NEW PUBLICATIONS.

Views and Reviews:

Essays in Appreciation—Literature. By W. E. HENLEY. Elzevir, 16mo, gilt top, $1.00.

Mr. Henley is the well-known author of 'A Book of Verses,' and is recognized as a singularly accomplished critic of literature and art. These brief essays relate to some of the great figures of the French and English literary world, and reveal a style at once light, graceful, and trenchant.

Famous Women of the French Court.

MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME. Translated from the French of IMBERT DE SAINT-AMAND, by T. S. PERRY. With Portrait. 12mo, cloth, $1.25.

The culmination of the gay and brilliant life of the French court and of the French nobility, of which Marie Antoinette was the central figure, during the last years before the revolutionary storm broke, is described in this volume with a fascinating vivacity and picturesqueness.

ALREADY ISSUED:

THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE. With Portrait. 12mo, cloth, $1.25.

THE WIFE OF THE FIRST CONSUL. With Portrait. 12mo, cloth, $1.25.

"He writes *con amore* of the splendor and glitter of the First Empire. He brings before the reader a gay and changing series of social sketches, vivacious and animated on every page."—*Christian Union.*

OTHER VOLUMES IN PREPARATION:

The Wrong Box.

By R. L. STEVENSON and LLOYD OSBOURNE. 12mo, paper, 50 cents.

"The plane occupied is that of farce or very light comedy. Realism is cast to the winds. Quaintness, paradox, the unexpected and preposterous, are encountered at every turn."—*N. Y. Tribune.*

Day and Night Stories.

By T. R. SULLIVAN. 12mo, cloth, $1.00; paper, 50 cents.

"Mr. Sullivan's style is at once easy and refined, conveying most happily that atmosphere of good breeding and polite society which is indispensable to the novel of manners, but which so many of them lamentably fail of."—*The Nation.*

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

"The story is one of American life. It has quickness without flippancy, firmness without a dull pace—a story well matured, vigorously proportioned, and interesting to the end."—*Brooklyn Times.*

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

"An exceedingly spirited, well-told, and interesting Southern story. It is briefly told, but every sentence counts, and it is impressive and absorbing."—*N. Y. Tribune.*

The Broughton House.

By BLISS PERRY. 12mo, $1.25.

"A bright, well-written story, told with great animation, showing close study of the surface phases of human nature, and full of keen observation on men and manners. It is very attractive in its freshness, buoyant spirit, and graceful realism."—*Boston Saturday Evening Gazette.*

For Electric Light Artisans and Students. By W. SLINGO and A. BROOKER, of the Telegraphists' School of Science, London. Crown 8vo, cloth, with 307 Illustrations, pp. viii.–631. $3.50.

"'Electrical Engineering' is a work to be commended, its special value being in the newness of much of the matter and in the able method of treatment. The typography and illustrations are excellent."—*Engineering and Mining Journal.*

"Not only does this contain a great store of accurately arranged information for the electrical expert, but it is as well a complete guide and instructor to those who, while having little or no electrical knowledge, have under their supervision various kinds of electrical machinery."—*The Safety Valve.*

New Educational Books.

LONGMANS' SCHOOL GEOGRAPHY FOR NORTH AMERICA.

By GEORGE G. CHISHOLM, M.A., and C. H. LEETE, B.A., Fellow of the American Geographical Society. Large 12mo, 384 pages. With 70 Illustrations. $1.25.

In Longmans' School Geography an attempt is made at a new departure in the teaching of Geography by providing a text-book which is founded on the results and methods following from the great advance which has taken place in Geographical Science and Teaching on the Continent, and especially in Germany. The aim of the author has been to exclude from the book almost all details which pupils cannot be expected to keep permanently in mind, but to take care that what the book does contain should consist of what is most effective as discipline and of most importance to know. In the American edition, prepared by Mr. Leete, the portions on America in general, North America, and the United States have been newly written. The other parts have been changed but little, though alterations and adaptations have been made wherever they seemed called for by the fact that American instead of English or Australian pupils were to be the readers.

*** Prospectus and specimen page sent on application.

A SMALLER COMMERCIAL GEOGRAPHY.

By GEORGE G. CHISHOLM, M.A., B.Sc. Crown 8vo, 216 pages. 90 cents.

*** In making this abridgment of his 'Handbook of Commercial Geography,' the author has endeavored to retain as much as possible of the matter that seemed fitted to present the leading facts of international commerce in such a way as to impress the memory. The description o countries is confined to features of importance in relation to commerce. In place of the tables of imports and exports given in the larger book, paragraphs have been inserted in the text summarizing the main facts to be learned from such tables. Attention is drawn in these paragraphs to the principal features of the recent history of the commerce of all the more important commercial countries.

THE ELEMENTS OF LABORATORY WORK.

A Course of Natural Science. By A. G. EARL, M.A., F.C.S., Science Master at Tunbridge School. With 57 Diagrams and numerous Exercises and Questions. Pp. xii.–179. Crown 8vo, $1.4C (net).

For sale by all booksellers. Sent on receipt of price by the Publishers,

LONGMANS, GREEN & CO.,

27 and 29 West 23d St., N. Y.

NOW READY:

The Writings and Correspondence of John Jay,

First Chief Justice of the United States. Volume I. Edited by HENRY P. JOHNSTON, Professor of American History in the College of the City of New York. The set is to be complete in four volumes octavo, uniform in size and style to the editions already issued of the writings of "Hamilton," "Franklin," and "Washington." The edition will, like these, be printed from type, and will be limited to 750 copies. The remaining volumes will follow at intervals of about two months. Price, per volume, $5.00.

This set is distinctive in one respect from the sets previously issued of the writings of the "Fathers of the Republic." The editors have found it desirable to include in it, in addition to the letters, journals, and decisions of Jay himself, a selection of the more important of the letters from his correspondents, and the work makes therefore a very interesting presentation of the noteworthy events and of the questions under discussion during the revolutionary period and during the first years of the Republic. A large portion of the material included in it is also now for the first time published, and the set will therefore form a contribution of first importance for the history of the country, and for that of the city and State of New York.

Boston Unitarianism, 1820-1850.

A Study of the Life and Work of Nathaniel Langdon Frothingham. By OCTAVIUS BROOKS FROTHINGHAM, author of 'Transcendentalism in New England.' $1.75.

The Othello of Tommaso Salvini.

A Study. By E. F. MASON. With Portrait by ROBERT F. BLUM. Cloth, square octavo, $1.00.

The English Novel in the Time of Shakespeare.

By J. J. JUSSERAND, author of 'English Wayfaring Life.' Translated from the French by ELIZABETH LEE. Revised and enlarged by the author. 8vo, $6.00.

The work is illustrated by six heliogravures by Dujardin of Paris, and twenty-one full-page and many other smaller illustrations in the text, executed in facsimile.

The book is divided into seven chapters: I. Before Shakespeare. II. Tudor Times—The Fashions and the Novel. III. Lyly and his "Euphues." IV. Lyly's Legatees. V. Sir Philip Sidney and Pastoral Romance. VI. Thomas Nash; the Picturesque and Realistic Novel. VII. After Shakespeare.

Nelson and the Naval Supremacy

of England. By W. CLARK RUSSELL, author of 'The Wreck of the Grosvenor,' 'The Life of William Dampier,' etc., with the collaboration of Wm. H. Jaques, late U. S. N. (Volume I. of the Heroes of the Nation Series.) 12mo, fully illustrated. Cloth, extra, $1.50; half morocco, uncut edges, gilt top, $175; large paper (only 250 numbered copies printed), with extra illustrations, $3.50.

"No romance could possess a deeper interest, and certainly none could reveal a more thorough mastery of material or an imagination more entirely coöperating with the purpose and knowledge of the writer. The story is told with a spirit and an impulse which carry the reader along from page to page, without pause or break to the very end."—*Christian Union.*

*** List of Midsummer Publications, prospectuses of the Heroes Series, "Knickerbocker Nuggets," sent on application.

LOVELL'S BOOK LIST.

LUX MUNDI.

The great theological sensation of the day in England. *Only edition authorized in America.* A Series of Studies in the Religion of the Incarnation. Edited by Rev. CHARLES GORE, M.A., Principal of Pusey House, and Fellow of Trinity College, Oxford. 1 vol., 12mo, cloth, gilt top, $1.75.

"A volume of thoughtful and well-written essays. They are an attempt to show that between theology rightly interpreted and the best modes and results of modern philosophy there is no real discrepancy. The task is noble, and the writers are well qualified to essay it, and to all thoughtful readers the book will be one of deep interest. In the way of devout treatment and reverent handling of great themes, all these essays leave nothing to be desired."—*Record.*

The Gentle Art of Making Enemies.

By J. MCNEILL WHISTLER. 12mo, cloth cover, specially designed by Mr. Whistler, $2.00. A limited *Édition de Luxe*, $10.00.

Cable message to *N. Y. Times*, Sunday, June 15, says: "The sumptuous Whistler book makes its appearance to-day. It is delightfully unique throughout. Nobody can read the book without surprise at the astonishingly high average of brilliancy. The volume itself is a most beautiful production."

The Life, Personal Reminiscences, and Musical Career of

Patrick Sarsfield Gilmore.

It is the only life of this greatest of military Band Leaders ever published, and has been prepared with the greatest care under the personal supervision of Mr. Gilmore, and has his full approval. Cloth, gilt, $1.00; paper, 50 cents.

The Prose Dramas of Henrik Ibsen.

Second volume. Cloth, $1.00. Edited by EDMUND GOSSE. Paper, 50 cents. Containing

"The Lady from the Sea,"
"An Enemy of Society,"
"The Wild Duck,"
"The Young Men's League."

The remarkable reception which the first of these volumes met renders it necessary only to announce that the second is now ready.

The recent issues in LOVELL'S INTERNATIONAL SERIES, which are the first and only authorized editions, are:

THE BURNT MILLION, by James Payn ..... No. 81, 50c.
THE PARTING OF THE WAYS, by Betham Edwards ..... No. 86, 50c.
ELI'S CHILDREN, by George Manville Fenn ..... No. 88, 50c.
APRIL'S LADY, by The Duchess .... No. 90, 50c.
DISHONORED, by Theo. Gift ..... No. 95, 50c.
THE MYSTERY OF M. FELIX, by B. L. Farjeon ..... No. 96, 50c.
PLAIN TALES FROM THE HILLS, by Rudyard Kipling ..... No. 59, 50c.
SOLDIERS THREE, AND OTHER STORIES, by Rudyard Kipling ..... No. 98, 50c.
THE PHANTOM RICKSHAW, by Rudyard Kipling ..... No. 103, 50c.

The phenomenal reception which this young author (Rudyard Kipling) and his books are meeting in England has had no equal in this generation. Even the London *Athenæum* predicts that he may become a second Dickens. His books are exceedingly novel and interesting. Every one reads and talks about them.

The Nation.

NEW YORK, THURSDAY, JULY 3, 1890.

The Week.

THE Republican trouble over Quay grows more interesting as time goes on. The interest reached its highest point at the Republican Convention in Pennsylvania last week. That Quay on two occasions stole a very large amount of money from the State Treasury not only is true, but has not been denied by him or anybody on his behalf. There are witnesses to the fact of the highest respectability, whose silence during the past three months is almost as good testimony as their oral evidence in court would be. Nevertheless, the Convention has met and nominated Quay's man for the Governorship—and he too has a little stock of imperfections on his head—and the Committee on Resolutions then proceeded to deal with Quay's personal troubles. In the first draught of the platform which was given to the Associated Press as certain to be adopted, they said:

"For the Chairman of our National Committee, Mr. Quay, we feel a lasting sense of gratitude for his matchless services in the last Presidential campaign, and commend his bearing under the slanders which his successful leadership of our party has purchased for him. As a citizen, a member of the General Assembly, *as Secretary of the Commonwealth under two successive Administrations, as State Treasurer by the overwhelming suffrages of his fellow-citizens, and as Senator of the United States, he has won and retains our respect and confidence.*"

His "bearing under the slanders" was simply standing silent under a charge of personal dishonesty supported by reputable and well-known witnesses. Fancy a great political party "commending" a leader for his departure from the customs of honorable men in every civilized community. This was, indeed, subsequently considered a little too strong, so the Quay plank was shifted from the beginning to the end of the platform, and all reference to "slanders" was omitted. But "confidence" was still expressed in a man who once while in charge of the Treasury, and once while having access to it in another office, abstracted from it over a quarter of a million of dollars on each occasion and used it in gambling. The facts have long been known among the leading business men of Philadelphia, and were produced in 1885 by the leading Republican journal of the State—the *Press*—as a reason why Quay could not be nominated for the State Treasurership.

The most ridiculous feature of the Pennsylvania Republican platform is the declaration which follows the endorsement of the McKinley Bill, that "we denounce the criticism passed upon that bill in the English Parliament as an unwarranted interference by a foreign nation with the right of the American people to protect American industries." Even that loyal supporter of the high tariff, the Philadelphia *Press*, is constrained to protest against such an absurdity. "This is simply silly," it says. "Our tariff laws are of interest to others besides ourselves. Comment upon them is perfectly legitimate and is not interference. The platform would have been improved if, on the revision, this petty piece of provincialism had been stricken out."

The Prohibitionists of Maine have just held a State convention which is noteworthy for its frank confession of the fact that prohibition does not prohibit in Maine. The platform contains the following statement: "That the Republican and Democratic parties each contain a liquor element sufficiently large to prevent any thorough or determined enforcement of the prohibitory law; their declarations are therefore meaningless, and adoptions well understood by the liquor interests, and by the officials upon whom enforcement depends, and at whose hands *the law is practically nullified in the cities and large towns in Maine.*" This is precisely what the opponents of prohibition have always contended to be the truth, and, now that its advocates concede the fact, there is no room for further argument on the question.

The fiscal year closed on Monday, and so few of the appropriation bills have become laws that the Chairman of the House Committee on Appropriations was compelled to present a joint resolution extending for thirty days, or until the bills now pending become laws, the provisions of the appropriation acts of 1889–'90, in pro-rata amounts. Moreover, he was forced by an inquiry from a Democrat to admit that the situation in this respect was hardly any better than two years ago, despite all the talk about how the new rules were to expedite matters.

The vote in the House on the Free-Coinage Bill puts that body in a notable contrast to the Senate, and it shows clearly that the former and not the latter is now the conservative branch of Congress, and the one to be relied on to save the country from spasmodic outbreaks of passion and folly. The decline of the Senate is due in large part to the admission of new and sparsely settled Territories and mining-camps into the Union, which count for as much in the Senate as the most populous and best educated States. There is no cure for this evil except in time, and in the case of Nevada there never will be any cure. That is the typical mining-camp, containing a nomadic population more likely to diminish than to increase as time goes on. The only way to give her a population to fit her for valuable membership of the Union is to annex Utah to her. There is no constitutional obstacle to that. The effect of such a proceeding would be to shift her centre of gravity to Salt Lake City. Of course, this will not be done until the Mormon question is settled in some satisfactory way, but it ought to be done whenever public sentiment is ripe for the admission of Utah. The Silver Bill will now go to a conference committee, and will probably be reported in such form as to require the doubling, or a little more, of the monthly purchases of silver bullion. This will stave off the silver crisis for a longer or shorter period, according as the public revenues are more or less than the expenditures. The ability of the Treasury to maintain gold payments depends strictly upon its current balance, or what would be called in private business its "profit and loss account." So long as the balance is on the credit side it can maintain the gold standard, and no longer.

On the motion of Senator Plumb, the Senate instructed its Committee on Finance to report, with each item of increase or decrease of duties in the tariff, the reasons for such increase or decrease. The report which has been made is substantially an evasion of the instruction. It amounts in almost every case of increase merely to a statement that the Committee deemed more protection to be necessary. A few of these answers will serve to show how little information is supplied. Taking wool as the most important item in the list, and the one about which there has been most controversy, the report says:

"The *demand* from the representative woolgrowers of the country that the rates upon wool should be largely increased, has led the Committee to recommend the adoption of the new classification herein suggested, which it is hoped will result in a uniform and honest classification of wool. The increase of rates for the manufactures of wool has been made necessary by this increase in the wool rates."

In other words, the Committee consented to an increase in the rate because somebody asked, or, as they say, *demanded* it. This is a reason reduced to its simplest terms. We trust that Senator Plumb will find himself enlightened by it.

The next reason given is the one which explains the advance in the duty on pearl buttons, an advance of 300 or 400 per cent. in the case of inferior grades used by the poorer classes. As stated in the press despatches, "the increase on pearl and shell buttons was intended to protect domestic industry against the competition of foreign convict labor." That is an untruth. The pearl and shell buttons imported into this country are made by as honest people as can be found in any part of the world. They are mostly poor women and children in Vienna and its suburbs, who never saw the inside of a prison. There is no pretence of establishing the pearl-button industry in this country. In fact that is not contemplated. What is intended is, that the people shall be compelled to use some other kind of button at a much higher cost. We hope that Senator Plumb will push his inquiries on this subject a little further, and find out what evidence is relied on to

show that pearl buttons are the product of convict labor. It might be asked what harm would be done to us in any way by foreign convicts producing an article that we do not produce and do not expect to produce. The reason for increasing the duty on building stone is curtly stated: it was "to check importations of foreign granite." Raw sugar was put on the free list "as a matter of wise public policy." The large increase in cigar wrappers was "to protect domestic growers from excessive importations of that article." The increased duty on glass bottles (present duty 42 per cent.) was "due to increased competition by foreign makers." (Here is a good chance for a Glass-Bottle Trust, if there is not one already in existence.) "The considerable increase in fruit juices not otherwise provided for was for the purpose of checking fraudulent importations of alcohol." Another untruth. The present law provides amply for the collection of duty on any alcohol contained in fruit juices above what is necessary to keep the juices from spoiling—that is, any alcohol capable of being put to commercial uses. The increase in laces, edgings, embroideries, etc., "was due to the feeling on the part of the Committee that these articles of luxury should pay part of the revenue necessary to be derived from some source to offset the large reduction resulting from placing sugar on the free list." This is another and a glaring untruth. The increase of duty will yield not more than $1,800,000, even if the importation of the articles is not checked by the increased cost. This is a notable offset indeed to $55,000,000 of sugar tax! What is really intended is to check the importation of the articles, in order to enrich a few manufacturers. And these things, we are told, are "articles of luxury"!

The outcry raised by the steel-rail manufacturers over the reduction of the duty on rails to $11.40 per ton fixed by the Senate Finance Committee ought to open the eyes of the people to the real character of what, in these later days, goes by the name of protection. A few weeks ago they and their newspaper organs were "pointing with pride" to the fact that rails were selling in this country as low as in England. In short, the sole condition upon which a protective tariff is ever justified, had been reached. The time had come when the promise originally given that protection should continue only till the industry was established on a firm basis, ought to be made good by a total repeal of the duty. But now, when the Senate Committee proposes to lower the duty to $11.40 per ton, they are in a great ferment, holding meetings and appointing committees to go to Washington, and raising heaven and earth to prevent the reduction. The truth is, that no duty at all is needed on steel rails. The manufacturers have for protection the cost of ocean freight, insurance, and commissions, which cannot be less than $3.50 per ton. They have, for a large portion of the country, the advantage of inland freight also, and, as we have said, the selling price is as high in Great Britain as here, or, if there is any difference, it is slight. If, under such conditions, a duty must still be maintained on steel rails, about what year of our Lord may we expect to see it taken off? Never, absolutely never, if we wait to get the consent of the rail-makers.

The latest thing in the way of Trusts is a Starch Trust, in which all or most of the starch factories of the country are combined. The duty on starch is 2 cents per pound under the present tariff, and on dextrine is one cent. The starch duty is not changed in the McKinley Bill, but the dextrine duty is doubled. According to the Senate Committee's tables published in the last Congress, the equivalent ad-valorem rate on starch is a trifle less than 100 per cent., being exactly 94.54 per cent. on starch made of corn or potatoes, and 97.90 per cent. on starch made of rice. This furnishes a good solid foundation for a Trust. We commend the matter to the diligent attention of the Republicans of Illinois and Iowa, whose State conventions held this week passed the most rabid resolutions on the subject of Trusts and combinations that we have yet seen. What is the use of foaming at the mouth on the subject of Trusts when McKinley is devising means to keep them going, and when the party in Congress blindly follows him?

Mr. Blaine, in his recent letter to the Senate on the results of the recent Pan-American Conference, made the following statement:

"The Conference believed that while great profit would come to all the countries if reciprocity treaties could be adopted, the United States would be by far the greatest gainer. Nearly all the articles we export to our neighbors are subjected to heavy customs taxes; so heavy, in many cases, as to prohibit their consumption by the masses of the people. On the other hand, more than 87 per cent. of our imports from Latin America are admitted free, leaving but 12 per cent. upon which duties may still be removed."

Now, the meaning of this, if it has any meaning, is, that trade between the United States and the Latin American republics is obstructed because there is no reciprocity in tariff arrangements. We admit free of duty almost everything—except wool, sugar, copper, and silver-lead ores—they desire to sell to us, while they impose heavy duties on almost everything we desire to sell to them. But Great Britain admits everything—except tobacco—the South American States desire to export, while the same tariff duties that these States impose on imports from the United States apply equally to their imports from Great Britain. And yet the latter country does not complain of any undue restrictions on her South American trade, which goes on year after year increasing. Mr. Blaine is therefore clearly muddled in his conclusions.

Commissioner Raum's method of determining the fitness of candidates for clerkships in the Pension Office by "looking them in the face and forming a judgment of them," impresses the *Civil-Service Chronicle* as at once speedy and comprehensive. "I don't care to choose a man," said Raum, "from the bare statement that he has made an average of 76 or 83 or 91 per cent." How the Raum system works in practice is thus related by the *Chronicle:*

"Commissioner Raum looked his own son, Green B. Raum, jr., in the face and formed a judgment of him. He did not require him to make an average of 76 or 83 or 91 per cent., but he lumped him off and decided that a suitable place must be made for this son, and so he created a new division known as the appointment division, and put Green B. Raum, jr., at the head of it with the title of Assistant Chief Clerk. This done, Commissioner Raum again looked his son in the face and formed a second judgment of him without requiring any per cent. As the result of this, he removed a woman clerk out of the chief clerk's room, where she had been making some fifteen dollars a month in notary fees, and put this son in the way of turning an honest penny with his notary's seal."

The *Chronicle* finds that the Raum method has been employed in choosing census-enumerators in Indianapolis. The first man who was looked in the face at Indianapolis was Mr. Merrill Moores, an active politician and a member of the Republican County Committee. Mr. Moores, after being looked in the face by Supervisor Conger, and found to be a good census-taker, was appointed to look in the faces of the other party workers in the city. The result has been very disappointing. "Some of those I recommended," says Mr. Moores, "have turned out most miserable failures." The Indianapolis *Journal* says that out of forty compositors working in that office twenty were missed by the census-takers. "The trouble," says the *Journal*, "grows out of the inexperience of enumerators and slipshod, unfaithful performance of duty on their part." This is just what was predicted when the Superintendent of the Census, with the permission of the President, discarded the civil-service rules in the selection of subordinates and adopted the Raum plan of choosing them by looking them in the face and forming a judgment without any percentage.

Tammany and its defenders are visibly disturbed over the appearance of clergymen in the citizens' movement, and are seeking to make it appear that the reverend gentlemen will be called upon to perform political duties which will detract from the dignity of their calling. The *Sun*, as the only really devoted Tammany organ, is especially anxious about them, and is trying to frighten them out of the field by setting forth a number of disagreeable things they may have to do if they stay in, saying among other things: "Of course, they must also appear on the stump as political orators, and on election day we may expect to see them as workers and watchers at the polls, zealously looking after the interests of the clerical ticket, and exhorting the faithful to vote as they pray." The *Sun* forgets that under the new election law there will be no "workers and watchers" of any kind about

the polls, "exhorting the faithful to vote" any kind of a ticket, simply because the law says: "No person shall do any electioneering on election day within any polling-place, or in any public street or room, or in a public manner, within 150 feet of any polling-place." This will make it unnecessary for the clergy or any other respectable persons to stand about the polls as heretofore for the purpose of keeping the Tammany and other "heelers" from passing out bogus or defective or "crooked" tickets.

A curious correspondence between Funk & Wagnalls and the Blacks has been printed, in which Dr. Funk informed the Blacks that he was "handling" the reprint of the 'Britannica,' and forwarded them what he (Funk) "deemed a fair share of the profits," viz., $500. The Blacks, of course, returned the money, but why did Funk send it? Here is the mystery. Funk said in his circular that he had "purchased" the Encyclopædia which he was issuing at great cost from somebody, but not from the Blacks. Why, then, are the Blacks entitled to a "fair share of the profits"? Is any one entitled to "a fair share of the profits" derived from the sale of a thing which he does not own? If, on the other hand, he does own it, how can any one else, particularly a doctor of divinity, "handle" it without his consent, or fix his "share of the profits" without consulting him? Will Dr. Funk kindly look in his books on moral philosophy and see what the answer is to this question? Ordinarily when a man is caught "handling" things under the conditions in which Dr. Funk is "handling" the Blacks' books, he is "run in" by the police. What is there exceptional in this case?

In the settlement between England and Germany as to East African territory, the possession of Heligoland was taken by the latter as an offset to the protectorate of Zanzibar. The London *Economist*, commenting on the English opposition to the surrender of Heligoland, shows conclusively that the bargain is enormously to the advantage of England. It may be to the advantage of Germany also, and is evidently so considered by the Germans, since it gives them a naval station in just the place where they want one to defend their great seaports. To England it has only a sentimental value, and in this particular the sentiment will not bear close investigation, since, as the *Economist* says, the island "was stolen rather than taken from Denmark in the war of 1807." Its area is only 450 acres, being smaller than many single farms in the United Kingdom. Its population of 2,000 inhabitants are attached to English rule because they are thus saved from military conscription. On the other hand, the island of Zanzibar in the hands of a great naval power dominates the East African coast and becomes a most valuable connecting link between Africa and India. Moreover, a quarrel with Germany at the present time, the *Economist* thinks, would probably have cost England her position in Egypt. The reasons assigned by the *Economist* for ratifying the agreement with Germany are so great in comparison with the value of Heligoland that there can be little doubt that Parliament will acquiesce in it if the motion to reject it is ever pressed to a vote.

The Boston *Journal* has formed the pleasant conceit that Great Britain ought to hand over Bermuda to us because she has handed over Heligoland to Germany. Another esteemed contemporary thinks that the island of New Providence (Nassau) would be about the right thing to compensate us for Heligoland. Great Britain has, in the Bermudas and Bahamas, about 2,500 patches of ground and rock sticking above water. If she should, in a friendly spirit, say to the United States: "Bless you, my child, take them all," what would be our feelings? Twice since the close of the civil war have we been offered possessions in the West Indies of far greater value than all of the Bahamas and Bermudas put together, and in each instance we declined to take them. Not even the great popularity of Gen. Grant could force San Domingo upon us. Not even the wily persuasiveness of Gov. Seward could induce us to accept St. Thomas. It is true that a money payment was required in the latter case, but it was not the price that led us to reject the island: we simply did not want it. Anybody who goes there now and spends an hour on the island will be entirely convinced that the decision then made was a good one. But we want St. Thomas exactly as much as we want either Bermuda or New Providence. Regarded as a naval station, it is the superior of either of them, while San Domingo is by far more valuable than all three—more valuable, indeed, than all the British islands in the West Indies taken together except, perhaps, Jamaica. Yet if we want San Domingo today, we have only to say so.

The reports about the situation of the British Ministry grow more serious, and it is now said that a complete reconstruction of the Cabinet, under which the Liberal Unionists would take the leading places, may be looked for before many days. Their calamity has grown out of their over-confidence in supposing that they could, towards the close of the session, push through, all abreast, three stoutly contested measures of the first importance, viz., the Irish Land-Purchase Bill, the Welsh Tithes Bill, and the License Bill. To every one of these there is fanatical hostility in some quarter. The Ministers tried for a while to stem the tide and force the bills through by the use of the closure, but it soon became clear that the Chairman of the Committee, Mr. Courtney, would not permit the use of the closure to stifle debate on measures of such importance. The first time he refused to put Mr. Smith's closure motion, therefore, it was evident that the powers of obstruction possessed by the Opposition would make progress impossible. After much hemming and hawing and much cursing of the Chancellor of the Exchequer, and many consultations as to what should be done, it was resolved to parley. To drop all or any one of the bills would of course bring more or less discredit. So Lord Salisbury concocted the plan of simply postponing one or more of them until the next session, leaving it to be taken up there at the exact stage in which the adjournment this session left it. But to do this would have needed a change in that time-honored Standing Order of the House under which every bill not passed dies at the close of the session. The change, Mr. John Morley and other Liberals admitted, had something to be said in its favor, but the bulk of the party was by no means ready to make it in order to help the Tories out of their difficulties. So that it was speedily perceived that it would take just as much time to debate and modify the Standing Order as to pass one of the three bills. Hence this plan was abandoned.

Mr. Smith, who is an elderly man in poor health, was then at his wits' ends, and there was nothing for it but to capitulate. He announced that the compensation clause of the bill would be withdrawn, and the tax, which was to have been devoted to the compensation would be allowed to accumulate, and have its final destination subsequently settled. This was really a cry for quarter, but the foe was pitiless and refused him all conditions. So he had to surrender at discretion—that is, throw the bill and all its belongings overboard. This, of course, has only flushed the Liberals with victory. They feel that they have fatally discredited the Ministry, and that if they push their advantage, they may compel the abandonment of the other two bills also. Of course the natural and time-honored way out of a situation so difficult is dissolution. A united party would undoubtedly, under existing circumstances, dissolve and go to the country. But the trouble is that the Tories know well that they would be left in a hopeless minority at a general election, as they were at the last two, while the Liberal Unionists have the strongest reason for believing that very few of them would get back to Parliament if they now appealed to their constituencies. Consequently, all talk of dissolution sends a shiver through the frames of the whole anti-Gladstonian host. They cannot bring themselves to face the risk of putting Gladstone back into office, with his powers of mischief apparently undiminished and the wicked Irish still unsubdued. For it appears from every day's news that Mr. Balfour's coercion has somehow not proved a success. The Irish are still recalcitrant, and he has still every day to defend in the House modes of breaking their spirit which puzzle and shock the English public. He thought when he came into office that, by subjecting the leaders to ordinary prison discipline, he should speedily end the trouble, and chuckled over it as a great discovery; but that sense of triumph has long passed away.

A RETROSPECT.

THE *Nation* begins with the present number its twenty-sixth year. It has occurred to us that we could hardly mark the occasion in any better way than by running over some of the great political and social changes which the paper has, within that quarter of a century, taken note of and to some extent discussed. No one who has participated in any such discussions can even look back over them without being impressed anew by the futility of political prophecy. In the year in which the *Nation* was started, there was hardly any political observer who did not look for the permanent retention among us of the military spirit, for a considerable increase in the standing army, and for an increased disposition to use it either for purposes of foreign aggression, or for the more complete and peremptory assertion of a strong central authority. All did not go as far as Wendell Phillips when he declared in that year, in a speech in Boston, that our old farming and reading republic was at an end, and that a strong military and perhaps predatory republic was to take its place. But certainly few looked for the rapid disappearance of the army, and the almost abrupt banishment of military topics from the forum of popular interest, and for the eagerness with which a community which had just been throwing all its powers into a fierce military struggle, diverted its energies to the business of money-making. There was something very fine, as well as unexpected, about this, and it called forth the admiration, as well as the surprise, of the civilized world.

But there followed on it another change which was much less desirable, and which also was unlooked for—we mean the rapid decline of the sentimental interest in the war. This is one of the *sequelæ* of all civil wars, owing to the fact that there is always something odious in the memory of conflicts of this nature, and that the contest begins, almost as soon as peace is restored, to furnish political capital to one or other of the parties which have carried it on. The duty of cherishing the memory of it is apt to be soon left to the veterans who have taken part in the fighting, and who can recall, as the younger generation cannot, the sacrifices it entailed and the evils it ended. This inevitable decline of popular interest in the heroic side of the contest has been hastened by the growth of the curiously mercenary view of the services of the Northern army which has ended in the pension legislation. There was probably nothing less looked for in 1865 than a successful movement, a quarter of a century later, to appraise the services of the soldiers in money, and discharge the obligations of the nation to its saviours in cash payable monthly, without distinction or discrimination as regards the nature of their services. This may be said to have buried the more tender memories of the war, which seemed, twenty-five years ago, to be certain to retain their strength at least till our babes were grown old and the survivors of the great fields were a small and vanishing band.

Not the least remarkable of the unexpected results of the war has been the recovery of the South. One of the anticipations of 1865 which did most to darken the political horizon, was the belief that the negro would for an indefinite period need the protection of Federal troops from physical violence, that industry at the South would consequently fail to revive, and that the State governments, if restored, would prove simply centres of resistance to Federal authority. It has taken twenty-five years of steadily increasing material prosperity at the South to dissipate those earlier apprehensions, and reduce the sum of Southern danger and misconduct to the cheating of the negroes at the polls, to the detriment not so much of the negro as of the Republican party at the North. The enormous increase of Southern products during the past fifteen years is proof, such as no one looked for within the present century, of the completeness with which order and security have been restored. The present state of things may not be satisfactory, owing to the political subjection of the negro to the white minority, but it is a state of things immensely superior to anything which was expected at the close of the war, and something totally different from what the prophets on both sides foresaw.

The return to specie payments was another thing which most observers relegated to a far remoter period than 1878, and which very few expected except through a process of increased paper inflation ending in a general crash. An operation so difficult seemed to some of the best political observers hardly within the reach of a legislative assembly neither led nor controlled by the executive branch of the Government. The late Samuel J. Tilden, who always, even when his party was most infected by the greenback craze, took the clearest possible view of the financial situation, was of opinion that we should "blunder into resumption" rather than deliberately resume; but, contrary to his fears, we did actually resume on a day fixed beforehand, partly through accident, it is true, but mainly through design.

The industrial changes of the period have been far too great and too varied for us to attempt even a notice of them here, and have been set out, in all their wondrousness, with admirable clearness and picturesqueness, by Mr. D. A. Wells in his recent book. Of a large number of them the public knows in detail but very little; but the most striking of them all, the extension and improvement of the railroads, no one can appreciate who does not recall the condition of the railroads and the discomfort of American travel at the close of the war. It is hardly an exaggeration to say that the art of transporting persons by land has been revolutionized within the quarter of a century. Not only has there been a wonderful extension of lines of communication, but the discomfort has been reduced to a minimum, and all around the great cities immense suburbs have been created which begin to rival them in population and in importance. Out of this great extension and improvement of the railroad communication, and out of the accompanying improvement and cheapening of steam navigation, there have grown since 1865 social and political changes of the first magnitude. Not only have vast additions been made to the foreign population—that is, to the portion of the population bred under institutions differing widely from those of the United States—but the seats both of social influence and of political power have been shifted to new classes.

One of the most marked characteristics of American society in the period preceding the war, and in truth during the war itself, was the influence of the clergy and lawyers in their character of publicists and orators. Nearly every State had at least one Senator of the type of Seward, or Sumner, or Fessenden, or Trumbull—generally a man of very moderate pecuniary means—who not only exerted great influence on the politics of his State, but spoke with more or less moral and intellectual authority on all the questions of the day, and aided his constituents by speeches out of Congress, somewhat in the English fashion, in making up their minds on current topics. This type has almost completely disappeared. It can hardly be said to have any representative whatever in the Senate to-day. There is no Senatorial orator whose utterances are looked for with any eagerness or have any deciding influence on local opinion. The Senate has, in fact, become almost exclusively a capitalists' chamber, and it is only from the South that poor men continue to find their way into it with ease. At the North there is a steady tendency to give seats in it to successful manufacturers, speculators, or railroad men. As a general rule, too, this class brings to the work of legislation considerable contempt for public opinion as expressed through the newspapers, and an almost unbounded belief in the venality of State legislatures as the result of their own experience in business life; for a successful business career on the scale which is now common can hardly go very far without bringing a man in contact with State legislators as an applicant for some sort of favor or privilege, or as the object of the form of extortion known as "a strike." There has been, too, contemporaneously with this change in the quality of the Senators, a marked withdrawal of the lawyers from the work of political exposition, and in fact from the whole rôle of politicians. The leaders of the bar confine themselves to professional work, largely in the service of corporations, with great assiduity, and seem to grow more and more reluctant to figure in great political movements of any kind. And this change has been accentuated by the complete disappearance from the political arena of the class of orator known as the "lyceum lecturer," who represented to the rural population not only literature and art, but political philosophy, and exerted during the period preceding the war a very wholesome and powerful influence in shaping popular thought on public questions.

On the other hand, the leading colleges of the country have been almost transformed since the *Nation* was started, and a class of

advanced students have come into existence who were unknown and unexpected at the close of the war. The schools of political science which the principal universities now contain, turn out yearly both writers and thinkers whose contributions to the literature of political philosophy, history, archæology, political economy, and administrative law are extremely important, and have placed the country in the very front rank in fields of inquiry in which it was, five-and-twenty years ago, almost wholly unrepresented. Not only have they made the task of conducting a critical journal like the *Nation* increasingly easy, but they carry on periodicals of their own, in which the best thought of the time on political and economical questions finds adequate expression. But, curiously enough, this remarkable development of the universities in these fields has been accompanied by what seems to be an undoubted decline in the influence of the colleges on popular thought, and in the number of graduates in Congress and in political life. This result is in part due to the prominence of the tariff in the politics of the day, and the consequent separation of the professors, who are generally free-traders, from the wealthy industrial class, who have made fortunes under the protectionist régime, and who have been largely relied on for the expenses of the now very costly elections; in part, also, to the increasing dislike of thoughtful and cultivated men to the working of our nominating machinery, and to its close connection with the "spoils system" in the administration of the Government. Whether a great change in the relation of the men of culture to public life may not be wrought by the new ballot act, which is now in operation in many States, and will probably before long be introduced into them all, remains to be seen.

No change has been so marked as the transfer to wealth of the political and social influence which was formerly shared, if not absorbed, by literary, oratorical, or professional distinction. The popular interest which twenty-five years ago was centred on the authors, preachers, and lecturers who had taken the leading part in the great anti-slavery struggle, or had written the books and poems which first spread the fame of American literature through the world, and during the war and for a short period afterwards was centred on the leaders in the armed struggle, has been almost wholly transferred to the great millionaires. It is their personality and doings which now pique popular curiosity and touch the popular imagination. It is their talk which commands most attention, and which is believed to have most power. In politics they have become perhaps the greatest force of the day, owing in part to the virtual withdrawal of the bar and the clergy from the political arena, but in still greater part to their power of "owning" both men and newspapers—that is, of controlling politicians, and directing the course of the press through the influence either of retainers or of "good things" in advertisements or circulation. In some parts of the country—Pennsylvania, for instance—this control may be said to be absolute; in others, its development corresponds very much to the local development of the manufacturing interest. Wherever this is very powerful, the subservience of the press to the interests of property, as they are understood by local capitalists, is very great, if not complete.

This is the natural and almost inevitable effect of the steady growth of the tariff in importance, owing to the enormous investments made in it, and depending on it, in the opinion of the owners, for safety. During the thirty years of high protection which followed the outbreak of the war, there has been an unprecedented amount of money put into industries created or maintained by legislation; and as the volume of this investment has swelled, the tariff question has gradually not only dominated all other questions, but has driven them out of the field. In every country property which has been directly created by legislation, or which needs special legal protection, is extraordinarily sensitive and jealous. Negro slavery and the English Corn Laws were two striking examples of this in our own time. Such property, if seriously assailed, is always ready to defend itself by any weapon within its reach, and is sure to surround itself with elaborate bulwarks and safeguards. Foremost among these safeguards is apt to be restriction on the liberty of speech of all within reach of its influence; the presence of men known to be hostile to it becomes odious; their actions become suspicious; their aims in every direction become tainted with treason or immorality; and, finally, any means of counteracting their influence or destroying their authority seems legitimate. In truth, nothing defends itself so desperately, and with such serenity of conscience as to the means to be used, as property in danger.

It is an easy deduction from all this that a high tariff in a country in which it has numerous and active opponents, and is therefore constantly in a state of unstable equilibrium, must necessarily make money a most potent agent in politics, and tend more and more to discredit the art of open persuasion. The art of persuasion only flourishes at times and in places where the orator or writer is sure that his strokes will tell, that his opponents do not wear concealed armor, and that the seed he sows in daylight will not be uprooted in the night-time. It declines always in the presence of legislative corruption in any form—that is, the use on the legislator of the motive of personal gain, whether that motive take the form of cash in hand or the prospect of large profits on an investment.

In nothing do the Northern States of to-day differ more from the Northern States of 1860 than in this great supremacy in politics of purely material interests. Devotion to those interests, however, has been in some of its phenomena by no means evil or despicable. It has added much to the comfort and convenience of life among all classes. It has greatly refined and considerably dignified the luxury and amusements of the rich. It has introduced an invaluable love of healthful outdoor sports and amusements, and may be said to have considerably changed for the better the physique of the sedentary class of the urban population. It has produced a great increase of attention to health, in the construction of dwellings and in clothing and food. It thus furnishes a fresh illustration of the difficulty which all observers, even the most pessimistic, find in despairing of the Republic. After they have collected together all the most depressing facts in existence, they are sure to find mixed up in them a bushel of reminders that, in the Western World at least, after all action comes reaction, after the flood comes the ebb, and that in politics, as in private life, people often make a ladder of their vices to rise to higher things.

A VOICE FROM THE SOUTH.

THE discussion of the Federal Election Bill in the House of Representatives has evoked a speech from a Southern Republican Congressman which must command the attention of the country. Hamilton G. Ewart, Representative from the Ninth District of North Carolina, is a white man who was only eleven years old when the war broke out, and who comes from a South Carolina family which was earnestly enlisted on the Confederate side. Settling in Hendersonville, N. C., after having completed his education, he joined the Republican party and cast his first vote for Gen. Grant in 1872. He speedily became a prominent local leader in his party, was twice elected Mayor of the city, ran as a Hayes and Wheeler Presidential elector in 1876, a few years later was chosen to the Legislature, and in 1888 was elected to Congress from a district which has a majority of white Republicans. In short, he represents that element in the South which the Republican party must secure if it is ever to amount to anything in that quarter.

Mr. Ewart unhesitatingly asserted for his own State that "no Republican in the State, black or white, is prevented from casting his vote," but admitted that "in other States in the South the negro vote is suppressed under the forms of law, and in other sections still there is violence and stealing of ballot-boxes." He insisted, however, that this admitted evil would only be aggravated by the force legislation proposed. Characterizing the bill as "a sectional measure, designed almost entirely for the South," he drew this picture of the way it would work:

> "The applicants for supervision must declare their belief that without it there will not be a free and fair election. And here we have a direct appeal to partisan prejudice. The complaint is filed that the majority in the district propose to steal, cheat, and swindle at the ballot-box, and that Federal supervisors must be appointed to protect the rights of the minority. And right here the wickedness and folly of this proposition become manifest. The most determined and resolute body of partisans in the world to-day live at the South. By this law you instigate the misguided colored man to sign the petition in which he alleges that the white people of his district propose to cheat and swindle him at the ballot-box. At the very outset of the political contest distrust and bad blood are generated. But it does not stop here. The law directs that the supervisors shall be appointed from each political party. In many counties in certain Southern States there are not half-a-dozen white Republicans;

in many townships not a single one. Who, then, will be appointed supervisors? Necessarily negroes. Deputy marshals would also be appointed from the same class. What results would this bring about? Bloodshed, terrorism, riot, and disorder."

Mr. Ewart pointed out that the framers of this bill are asking these poor negroes who are appointed in Mississippi, Louisiana, South Carolina, Alabama, and Georgia as supervisors, to discharge a duty that the bravest soldier in the United States service today would hesitate to perform, since "it requires a man of unflinching nerve to act as a supervisor or deputy marshal at a precinct surrounded by angry, hot-blooded, determined, and resolute partisans where the issue is black against white, the powerful against the weak, the rich against the poor, the intelligent against the ignorant." To the objection of Northern Republicans that this is a shameless state of affairs to exist in any section of the United States, he made this effective reply: "But, virtuous Representatives, put yourselves in the place of these Southern people; place negro judges of election and negro deputy marshals at the voting precincts in Michigan, in Wisconsin, in Ohio, and in Indiana, and the Republican nominees for Congress in those districts would be swept out of political existence. You very well know that you would not dare to apply this law as it will have to be applied in the South in the districts which you represent to-day."

"Suppose you place this law upon the statute-book," he went on, "in what way have you helped the negro?" The only effect could be to solidify the white voters, now on the eve of disintegration, to encourage Bourbon extremists, to frighten away Northern capital, now pouring into the South, and to retard the industrial interests of the section—and all for what? "To create returning boards who may possibly return as elected a few Congressmen from the black districts," although Mr. Ewart's belief is that, if the bill is passed, there will not be a corporal's guard of Southern Republicans in the Fifty-second Congress.

Leaving the partisan aspect of the case, Mr. Ewart discussed briefly the philosophy of the negro's condition. He recalled the fact, which so many people forget, that under our system it is the State Government, not the United States Government, which must protect the citizen in his rights, and that this is as true of the black citizen as of the white. "You will tell me," he continued, "that I am suggesting no remedy for the political state of affairs in the South. Yes, there is a remedy, and that is to mind your own affairs and treat the colored man of the South with 'wise and salutary neglect'—I mean, of course, in a political sense. If you are too penurious to help him by educating him, at least let him alone. It was Burke who said that 'a clamor made merely for the purpose of rendering the people discontented without an endeavor to give them a practical remedy is indeed one of the worst acts of sedition.' Such conduct is worthy only of demagogues like Cleon, or scheming politicians like Burr. I am tired of this rot and fustian about the poor negro and down-trod Republican of the South. The negro of the South is doing well."

Mr. Ewart presented evidence that the Republicans of his district sustain his position on this question, saying among other things: "One of the most prominent colored men in my district, and a leader of his people, earnestly endorses my views on the Election Bill, and predicts trouble and disaster to his race if it passes. John H. Williamson, the editor of the *Gazette*, the leading colored paper in the State, and an ex-member of ability and standing in the Legislature of 1886, writes me that he heartily approves my course, and unites with me in warning the leaders of the party against this pernicious legislation." He concluded with this ringing declaration of independence:

"I do not know what course other Southern Republican Representatives may take in this matter; but, speaking for myself, I will never by my vote or voice support a proposition that tends to humiliate or degrade my people. I shall, if I am the only Republican on this floor, protest against the passage of a law that will sow the foul seeds of factional discord among the people, and be a fruitful cause of unutterable woe to the unfortunate class it is designed to benefit. If that be treason to the party to which I have ever been loyal, make the most of it."

Such a speech ought to carry weight in the House. All accounts agree that it produced a great effect. But whether this effect will be reflected in Republican votes against the Force Bill is another matter. The party caucus has decreed the passage of the measure, and, as Mr. Ewart said in opening his remarks, "unfortunately, it has reached that point in American politics where, under the iron and despotic ruling of King Caucus, a representative of the people is often forced to forget that he has a conscience, and, blindly ignoring all sense of self-respect and manly pride, commit himself to the support of measures which, deep down in his heart, he knows to be utterly wrong. To-day, to our shame and discredit be it said, there are Representatives from sovereign States upon this floor who, deep down in their hearts, know that this election bill is as damnable, illogical, inequitable, and vicious a piece of legislation as was ever attempted to be placed upon the statute-books of this republic. And yet, at a sacrifice of their manhood, sober judgment, their sense of fairness and justness, feeling the keen sting of the caucus lash, they will support a measure which will add untold miseries to the woes of the unfortunate people it is designed to help, stir up race troubles and factional strife in our fair South land, and breed political confusion worse confounded."

However the vote in the House may result, Mr. Ewart's speech is bound to have a marked effect upon public opinion. It counteracts the force of all the bloody-shirt tirades from Northern Republican demagogues, and leaves exposed the wicked and stupid partisanship which lies behind this measure.

A BLOW AT THE PIRATES.

JUDGE SHIPMAN of the United States District Court has rendered a decision of great importance to the international-copyright question, and indirectly to the morals of the community. As our readers are aware, the invention of a very cheap process for reproducing books by photography has started an attack on various expensive foreign books by domestic Pirates. The principal object of attack has been the 'Encyclopædia Britannica,' the English edition of which costs $9 a volume, and the American, issued by the Scribners, $5 a volume, but the Pirates are, by the photographic process, able to sell it at about $1.50 a volume. A swarm of them have accordingly fastened on the work and are deluging the market with the photograph. The books contain many articles and maps by American authors of distinction, who either hold the copyright of these articles themselves or have assigned it to the Messrs. Black of Edinburgh.

Now the Pirates, in stealing the book, forgot these articles and maps, and reproduced them by their photographic process and offered them for sale with the rest of the work. The Messrs. Black, with the Scribners and Gen. Francis A. Walker, have accordingly attacked one of the Pirates, the firm of H. G. Allen & Co., in the United States courts, and asked to have them enjoined from further publication and made to account for the proceeds of past plunder. The Pirates demurred to the bill, on the ground that, as the articles claimed as copyright have appeared in a book most of which, as belonging to an alien, is not copyright, or *publici juris*, as the lawyers say (meaning that anybody may steal it), they must take their chance with the rest. In other words, they claimed that if an American allows his property to be mixed up with a foreigner's property, which our Government does not protect, and which American robbers are therefore permitted to steal, the robbers need not discriminate, but may freely appropriate whatever first comes to their hand. They also set up the very amusing but very impudent plea that the insertion of these American articles in the Encyclopædia was a trap set for American Pirates, and that those who set it do not therefore come into court with clean hands, and are not entitled to redress. Judge Shipman has brushed aside these pleas. He has overruled the demurrer, and ruled that an American does not lose his title to his property by mixing it in with lawful plunder, and that "a citizen of the United States who is the owner of a copyright can assign the whole of such copyright to a foreigner."

Final judgment in the case has not yet been rendered, but as there is no dispute about the facts, there can, under this interlocutory ruling, be no doubt as to what it must be. It will of course cover the case of Funk and Wanamaker as well as that of the Allens, and we trust that the Messrs. Black and Scribner and Gen. Walker, in the interest of public morals, will begin suits against these worthies as soon as possible and prosecute them vigorously. The demoralizing effects both of their thefts and their excuses can hardly be overrated, owing to their standing in the Church and the conspicuousness of their religious professions. Funk is a doctor of divinity and the editor of a *Homiletic Review* (of all things in the world), and maintains publicly that he may steal all property not especially covered by statute or legal de-

cisions, and that the Government may ethically expose to plunder anybody it pleases by refusing him the protection of the law, and he is selling like wildfire the proceeds of a huge theft. Wanamaker is a Cabinet Minister and an active Sunday-school superintendent, and holds the Funk theory in its fullest extent, but defends himself against criticism in this particular case by maintaining that as he only "handles" and "pushes" the stolen Encyclopædia, and does not himself photograph or bind it, he is not only not to blame, but is worthy of praise. Every day that these shocking examples of profitable dishonesty, cloaked or disguised by religious professions, are offered to the youth of the country, infinite harm is done to public morals. We wish that we could hope that a meeting of the other doctors of divinity would be held in this city to consider Funk's case, and call his "successful book business" by its right name. We can hardly expect this, however, but we do call on those American citizens who have the opportunity of bringing the pair of them to justice under Judge Shipman's decision, to give them, for the honor of the country and in the interest of true religion and sound morality, the full rigor of the law.

To return to the demurrer in the above case, we have never seen anything quite so amusing in a law pleading, except the account given of the doings in the Twenty-third Street Opera-house, in one of the Erie suits against James Fisk, jr. Of course it is quite possible, and in fact very probable, that it does not contain the real sentiments of the learned author. It is almost certain, too, that it is not meant to be a contribution to humorous literature, for the last thing an equity draftsman thinks of is inserting jokes in his pleadings. It is undoubtedly meant seriously to influence the mind of a United States judge, by showing that, through the negligence or connivance of Congress, mere use and wont has not only taken a certain species of property from under the protection of the Decalogue, but has covered the stealing of it with a sanctity which a court of equity will rigorously uphold. The counsel's contention is—we mean to be serious and fair in reproducing it—that Congress, in refusing copyright to aliens, meant that their books should be stolen in order to make easy the diffusion of knowledge in this country; that this view is "not only sound in law, but is in full accord with the highest ethics of morality [*sic*] and the clearest principles of business integrity. It deprives the foreigner of nothing to which he is morally or legally entitled. It misleads no one; it does not entrap the foreigner, neither does it take from him the value of a cent that is his."

"The United States law of copyrights is the same to-day that it has been for two generations. It is, and has been, notice to all the world that a foreign publication can be reprinted in the United States without interference from any quarter. When the foreign complainants began the publication of the Encyclopædia, they knew that their exclusive field would be confined to countries outside of the United States. They went into the enterprise fully cognizant of the right of any person within the boundaries of the United States to reprint and republish it, volume by volume, as fast as it appeared. The profits of an exclusive American market did not enter into their calculations, and formed no inducement to the enterprise, for our laws warned them that such was impossible. What, then, have they to complain of when they are met by precisely the same adverse conditions which, when they started, they knew they must expect?"

From all this is deduced the conclusion that the plaintiffs, by sprinkling American articles over the pages of the Encyclopædia, meant to impede or hinder the exercise of that sacred right of plunder which Congress meant our citizens to exercise without stint, and have been guilty of an unworthy trick. Therefore, says the pleader—were he in any other calling we should call him a sorry wag—

"From the standpoint of sound morals and acknowledged judicial principles, the defendant herein is the meritorious party; the complainant is a Philistine from afar, seeking to reap where he has not sown. The American market was not for him. All his legitimate hope of profit lay in the tillage of other fields. For those, and not for ours, he dug his irrigating ditches and expended his labor. If the overflow has passed his boundaries and by American enterprise is made to fertilize our territory, he is none the poorer, and his claim to control our fields as he would his own is simply the brazen audacity of the buccaneer." These passages are sure to go the round of the civilized world as a huge American joke, but we warn foreigners that they are nothing of the kind. They are sober earnest, as understood in a respectable law office in this city.

We have amused ourselves, after recovering from the reading of them, by putting the argument in the mouth of a Dey of Algiers in the old days addressed to his Christian captives just brought in by one of his corsairs:

"Christian Dogs, what are you whimpering about? You knew when you started on this voyage, with your valuable cargo, for Smyrna, as you say, that you would have to pass through the Mediterranean, and that this sea has been for two centuries infested by my cruisers. You knew that we have practised piracy on such as you for many generations, and that it is necessary to the comfort and prosperity of this State and city. You knew it brought us wealth, and stimulated the energies of our young men and spread the fame of our flag. You knew, in short, you snivelling infidels, that you would probably be captured before you had got half way down the sea. Why did you sail on such a venture if you did not like being captured and losing your goods? You knew perfectly well, too, that there was nothing wrong in seizing your ship and selling you into slavery, because if there had been anything wrong in it, I or my predecessors should have forbidden it by an edict long ago. There is no law in Algiers against it, and therefore it is right. My captain reports, too, that you had guns on board and used them to resist capture desperately. You actually used weapons and shed blood, besides extinguishing your lights at night, in trying to prevent my subjects exercising their lawful calling, showing what an accursedly wicked and undeserving crew you are. In order to give you a lesson in really high morality, you shall, each of you, have two dozen on the soles of your feet, and be sold cheap, so that poor men may get hold of you."

A STUDY IN LEGISLATIVE MORALS.

THE investigation of the West End Railway scandal in the Massachusetts Legislature has been closed, and the evidence has been summed up in long and able speeches by the counsel for the railway company on one side and by the Attorney-General of the Commonwealth on the other. These two speeches, as published in full in the Boston newspapers, are most instructive reading. They reveal a condition of affairs in relation to modern legislative methods which we are sorry to believe is not peculiar to Massachusetts, but is to be found, with slightly varying details, in nearly every State in the Union. The main facts in the Massachusetts case are not disputed. The counsel for the railway company admits them, and offers no other defence than that custom made the course pursued the necessary one.

These facts can be set forth in comparatively brief space. There had been for several years a constantly growing demand in Boston for an elevated railway. Down to the close of the session of the Legislature of 1889, the West End Railway Company, which controls the horse-car lines of Boston, opposed the demand on the ground that an elevated road was not necessary. It succeeded in defeating legislation at that session, but hardly had the adjournment taken place when the company changed front and became an advocate of an elevated system, and began a campaign to obtain for itself the privilege of constructing it. It is the inside history of this campaign that the investigation has made public, and a remarkable revelation it is. The election of members of the next Legislature was not to take place till November, but the West End managers began in July the work of "fixing" them. Their first step was to retain as counsel, for a fee of $10,000, an eminent Republican leader who had been President of the Senate. He devoted himself to employing as his subordinates in the service of the company members of the lobby of the Legislature, who were also politicians in various parts of the State; men who had influence in the different counties; and men who had occupied positions on political committees and were known to have had great influence in previous legislatures, and who had a large acquaintance with persons who were likely to be chosen to the new Legislature. This work was laid out in a thoroughly systematic manner. The counties were arranged as districts, the larger ones each constituting a district, and the smaller ones being grouped several together in a district. Care was taken that in each county there should be secured the services of one man of influence, no matter to which political party he belonged.

When this had been accomplished, when the company had secured its men in every part of the State, a series of banquets was arranged for them by counties at the Algonquin Club in Boston. At each banquet the President of the company appeared, and at its close delivered a speech in favor of the elevated railway which the company desired to build. It was rumored about this time that the former seekers for an elevated-railway franchise were at work in some of the legislative districts of the State, and were using money freely to secure the nomination and election of members who would be friendly to their project. The West End people put out money freely in the first place to overcome this obstacle, and subsequently bought out their rivals by paying them a fixed sum to abandon the field and turn over all their lobby and other workers to their side. In this way the West End influence was unobstructed in all the nominating conventions.

When the Legislature came together, the county banquets, preceded by carriage rides, were continued, with the members included as guests. Where members were detained over night by them, their hotel bills were paid by the company. A lobby of nearly forty members was in constant attendance, and no less than eight attorneys, including two ex-Governors, all eminent legal lights of the Boston bar, were retained as counsel. Great efforts were made to "fix" the railway committees of the two houses in the interest of the company, and the succession of banquets and other seductive social attentions was constant and well-nigh or quite irresistible. The Senate succumbed easily, and the desired bill went through that body with little opposition. It was moving along serenely in the House till a Mugwump member, George F. Williams of Dedham, openly denounced the methods by which it had been pushed and demanded an inquiry.

It has been shown that in getting their project to the point at which Mr. Williams stopped it, the company spent $113,516. Of this amount $24,000 went to the county and lobby workers, $7,500 went for "reading notices" in the newspapers; the banquets, and cabs made necessary by them, cost $2,500; and a greater part of the remainder was for "counsel fees." There was no evidence that any member had been bought outright, and it would have been surprising if there had been, for, after the prolonged series of banquets and the systematic "fixing" which preceded and accompanied them, direct bribery ought to have been unnecessary.

In the speech of the counsel for the company, Mr. George M. Stearns, a lawyer justly celebrated for his brilliant abilities, there are many most instructive passages. He took the ground boldly that the company had followed the plan revealed simply because it was the only way by which the desired legislation could be obtained; they found the lobby there and they used it; they found that banquets were useful in getting a proper view of things into the minds of legislators, and so they gave them freely. As for giving money to the newspapers, what Mr. Stearns thinks of that is worth printing in full:

"Then we are charged with corrupting the newspapers. With $7,500 we have bought the press of Boston. We have bought the press of Boston for $7,500. God save the mark. If the press of Boston can be bought for that sum, if it is so venal, then I don't think its influence is worth purchasing. We did just what everybody does to the press. They report only current news. If you want your speeches printed in the newspapers, you must pay for it. They will state the fact that you spoke; they will give ten lines of what you say, but that is all. If you want the speech reported in full, you must pay for it, and that we did."

That puts the "reading notice" in its proper light as one of the agents by which the public mind is deluded. Mr. Stearns appears to think that venality depends upon the amount of the bribe; but even the price which he thinks is so small as to constitute a proof of virtue would not have been paid if the publishers who took it had refused to print the speeches without accompanying them with some mark indicating that their publication had been purchased. They were printed as news, and were therefore a fraud on the public, and it was because they were a fraud that the $7,500 was paid for their publication. In this way they were used, like the banquets, to create a sentiment in favor of legislation which, whatever its merits or demerits, its promoters had not faith enough in to seek to obtain by the plain and ordinary methods of old-fashioned honesty. That it influenced the judgment of newspapers which received it is shown by their conduct now in advocating the passage of the West-End Bill by the House, even after these revelations. They take the ground openly that Boston needs an elevated railway so badly, and the proposal of the West End Company meets the need so well, that it would be an unjustifiable concession to mere "squeamishness" to refuse to pass the bill. They are even inclined to feel sorry for Mr. Williams because he has not succeeded in proving that any member was bought outright.

LOCAL GOVERNMENT IN JAPAN.

TOKIO, May, 1890.

THERE is an old Japanese saying, once current in Kioto, "Tenka hatto, mikka hatto" (Government laws are but three-day laws). The accepted import is, that the central Government, its officers and laws, constantly change, and their influence is but a passing one; the true source of social order lies in the customs and regulations of the home, the hamlet, and the city. Whether this was a genuine deduction from experience, or merely an adaptation of the Confucian maxim, "By good morals govern and tranquillize your homes, then govern and tranquillize the country," is perhaps a question. It is certain, however, that the local political life of the Japanese people under the Shogunate was far more active and important than one is allowed to gather from the dry annals of the military aristocracy which form the staple material of the ordinary histories, whether native or foreign.

To comprehend the conditions under which Japan will enter upon parliamentary government, we must have some knowledge of the degree of success with which the nation rules itself in local affairs. To convey some such information is my present object. It will be desirable, however, to glance first at the local political life which has been left behind. The available materials for its study are, unfortunately, not yet plentiful. I rely for such facts as I have obtained upon some translations (recently made for me) of scarce local histories, upon the manuscripts of Dr. D. B. Simmons (an able observer, recently deceased), to which I have had access, and upon some private lectures of Prof. Konakamura, reputed to be the most learned Japanese legal antiquarian.

It is a matter of general knowledge that the administration of the country (confining ourselves to the last 300 years) was parcelled out, under the Shoguns, between themselves, the eighteen greater daimios, and the lesser landed nobles; and that the last two classes maintained a certain amount of legislative independence, and surrounded themselves with a military body, the Samurai, for whose government codes of rules were formed. But these classes of the population (with few exceptions) were consumers only, not producers. In number they seldom, if ever, exceeded one-fifteenth of the whole population. Below them a great national life went on. Their particular regulations were but a small part of the usages and rules which secured social order and formed the characteristic law of the country.

The division of the daimiates for purposes of administration was, in its general features, simple enough. Each was divided into *mura* (villages or townships). Over the *mura* was a *nanushi* (called *shoya*, in the west). The general management of the producing population of the daimiate was placed by the lord of the soil in the hands of an officer called *kori-bugyo* (county superintendent), or, in the Shogun's dominions, *daikwan* (deputy). If the district exceeded a certain size, the title was *gundai* (county chief). Sometimes a *gundai* supervised several *daikwan*. Between the *nanushi* and the *daikwan* was often an *o* (chief)-*nanushi*. Below the *nanushi* were various officers—the *kumi-gashira* (company-chief), whose duties were executive, the *toshiyori* (elder), and *hyakusho-dai* (farmer-chief), whose offices were advisory.

In appearance this arrangement was merely a series of subdivisions of executive duties. In fact, there began at a certain point in the scale a vital distinction. Above that point all power was received from above; below it, all came from below. The *daikwan* and the *gundai* were always appointed by the central authority, in Bakufu (Shogunate) districts (*ken*) as well as in the other feudal divisions (*han*). The *nanushi*, on the other hand, were as a rule elected by the people (subject to approval by the *daikwan*). They were identified with the people, protected them against official severity, and were their representatives in all questions arising between the Government and the people. The *daikwan's* powers involved all that concerned the interests of the central Government. Roughly speaking, those interests were that the people should make the land yield the greatest possible returns, though this purpose was seldom carried out oppressively or from a short-sighted point of view. The *daikwan* and his assistants therefore supervised the system of irrigation and methods of cultivation, had full charge of taxation, assessed the lands (a matter of extreme complication), allowed rebates for crop failures, etc., and collected and forwarded the taxes. Besides this he had judicial functions, fixing land boundaries and hearing appeals from the justice meted out by local authorities. To many sequestered communities he was the em-

bodiment of supreme authority, and Shogun and Mikado were only names.

In the local interests of the people, however, their own usages obtained. They had their own local expenses, their taxation and their financial problems. They repaired roads, each person owing a quantum of service. The *mura* owned grass-land and forests as public property, and made regulations for their use. As a rule all ordinary administration of justice, civil and criminal, began and ended within the borders of the *mura*. It was, to be sure, a life of customs, not codes; of arbitration, not litigation. The officers of the community were advisers, hardly rulers. The *nanushi*, although he was elected, and by ballot, too, was usually some patriarch, marked out beforehand by the general opinion. Spirited electioneering, however, sometimes took place; a tie vote was occasionally recorded. Curiously enough, a mere majority was not decisive; a clear preponderance of favor was required. Owners of land seem alone to have had the franchise, but other considerations were also of importance. To vote for one's self was a breach of good manners; one who once did so has been dishonorably immortalized in one of the old chronicles.

By the seventeenth century, if not before, certain of the local usages, mixed with regulations of the Bakufu and the Emperor, were customarily committed to writing as a sort of constitution. This document was signed and sealed by the head of every *go-nin-kumi* (five-person-company, a subdivision of the *mura* to some one of which every person must belong). It was called *na-yosei-cho* (name-collection-register), or, more simply, *kumi cho*. Of these documents, Dr. Simmons, in his journeys, saw many still remaining in all parts of the country. I know, however, of only four copies which are now accessible—one in the Imperial University Library, one among Dr. Simmons's papers, and two in my possession, sent by courteous officials in Chiba and Kioto. Future research in this field would be very fruitful.

Such, in outline, was the local self-government of the past. It was not everywhere the same; in details it varied widely. In the cities, particularly, it received a special development. But in general the elements remained the same.

Turning now to the story of local government since the Restoration down through the last twenty-three years, and compressing it into a sentence, it has been a veritable leading of the Israelites out of the wilderness, a deeply interesting instance of the systematic political education of a people. As a matter of course, broad modern influences have contributed much. There have been intervals, too, when other pressing problems forced a suspension of this work. Yet so far as governmental direction is concerned, it has certainly been a difficult task skilfully accomplished.

The period from 1867 to 1889 falls into two parts, dividing at the year 1878. The former was occupied with testing the capacity of the people for self-government; the latter with extending to them a larger and larger measure of power, and in advancing towards a proper degree of decentralization. At the beginning, however, the political situation was such that the establishment of a strong central power was the paramount requirement. The local divisions, as has been said, had been *ken* (Bakufu districts), and *han* (clans), with three *fu*, or metropolitan cities. By skilful management on the part of the Government, their object was gradually attained. The only measures relevant to our subject were the transformation, early in 1869, of *daimio* into temporary *chi-han ji* (clan-governors); and the final substitution for *han*, by decree of August 29, 1871, of a uniform system of *ken*, with *chi-ji* or *ken-rei* (governors) appointed by the Government. There were at that time three *fu* and sixty *ken*.

Meanwhile the foundation of the present system was laid by the decree of February 5, 1869, a sort of constitution for internal affairs. It provided for the uniform administration of *fu*, *han*, and *ken*, and regulated in general terms the principal departments of administration. For a while, at least, the old system was not in practice much altered. At the head of the *mura* was the *ko cho* (sometimes still called *nanushi*) with his assistants. The popular favorite was usually appointed by the Governor. Several *mura* together formed a *kori* or *dai-ku* (county), under a *ku-cho*, who was usually selected from among the *ko-cho*. The *ken-rei* had charge practically of the entire administration, and served as a judicial officer as well. The police were controlled from Tokio.

But a step forward was soon taken. The third clause of the decree of February, 1869, read: "Holding of assemblies. When existing laws are to be amended or new ones to be enacted, public opinion shall be consulted, so that legislation may be impartial and the people may be content." Within two months' time an assembly chosen by popular vote had been summoned in Osaka, and in the course of a few years a system of ward (*ku*) assemblies was added. *Gi-ji-sho* (parliament) was at first the general term used, but *kwai* (assembly) has since come into general use for local bodies. During the next eight years this example was followed with increasing frequency. The credit of the next assemblies seems to belong to the *ken* of Yamaguchi and Hiogo; and after these to Chiba, Niigata, Oita, and others. In Tokio no popular assembly seems to have been formed, but only an assembly composed of the heads of smaller districts. Indeed, in Chiba *ken* the members were at first *ku-cho* and *ko-cho* only, but they soon began to be elected by the people. So too, in this *ken*, the presiding officer, at first the *ken rei* himself, came to be one of the members, chosen by themselves. In this *ken*, it may be added, *ku-cho* and *ko-cho* were chosen by popular election for some years before the law of 1878.

While on the one hand the people were beginning to take part in the management of local affairs, the process of decentralization had begun. As early as 1873 the Government had by a general order recommended the *ken-rei* to establish local school departments, and to have the officials elected by the people; and the measure was very generally carried out. In 1876 the judicial functions (which in 1872 had been in many districts taken from the *ken-rei* and placed under the Government) were vested in a series of courts, one *Daishin-In* (Supreme Court), one *Koso-In* (Superior Court) having four circuits, and a *Saiban-sho* (court of first instance) in the capital of each *fu* and *ken*. Justices' courts were afterwards established here and there in the larger towns. The first two had been established in the previous year, but were now reorganized.

Finally, in the early part of 1878, at a meeting of the *Chiho-kwan Kwai gi* (assembly of local officials) held in Tokio, the Government submitted a bill establishing popular assemblies in each *fu* and *ken*. A similar bill had been submitted to the same body in 1875, and they had declared in favor of constituting such assemblies of the appointed *ku-cho* and *ko-cho* only; but the Government had concluded that the time was ripe for something better than that. The measure became a law on July 22. It was liberal and modern in spirit and in detail, though it simply introduced the assembly to a share in deliberation, and gave no complete legislative power.

On the same day were published a law naming the various purposes (schools, police, roads, etc.) the taxes for which were to be laid by the local government; and a law dividing *ken* into *gun* (counties) and *son* (villages or townships), and dividing *fu* into *ku* (wards) and *cho* (precincts). A law of July 25 revised the law of 1869, and provided for the appointment of subordinate officers by the Governor. On August 26 it was ordered that the heads of *cho* and *son* should be elected by the people, subject to the approval of the Governor.

The first three of these laws have been called *San Dai Shimpo* (The Three Great Laws). On the same July 22 it had also been decreed that "in each of the *fu* and *ken*, *ku*, *cho*, and *son* assemblies are to be held, as soon as circumstances permit, to determine the amount of taxes for such district." In a few years such assemblies had come into general existence, and uniform regulations, dating from 1881, but revised in 1884, modelled them after their provincial predecessors.

In the period beginning with 1878 the local-government system has advanced steadily, if slowly, in the direction of a greater decentralization and a broader popular prerogative. Under the first head we may notice: in 1880, the relinquishment to the local government of taxation for prisons and public works; in 1881, the establishment of local committees (appointed) and assemblies (elected) for agriculture, trade, and commerce, and the granting of the power to establish local educational boards; in 1882, a further extension of the sphere of local taxation; in 1885, greater freedom in shaping local educational methods; in 1886, a revision of the administrative system, giving wider powers to local officials; in 1888, the surrender of the *fu kin* (licensed-prostitution tax) to the local governments. Under the second head may be noted: in 1879, the exemption of Assembly members from arrest during a session without consent of the President; in 1880, the substitution of the Assembly President for the Governor as the one to pass upon resignations and requests for leave of absence, the grant to Assembly of the power to expel members for neglect of duty, and to address the Government in criticism upon the Governor; and in 1887, a greater accountability of the Governor to the Assembly in reporting details of work.

Practically a new period begins with 1889. A new and comprehensive law for city (*shi*), town (*cho*), and village (*son*) government was submitted to the Senate (*Genro-In*) in 1887, and to the Assembly of Local Officials in 1888, and was enacted April 14, 1888, going into effect April 1, 1889. By it the local subdivisions are somewhat changed, a *gun* (county) being now divided into communities of three classes (*shi*, *cho*, and *son*), graded according to population, and each with a popular assembly; and each *fu* consisting of one main "city," with suburban districts. Ward (*ku*) assemblies may be established when desired. A few of the notable features are (1) the use of certain terms new to the language, such as *komin* (citizen); (2) the declaration of the principle that "a city, town, or village shall be considered as a juristic person," that is, as a municipal corporation, not merely an administrative subdivision; (3) the election of mayors (*shi-*, *cho-*, and *son-cho*) by the city, town, or village assembly; (4) the division of the electors into classes according to the amount of taxes paid, each class electing an equal number of rep-

resentatives—a system similar to that in vogue in Hamburg, Brunswick, and other German cities; and (5) the creation of a second or aldermanic chamber. A similarly comprehensive law reorganizing the *fu* and *ken* governments will soon be issued.

Such has been the progress of local self-government in the Meiji period. The difficulty of obtaining accurate information on the subject is very great, and I can hardly hope that the preceding account is entirely without error. My object has been not to describe in detail the system as it exists, but rather to call attention to the steadiness with which progress has been made, the spirit in which the Government has carried out the work, and the carefulness with which the institutions have been adapted to the condition of the people. How far the people themselves have risen to the occasion I propose to notice in another letter.

JOHN H. WIGMORE.

Correspondence.

REINFORCEMENT.

TO THE EDITOR OF THE NATION:

SIR: There is hardly a number of your paper which does not furnish me with a text. Last week's contains no less than three, of such crushing force that it seems as if they only needed to be stated to carry conviction.

(1.) The reckless appropriations both by the Senate and the House threaten to convert our surplus into a deficit. But is not that the natural result of an arrangement under which everybody has an interest in expenditure and nobody in economy? If you prepare a rich and sumptuous feast, and then let a dozen hungry men into the room with nobody to guard it, can you wonder if, in the course of an hour, the feast has disappeared? Every Senator and every member of the House represents a locality, and is anxious to secure the largest possible share of the national expenditure, with a wholly disproportionate interest in defending the Treasury, which has no official defender. It is for this reason that the forcible argument of Mr. Plumb of Kansas, quoted by you, fell so flat. How different would the same words in the same place have sounded if uttered by Mr. Windom!

(2) Your sketch of the silver debate in the Senate shows this and much more. It shows how, under the five-minute rule and with unlimited power of moving and taking a vote on amendments, a few sharp, shrewd men, with a keen, selfish interest, can manipulate and disorganize a large body of which no member has any direct interest or authority to make a determined stand against them. Very few Senators can have a direct interest in the Silver Bill; it is certainly not any doctrine of the Republican party, and it would be a very poor compliment to a body occupying such a position before the world as the United States Senate to say that its members did not understand the injurious effect upon the country. It is a pure case of weakness of defence against attack. The only hope now, and a faint one, is a veto by the President. The silver-men will take care to bring such pressure on him that he would be more than human to resist it. And even if he does, it leaves the field open for another attempt next year. How different it would have been if the official defender of the Treasury and of the national interest had followed every stage of the bill, open to cross-examination by independent members and looked to by the country to explain its effect.

(3.) Mr. Blaine has written a letter criticising the action of the Senate on the Tariff Bill, and the President has transmitted it to the Senate, which has received it with the most fatal of all weapons—silence. A bit of newspaper gossip quotes Mr. Blaine as saying that he would give two years of his life for a chance to debate the bill in the Senate. Why on earth should he not have it? We may not agree with him or his methods; but one or two days of open debate, with himself and Mr. Windom taking the lead, would do more to enlighten and arouse public opinion than years of the lobbying and intrigue which are now the only methods of settling the tariff question. Mr. Blaine could do no better service to the country or his own reputation than by giving those two years or more to an appeal to the people to compel the Senate to give to him, or to his successors, that chance which it will never give of its own accord. G. B.

BOSTON, June 28, 1890.

THE NATIONAL FINANCES.

TO THE EDITOR OF THE NATION:

SIR: In view of the almost universal complaint—more especially by the agricultural interest of the country—of the burden and inequality of Federal taxation, it seems important that certain points connected with the same, not immediately bearing on the questions of free trade or protection, should at the present time be especially pressed upon the attention of the American public.

The amount of money necessary to meet the expenditures of the Federal Government for the fiscal year commencing July 1, 1890, was estimated by Secretary Windom in his report for December, 1889, at $341,400,000. The appropriations already authorized by the present Congress, or certain to be authorized, will increase these figures to an excess of $400,000,000. But for the sake of argument, and in order to avoid anything of hypothesis, let $400,000,000 be assumed as the correct figures.

Now, as the Federal Government never has any money except that which the people give it through the agency of taxation, and as the people as a whole never have any money to give except what comes to them as the result of their work, or from an exchange of the products of their work, it is clear, as Mr. Atkinson has shown in one of his recent essays, that what the Government really wants of its people, when it calls upon them for taxes, is work, and that the methods of taxation are only methods for collecting and using the products of work. If we assume that the average earnings of the larger part of the people who work with their hands in the United States are one dollar per day (and this is an over-estimate, for the average wages of those who follow agriculture for a living are not in excess of eighty-five cents), then four hundred millions of expenditure by the Federal Government next year, will mean four hundred millions of day's work; or, in other words, for every dollar that the Government of the United States expends, somebody must do a whole day's work to furnish it.

Even if the highest estimate be put upon the per-capita product of the whole country—including a valuation of the domestic consumption of farmers and farm laborers—the average earnings of each person occupied for gain in all arts and all branches of mental, manual, or mechanical work cannot exceed two dollars for each working day, or $600 a year, on which three persons depend for their support, giving a gross product of sixty-six and two-thirds cents each. Deducting the domestic consumption of farmers, the cost of State and municipal government, and the necessary addition to the capital of the nation, the net average earnings of the whole population from which national taxes are to be taken cannot exceed fifty cents a day, or what fifty cents a day will buy. Multiply by three, and the maximum average wages or earnings of every one occupied for gain, from the president of the great railway system covering thousands of miles to the scrub who washes the floor of the station, cannot exceed $1.50 per day. How unequally this is divided every one may estimate. But is the burden of national taxation which takes six dollars' worth of work out of each one hundred and fifty of product, or thirty dollars' worth of the product of each family of five persons who live on an income of seven hundred and fifty dollars a year, apportioned equitably in respect to income? Far from it; for, as a matter of fact, the cost of the National Government, estimated at $400,000,000 per annum, represents not less than twenty days' work at $1.50 a day out of 300 days in the service of each family of five persons; and the less the income the greater the burden of work required.

The question which next naturally suggests itself is, What are the people who will work next year 400,000,000 days—in heat and cold, on the farm, in the forge, mine, factory, shop, and counting-room, in the cab of the locomotive, or on the deck of the vessel, with pick and shovel, hammer and shuttle, with nimble fingers, skilful pen, and educated brain—in order to give their Government the money it says it must take from them next year, to receive in return for such working? A correct answer, expressed in general terms, and which every citizen who keeps a general run of the details of government ought to be able to frame for himself, would be as follows:

Work contributed in the form of taxes to the Government, and wisely expended by it for the insuring of security to life and property, the administration of justice, general education, general health, and improved facilities for the intercommunication of intelligence and the reduction of the expenses of transportation, brings with it the fullest equivalent of recompense or profit to the individual or community contributing. But work performed and contributed to Government in the form of taxes which in turn are expended for other purposes—as for the building of enormous "iron clad" vessels which are likely to be obsolete before they are completed, and which, if the advice of Washington, to avoid intermeddling with foreign nations, is heeded, will never be wanted; or for the payment of pensions to persons who having no just claim on the Government, have other and adequate means of support, and no right to ask other citizens to work for them; or for the purchase and hoarding of enormous quantities of silver under the pretence that it is needed as the basis of currency, when an equally good and sufficient currency can be provided not only without expense, but with a profit to the people, by the Government; or for enabling people to make livings or fortunes by unnaturally advancing the prices of commodities—is work that entails unnecessary labor upon the worker, favors the unequal distribution of wealth, and in its influence is antagonistic to the principles and existence of a free and democratic form of government.

Let no man whose daily earnings are essential to meet his daily needs deceive himself with the idea, that because no Federal tax-collector makes a personal demand on him for taxes, he does not perform the labor that is em-

bodied in and produces them. With a very few exceptions, all the revenue—money—that the Federal Government receives is derived from taxes on commodities, or things which people consume in their living or use in their labor; and is paid, in the first instance, by those who consume or use them. And it needs no argument to prove that the burden of such taxes must be disproportionately heavier on the man who from necessity expends all or nearly all his earnings on living than on him who only expends one-half, one-third, or a smaller proportion of them for like purposes, and lays up the surplus for increasing his income. Neither should it be overlooked that, under the existing system of deriving revenue from taxes on commodities, the poor are not unfrequently required to perform proportionally more work to earn them than the rich, because the taxes levied on the articles of a given class of commodities consumed by the poor—as is notably the case with woollen goods—are much heavier than on those consumed by the rich.

But assuming that four hundred millions of dollars ($400,000,000) must now be annually collected of the people of the United States to meet the expenditures of the Federal Government, there will probably be a unanimity of public opinion that this amount should be obtained in the most economical and effective manner, and with the least burden and annoyance to those who are to be called upon to contribute work in the form of taxes. But to what extent can such a result be compassed by sure and simple methods? Let us see.

The revenue derived during the fiscal year 1889 from the existing taxes on distilled spirits and wines was $74,312,200 internal, $7,123,062 customs; total, $81,435,268.

From malt or fermented liquors $23,723,835 internal, $663,337 customs; total, $24,387,172.

From tobacco $31,866,860 internal; $11,194,486 customs; total, $43,061,346.

From sugar and molasses $55,995,137.

Here, then, from the above-enumerated four articles or classes of articles, $204,878,923, or a fraction over one-half of the $400,000,000 required to defray the annual expenses of the Federal Government, can be certainly and easily collected. In respect to three of these articles or classes of articles—liquors and tobacco—from which $148,883,786, or 37 per cent. of the required revenue of four hundred millions, is now raised, it is entirely optional with the citizen whether he will assess himself and act as tax-collector for the Government, or not. And in respect to the fourth article or class, namely, sugar, although the rate of taxation is high—70 per cent. in 1889—it would be difficult to name any commodity in general use which could be taxed with a view to revenue with so little of burden to consumers and so little of detriment to industry. It is so largely produced, dealt in, and consumed, and enters to so small an extent as a crude material into other industries, that it comes to the consumer less burdened with other than Government taxes, merchants' profits, and expenses of distribution than almost any commodity that can be mentioned. Of all articles retailed, sugar is the one whose cost is least augmented by retailing, and, in fact, is said to be often sold by grocers without any profit as a means of attracting other trade. And yet, by a not inconsiderable portion of the American people, it is believed to be good public policy to throw away all, or nearly all, the advantages accruing from retaining the above enumerated sources of revenue, by totally abolishing the internal-revenue system, and not only repealing the present customs revenue of $55,000,000 on sugar, but making the occasion of such repeal a reason for augmenting the existing taxes to the extent of at least seven millions of dollars in the way of bounties on its domestic production. Has there ever been in the whole history of taxation anything more palpably absurd, or such a demonstration, on the part of all responsible persons, of inability to exercise common sense?

Is it not self-evident, also, if four hundred millions must every year be collected from the people to meet the expenditures of the Federal Government, and if the consumption of liquors, tobacco, and sugar is to be no longer regarded and utilized as a proper source for supplying some two hundred millions of this requirement, that the immense sum thus diverted and abandoned will have to be collected just the same; and that, too, by spreading an equal aggregate of taxes over a multitude of other commodities, involving increased expense and annoyance in collecting, increased burdens upon domestic industries, and increased opportunities for using taxation for the promotion of private rather than public interests?

The increase in recent years in Federal expenditures, and consequently in taxation, is also worthy the attention of the American people. Between 1870 and 1880 the increase in the net ordinary expenditures of the Federal Government, exclusive of interest and payments on the national debt (which payments represent the legitimate continuing burden of the war), was less than 4 per cent., or from $164,421,000 to $169,000,000, while the increase during the same period in population was 30.08 per cent. But between 1880 and 1889, inclusive, the increase in the same class of national expenditures, notwithstanding a reduction in the annual burden of interest of $57,000,000, was over 42 per cent., while the increase in population during these same years could not have been in excess of 30 per cent.

A burden of annual taxation of $400,000,000 on a population of sixty-six millions is a little over $6 per capita, or $30 on every family of five persons; but the ultimate burden of a system of indirect taxation on imported commodities on the final consumer of such commodities is certainly considerably greater. Recent investigations in this matter instituted in the English colony of New Zealand, where the revenue of the State, derived mainly from customs taxes on imports collected from a sparse population, affords unusual facilities for investigation, indicate that the burden of such taxation is increased to the final consumers of the taxed articles to the extent of at least 33 per cent. In the United States the increment is probably much greater. The average burden of Federal taxation for the next fiscal year will therefore certainly be at least $40 on every family, and promises in the immediate future to be greater rather than less. To the man with an income of $20 per day, or some $6,000 per annum, this is not much, but to the farmer who is raising and selling corn for 15 cents a bushel, and to the operatives in the great leading mechanical industries of the country, whose annual incomes average less than $400, it means deprivation.

DAVID A. WELLS.

THE LOUISVILLE POST-OFFICE.

TO THE EDITOR OF THE NATION:

SIR: In view of some of President Harrison's recent performances as a civil-service reformer, I wish to call attention to the Louisville Post-office as furnishing an illustration of his sincerity, without which no collection of cases would be complete.

The term of the present Postmistress expired more than a month ago. She has held the office for twelve consecutive years, having been first appointed by Mr. Hayes. As far as one can judge, she has proved an exceptionally efficient and progressive official. There has been as little "politics" connected with her administration as has been possible under a "spoils" régime. It is true that, after her reappointment by President Cleveland, a few Republicans gave way to as many Democrats; and likewise, after the inauguration of President Harrison, these same Democrats were supplanted by their opponents. But, while the Postmistress cannot for these reasons be called a civil-service reformer, the changes in question have been comparatively few and have been slowly made; the damage has been perhaps as slight as possible, and her concessions to partisan spirit have probably saved us from a "clean sweep," such as a new appointment would have involved. Besides, her employees have never displayed offensive partisan activity.

The objections to her reappointment now, however, do not rest upon the pretence that she has been, on the one hand, an incompetent official, or, on the other, that she has not been an ideal reformer. The former would be manifestly false; the latter would not trouble the party leaders either here or at Washington. The sole ground, then, upon which she is opposed is this, that, under the management of a woman, the Louisville Post-office counts for nothing as a political factor; the chief point made by the other applicants, that they can make the office tell in favor of the party in general at all times, and in favor of Mr. Harrison in particular in 1892.

It is reported that the President personally favors Mrs. Thompson's retention; the Postmaster-General is supposed to differ from him. Now, admitting, as every one does, that nothing but a political consideration stands in the way of her reappointment, how long, I ask, would such opposition hinder a President honestly bent upon civil-service reform? Nay, more, would such an Executive suffer himself for a moment to be surrounded by advisers whose conduct in this case, as often before, betrays their complete contempt for the cause he has pretended to favor? Mrs. Thompson may, it is true, still be reappointed; but as her fitness has never been questioned, very slight weight can, in that event, be claimed for the fact that she has already proved a capable official. Luckily enough, she has warm friends among those classes of people in whom our pious Chief Magistrate especially trusts, and with whom he devoutly wishes to be numbered. Assuredly the friction of political activity must have worn off the fine edge of the Postmaster-General's religious feeling, else he too would certainly throw the weight of his influence with that of the rest of the godly. But, however Mr. Wanamaker's strange departure may be explained, the President is far more anxious not to offend Mrs. Thompson's friends than he is to give the people of Louisville a competent Postmaster. Were this last the sole consideration, Mrs. Thompson would have been promptly renominated; the delay in the settlement of the matter marks the painful process by which the Executive mind is trying to determine whether Mrs. Thompson's friendship or a politician in the Post-office will avail him most two years hence.

A. F.

LOUISVILLE, KY., June 20, 1890.

AN INQUIRY.

To the Editor of The Nation:

Sir: I have read with great satisfaction your arraignment of certain pious humbugs as "book-thieves" and "pirates," and am astonished that such a Mount Sinai of morality as your valued paper undoubtedly is should print the following advertisement: "By putting a few chemicals in ordinary cooking gelatine we have enabled American publishers to sell a full set of the 'Encyclopædia Britannica' for $38.50, while the English edition costs $190 per set." Why not advertise kits of burglars' tools accompanied by the information that they were used with great success in a recent well-known bank-robbery?

Very respectfully yours,
Charles Edward Stowe.

Lenox, Mass., June 27, 1890.

[We have already, in reply to a similar protest, given reasons for not attempting to discriminate, in our advertising columns, between the grosser and the smaller violators of the copyright principle. As regards the ingenious and useful invention by which whole books are now as readily reproduced as engravings hitherto have been, the abuse of it is again something that we must leave the public to correct. There is nothing in the process itself immoral, and, in fact, as we are informed, the illegitimate demands upon it are far behind the legitimate—as where a costly copyright book printed from type needs to be renewed in answer to a fresh call, which would not, nevertheless, justify the prime cost of manufacture; or where it is desired to avoid the errors of resetting, as in the case of logarithmic tables; or where the plates have been destroyed by fire, etc. Undoubtedly, the achievement of converting the 'Britannica' into a cheap and popular work is the best evidence of the excellence of the process, and as such is naturally put forward in an advertisement. We do not absolve the firm in question from the moral responsibility we lay upon their piratical patrons; but Mr. Stowe will see that he might as well exact of us exclusion of their advertisement because we *know* them to have made the 'Britannica' reproduction, as because they proclaim it themselves. As well might we turn away advertisements of Wanamaker's store, or of Funk & Wagnalls's *Literary Digest* or *Homiletic Review*.—Ed. Nation.]

SHORTENING THE COLLEGE COURSE.

To the Editor of The Nation:

Sir: In the discussion excited by the proposal to cut down the academic course at Harvard University from four years to three, the fact seems to have been overlooked that the collegiate course at the Johns Hopkins University has, ever since the founding of that institution, extended over but three years. The proposition is discussed with all the spice of a perfectly new subject, whereas it has been in successful operation for fourteen years, in one of the most progressive universities in the country.

The undergraduate department of the Johns Hopkins University, although less widely known than the graduate department, is no less thorough. Those pursuing the collegiate course are largely under the instruction of the same professors as the graduate students, and, what is more important, the same spirit of application and love of study is rife among both. If we were to test the feelings on the subject of those connected with the University, the unanimous testimony of all would, I feel sure, be that three years spent in preparation for the degree of Bachelor of Arts is ample, at least for the average student. There is nothing, however, to prevent his taking four, or even five years, to fulfil the requirements, if he deem it necessary.

Neither of the possible objections mentioned in your editorial is felt to have any weight. There has never been any "long-established custom" of having a four-year course, so that the three-year course is not thought of as an innovation. The other objection to the plan, that the "process of absorbing intellectual influence is thereby diminished," is, I think, more than obviated by a higher matriculation standard and increased application and concentration on a somewhat smaller number of studies.

The real meaning of the word "education" is kept in view, that it is not a mere cramming with facts, however useful and interesting, but a development of the human mind, so that it may be able to grapple successfully with the great problems of life which may in the future present themselves. And this, it is claimed, is accomplished at least as well in the three years of concentrated study in the undergraduate department of the Johns Hopkins University, as in many of the colleges which still retain the time-honored four-year course.

R. E. Carson.

Baltimore, Md., June 23, 1890.

To the Editor of The Nation:

Sir: In a recent editorial you again discuss the question whether the course of Harvard should be cut down from four to three years, as President Eliot proposes. You say that the objections are raised on two grounds only: first, an unreasoning faith in the time-honored course of a Freshman, a Sophomore, a Junior, and a Senior year; secondly, the wish that the cultivating influence of the University should not last any shorter time than it does now, and the belief that less than four years will not exert a lasting effect.

My objections rest on entirely different grounds, and are coupled with a very tangible remedy for the supposed evils arising from the inordinate length of the present course.

For those who wish to devote themselves to a scientific or literary course of life, a study of four years after "ripeness" to enter Harvard, is not too much. Johns Hopkins has cut down her course to three years, and, as a consequence, has more post-graduate than undergraduate hearers. Even at Harvard there are many whom the four years' academic course does not satisfy. But men who wish, after taking their bachelor's degree, to study law, medicine, or divinity thoroughly—that is, to study one of those branches for three years—find that they are too old (about twenty-five or twenty-six) before they can enter upon a profession; eighteen *plus* four *plus* three being equal to twenty-five. They are perfectly right. But there is no reason in the world why any one who proposes to take the degree of M.D. or D.D. or B.L. should have his degree of A.B. in his pocket before entering upon his professional studies, except the notion prevailing in England and America, but nowhere else, that a degree in law, medicine, or divinity is no proof of learning in the holder, but only a certificate that he may earn his bread by healing people, attending to their lawsuits, or preaching to them. On the continent of Europe it is different, and no one there who prepares himself to become a lawyer, physician, or preacher ever thinks of first attending for four years or even for three years the lectures of a "philosophical faculty," which faculty corresponds in every way—especially in the age of its students—to a course at Harvard or Johns Hopkins.

It was not always and everywhere thus. Before 1848, the "Latin School" in Austria took boys from the age of ten to that of sixteen; they then were deemed ripe for the University, but had there to take a two-years' course in "philosophy" before entering the law, medical, or divinity schools. Now the "Latin School" of six years has been turned into the "Gymnasium" of eight years, and "philosophy" for law or medical students is very properly dropped. The old Austrian system was pretty much the same as that of Harvard of the same time; for sixteen was then the ordinary age for entering college, and a boy of that age might well go on for two or even for four years to broaden his general culture.

The Harvard catalogue of 1889 shows that nearly all the divinity students, 80 per cent. of the law students, and 47 per cent. of the medical students held a college degree. Under these circumstances it would be no hardship to demand of every one who wishes to enter any one of the three schools as a regular student, that he should be fitted for the *second* year of the academic course. The group of studies in the first year in which he should be examined on admission might be prescribed for each of the three professional courses: for instance, those who wish to enter the Law School must take the historico-political group of studies. This being done, the academic character of the students in the three "schools" would be guaranteed. There could be no boors among them simply trying to get to money-making in the shortest possible time. In the next place, no young men without culture being in the schools, a plan of teaching the three professions could be introduced, treating them as branches of learning. A source of legal lore, for instance, need not be neglected simply because it is accessible only in French or Latin. A physical demonstration need not be skipped in the Medical School because its proper understanding requires a knowledge of trigonometry. The comparative method, the true basis of all modern science, can be followed even in theology, when only men trained to the age of nineteen in scientific habits are to be dealt with.

But one thing more is necessary. The attendants at the professional schools ought to be made to feel that they are children, not mere step-children, of the Alma Mater. A first-year law student must be considered a Sophomore, a third-year law student a Senior. The degree from the professional schools should constitute its holder an alumnus of Harvard, upon an exact footing with the Bachelor of Arts, entitled in like manner with him to take a part in the government of the institution. Then the students of the three schools will no longer have any motive for wasting their best years in the academic course.

These very simple, and, in the present condition of things, easy and practicable changes would give to Harvard University, what it now lacks, a plainly visible purpose, making it a place to educate (1) literary and scientific men, (2) learned lawyers, (3) learned physicians, (4) learned ministers, and put it exactly on the footing with the universities of Germany, Austria-Hungary, France, Italy, the Netherlands, etc., to which it has gradually

been tending. The exclusion of law and medicine from the course of academic instruction at Oxford and Cambridge is one of the many accidents and peculiarities in English life and customs, of which America ought long ago to have got rid altogether.

Very respectfully, L. N. D.

Louisville, Ky., June 22, 1890.

Notes.

A COMPLETE catalogue of the late Dr. Döllinger's library is in course of preparation, and will be published at an early date. Copies of it may be procured by applying to Fräulein Döllinger, at No. 11 Von der Tannstrasse, Munich, Germany. It is to be hoped that some American university may be so fortunate as to secure this extremely valuable collection of books.

A new volume of Dr. Döllinger's academical addresses ('Akademische Vorträge'), containing among other discourses that on "The Influence of North America in Literature," is already in press. Also, a Life of Pius IX., a treatise on the Council of Trent, an essay on the Inquisition, and a correspondence with the Papal Nuncio, the Archbishop of Munich-Freising, and other ecclesiastical dignitaries, touching the Vatican decrees, have been found among his posthumous papers, and will shortly appear in print.

A second edition of 'Aryan Sun Myths: the Origin of Religions,' by Sarah E. Titcomb, will be published by the author herself at 83 Pinckney Street, Boston.

A revised edition of Prof. Jesse Macy's 'Our Government' is set down for July by Ginn & Co., Boston.

'Toxar,' by the author of 'Thoth,' is announced by Longmans, Green & Co.

A new translation from the German of W. Heimburg, by Mrs. J. W. Davis, 'Lucie's Mistake,' will be published immediately by Worthington Co.

The American Economic Association will soon have ready a monograph on canals, in two parts, viz., "The Canal and the Railway, with a note on the Development of Railway Passenger Traffic," by Prof. E. J. James, and 'Canals and their Economic Relation to Transportation,' by Prof. L. M. Haupt. It may be had of the Secretary, Prof. Richard T. Ely, Baltimore.

A work which it does not fall within our province to criticise, the 'Cyclopædia of Manufactures and Products of the United States,' published in this city by the Seeger & Guernsey Co., nevertheless has an interest for not a few of our readers, and deserves mention. The merest glance at it shows it to have been executed in a very orderly and painstaking way. The arrangement is alphabetical of departments, but there is also a copious index to articles which renders reference easy, whether one is in search of "Advertising Thermometers," "Films, Photographic," "Garments, Dress-Reform," "Quarter Sawed Lumber," "Teething Rings," "Yeast Cakes," or "Zinc Tubing," etc., etc. This is information convenient not only for shippers, but for the mass of private purchasers. The list of firms, though liberal, is not exhaustive, but selective—another merit in the 'Cyclopædia.' The volume is beautifully printed.

'Brown's Directory of American Gas Companies' (New York: E. C. Brown) comes to us in its third issue. The capital, financial condition, population supplied, rates, and other statistics are clearly tabulated for the northern continent. Electric light and power are often combined with gas in the enterprises recorded. Natural-gas companies are grouped by themselves.

No title could well be more obscure and misleading than 'Derivation of Practical Electrical Units,' by Lieut. F. B. Badt and Prof. H. S. Carhart (Chicago: Electrician Publishing Co.). Besides a table of these units, the little book consists mainly of brief biographies of "all the eminent scientists by whose names the practical units are or were designated," accompanied by portraits in every case except that of Coulomb.

The 'Musical Year-Book of the United States' reaches its seventh issue in recording the season of 1889-'90 (Boston: G. H. Wilson). New American compositions and American compositions performed abroad are carefully noted.

Dr. Francis H. Rankin's 'Hygiene of Childhood' (Appletons) is a wise, unpretentious little book that parents should like to read and its precepts follow. It is untechnical, but inspired with professional wisdom and experience; and the more widely such literature is circulated, the better for the generations that succeed. This combines good style and sound sense, and appeals to every head of a family.

Dr. Louis Barkan has added another item to the long roll of books about ourselves in 'How to Preserve Health' (New York: Exchange Printing Co.). Hygiene and morals have much in common; and this particular book, like some sermons, is excellent in matter, but not especially inviting in style.

The success of their popular edition of Charles Kingsley's works (of which 'Hereward the Wake' is last to hand) has encouraged Macmillan & Co. to put out a very large edition of 'Tom Brown's School Days' in the same style, but with illustrations. We regret afresh the necessity for such condensed typography.

The "German Webster," or Moriz Heyne's 'Deutsches Wörterbuch,' completes its first of three volumes with the letter G (Leipzig: S. Hirzel; New York: B. Westermann & Co.). The preface, reserved to accompany the last half of vol. i., states the author's conviction, as a colaborer on the Grimm Lexicon, that that work, when completed, will never have the domestic use anticipated for it by its projector. Hence his attempt to carry out the idea in his own way. Dr. Heyne omits provincial and obsolete vocables in order to bring his work within moderate compass, and technical expressions are sparingly admitted; on the side of etymology, ignorance is frankly confessed in cases of doubt. The references to the literary sources are exact, and a list of these sources will accompany the final volume. The examples cited are in Roman type. This does much to relieve the appearance of the page, of which the impression is noticeably distinct. Dr. Heyne has had the assistance of his wife as a literary reader in his ten years' labor.

A fourth volume of the Papers of the American Historical Association opens with the quarterly issues for January and April, containing official reports and the following papers: "Recent Historical Work in the Colleges and Universities of Europe and America," by President Adams of Cornell; "A Catechism of the Revolutionary Reaction," by ex-President White; and "The Origin of the National Scientific and Educational Institutions of the United States," by Dr. G. Brown Goode. This last is an historical inquiry of decided value, replete with curious information. Thus, in a foot-note to page 73, the rise of the "agricultural experiment station" is sketched, and we are told that no fewer than forty-six now exist (one State having as many as three), and employ nearly 400 experimenters. The origin of the National Observatory and John Quincy Adams's efforts towards it make one of the most interesting episodes in Dr. Goode's review.

Dr. Jeffrey R. Brackett has supplemented his monograph on 'The Negro in Maryland: A Study of the Institution of Slavery,' with 'Notes on the Progress of the Colored People of Maryland since the War,' which appears as a triple number (vii–viii–ix) of the eighth series of the Johns Hopkins University Studies. It is, on the whole, a cheering exhibit. The admission of colored men to the jury-box and the bar is one of the greatest strides; and another is the abolition of color distinction in cases of bastardy.

The last Quinquennial Catalogue of the Officers and Graduates of Harvard University, which appeared in 1885, was, it is now to be seen, the last in which Latin was employed instead of the vernacular. The new Catalogue for 1890, which can be had of Charles W. Sever, Cambridge, sticks to the vernacular throughout, and for the first time the names are printed as they were borne by their owners. This reform is noteworthy as happening in the year when it is proposed to cut down the College term by one-fourth, in final breach with the domination of the classics, the excessive study of which we may fairly estimate to have involved the loss of a year. Another significant change is the abandonment of the use of italics to denote the clergy among the graduate bachelors of arts. This time-honored practice seemed in deference to the college motto, "Christo et Ecclesiæ," which is still retained on the seal, but henceforth with a very broad interpretation. Improvement is also visible in the more elegant typography.

Harvard's great genealogist, Mr. Henry F. Waters, has, in the London *Athenæum* of June 14, an elaborate defence of his Washington pedigree, which has been more plentifully than wisely impeached across the water.

In the Syracuse *Academy* for June, Mr. Henry L. Coar has a paper, "When and How Geometry Should be Taught," which is one more symptom of a drift of opinion in the right direction. Those who hold that the study of geometry is postponed too long, and should be, in the elements at least, a part of primary education, in conjunction with arithmetic and in advance of algebra, will read Mr. Coar's paper with interest.

— The July *Atlantic* has a list of articles of very even strength and interest. Mr. Cook's study of the character and career of Richard Henry Lee brings forward one of the most brilliant and effective figures of the Revolution, whose fame has hardly proved equal to his services. Chance deprived him of the honor of drafting the Declaration of Independence, and no other single occasion arose by which he might have been identified with a great historical moment, for his work of incorporating a Bill of Rights in the Constitution by the first amendments does not stand out as a conspicuous personal action. The oratory of Patrick Henry has eclipsed his own in the tradition of the country; and yet, whether as orator or statesman, or as a practical worker in Government business, he seems to have deserved more than he has received in the regard of history. His affinity with Sam Adams is remarked upon in this article, and his democratic principles in opposition to the aristocratic temperament of Virginia are strongly emphasized, from the moment of his maiden speech against slavery, to the latter days when he wished to emigrate to Massachusetts in order to live in a social order

consonant with his convictions. His life illustrates the accidental nature of posthumous fame, and its frequent dependence upon events more than on persons. Prof. Hart contributes a timely and very thorough article upon the present condition of athletics in colleges, and explains the growth of the joint control of sports at Harvard by the Faculty, graduates, and students; he takes a conservative and reasonable view. Prof. Carpenter writes with interest of the literary language of Norway. Prof. Shaler suggests an association for the systematic study of the negro in America. Mr. Merwin continues his papers upon horses, with a spirited account of Fire-horses, in which are several anecdotes of equine habits and character. No reader of this number of the *Atlantic* should overlook the exceptionally fine verses on Wendell Phillips by a namesake.

—*Scribner's* contains a curious piece of secret history in Dr. George Howe's narrative of the voyage of the last slave-ship. He shipped suddenly and unthinkingly, it would seem, as a doctor on board a ship which was to carry a cargo of emancipated slaves to Liberia, and only when on the open sea discovered that he was on a slaver, which had taken this cargo in order to get to the coast of Africa unsuspected. There was a scheme on the part of the captain to take the negroes they had and sell them, but this was not concurred in by the Spaniards in charge, and the ship went to its destination only to find that it was to be strictly watched. The doctor, who was just out of college, stayed with the ship, partly by accident and partly in a spirit of adventure, and landed on the Congo Coast, obtaining glimpses of the river and the tribes. At last, the cruisers being eluded, he saw the ship loaded with the slaves just in time to escape the *Vixen*, which had got within range but could not equal the speed of the vessel. They then sailed for an island south of Cuba, transferred the cargo to schooners, burned the ship, made Trinidad with the slaves concealed under the hatches, lay a night and a day in the harbor unsearched, and landed the slaves the night following, getting them into the interior and distributed among the planters in a very short space of time. Finally, the Americans got passports by a clever trick, and returned to New Orleans. The story is well told, and is an interesting account of the way the slave trade was managed, and of its necessary hardships even when, as in this case, the officers took better than ordinary care of the slaves. Other articles are upon the "Suburban House," "Surf and Surf-Bathing," and "The Rights of the Citizen to His Own Reputation." The poem by Robert Louis Stevenson, "The House of Tembinoka," is of amazing badness.

—*Harper's* continues the adventures of Tartarin, and follows them up with a sketch of the doings of Jonathan Wild. Travel is represented by a paper upon Baltic Russia, and cognate articles are upon the widely differing types of society in Texas (a very picturesque subject) and in Oxford, where the changes occasioned by permitting Fellows to marry, by the education of women, and in general by the Londonizing of the old academic régime, have been very marked. A paper of a sort not often to be found in this magazine is a literary study of Giosuè Carducci, whose reputation in his own country entitles him to the attention of foreigners, as a poet illustrating with some originality and force a modern literary movement. The author of the article seems to oscillate between admiration for the poet and doubt of the sufficiency of the philosophy incorporated in his verse; but he does his best to make Carducci understood. The difficulty of the case may be indicated by the fact that at the outset the critic has to raise the question whether Christianity is not something superimposed on the Italians and radically in conflict with their race-nature, which in the end may throw it off as a mere incident in the centuries of history. At all events he can point to a perpetually recurring revolt in Italy of the pagan spirit of adoration of this world's beauty and devotion to the joy of the senses, and he finds it renewed in "the Hellenic reaction," as he calls it, denoted by Carducci's verse. The philosophy of history, however, may be left to take care of itself, and the reader may attend to the translations, often excellent, from the whole range of Carducci, among them the notorious "Hymn to Satan." At the conclusion, the critic remarks upon the influence of court favor upon the poet, and also sufficiently expresses his own judgment that the pagan spirit, even in its ethical and æsthetic forms, does not comprehend enough of modern life to be equal to humanity. So, at least, we understand him. The paper is as conscientious as it is scholarly, and opens a refreshingly new subject.

—The *Century* contains an attractive colonial paper, by Edward Eggleston, upon Nathaniel Bacon, the Virginian adventurer who led the popular discontent and finally open rebellion directed against Governor Berkeley in 1676. The conditions of the time are graphically set forth, but the character of Bacon is the life of the article. His control of his men, his energy, the romantic words and the dramatic scenes that have come down to us, and his pathetic end, contribute to build up the ideal of the English adventurer, which we associate rather with the preceding generation. The present is the fullest account which has been given of him, and abounds in that picturesqueness which is not too common a quality of our early history. The principal paper in this number, however, is upon the theory of the Single Tax on Land Values, and is made up of a destructive criticism by Mr. Atkinson, a sarcastic reply by Mr. George, and a brief rejoinder by the first debater. Unlike most "modern symposiums," this presents many elements of a real discussion. Each intimates, and here and there directly states, that his opponent is, as a matter of fact, ignorant of what he is talking about, and there is no disposition on either side to suggest fallibility in the view held by it. Mr. Atkinson tends naturally rather to statistics, and Mr. George to philanthropic eloquence, and each deprecates the other's peculiarity in this regard. To the impartial spectator, the most obvious thing in the discussion is that there are two points of view and a debatable land between, where some discoveries may yet be made. The question is too large for the space given, and the treatment of it is no more than an opening skirmish. The most good it can do is to suggest the large issues involved in these questions, and to emphasize those conclusions, in respect to a reform of present taxation, in which both contestants agree.

—The ninth number of the *Journal of American Folk-Lore* (April-June) opens with two articles which will attract especial attention from anthropologists. The first of these papers, by Dr. Washington Matthews, U. S. A., contains an abstract of that part of the great creation and migration legend of the Navajos which gives an account of the origin and accession of the several gentes. The legend declares a period of seven lives of old men, or from 500 to 700 years, to have elapsed since the creation of the pair forming the nuclear gens of the present composite Navajo nation; during the subsequent history of the tribe, it is described as continually incorporating with itself additions from many quarters, forming new gentes. Among these, for example, after the arrival of the Spaniards, are said to have been the descendants of a Mexican captive, constituting a gens which received the name of People of the White Stranger. The writer believes these gentes to have been in the first instance only local exogamous groups, no man being allowed to marry in his own village. He remarks that among the Navajos both mother-right and father-right exists, and that descent in both lines seems to be recognized as determining consanguinity.

—In another paper, intended to accompany that of Dr. Matthews, Capt. John G. Bourke, U. S. A., discusses the Gentile Organization of the Apaches of Arizona. He gives lists of Apache gentes, adding those of the Moquis, of Zuñi and other pueblos. Examining the origin of the nomenclature, he shows the small number of animal titles included, while he observes that in the list of Dr. Matthews there is not a single such title out of more than fifty gentes. He concludes that the entire nomenclature of the Apache and Navajo gentile systems is topographical, and inclines to think that animal totemic designations may have been developed out of names at first local; for example, a people living near the Wolf Spring, and called after their dwelling-place, with natural taste for the marvellous, may have gloried in their association with the animal and in the distinction which they might derive from tracing their paternity to this source. "Primitive man," he remarks, "bothered himself very little about his ancestry. He gathered into little bands, and formed little communities for the great purpose of protection against human and animal enemies." In respect to the effects attributed to totemic belief, he doubts the connection of tabus respecting food with gentile titles, and thinks that observers have often confounded ceremonial fasts with general prohibitions. The effect of these articles, both as tending to overthrow a widely accepted theory of gentile origin and as militating against the recent extension of the doctrine of totemism as a ready explanation for the phenomena of primitive religion, will lead to an animated discussion, and cause a closer investigation of the gentile system of other tribes than these systems have hitherto received.

—The selection by the Senior Class of Harvard College of a colored class-day orator last autumn aroused much interest, which only seemed to increase as the time for the test of his mettle approached. In the meantime the commencement programme also bore the name of a black man, who had won his place on it by scholarship; and that both class day and commencement were this year more largely attended than for years past, was not a little due to public curiosity as to the real merit of the two speakers. The class orator, Clement Garnett Morgan, was the first to be tried. He had previously won a first Boylston prize for declamation, but otherwise had been little known in college. His very black, but not unpleasing face, looked singularly well under the Oxford cap of the day, and his scholar's robe lent a dignity to his naturally easy pose. He spoke to a critical, but very favorable audience, and received such applause at the beginning and end as very few class speakers ever win. This may have accounted for his embarrassment; for his evident nervous-

ness took away from his usual robust delivery, and his diminished voice was heard with difficulty in the remoter parts of the hall. The matter of his address was indifferent—no better and no worse than the conventional valedictory class oration.

— The commencement orator, on the other hand, achieved a distinct triumph. He had been twice a Boylston prize winner, but otherwise was no better known than Morgan. But whereas the latter's commonplaces were offset by the wit of two unusually bright men, the feeble and mediocre character of the other commencement parts served but as a foil to show off the striking quality of the colored man's. The scene, too, was more dramatic on commencement than on class day. Sanders Theatre was unusually crowded—largely on account of Mrs. Cleveland's presence; and the number of distinguished faces on the platform was also greater than common. When the name of William Edward Burghardt Du Bois was called, and a slender, intellectual-looking mulatto ascended the platform and made his bow to the President of the University, the Governor of Massachusetts, the Bishop of New York, and a hundred other notables, the applause burst out heartily, as if in recognition of the strange significance of his appearance there. His theme, "Jefferson Davis as a Representative of Civilization," heightened this significance. Du Bois not only far excelled Morgan in mere delivery, but handled his difficult and hazardous subject with absolute good taste, great moderation, and almost contemptuous fairness. He dwelt largely upon Davis's intellectual strength, personal courage, and private integrity, and passed over altogether those arrogant traits which made him enemies even in his own camp. In contrast to this strong man, this Teutonic type, as he called it, he then set up the patient, trustful, submissive African as a type of citizen the world would some day honor. For the moment the audience showed itself ready to honor this type as displayed in the orator.

THE FRENCH WEST INDIES.

Two Years in the French West Indies. By Lafcadio Hearn. Harper & Brothers. 1890.

NOT long ago an American newspaper, published in the interests of the commercial classes, alluded to the West Indian Islands as "a dumping ground for the refuse dairy produce of the United States." The Caribbee Islands are not, however, without other uses to the world at large. Since regular steam communication has been established between them and North America, numbers of Americans have taken a run down the islands—some with return tickets, while others, in want of change of climate or of scene, have dwelt awhile in those sunny lands. One of the results of this coming and going of Americans has been the publication, in newspapers, in periodicals, and in books, of descriptions of these newly discovered holiday resorts. Of these productions of our travelled thanes, the one which has hitherto proved the most popular, and which has found great favor with West Indians themselves, is that entitled 'Down the Islands,' a cheery, breezy volume, in which the author writes of his trip as if he thoroughly enjoyed it. And now comes Mr. Lafcadio Hearn, with his delightful account of his 'Two Years in the French West Indies.'

In the summer of 1887, Mr. Hearn started on a trip to the tropics. Apparently he went only for an outing. But, landing at the French island of Martinique, it so fascinated him that, after running down the islands, and proceeding to British Guiana, he returned to the *Pays des Revenants*, as he tells us Martinique is historically called, for a stay of "some months." He remained there for two years. Besides Martinique, the French own the West Indian islands of Guadeloupe and St. Bartholomew. They are also possessed of a portion of Guiana on the main, the name of a district in which, Cayenne, is well known for the pungency of its prepared pepper, and as a hot corner for convicts and *récidivistes*. Mr. Hearn's book deals almost wholly with the colony of Martinique, which is, indeed, the principal possession of the French in those parts.

Mr. Hearn rightly disclaims importance for his introductory chapter, to which he has given the title of "A Midsummer Trip to the Tropics." As a passenger on board of a merchant steamer which put into ports for a few hours at a time, or at most for a couple of days, to take in or to discharge cargo, what opportunities did he have for observing the inner life of the peoples of the various colonies? As it is, he has ventured to generalize upon "the visual and emotional impressions" of the moment. Thus, the notoriously rough boatmen and 'longshoremen of Bridgetown, Barbados, are taken as specimens of the Barbadian-African generally, and are then compared, with disadvantage, to the African of the French islands. By the way, Mr. Hearn credits the Barbadian blacks with speaking "excellent English." He says they speak English "with a strong Old Country accent." Their English neighbors in the adjacent islands say that Barbadians speak with an unmistakable American twang. It is not far from the truth to say that Barbadians speak English in an Old English way. They illustrate in their intonation of language the principle of survival, which in like manner may be identified on a market-day in an English country town. How is it, though, that Mr. Hearn does not notice the fact that George Washington spent some weeks in Barbados, when he visited it with his elder brother Lawrence, on account of the latter's ill health? Are there no records in the island of the Beefsteak Club to which the Father of his Country had admission during his stay, or must we content ourselves with the bare record of the fact as given by Sparks?

Again, is there nothing in the island to throw light upon the visit paid to it, in 1813, for his health's sake, by Light Horse Harry? Must we remain content with the paragraph in one of the old Barbados papers, which noted the landing there on the 21st of June, 1813, of Maj.-Gen. Henry Lee? Similarly of the other colonies. Facts are wanting to illustrate the years of the youth of Alexander Hamilton in his island home, Nevis, and in Santa Cruz and St. Kitt's. We want fresh details of Lawrence's fight in the *Hornet* with the British vessel of war *Peacock* off the coast of Guiana. Mr. Hearn tells us how Semmes escaped with the *Alabama* from Palmer in the *Tuscarora*, in the waters of Martinique, but he wholly omits mention of the fact that Semmes, in the *Sumter*, had before that evaded capture by Wilkes in the *Vanderbilt*, in those same waters. It would be well if our travellers took more note of the old associations between the British possessions in the Caribbean Sea and the great Republic, as numbers of families now rooted in the United States have sprung from forefathers who originally emigrated to Barbados and to others of the old English West Indian Islands.

In 'Two Years in the French West Indies' we have a study of life in a French tropical colony. Nature, also, is depicted for us in all her gorgeousness by the glowing pen of Mr. Hearn. He has caught the brilliance of tropical coloring and has impressed its hues upon his own pages. The chapters in which he paints for us the scenery of Martinique are the most successful attempt yet made to give word pictures of Nature arrayed in the luxuriance of tropical splendor. At the same time we have, with all the freshness of lifelike portraiture, a succession of vignettes of the work-a-day life of the laboring classes of Martinique. Mr. Hearn writes in full sympathy with these dusky toilers, and upon his narrative he engrafts incidents which are often deeply pathetic. These he relates with dramatic skill. In the French West Indies, as in the British colonies of Trinidad, Grenada, St. Lucia, and Dominica, the laboring classes speak a patois of the French language. So admirably has Mr. Hearn rendered his frequent quotations from this patois that we hardly think we do him an injustice in suggesting that, in the rendering, he may have received some assistance from his friend M. Leopold Arnoux, notary of St. Pierre, Martinique, to whom he has in fond terms dedicated his book.

Mr. Hearn is nothing if not æsthetical. His literary vice is in his sometimes letting the æsthetic sense run away with him. Life is too short for us to attempt to specify the quite too confusing varieties of blue that the author has noted in sea and sky. The differentiation of tints among the "fruit-colored populations" is overdone. Then how prodigious is the "tail of some unutterable bird"! The streets of St. Pierre are "lemon-tinted." The red limbs of the women carriers, locally called *porteuses*, take in the changing glow an "impossible tint." Of colored boys bathing, we are told that their "flesh does not look like flesh, but like fruit pulp"! All which reminds us of the æsthetical description of the intensely educated lower limbs of that eminent tragedian, Mr. Irving: "His right leg is limpid and utter; his left leg is a poem." While, however, the ordinary understanding reels in attempting to rise to the heights of our author's æsthetical furor, the book abounds with the charm of true poetical description. There is "an "indescribable caress in it," as Mr. Hearn himself says of the tropical breeze. If we have a fault to find, it is that there is not more of the book. Why has Mr. Hearn confined his studies to the life of the laboring classes? How delightful it would have been to have had some word-pictures of the life of the creole whites, whose power is passing away. Then, too, something fresh might have been gleaned about the risen and rising among the colored people. When the latter can supply members to the Chamber of Deputies in Paris—notably such a capable man as M. Vielle-Réache, a Deputy from Guadeloupe—there must surely be something to tell of the class whence they sprang. It is of this class that the outside world most needs to have correct information. Their white fellow-colonists will not, in many cases, get to know them, and hence are but too prone to misunderstand, to misjudge, and to misrepresent them. As, however, the men of color must year by year come more and more to the front, we hope that some of our travellers will yet discover that the whites and the laboring classes do not represent all the social forces in those colonies.

Those who know the West Indies, and those who wish to learn about the West Indies, will alike take pleasure in reading Mr. Hearn's book. He not only tells of the present, but gives glimpses of the past. A very pleasant account is that of Father Labat, both priest and planter, whose 'Voyage to the West In-

dies' is such a mine for those who write about the archipelago. Old Father Dutertre, too, has honorable mention. The description given in the chapter with the title "La Vérette," of life in St. Pierre in 1887 and 1888, when smallpox was playing havoc among the inhabitants, is a literary triumph. All, however, of Mr. Hearn's other pictures in words are done to the life.

Pure Logic, and Other Minor Works. By W. Stanley Jevons. Edited by Robert Adamson and Harriet A. Jevons. Macmillan & Co. 1890.

THOUGH called Minor, these are scientifically Jevons's most important writings. As when they first appeared, they impress us by their clearness of thought, but not with any great power. The first piece, "Pure Logic," followed by four years De Morgan's "Syllabus of Logic," a dynamically luminous and perfect presentation of an idea. In comparison with that, Jevons's work seemed, and still seems, feeble enough. Its leading idea amounts to saying that existence can be asserted indirectly by denying the existence of something else. But among errors thick as autumn leaves in Vallambrosa, the tract contains a valuable suggestion, a certain modification of Boole's use of the symbol + in logic. This idea, directly suggested by De Morgan's work, soon presented itself independently to half-a-dozen writers. But Jevons was first in the field, and the idea has come to stay. Mr. Venn is alone in his dissent.

The substance of the second piece in this volume, the "Substitution of Similars," is in its title. Cicero had a wart on his nose; so Burke would be expected to have something like it. This is Mill's inference from particulars to particulars. As a matter of psychology, it is true the one statement suggests the other, but logical connection between them is wholly wanting. The substitution of similars might well be taken as the grand formula of bad reasoning.

Both these tracts warmly advocate the quantification of the predicate—that it is preferable in formal logic to take A=B as the fundamental form of proposition rather than "If A, then B," or "A belongs among the Bs." The question is not so important as Jevons thought it to be; but we give his three arguments with refutations. First, he says the copula of identity is logically simpler than the copula of inclusion. Not so, for the statement that "man=rational animal" is equivalent to a compound of two propositions with the copula of inclusion, namely, "If anything is a man, it is a rational animal," and "If anything is a rational animal, it is a man." True, Jevons replies that these propositions can be written with a copula of identity, A AB. But A and B are not symmetrically situated here. They are not simply joined by a sign of equality. Second, Jevons says that logic takes a more unitary development with the proposition of identity than with that of inclusion. He thinks his doctrines of not quantified logic and the substitution of similars call for this copula, but this is quite an error. And then an inference supposes that if the premises are true, the conclusion is true. The relation of premises to conclusion is thus just that of the terms of the proposition of inclusion. Thus the illative "ergo" is really a copula of inclusion. Why have any other? Third, Jevons holds the proposition of identity to be the more natural. But, psychologically, propositions spring from association. The subject suggests the predicate. Now the difficulty of saying the words of any familiar thing backwards shows that the suggesting and suggested cannot immediately change places.

The third piece in the volume describes Jevons's logical machine, in every respect inferior to that of Prof. Allan Marquand, and adequate only to inferences of childish simplicity. The higher kinds of reasoning concerning relative terms cannot (as far as we can yet see) be performed mechanically.

The fourth paper advocates the treatment of logic by means of arithmetic—without previous logical analysis of the conception of number, which would call for the logic of relatives. To exhibit the power of his method, Jevons shows that it draws at once such a difficult conclusion as this: "For every man in the house, there is a person who is aged; some of the men are not aged. It follows, that some of the persons in the house are not men." Unfortunately, this is an exhibition not of the power of the method, but of its imbecility, since the reasoning is not good. For if we substitute for "person," even number, for "man," whole number; for "aged," double of an integer, we get this wonderful reasoning: "Every whole number has its double; some whole numbers are not doubles of integers. Hence, some even numbers are not whole numbers."

The remainder of the book is taken up with Jevons's articles against Mill, which were interrupted by his death. The first relates to Mill's theory of mathematical reasoning, which in its main features is correct. The only defect which Jevons brings out is, that no satisfactory mode of proving the approximate truth of the geometrical axioms is indicated. But this is a question of physical, not of mathematical, reasoning. The second criticism, relating to resemblance, seems due to Jevons's not seizing the distinction between a definite attribute, which is a resemblance between its subjects, and Resemblance in general, as a relation between attributes. The third paper concerns Mill's theory of induction. That theory may be stated as follows: When we remark that a good many things of a certain kind have a certain character, and that no such things are found to want it, we find ourselves disposed to believe that all the things of that kind have that character. Though we are unable, at first, to defend this inference, we are none the less under the dominion of the tendency so to infer. Later, we come to the conclusion that certain orders of qualities (such as location) are very variable even in things which otherwise are closely similar, others (as color) are generally common to narrow classes, others again (as growth) to very wide classes. There are, in short, many uniformities in nature; and we come to believe that there is a general and strict uniformity. By making use of these considerations according to four certain methods, we are able to distinguish some inductions as greatly preferable to others. Now, if it be really true that there is a strict uniformity in nature, the fact that inductive inference leads to the truth receives a complete explanation. We believe in our inferences, because we are irresistibly led to do so; and this *theory* shows why they come out true so often. Such is Mill's doctrine. It misses the essential and dwells on secondary features of scientific inference; but it is an intelligible doctrine, not open to the charge of paltering inconsistency which Mr. Jevons brings against it.

No doubt there is a good deal of truth in Jevons's criticism of Mill, who was a sagacious but not a very close thinker, and whose style, very perspicuous for him who reads rapidly, is almost impenetrably obscure to him who inquires more narrowly into its meaning. But Mill's examination of Hamilton has a logical penetration and force which we look for in vain in Jevons's articles on Mill.

When We Were Boys: A Novel. By William O'Brien, M.P. Longmans, Green & Co.

THERE are few more striking personalities in British politics than William O'Brien. Ten years ago, an unknown writer on the Dublin daily press; then sent abroad for his health and corresponding on Egyptian affairs; returning to throw himself into the Land League agitation, and be incarcerated with Mr. Parnell in Kilmainham (being separated from a dying mother, to whom he was tenderly attached); the editor of *United Ireland;* above all other members of the Irish Parliamentary party, the darling of the Irish people, perhaps the most hated by Mr. Balfour; a lion in the face of imprisonment and opposition, a very lamb in private intercourse; just married to Miss Raffalovitch, a French writer, an heiress, who, apparently for his sake, has joined the Catholic Church—he has now given us this novel. It was written during his last imprisonment, and is dedicated "To John Dillon, in memory of anxious years and glorious hopes." The scenes are laid in Ireland in the Fenian times of from twenty to twenty-five years ago. It is in the main a history of young Ken Rohan, from the day when he leaves his mother's side for school, until, sentence of death having been remitted, he is, as "convict 575," condemned to penal servitude for life, on account of participation in the Fenian movement—"and with this we reach what we at first suppose to be, but which we are assured is NOT THE END."

"Within our own generation, innumerable Irish hearts as young and lightsome as Ken Rohan's have been quenched in penal servitude, and innumerable Irish mothers, sweethearts, and sisters have wept at the prison gates. An Irish novelist, if he loved his youths or maidens, had only to make them die or suffer. The writer's besetting difficulty throughout was how to soften for strangers' ears those minor chords of sorrow which haunt Irish life like night winds sighing through one of our ruined shrines."

The 550 closely printed pages, with their redundancy of adjectives and proper names, and similes, and italicised words in French, Italian, German, and Irish, will not be generally attractive. The style is often careless, and there are many sins against good taste and defects of diction and construction. The chief characters are unreal, the action frequently unnatural. To the Irish reader it is redeemed as a novel by the remarkable reality and naturalness of the distinctively Irish characters portrayed, their conversation and ideas being true to the life. Doubtless many casual and busy readers will lay aside the book with a feeling of disappointment. Those, on the other hand, who have sufficient interest in Irish affairs, sufficient desire to understand Irish feeling and the springs of Irish thought, will have their reward in reading it. We know few works of a similar character throwing so much light on the subject. It is eminently fair-minded. Irish faults are portrayed as clearly as Irish virtues. Its perusal would be a good antidote to those who dread Papal aggression in Ireland. Catholicism is presented in its best and most spiritual aspects, while its political pretensions are freely reprobated. The author often recurs to and dwells upon the law of love:

"Do you suppose you would find a human heart anywhere—in a cabin or in a prison—that was not made for sunshine as well as yours or mine, if you could only release it from its dungeon of suffering and unkindness?"

"How much happier a world it might be if people would only do as much for kindness as they do for love, and how many a million loveless hearts would be the brighter!"

"One like you is never done with love until he is done with life. When you have done adoring young women, you will find old ones more adorable, and when the old ones disappear, you will find children the most adorable of all."

The general unpunctuality in Ireland is thus lightly touched off:

"If this British Empire was advertised to burst up spontaneous at an hour and place named in the bills, provided the Irish people was punctual on time just for that one auspicious occasion, darned but you'd have Mick and Paddy mounching along half an hour too late, hoping they hadn't kep' anybody waiting."

And we read of "that first treasure of happiness and fatal disqualification for successful ambition—an easy temper."

The Irish-American is one of the best characters in the book; almost everything he says is good. The talk at the Gouganebarra pic-nic between him, the priest, and the clergyman contains some admirable passages, but they are too long for extract. The following are worth quoting as putting the Irish question in so many nutshells:

"It is supposed to be vulgar for a man who lives by the country [Ireland] to do anything but abuse it."

"English policy in Ireland has always proceeded upon the principle of governing by bribing somebody—anybody except the people to be governed."

"What is all Irish history but a pile of coffins of the young and brave!"

"Hearts break and homes crumble any way in Ireland. Two million of hearts were broken in this small island since you were of my age. . . . Enough Irish lives have been thrown away in this generation to have purchased us a hundred Marathons or Bannockburns—and we have nothing to show for it but the famine pits of Skibbereen."

"Sentiment and the round towers have outlived twenty generations of Strongbows and Cromwells."

Again, the author speaks of "those secretive peasants, over whose hides caution and dissimulation had grown encrusted like the cuirass on the backs of palæozoic animals accustomed to be preyed upon." There is true insight into life in this: "Our lives pass in stumbling over the stocks and stones of the prosaic mountains which glowed in the distance like mines of amethysts."

That fire, so dangerous to the British Empire, which, under the present system of government, smoulders in so many Irish hearts, is often revealed to us by Mr. O'Brien, as in a conversation between Ken Rohan's father and the priest over the lad's Fenian proclivities:

"We have grown old and of the peace, Myles—you because of the children and the mill, I because the Papal Legate in Dublin is an Italian monk in the garb of an Irish bishop; but if the French were in the bay again to-night, with those 15,000 troops and the 100,000 stand of arms, do you think Master Ken's heart would beat a little more wildly than yours or mine, in spite of mills or cardinals?"

We doubt if this work will live as a novel; but there is so much feeling in it, so much life and truth and genuine Irish humor and poetry, that, in spite of its numerous faults, it will find a permanent place in many collections of books relating to Ireland. We are glad that a page remains between what is "NOT THE END" and the author's last word:

"Irishmen have discovered a saner resource than the wild weapons of boyish insurrection, and Englishmen a more glorious revenge than a handcuffed wrist and a convict's brand. The issue between humanity and barbarism—between love and hate—is even at this moment trembling in the balance."

We ought to add that the Messrs. Longman are the only authorized publishers of this novel in the United States.

The Art of Authorship: Literary Reminiscences, Methods of Work, and Advice to Young Beginners. Personally contributed by leading authors of the day. Compiled and edited by George Bainton. D. Appleton & Co. 1890.

THE vanity of authors is proverbial, and their innocent unwariness is almost as well established in common belief. We owe the present volume, in about equal measure, to these traits in the literary class. The editor is not known to us, but it is plain that he uses a honeyed pen in correspondence, and in reply to his flattering appeal an unusually large number of the elect have fallen into the snare with a crowd of minor authors and authoresses from twenty years of age to fourscore. It seems that the entire craft in England and America, with representatives from Germany and France, was invited to tell the "young aspirant" how "to learn to write," and in particular to teach by example, confiding to the editor for publication the history of how each "learned to write" in his or her own case; and here we have the result made up of extracts from the letters received. There is, altogether, much agreement in the advice given. It appears that very many authors regard their "art" as, in one way or another, a "gift," which can be improved but never acquired; it is not only the poet, these affirm, who is "born, not made," but the three-volume novelist likewise. Many also unite in the opinion that the "young aspirant" should endeavor to make himself understood, should use easy words, short ones if possible, and should be "true to himself or herself." The method of learning "how to write" which has a large majority in its favor is—"to write." It seems that nearly all actually learned what they know of the art in just that way. Another bit of advice, reiterated so often that it must be of importance, is "to read good books." A few put much stress on this, and ascribe much to it in their own cases. Thus, the Lord Bishop of Carlisle thinks his style is chiefly due to reading mathematics at Cambridge, Ernest Myers owes very much to the Greek classics, and "Virgil did a great deal" for G. P. Lathrop. Mr. Lewis Morris, who remarks that he "generally fails to satisfy himself in prose and often in verse," acknowledges his indebtedness for clearness to his "experience as a conveyancing counsel of long practice in drafting legal instruments," and he seems to suggest that Robert Browning and George Meredith might have profited by his example. Sir Edwin Arnold says that the good writer "never commits the fault of tautology," or "employs redundant epithets" (speaking, of course, with an eye to his own style); Sir M. Monier Williams advises "abstemiousness in the use of adjectives"; and Sir J. Fitz James Stephen confines himself to denouncing with accustomed vigor "the misuse of pronouns." Cuthbert Bede says you should cross your "t's." There are over three hundred pages of these admirable counsels from distinguished gentlemen and others, all tending to show that a common-school rhetoric is to be trusted.

The well-meaning editor has not confined his extracts from the letters merely to the subject in hand. He has included a good share of autobiography in the way of "confessions." Mr. J. A. Symonds, for example, tells of his college days, John Boyle O'Reilly and Lew Wallace give some spice of adventure, and here and there a female novelist contributes reminiscences in a light and sparkling style. Marie Corelli relates how she "disburdened her mind of certain thoughts that clamored for utterance," and produced 'A Romance of Two Worlds,' the instant success of which gave her to literature. She has studied "Homer and the classics, the best French, German, and Italian authors, together with all the finest works in the English language," but as for newspapers, which she "detests," "the mere news stated in the telegrams has always sufficed for me." Naturally, she does not write for money or reputation, having the former "without exertion," and regarding the latter as "not worth a pin's point in the general economy of the universe"; and so she declares that "art always frowns on those who are too ready to barter her for gold." There is much more of her experience (at "four and twenty"), but we give so much as an example of the prattle (both masculine and feminine) that occasionally glitters on the page. It relieves Dr. Freeman's vehemence against those who think him diffuse, or Julian Hawthorne's lament that he has insufficient leisure and opportunity for producing the best literature, and Edgar Fawcett's regret that he "should be so ill-known amongst her [England's] vast throngs of intelligent readers."

But quotation fails us in the effort to do justice to upwards of 150 authors who have told here the secret of success in literature and much else. One gleans much from the volumes besides wisdom. The number of writers who had no training whatever is noticeably large—though few are so frank as Mrs. E. L. Linton, who declares that she is "always finding out some new error of style or syntax of which I am habitually guilty"; but such difficulties, it is clear, can be overcome, and altogether the volume is encouraging to the "young aspirant," whether he be educated or not, provided he has "the gift" that "clamors for words." The volume is, as will be seen, very various in matter, but one thing is constant in it—the good-nature of the editor, who was appreciative of every style, and of the eight-score authors who were willing to assist his laudable design of helping the "young aspirant" by talking about themselves.

Adventures in the Great Forest of Equatorial Africa and the Country of the Dwarfs. By Paul Du Chaillu. With map and illustrations. Abridged and popular edition. Harper & Bros. 1890. Pp. xviii, 476. 8vo.

IT is now nearly thirty years since Mr. Du Chaillu published the first volume of his travels in western Africa, containing an account of the gorilla, the cannibals, and the dwarfs. It excited much interest at the time, as well as a lively controversy, now happily well-nigh forgotten. This and the succeeding volumes, relating to his second expedition to the same region of the Gaboon and Ogoway Rivers, have been condensed as above. The story is always interesting and well told, but it has now only an historical value, the territory in question having been since thoroughly explored by the Marquis de Compiègne, Oskar Lenz, Savorgnan de Brazza, and many others. Considering Du Chaillu's age—he was not twenty-one when he started on his first expedition—his achievements were certainly remarkable and should give him a high rank among modern explorers. Though he did not penetrate much over 200 miles from the coast, yet he travelled nearly 10,000 miles on foot without any white companion. His collections consisted of 2,000 birds, including many new species, and 200

quadrupeds, of which 20 were new species. His description of the dwarfs whom he found in the forests of the Ogoway is so general that it is impossible to determine whether they have any race connection with the pygmies whom Stanley discovered in the great Aruwimi forest. They were certainly much larger, for the tallest of seven of the Obongos whom Du Chaillu measured was 60¼ inches, and the shortest 52¼ inches, the average height being slightly over 55¾ inches. Of fifty dwarfs captured by the Stanley expedition, only one reached the height of 54 inches, the others varying from 39 to 50 inches. In one important respect the two accounts agree, in stating that the larger natives tolerate the presence of the dwarfs because of their skill and usefulness in hunting and trapping birds and other game.

Diaries of Sir Moses and Lady Montefiore. Comprising their Life and Work as Recorded in their Diaries from 1812 to 1883, etc. Edited by Dr. L. Loewe, assisted by his Son. 2 vols., 8vo, pp. xii, 389, x, 363. Chicago: Belford-Clarke Co. 1890.

SIR MOSES MONTEFIORE occupied a unique position among his contemporaries. Connected by marriage with the richest family in the world, he acquired an independent fortune early in life, and for nearly half a century devoted his restless energies to unremitting efforts at ameliorating the condition of his race in all parts of the world. The secret of the great success which so frequently crowned his efforts is to be sought in his habit of promptly repairing to the spot where anything required to be done and doing it himself, instead of sending some one else to do it. Thus, he made seven separate voyages to Palestine on errands of mercy, the last of them in his ninety-first year. What is more, in 1882, when the anti-Jewish riots in Russia aroused the indignation of the civilized world, and a relief fund of over half a million of dollars was raised in London, he offered, although ninety-eight years old, to journey to Russia to intercede with the Czar. In the course of the various missions he undertook he had interviews with nearly all the potentates of his time, and never failed of a favorable answer to his petitions for justice to his people. He was never discouraged or dismayed, and on more than one occasion proceeded calmly on his way when more timid souls scented danger and counselled him to retreat. The reports he made to the Emperor Nicholas in 1846 on the condition and character of the Jews in Russia disposed of many calumnies in regard to their industrial status, showed that much of what was objectionable was the direct result of cruel and oppressive legislation, and prevailed upon the Czar to suspend the ukase against the Jews. The numerous other concessions of liberty and legal equality which he obtained from the Sultans of Turkey and Morocco and from other monarchs are too well known to need recounting here.

His sincere piety, and the great strictness with which he observed the minutest ritual and dietary regulations of his faith, give an additional peculiarity to his character, and remind one of similar traits in the Earl of Shaftesbury, who was animated by the same philanthropic motives, and entertained so great an admiration for him whom he called "that grand old Hebrew patriarch," that he suggested to Disraeli and, later, to Gladstone, the propriety of raising Sir Moses to the peerage. Not the least interesting point in his life is its great length, as he presents one of the very few authenticated instances in modern times of an actual centenarian retaining all his faculties to the last day.

Altogether, here was a man whose career was worthy of being commemorated, and afforded abundant material to furnish forth an interesting and instructive record. His memoir now given to the public does not, however, fulfil any reasonable expectations. While omitting various particulars which might have been useful in bringing the individuality of Sir Moses out in bolder relief, it is extended to an inordinate length by the insertion of many trivial details, which might be acceptable if mentioned once, or even twice, but are repeated so often as to become intolerably tedious. The result is, that what is really important is swamped in a mass of dreary commonplace and misses its legitimate effect. Instead of digesting his materials and producing an organized book, the editor has simply pieced together scraps from the diaries which were placed at his disposal, and seems to have made no attempt at arranging them in any order except a chronological one. Of affording any literary aid to the reader through the resulting maze, he appears to entertain only the most rudimentary ideas. Such a simple expedient as printing the year at the top of the page or in the margin has not occurred to him.

It is perhaps superfluous to add that the book has no index. The illustrations are such as might have been passable a quarter of a century ago. What the American republishers mean by claiming copyright on the reverse of the title-page, is a mystery which we do not undertake to explain.

The Supplices of Æschylus. Edited by T. G. Tucker, M.A., Professor of Classical Philology in the University of Melbourne. Macmillan & Co.

FROM the opposite side of the world comes this elaborate and learned edition of the "Supplices," which the publishers present in one of those beautiful octavo volumes in whose praise we have several times had occasion to speak during the last two or three years. Within the memory of men still living and working, Melbourne was not. Now, Mr. Tucker, after enumerating near the beginning of his preface the various sources from which he has drawn, says that they "practically place the antipodean student on an equality of equipment with the European." He has only one complaint to make, one reason to ask for indulgence. That is contained in the closing sentence of his preface: "It is not so much that our literary stores and appliances are insufficient as that there is a want of that ready help and advice, and of that sympathy of pursuit, which the European student can enjoy so plentifully."

Of the thirty-two Greek tragedies that time has spared, the "Supplices" of Æschylus has come down to us in the most woful condition. Of the four MSS. on which the text of the drama is founded, one, the *Mediceus*, of the eleventh century, is generally acknowledged to be very corrupt, while the other three, two of the fifteenth and one of the sixteenth century, are by most critics regarded merely as bad copies of the first. Hence almost, perhaps quite, every line of the play has been the subject of conjectural emendation. In fact, a commentary on the "Supplices" is necessarily occupied not so much with explaining the meaning of the text as with constructing a text which shall have a meaning. Mr. Tucker gives, on the average, on each page five lines of text, in what he supposes to have been its original form. Beneath this are critical notes in Latin, which contain the results of the labors of all the previous editors—Hermann, Dindorf, Oberdick, Paley, and a long list of others; the remaining, and far the largest portion of the page, is occupied by his commentary in English. His critical notes also give the reading of the oldest MS. wherever it differs from his own, and of the other MSS. wherever they seemed worthy of notice. At the end is a literal prose translation of his own text and an index to his notes.

In his preface and introduction Prof. Tucker has stated very fully and illustrated by numerous examples the principles and rules which have guided him in his attempts to restore the text. He seems to have worked with the greatest care, diligence, and conscientiousness. But, after all, when we possess practically but one MS., and that contains many passages destitute alike of grammar, of metre, and of sense, however ingeniously an editor may "emend" them into something answering all these requirements, an impartial reader cannot help feeling that he is a long way from being certain that what the editor offers is what the author wrote; and whatever slight probability there may be that such is the case, that probability becomes infinitesimally small when we find three or four different editors, equally learned and ingenious, each attaining the same end in a different way. But, all this apart, the "Supplices" still resembles many of the remains of Greek sculpture which, though battered and mutilated, yet glow with beauty and grace. Prof. Tucker says (p. xviii) that vv. 604–688 are "the most beautiful lyric composition in Greek drama." We should certainly prefer to refresh our recollection of some of the other masterpieces of Greek tragedy before giving assent to this assertion.

We can notice but one more point. The date of the play is generally fixed at 461 or 462 B. C. Prof. Tucker places it thirty years earlier, in 491 or 492 B. C., when Æschylus was thirty-three years old. We have no room to state Prof. Tucker's arguments or additional reasons of our own, but with his general conclusion that it is the earliest extant Greek drama we most unqualifiedly agree. On the whole, we think Prof. Tucker's edition of the "Supplices" the most useful at present attainable. That it is the handsomest there can be no doubt.

The Prophet of Palmyra: Mormonism reviewed and examined in the life, character, and career of its founder, from "Cumorah Hill" to Carthage Jail and the Desert. Together with a Complete History of the Mormon Era in Illinois, and an exhaustive investigation of the "Spalding Manuscript" Theory of the Origin of the Book of Mormon. By Thomas Gregg. New York: John B. Alden. 12mo, pp. xv, 552.

THIS seems to be an honest effort at compiling the history of the growth of Mormonism, and its progress in this country down to the establishment of the Mormons in Utah. The writer is a citizen of Illinois, whose memory reaches the period of the heyday of prosperity at Nauvoo, and the murder of Joe Smith and his brother by the mob at Carthage. His personal knowledge, however, is limited to the general public feeling in Illinois at the time, for he does not seem to have been a witness himself of any important events in the history. It can hardly be said that the book bears out the pretensions of the title-page, for it is not a complete or exhaustive investigation of Mormon history or doctrine. It is rather a taking popular treatment of the story, and, in the matter of the Spalding manuscript, has some valuable original evidence. For serious historical pur-

poses it lacks evidence of the searching care and full investigation which the subject demands; but perhaps it is more likely to suit the popular taste than if its grasp were stronger or its research more exhaustive.

BOOKS OF THE WEEK.

Annual Register for 1889. London: Rivingtons.
Azarias, Brother. An Essay Contributing to a Philosophy of Literature. 6th ed. New York: P. O'Shea. $1.60.
Balzac, H. de. The Devil's Daughter. Am. News Co. 50 cents.
Bates, Katherine L. Hermit Island. Boston: D. Lothrop Co. $1.25.

Wheeler, J. T. Indian History, Asiatic and European. Macmillan & Co. 35 cents.

FOR SUMMER.

Entomology for Beginners.

By A. S. PACKARD, M.D., Ph.D. 12mo, $1.75.

"It is the best thing of the kind in the English or any other language. There is no work that I would recommend to the young student so heartily."—*S. W. Williston, Professor in Yale University.*

Packard's Guide to the Study of Insects.

By A. S. PACKARD, Professor in Brown University. Beautifully illustrated. 8vo, $5.00.

Our Native Ferns

AND THEIR ALLIES. By LUCIEN M. UNDERWOOD, Professor in Syracuse University. Third edition, revised. 12mo, 156 pp., $1.25.

"The addition of the remaining vascular cryptogams greatly increases the value of the book, and makes it doubly useful to all who seek to study this class of plants."—*Bulletin of the Torrey Botanical Club.*

Butterflies:

THEIR STRUCTURAL CHANGES AND LIFE HISTORIES, WITH SPECIAL REFERENCE TO AMERICAN FORMS. With an Appendix of Practical Instruction for Collecting, Rearing, Preserving, and Studying. New and cheaper edition. 8vo, $1.50.

A Japanese Boy.

By Himself. 12mo, $1.00.

"There are very few natives who have attempted, in a foreign language, to lift the veil of private life, and let the people speak for themselves. . . . Mr. Shigemi, though writing in a chatty delightful way his boyhood's memories, is extremely accurate. . . . Well worthy of a place in all our libraries."—*The Nation.*

The True Grasses.

By EDOUARD HACKEL. Translated by F. LAMSON-SCRIBNER and A. E. SOUTHWORTH. 12mo, illustrated, $1.50.

HENRY HOLT & CO., New York.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

American Economic Association

PUBLICATIONS.

Volume V., Nos. 3 and 4, Just Issued.

This double number contains two papers on the Canal Question, entitled:

I. THE CANAL AND THE RAILWAY, with a Note on the Development of Railway Passenger Traffic,
By EDMUND J. JAMES, Ph.D., University of Pennsylvania.

II. CANALS AND THEIR ECONOMIC RELATION TO TRANSPORTATION,
By LEWIS M. HAUPT, A.M., C.E., University of Pennsylvania.

PRICE, ONE DOLLAR.

Four complete volumes of the Publications, bound in cloth, sent postpaid for $5 each. Any two for $9; any three for $13; all four for $17; unbound, $4 each. Subscription to Volume V, $4. Annual membership, $3; life membership, $25. Address

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES. } Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay are now first offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

RECENT PUBLICATIONS OF

GINN & COMPANY.

The Thirty-third Volume. Classics for Children.

Heroic Ballads, with Poems of War and Patriotism.

Edited with Notes, by D. H. Montgomery. 12mo. Pp. viii+319. Boards, 40 cents; Cloth, 50 cents.

A carefully chosen collection of sixty-eight of the most stirring and inspiring pieces in the English language, including such examples as Horatius, Virginia, The Heart of Bruce, Chevy-Chase, Battle-hymn of the Republic, The Loss of the Birkenhead, and Lowell's Commemoration Ode. The good influence of literature of this sort, especially on the young, can hardly be overestimated.

The Best Elizabethan Plays : The Jew of Malta, by Marlowe; The Alchemist, by Jonson; Philaster, by Beaumont & Fletcher; The Two Noble Kinsmen, by Fletcher & Shakespeare; The Duchess of Malfi, by Webster.

Edited by William Roscoe Thayer, author of "The Confessions of Hermes, and Other Poems"; "Hesper: An American Drama," etc. 12mo. Cloth. H+611 pp. $1.25.

This collection furnishes not only the best specimen of the dramatic works of each of the five Elizabethan poets who rank next to Shakespeare, but also a general view of the development of the English Drama from its rise in Marlowe to its last strong expression in Webster. This volume appeals to the general reader who wishes to get, in small compass, the best products of the Elizabethan Drama (exclusive of Shakespeare), and also to the students in academies or colleges who are studying this most important period of English Literature. It is a work equally well adapted to the library and to the class-room.

Reference Handbook of English History for Readers, Students, and Teachers.

By E. H. Gurney. 12mo. Cloth. pp. 114. 75 cents.

This work is intended as a constant companion and assistant to the reader or student of English history, affording him a rapid and easy method of placing his persons and dates before him in accurate relationship to each other, and helping him to draw them out of the maze of confusion and contradiction in which we find them in nearly all our great histories. It identifies every prominent man from the time of the Confessor to Victoria, giving the date of his death, to whom married, and the number and names of his children.

It saves the reader hours of study, and makes his work a pleasure.

College Series of Latin Authors.

The Annals of Tacitus, Books I.—VI.

Edited with Introduction, Notes, and Indexes by the late William Francis Allen, Professor of History in the University of Wisconsin. 12mo. Cloth. Pp. xlii+444. $1.50. Text Edition, 50 cents.

The text is based upon that of Halm (Leipzic, 1882). In the commentary considerable prominence is given to the peculiarities of Tacitus's style, and to the development of prose Latin since Cicero; but the distinctive aim is to present a connected view of the character and reign of Tiberius, and to trace the constitutional and administrative changes which took place under that Emperor. To make the view more complete, the lost portions of the fifth and sixth books have been, in a measure, supplied by extracts from Dio Cassius, Suetonius, and Juvenal.

Wentworth's School Algebra.

A new book by the author of *Wentworth's Mathematical Series.* 12mo. Half-leather. Pp. vi+362. $1.12.

The work is written for high schools and academies, and is a thorough and practical treatment of the principles of Algebra up to and including the Binomial Theorem.

A special feature is the introductory chapter, which contains a statement, with proof, of the general laws of arithmetical numbers, which affords an opportunity of setting forth clearly the advantage of using letters to represent numbers, and so provides the best and most natural transition from Arithmetic to Algebra. This chapter also contains a full explanation of the meaning and advantage of negative numbers, and a proof that negative numbers are subject to the general laws of mathematical numbers.

The problems are for the most part new—either original or selected from recent examination papers—and are graded with the utmost care.

Elements of Structural and Systematic Botany.

For High Schools and Elementary College Courses. By Douglas Houghton Campbell, Ph.D., Professor of Botany in the Indiana University. Illustrated with numerous drawings from nature by the author. 12mo. Cloth. Pp. x + 253. $1.12.

This work, based upon the results of the most recent and reliable authorities, is designed to serve as both a laboratory guide and an outline of classification in the detailed and careful study of a number of the commoner types of the different great plants, with the ultimate object of giving the student some comprehension of the real aims of botanical science and its claims to be something more than the "analysis" of flowers.

The prices quoted are introductory.

GINN & COMPANY, Publishers,
Boston, New York, and Chicago.

With Fire and Sword.

A new novel of great power and interest, now first translated from the Polish.

☞ *What is said of it:*

☞ *A Capital Story.* THE ONLY MODERN ROMANCE WITH WHICH IT CAN BE COMPARED FOR FIRE, SPRIGHTLINESS, RAPIDITY OF ACTION, SWIFT CHANGES, AND ABSORBING INTEREST IS THE 'THREE MUSKETEERS' OF DUMAS. [New York Tribune.

☞ *A Great Novel.* He exhibits the sustained power and sweep of narrative of Walter Scott, and the humor of Cervantes. A greater novelist than Tolstoï. [Phila. Inquirer.

☞ *Altogether uncommon, * * * one of the noblest works of historical romance ever written in any language,* and it has been done into English by the hand of a master. [The Pilot.

☞ *One of the most brilliant historical novels ever written.* * * * A story of chivalry, of heroism, of romance, and of devotion. [Christian Union.

☞ *A tremendous work in subject, size, and treatment.* It is refreshing, in these days of pastels in prose and novels without incident, to come upon one so full of life and vigor, where man, like Nature, is on a great and wide scale, and where the passions are as frank as they are fresh. [Providence Journal.

☞ *Abounds in all kinds of military adventure,* and although less impressive than 'War and Peace,' is *more continuously brilliant and readable.* [Boston Post.

Being A First Manual of Musical Form and History for Students and Readers. By Frederick J. Crowest.

Contents: Ancient Music—Notation—Scales, Clefs, and Bars—Signs and Abbreviations—Time and Accent—Melody—Harmony—Vocal Music, Ancient and Modern—Instruments and Instrumentation—Musical Form—Schools of Music—Principal Events in Musical History—Birth and Death Dates of Leading Musicians—Index.

"This is not altogether a book for musical beginners, it is more deliberately a first manual, which the vast number of grown-up people taking, or desiring to take, an intelligent interest in music, may study or peruse."—*From the Preface.*

SOME RECENT ADDITIONS

TO

THE CHANDOS CLASSICS

OF

GENERAL LITERATURE.

*** This world-wide series now consists of upwards of 130 volumes, containing the collected wisdom, wit imagination, and knowledge of all ages and all countries, prose and poetry. Well printed and strongly bound, forming a complete library in itself, suitable for the man of letters, the student, and the general reader.

In a neat and effective library binding, edges untrimmed, bound in smooth blue linen, boards, white title labels, at a uniform price of

SEVENTY-FIVE CENTS PER VOLUME.

Or in the new "Roxburgh" style, cloth binding, leather label, gilt top, trimmed edges, price $1.

*** Detailed list free on application.

Roscoe's Italian Novelists.

Roscoe's German Novelists.

Roscoe's Spanish Novelists.

Choice stories and selections from the great novelists of these countries, translated with critical and biographical notices by Thomas Roscoe.

Disraeli's (Isaac) The Elder: Works in seven volumes. Curiosities of Literature, &c.

Pilpay's Fables (or Bidpai).

*** Probably of Sanskrit origin. There is no work except the Bible, we are told, that has been translated into so many languages.

Shah Nameh (Epic of Kings) (FIRDAUSI). Translated by Atkinson.

*** "The Iliad of the East."

The Spectator (Addison & Steele). Select essays from, with notes and critical introduction to the essayists, by Alex. C. Ewald, editor of the State Papers.

The Tatler (Addison & Steele). Selected essays; notes and introduction by Ewald.

Poe, E. A., Poetical and Prose works of. Edited by J. H. Ingram.

Ingoldsby Legends, or Mirth and Marvels, by Thomas Ingoldsby (Rev. R. H. Barham). With Cruikshank's clever illustrations.

Horace: The Odes, Epodes, Satires, and Epistles. Translated by the most eminent English scholars and poets, and containing two Epodes never before translated.

Gay, John, The Fables of; with Biographical and Critical Introduction and Bibliography. Edited by W. H. Kearley Wright, F.R.H.S. Illustrated by Harvey.

*** One of "The Wits of Queen Anne," the friend of Pope and Swift; the author of "The Beggar's Opera," the parent of comic opera. These fables will long hold their place in literature for a fine vein of humor and fancy they disclose, and for the many proverbial lines scattered through them which are to-day uttered by thousands who do not know their origin.

Napier, Major-Gen. W. F. P. History of the War in the Peninsula. 6 vols., with Notes, Steel Portrait, and 55 Maps and Plans.

*** Complete and detailed list of the series gratis on application.

Of all booksellers, or free by mail on receipt of price by the Publishers.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

JUST PUBLISHED:

'The Toltec Cup;'

A Tale of the Here and Now, in New York City. By "NYM CRINKLE" (A. C. Wheeler). Paper bound, 75 cents.

Mr. Wheeler is a writer of such noted skill and power that there was a tremendous competition for this novel among the New York publishers as soon as it was known that he was writing it; and it was only by paying a higher price than any other publishing house could offer—$10,000—that we succeeded in obtaining it. This is the largest sum paid for any recent work of fiction, and it is a most happy fact that the character of the story is far more remarkable and unusual than the price which it cost its publishers.

From the first page to the last 'The Toltec Cup' is intensely dramatic and of thrilling interest. It has a plot whose mysteries cannot be penetrated until its gifted author chooses to disclose them; the course of the story teems with the stirring incidents and episodes of active every-day life in New York, and the people about whom Mr. Wheeler's fascinating mantle of romance is thrown are most attractive because they are so mightily and unmistakably human.

We have also in press, to be published about July 20,

'ETEOCLES; A Tale of Antioch.'

By JESSIE AGNES ANDREWS. Cloth bound, $1.00.

And on or about the 15th of August we shall also bring out

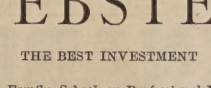
WEBSTER

THE BEST INVESTMENT

For the Family, School, or Professional Library.



DON'T BE DUPED

by buying the cheap phototype reprints of an obsolete "Webster" now being foisted upon the market. From A to Z they are ALL ALIKE, being poor reproductions of the Dictionary of OVER 40 YEARS AGO. Announcements concerning them are very misleading; for instance, the supplement of 10,000 so-called "new words" was compiled by a gentleman who has been dead over thirty years, and was published before his death. Other so-called additions are reprints of a like nature. These books are comparatively valueless.

The "Webster," which to-day is accepted as the Standard and the Best, contains over 2,000 pages, with illustrations on nearly every page, and bears our imprint on the title page.

G. & C. MERRIAM & CO., Springfield, Mass.
Sold by all Booksellers. Illustrated pamphlet free.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

TWILIGHT PARK IN THE CATSKILLS.

(THIRD SEASON.)

I.

Every one is interested in right methods of living; how to get the most out of life, comfort without excessive luxury, simplicity without baldness. Wholesome, restorative recreation is what all seek for.

This is the problem sought to be solved at Twilight Park. It is a thoroughly practical scheme, yet based upon an ideal. Its success more than justifies expectation. It has the promise and the potency of rapid and healthful growth.

There are thirty cottages, costing from $600 to $2,500, with a central club-house and social hall, where meals are furnished at $7 per week; in short, all the comforts of family life, with none of the cares of housekeeping

If you want to know more call at my office or send for primer.

CHARLES F. WINGATE,
Sanitary Engineer,
1 9 Pearl Street, N. Y.

VISITORS' IMPRESSIONS.

I have asked a number of visitors to give their impressions of the Park. Here is one of the responses.

OVERLOOK COTTAGE, JAMAICA PLAIN, MASS.
March 27th, 1890.

MY DEAR WINGATE:

You ask me "why I bought a lot at Twilight Park," an easy question surely, and one that to anybody who knows the Park has an obvious answer. I bought a lot there because it seemed to me to be one of the most beautiful places in the world, possessing beyond the charms of Nature, everything that a tired denizen of the city could desire: woods, water-falls, cliffs, mountains, and a climate that is both bland and invigorating.

What is the use of the little rustic drug-store at the gateway of the Park, except to sell photographs, toilet articles, and soda water? Neither bromide, nor sulfonal, nor morphia gives such sleep as that which softly overcomes us the moment we arrive there, and is repeated night after night, so long as we remain. You have described the situation exactly in the line from Goethe at the portal of the Club-house, "On every mountain height is Rest."

And then the views! I know the Rocky Mountains, some of the Alps, Snowdonia, and the White Mountains, but I recall nothing lovelier than the outlook from Ledge End; the deep chasm of the Kaaterskill Clove with its surging seas of hemlocks and pines, and its wide outlook across the Hudson to Berkshire. Don't you remember the hours we spent there, and our lotus eating? It is ridiculous to ask me why I bought a lot of land at Twilight Park.

Sincerely yours,
WILLIAM H. RIDEING.

OFFICE OF THE

Atlantic Mutual

INSURANCE COMPANY,

NEW YORK, January 24, 1890.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st of December, 1889:

NEW BOOKS.

I.

TOWN AND COUNTRY LIBRARY.

THROCKMORTON.

By MOLLY ELLIOT SEAWELL. Paper cover, price, 50 cents. Specially bound in cloth, price, $1.00.

A new American novel, presenting a strong study of contrasting characters, by an author intimately acquainted with her scene and background—the Virginia of the years immediately following the war.

II.

IN AND OUT OF CENTRAL AMERICA;

And Other Sketches and Studies of Travel. By FRANK VINCENT, author of 'Around and About South America,' etc. With Maps and Illustrations. 12mo, cloth. Price, $2.00.

"Few living travellers have had a literary success equal to Mr. Vincent's."—*Harper's Weekly.*

III.

AN UNCONVENTIONAL TRAVEL-BOOK.

With 112 Illustrations. 12mo, cloth. Price, $1.75.

A SOCIAL DEPARTURE:

How Orthodocia and I went Round the World by Ourselves. By SARA JEANNETTE DUNCAN.

"The reader who does not have 'a good time' over 'A Social Departure' must have a blunted appreciation of fun and pluck. There is not a dull page in it. . . . The story is told with wonderful dash and cleverness, and the illustrations are as good as the text."—*Scotsman.*

IV.

INTERNATIONAL EDUCATION SERIES.

Edited by WILLIAM T. HARRIS, A.M., LL.D., Commissioner of Education.

VOL. XV.

SCHOOL SUPERVISION.

By J. L. PICKARD, LL D. 12mo. Cloth, $1.00.

In this work is embodied the results of more than twenty years' successful experience in town, State, and city supervision of schools. The author outlines the history of school supervision in the United States; he discusses the work of the State, county, and city superintendent; the relation of the superintendent to teachers, pupils, parents, Boards of Education, etc.; he has included valuable chapters on examinations and promotions, on physical and moral education, on government and discipline; and has added appendices on the relation of public schools to morality and religion, and "What shall we do with our boys?" In all, it is a work of great practical value to normal students, teachers, and to all engaged in the active work of supervision.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

A SPANISH GRAMMAR.

A new method for learning Spanish as taught by the masters of the language, and for acquiring the Castilian pronunciation, with the *new rules of accentuation by the Royal Academy of Spain*, and an alphabetical Index of the conjugations of all irregular, defective, and impersonal verbs. By A. M. SOTELDO, author of the 'Gramática Inglesa para los Españoles,' the actual national text-book in Venezuela. This grammar is reliable and practical. It has been composed by one of the foremost contemporary Spanish grammarians, and, it is confidently expected by the publishers, will be recognized as an authority on the Spanish language and a standard hand-book for the acquisition of Spanish by English-speaking nations. 12mo, bound, $2.00.

NEW BOOKS.

THE ADVENTURE SERIES.
NOW READY:

I.

ADVENTURES OF A YOUNGER SON.

By JOHN EDWARD TRELAWNEY, with an Introduction by EDWARD GARNETT. Illustrated. Large 12mo, $1.50.

"It is all the way through one of the most entertaining tales of adventure ever written."—*Philadelphia Press.*

"One of the books that will be read as long as daring deeds and hair-breadth 'scapes have any fascination for humanity is Edward John Trelawney's 'Adventures of a Younger Son.'"—*Boston Beacon.*

II.

MADAGASCAR;

OR, ROBERT DRURY'S JOURNAL DURING FIFTEEN YEARS' CAPTIVITY ON THAT ISLAND. And a further description of Madagascar by the Abbé ALEXIS ROCHON. Edited, with an Introduction and Notes, by Capt. PASFIELD OLIVER, R.A. With Illustrations and Maps. Large 12mo, $1.50.

Now Ready: Vol. III. (completing the work). 8vo, $3.50.

A HANDBOOK OF DESCRIPTIVE AND PRACTICAL ASTRONOMY.

By GEORGE F. CHAMBERS, F.R.A.S.

VOL. I.—THE SUN, PLANETS, AND COMETS. 8vo, $5.25.

VOL. II.—INSTRUMENTS AND PRACTICAL ASTRONOMY. 8vo, $5.25.

VOL. III.—THE STARRY HEAVENS. 8vo, $3.50.

"A valuable mine of astronomical information carefully brought up to date."—*Academy.*

New Vol. of the 'Dictionary of National Biography.'

Just Published: Royal 8vo, $3.75 in cloth; half morocco, $6.50. Vol. XXIII. (Gray-Haighton) of the

DICTIONARY OF NATIONAL BIOGRAPHY.

Edited by LESLIE STEPHEN and SIDNEY LEE.

** *Vol. XXIV. will be published September 26, and the subsequent volumes at intervals of three months.*

"The Dictionary has now established itself so firmly in public estimation that its commendation has become almost superfluous, while even a cursory survey of the successive volumes suffices to show that the high character of the work is fully sustained in each."—Review of Vols. XV.–XXII., *Times.*

Cameos from English History.

THE REBELLION AND RESTORATION (1642-1678).

By CHARLOTTE M. YONGE, author of 'The Heir of Redclyffe,' Seventh Series. 12mo, $1.25.

THE CIVILIZATION OF THE RENAISSANCE IN ITALY.

By JACOB BURCKHARDT. Authorized translation by S. G. C. MIDDLEMORE. 8vo, cloth, gilt top, $4.00.

"To every variety of social, political, intellectual, and artistic activity Dr. Burckhardt pays due heed. The immensity of his learning, the balance of his judgment, and the candor of his mind are everywhere evident in a work which no one who would know the Renaissance can now have any reason to neglect."—*Literary World.*

The Nation.

NEW YORK, THURSDAY, JULY 10, 1890.

The Week.

SPEAKER REED has forced through the Federal Election Bill, as it has been expected that he would do ever since he had it made a caucus measure. Many Republicans were opposed to this policy, but only three had independence enough to array themselves against the bill on the final vote. The measure is one of the most revolutionary in its character ever proposed, inasmuch as it takes the control of the Congressional elections from the States, which have always exercised it, and gives it to appointees of the Federal Government—in other words, of the party in power at Washington. This would be the longest step towards centralization ever taken since the foundation of the Government.

It is gratifying to learn, upon such good Republican authority as the Washington correspondent of the Philadelphia *Press*, that Senators Allison and Aldrich, upon the Republican side, and Mr. Gorman and other Senators upon the Democratic, express the opinion that their branch of Congress will be ready to adjourn by the 1st of August; "and three Republican Senators, who did not care to be quoted, privately expressed the opinion that 'the Election Bill would not be considered by the Senate at this session.'" It is obvious that the bill could not be passed in the Senate without a change of the rules, inasmuch as the Democrats would talk it to death if it should be taken up, and Mr. Edmunds has given notice that the rules shall not be changed so as to infringe upon the present freedom of debate. The idea seems to be to let the House pass the bill and get whatever political credit it is supposed may be thus secured, and then have the Senate assume an air of magnanimity. As "a prominent Republican," quoted by the correspondent of the *Press*, puts it: "It may be that the Republicans will not care to put the Election Bill through the Senate at this session, in order to give the Democrats an opportunity to redeem their promise of fair play at next autumn's elections. They insist that elections in the South are fair, and we will accept next fall's results as a test, putting aside their past well-known record. If, however, the same old means are employed in the South to carry the elections, the Senate next winter can pass the bill." So long as the bill does not become a law, the public will not care much what theories Republican Senators construct to explain their inaction.

The *Valley Virginian*, published at Staunton, and the ablest Republican journal in Virginia, while admitting the constitutional right of Congress to pass a Force Bill, holds that the main question is its expediency—whether anything would be gained by its enactment, and whether it could be enforced were it enacted. This question it proceeds to answer as follows: "We are very sure it would be followed by strife and contention and bloodshed. We know generally who get hurt in such issues. Taking the past as a guide, the record would be a sensation about negro aggression and a 'negro rising,' a conflict in which one or two white Democrats would have their shins skinned and a dozen or two negroes killed, and in the long run as many Democrats elected as has been the case in the past. Indeed, we believe the passage of the Lodge bill would reduce the number of Republican Representatives; throw some of the Southern States into turmoil and disorder; material progress be arrested, and harm generally be effected." The Force Bill was bound to go through the House because Speaker Reed had made up his mind to have it, but such arguments as these of the *Valley Virginian* ought to have some effect in the Senate.

Another "mining camp" becomes a State, the Senate having last week passed the House bill admitting Idaho to the Union. The Republicans in Congress thus add two more votes in the Senate for free silver coinage and against sound money; and when Wyoming is made a State, as it will shortly be, the Republican majority in the Senate will be increased, by the admission of the four new Senators, to fourteen, which it is hoped will prove large enough to offset any possible Democratic gains in that body for at least four years to come.

The Pennsylvania Democrats in their State Convention on July 2 had the wisdom to do exactly what their opponents did not want them to do, and to do precisely what the friends of pure government the country over hoped that they would do. A week ago, in the face of the many influences at work for Wallace—all the forces of Quayism on the Republican side being exerted in that direction—Pattison's nomination seemed improbable. Even his success in Convention is proof that the political immorality which placed the Harrisburg Convention in the control of a public thief, does not sway both parties in Pennsylvania, and if his nomination shall be followed up by his election, Pennsylvania will give Quayism a rebuke such as would not even have been administered by the defeat of Quay's candidate by the Republican Convention. Pattison and Black are a platform in themselves, and the brief resolutions adopted by the Convention cover the issues of the campaign. The Philadelphia *Press*, while conceding that the ticket "is probably the strongest the Democrats could put in the field," says in criticism of Mr. Pattison's course while Governor: "His restless ambition seemed always on the alert to find something in the nature of a corporation at which to strike. That was his capital and stock in trade, and it is *this dangerous and communistic trait*, doubtless, which will be pressed most zealously as his chief claim to public favor." If the Republicans will keep up their defence of Quay (silent or outspoken), and make their attack on Pattison on the ground that his zealous efforts as Governor to compel corporations to observe the Constitution and laws of the State were dangerous communism, there ought to be little doubt about the outcome of the campaign.

The report on the Patent Office just made by a committee of the National Civil-Service Reform League teaches a self-evident lesson. That lesson is, that no Administration can secure the credit and the benefits of a service founded on merit whose reform policy is made up of pieces. President Cleveland, coming into office as he did after his party had been long out of power, and finding nearly every Federal place filled by his political opponents, had a task of the most difficult kind to be consistent as regards the merit system and not stir up a party mutiny. What he did accomplish, therefore, in enforcing that system was doubly valuable as an example. But he detracted from his own good repute in surrendering certain branches of the Government, like the Patent Office, to the spoilsmen, and in every instance of this kind he injured the public service and weakened himself. President Harrison's support of the merit system is rather in the way of an exception than as a rule, the Patent Office being one of the marks to his credit. But no one would think of classing him as a civil-service reformer solely because of these exceptions, with such examples to the contrary as the census, the Wanamaker selection, and his subservience to Quay and the other bosses ever in sight. If the merit system is a good one, it is good for the whole Government service; and if the spoils system is a good one, the whole service ought to have the benefit of that. When we get a President who will hew to this mark, we shall get very near to the solution of the whole problem.

When our Minister to France was here negotiating with his party friends for a little reciprocity treaty with France, in which works of art should be admitted by us free of duty and the French prohibition of American pork products should be removed, he was told that the McKinley Administrative Bill would prove fatal to his project. The cable now informs us that a deputation has waited on M. Roche, the Minister of Commerce, to remonstrate against any relaxation of the French decree against American lard. The Minister replied that the vote on the McKinley Bill had changed the attitude of the Government towards America in a com-

mercial sense, and that France would not meet America's declaration of economic war by making concessions. That M. Roche referred to the McKinley Administrative Bill is altogether probable, since it is not customary for one Government to refer to the measures of another Government which are pending and incomplete. But whichever bill he may have had in mind, the prosperous negotiation of our Minister, upon the supposed accomplishment of which a banquet was recently given in Paris, is nipped in the bud. M. Roche was candid enough to say that the prohibition of American lard might have been one of the motives for passing the McKinley Bill. We do not think that it was, but if it had been, France would have no right to complain. Both countries are seeking a fool's paradise—striving to get rich by crippling trade. Both are sacrificing the consumer for the sake of the producer, and the many for the benefit of the few. It might be hard to decide which was most to blame.

The failure of Mr. Blaine's appeal for reciprocity with South America to awaken any response or even interest in Congress shows that the dominant party is not likely to be moved by any talk about pork duties or pork prohibition in Europe. What they want is less trade, not more trade. If there could be such a thing as selling without buying, that would suit our statesmen well enough. Senator Hiscock told us the other day how splendidly it would work. But since that cannot be, he prefers a system in which there is a minimum of either selling or buying. The eventual cure for both France and the United States is to be found in the most rigid adherence to the system, and its extension to as many articles of commerce as possible. Its ideal development would be the prohibition of international trade altogether. We hope that France, instead of wasting time in fruitless negotiations, will adopt all the "reprisals" against the McKinley Bill that her ingenuity can devise, and that the two republics may gradually close their ports against each other just as Fooltown and Boytown did in Bastiat's fable. In this way a starting-point may be found for the emancipation of the human intellect in both countries, which is of more importance to them than the selling of pork or of dry goods.

Mr. Columbus Delano celebrated the Fourth of July by issuing in behalf of the wool-growers a pronunciamiento against Senator Hale's amendment to the McKinley Tariff Bill. This amendment is designed to carry out Mr. Blaine's idea of reciprocity with South America. This, Mr. Delano says, "would work absolute ruin"; it would admit clothing-wools free of duty, and "your industry would perish." He warns the wool-growers, also, that other amendments are to be proposed in the Senate which will work a vast deal of harm. One of these amendments is to allow the "sorting" of carpet-wools, which Delano thinks ought to be sternly prohibited. Another proposes to omit "charges" in foreign ports as part of the dutiable value of carpet-wools. If charges are omitted, the dividing line between the two grades of carpet-wool will be lowered, to the great detriment of home industry. "We have thus," continues Delano, "briefly presented the difficulties and dangers which threaten the most important industry of the nation, *and which must be protected if our protective policy survives.*" Here is the point of the stiletto again. Give us what we want, or down comes your whole establishment.

While Mr. Delano was celebrating the Fourth and showing his dagger to the trembling carpet-manufacturers, the French Senate was drawing a knife also, much to the same purpose. It voted a prohibitory duty on Indian corn and corn meal, the same having previously passed the Chamber of Deputies. During the debate on this measure M. Foucher de Careil avowed that the prohibition of pork and that of corn rested on the same basis. Both were intended to protect French agriculture and both were right. M. Millaud called attention to the fact that American pork was only prohibited on account of its alleged unhealthfulness. He declared that that was merely a pretext. Corn could not be unhealthful even if pork was. Nevertheless the bill passed. The next measure will probably be an extra subsidy to the French steamers to compensate them for the loss of corn freights. This would no doubt give new encouragement and a fresh argument to Senator Frye in favor of subsidies to American steamers. First prohibit imports, then pay your ships for running empty, and call the whole thing a Restoration of Commerce. Who shall say that this is not an age of progress?

The State of Kansas is making a hard fight against the authority of the Federal Government. Under the "original-package" decision of the United States Supreme Court, sundry dealers began the sale of liquor in the capital of Kansas, as they undoubtedly have the right to do until Congress passes a bill giving the States authority to interfere with such traffic. The Kansas officials, however, attempted to usurp the power of overruling the Federal Court, and arrested the dealers; the Attorney-General contending that the packages were not "original" because they were small enough to suit retail purposes. This claim was absurd on its face, and Judge Foster of the United States Circuit Court has made short work of it, pointing out that the dissenting judges of the United States Supreme Court had made the scope of the decision and of the law as it now stands very clear, having expressly declared that whiskey and beer might be imported from one State into another and sold by the keg, case, bottle, in any quantity, large or small, provided it remained in the shape in which it was put up for shipment. Kansas has been very emphatic in maintaining that the States must yield to the authority of the Federal Government, but it is a disagreeable surprise to find that she must mind the Supreme Court of the nation when she does not like its orders.

The investigation of the lobby in the Massachusetts Legislature has had a lame and impotent conclusion. The Committee reserved most of its censure for the public-spirited member of the House who brought the scandal to light, and let off the offending corporation with this mild censure: "Although it is true that applicants for important financial legislation have sometimes refused to employ the services of the lobby, and have still succeeded in obtaining what they asked, the Committee is not prepared to find that, under the conditions as they now exist, it would have been reasonable to expect the officers of the West End Company to risk, perhaps, the passage of their bill, by a refusal to employ any lobbyists at all; but the Committee does feel that it cannot but condemn the company for the extent to which it employed persons to influence legislation, and for its lavish expenditure of money for their services." After this, there was, of course, nothing left to do except to pass the corporation's bill, and the Governor's signature was duly affixed. The whole incident constitutes a startling proof of the lowering of legislative standards.

Seeing a chuckling announcement by Wanamaker that he has sold nearly all the copies of the 'Britannica' which he undertook to "handle" and "push," we cannot help asking Dr. Funk whether he has had the same experience, and whether, therefore, his refusal to take any more orders is a real sacrifice on the altar of virtue, and a sign of genuine repentance, or merely a tub thrown to the whale? He has said that he would do nothing more than to execute contracts already made; but would not this be all he ever expected to do? Besides this, we must observe to him that contracts for the delivery of stolen goods are not valid in law, because they are *contra bonos mores*. He has, therefore, nothing to fear from a refusal to carry them out, so far as the courts are concerned, while he has much to fear for his moral standing if he continues to carry them out. All good men would applaud his repudiation of them. Nobody believes in a man's repentance as long as they see the money from his sin going into his bank account.

The canvass made by a correspondent of the *Evening Post* of the Philadelphia and Pittsburgh clergymen about the Quay matter has shown that none of them had any intention of denouncing Quay from the pulpit. This was not to be expected; but it was desirable to notify them directly that the secular world was deeply moved by the fact that the man who was principally instrumental in putting Mr Harrison, an Elder of the First Presbyterian Church in Indianapolis, in the Presidential chair, and to whom large sums, to be used for that purpose, were confided by John Wanamaker, the Proprietor and Superintendent of the Bethany Sunday-school, and a conspicuous Presbyterian exhorter, had no defence to a charge of theft

from the public treasury. This is important because the Harrison Administration has been much helped in certain circles by the religious professions and activities of the President and his Postmaster-General, and because the clergy took a very active part in trying to discredit the last Administration by the circulation of stories intended to depreciate Mr. Cleveland personally. Their reluctance to discuss politics in the pulpit is very defensible, but it must not be supposed that this always indicates a position of neutrality and detachment outside the pulpit. On the contrary, ministers have of late years, through private gossip, exerted a very strong and very unfortunate influence on public opinion about public men. The inquiries were more than ordinarily useful in Pennsylvania, owing to the muzzled condition of the Republican press in that State, the like of which, we think, has never been seen in a free community, unless we call the Southern States during the days of slavery free communities. The correspondent found some ministers who had never heard of the charges against Quay, owing to their confining their newspaper-reading to two newspapers, one of them, we regret to say, a journal which we greatly respect—the *Ledger*.

The election at Barrow-in-Furness, in England, which took place last week, was an extremely important one, as foreshadowing the fate of the Liberal Unionists in case Parliament should be dissolved. The vacancy was occasioned by the resignation of the sitting member, Mr. Caine, for the express purpose of taking the opinion of his constituents on his recent course in Parliament. Caine was elected in 1885 as a Gladstonian, but in 1886 as a Liberal Unionist. He is an able man, and very prominent as a temperance advocate and as a foe of the publicans. But he seceded with Chamberlain and the others on the home-rule question, and continued to give the Tories faithful support till they brought in their License-Compensation Bill. This was more than he could stand, and he joined in the opposition which led to their recent abandonment of that measure. His situation thus became so complicated that he thought it behooved him to find out what his constituents thought about it. He accordingly offered himself for reëlection, and the result was watched with great interest. Caine was one of the least objectionable of the seceders. He had not been rancorous or abusive of Gladstone, and had not given himself airs about his superior morality, and he had strong hopes that, as he had turned against the Tories, the Liberals would take him up again and return him once more. To his great chagrin he found them implacable. They would not renominate him; nor would they refrain from nominating a third candidate, even at the risk of giving the seat to the Tories. They ran a new out-and-out Gladstonian, and not only beat the Tory candidate, but put Caine at the foot of the poll. Of course this will cause a fearful looking for of judgment among his brethren of the Hartington persuasion.

The importance of the London police strike is mainly political. We believe its only precedent is a threat to strike made by the Dublin city police in 1882, during the troubles following on the Phœnix Park murders, and for similar reasons—the hardness of the work and the poorness of the pay. The Dublin police were, however, brought to reason before they actually struck, and were probably restrained by the fact that their places could have been readily supplied, temporarily at least, by the constabulary, the semi-military force which polices the country districts. Of course London could also have been temporarily taken care of by the troops and by the swarm of "special constables," who always offer themselves on such occasions from among the sporting men and athletes with whom the British capital at this season abounds, and who are always eager for a chance to cudgel somebody. What has precipitated the crisis is the fact that the Chief Commissioner, Mr. Monro, who has just resigned, sympathized with the grievances of the men, and had to resign because he could not convince Mr. Mathews, the Home Secretary, of the justice of their demands. Of course this gave a great deal of substance to the discontent and spurred the men on into overt demonstrations. They were probably still farther exasperated by the fact that the new Commissioner is a military man, whose whole experience as a commander has been acquired in India, and who is, therefore, expected to subject the force to a harsher and more arbitrary discipline than has hitherto been known in an English civil force. But, although the House of Commons accepted Mr. Mathews's explanation of his differences with Mr. Monro as satisfactory, the disturbance can hardly fail to increase the discredit into which the Ministry is falling, and under which Mr. Mathews in particular has long lived. Frightened shopkeepers do not try to distribute blame impartially, and they will probably set down the demoralized condition of the police force as another of Mr. Mathews's blunders.

Among the disagreeable surprises turned up in the report on the Panama Canal is a statement that some of the contractors, whose names are given, received payment for 100 to 150 per cent. more work than they had done, but were not required by the Judicial Administrator to repay any of the money overdrawn. The report says also, in a comprehensive way, that the amount of money raised was 1,530 million francs, of which there was an effective expenditure of only 700 millions. In other words, something less than one-half of the money contributed by the French peasants, shopkeepers, and chambermaids was actually spent on the canal. But it makes little difference whether it was wasted in one way or the other. The fact that some of the contractors had been largely overpaid was known in New York before the work was stopped. Those thrifty individuals saw that the end was coming. They considered that they had a vested right to a certain aggregate amount of profit. They reasoned that it would be a waste of capital to prolong the digging after abandonment of the work had become inevitable. Indeed, the whole affair looks now like a prearranged swindle—the most gigantic one the world ever saw. M. de Lesseps himself may have been one of the victims of it.

A sudden and as yet unexplained change of Ministry, on the eve of a general election, occurred in Spain on July 5, bringing the Conservatives and extreme protectionists into power, with Canovas del Castillo at their head. It was this event which Castelar, on giving in his positive adhesion to the Liberal cause, recently declared would be a calamity for Spain. The present state of Europe, he says, calls more than ever for the application of that political paradox which demands that republics be ruled by monarchists, and monarchies by republicans. Since France has left off something of its narrow Republicanism, and given a share in its Government to an Orleanist like Ribot, and a believer in central power like Constans, the stability of the republic, Castelar thinks, has been made much greater. For analogous reasons, the Spanish monarchy ought to seek its expansion on the Left, as a conservative monarchy would be a hindrance to the development of the people, and a prematurely realized republic would run everything off the track. Both reason and patriotism, then, in Castelar's opinion, call for a strengthened Liberal administration. If this should be secured, Ruiz Zorrilla would return from his voluntary exile, and, abandoning his revolutionary programme, thus proved chimerical, would lead the small band of Radical Monarchists, while nearly all the Republicans would give in their adherence to the Liberal régime.

Only a few days after these utterances were made public, on June 5, 500 Republicans met in the Alhambra Theatre, to form a new Republican party. The leading spirit of the gathering was the veteran Salmerón, and the lines upon which the new party was to be organized marked it off at once from the revolutionists on the one hand and the Castelar type on the other. Indeed, not a little bitterness towards the apostasy of the latter, as it was called, appeared in the speeches, and the meeting itself was in a sort a protest against his assertion that the Republicans as a party had no mission in Spain. Salmerón summed up the four hours' speaking, and marked out the objective points of the new organization, namely, the abolition of a hereditary Senate with life tenure, emancipation of the House of Deputies from Executive domination, home rule in provinces and municipalities, abolition of the spoils system and bosses, reform in the methods of legal procedure, and a new Constitution admitting of amendments, as the present one does not. He declared, in conclusion, for union with Portugal, and said that the labor question could be solved by a republic alone.

THE SILVER COMPROMISE.

THE report of the Conference Committee on the Silver Bill contains some features that were not embraced in either the House or the Senate bill, and that tend to make it a better measure than either of them. These may be enumerated as follows :

(1.) It is declared to be the "established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be established by law." This amounts to a direction to the Secretary of the Treasury to keep the two kinds of dollars at par with each other; in other words, to maintain the gold standard. Since the Resumption Act of 1875 requires the Secretary to redeem United States notes in coin continuously on and after January 1, 1879, and gives him unlimited power to sell bonds for that purpose, this additional direction suffices to maintain the gold standard as long as the credit of the United States suffices for the purpose. If the silver-men intended to force the silver standard upon the country, their purpose is foiled by this provision.

(2.) The Secretary is not absolutely required to coin more than $2,000,000 per month of silver, and this requirement is to cease on the 1st of July, 1891. Thereafter he will coin only so much as may be needed to redeem silver Treasury notes presented for the purpose. Another provision repeals the present two-millions per month law from the date of the passage of this act, while this act does not go into effect until the expiration of thirty days. Thus at least one month of the two-millions law is cut off, leaving eleven months of absolute coinage at that rate.

(3.) The bill does not require the purchase of 4,500,000 ounces of silver absolutely, being limited by the words, "or so much thereof as may be offered in each month at the market price thereof." The determination of the market price is necessarily left to the Secretary, and if he exercises his discretion impartially, there will be no reason why silver bullion should be offered to him rather than to any other purchaser.

(4.) The silver Treasury notes are a new and distinct form of currency, differing from silver certificates in some particulars. They are to be legal tender, while silver certificates are not. The national banks are not required to receive them on deposit, but if they do receive them, they may count them as part of their lawful reserves. Looking at all the features of the bill, including the one which directs the Secretary to maintain the gold standard, we perceive no reason why the banks should not receive the notes on deposit, like any other current funds.

(5.) The Treasury will buy silver bullion at the market price and pay for the same in Treasury notes, making the same profit that it now makes on silver certificates. If the amount of silver offered is no more than sufficient to meet the requirements of the public for circulation, there will be no drain on the Treasury. If the offerings should exceed the public demand for circulation, the drain on the Treasury would be measured by the excess, and the Secretary might be compelled to sell bonds to replenish his gold balance. The act of 1882 establishing the greenback-redemption reserve of $100,000,000 gold remains unrepealed. Logically, all the acts taken together require the Secretary to sell bonds to replenish this fund whenever it is reduced below $100,000,000. It is not impossible that resort may be had to this power before President Harrison's term expires, especially if the requirements for new pensions exceed the estimates of the Pension Committee of the Senate, viz., $43,000,000.

Looked at from the standpoint of the science of finance, the bill is tremendously absurd, but that is not the true point of view. The bill is a compromise of conflicting whimsies and conflicting interests. We doubt whether the Senate will accept it, but if it does so, the country may be congratulated on not getting a worse measure.

SENATOR FRYE ON SUBSIDIES.

IN his speech in favor of steamship subsidies Senator Frye relied upon two assumptions : first, that those nations which have outstripped us in maritime progress have achieved success by means of donations from their governments to private ship-owners ; second, that American wages and style of living prevent us from competing with foreigners, since sailors determine their own pay and subsistence not by the amount or kind of work done, but by reference to the flag flying over their heads. On the latter point he was severely "winged" by Senator Morgan, who said he understood the argument to be that, inasmuch as our ship-owners cannot afford to pay the difference between foreign wages and American wages, we must collect the money out of the people to pay the difference. To this Mr. Frye replied brokenly :

"Well, that is hardly a logical conclusion, I take it, from what I said ; because the higher wages and the increased cost of living do not account for this enormous difference. I say we have no protection for our ships. If anything, we are discriminated against by our nation in this matter of carrying the mails. The Senator knows it is true that we are not paying the actual cost of carrying the mails to-day; that these foreign countries, in addition to paying lower wages for their sailors and their officers and a lower cost of living, have these enormous subsidies, and those, coupled with the other things, make the difference which I have stated."

Mr. Frye had much to say about the want of protection to our ships, and about the protection extended to foreign ships by their governments, but did not define the meaning of protection. The received economic meaning of the phrase is the enactment of laws which compel or impel the citizen who wishes to buy anything, to buy it of an American instead of a foreigner. As applied to navigation, it would require the establishment of toll roads to the docks at all seaports, and compel passengers and shippers to pay something for the privilege of going or sending their goods on board a foreign ship, while allowing them free access to the American ship. This is the only thing that is entitled to be called by the sacred name of protection. But this is not what Mr. Frye meant. Nor did he mean merely pay for carrying the mails when he said protection. He meant subsidy, and he meant to say also that it was subsidy that had enabled other countries to outstrip us in the ocean carrying trade.

It would not be profitable to thresh over the old straw of British and French subsidies. The question whether Great Britain does or does not pay subsidies may be answered either way without touching the question whether subsidies are the cause of her maritime supremacy. It is acknowledged that France does pay subsidies, but it is denied that they have been of any advantage to her shipping or to her commerce. There is one country, however, that has confessedly made great strides in the ocean carrying trade without subsidies, namely, Norway. She is now only second to Great Britain as a maritime Power, and is supplying us with a larger proportion of our hired steam marine than any other country. A few days ago a statement was published that forty-five Norwegian steamers were under charter to American merchants during the months of May and June, 1890, carrying goods to and from Central and South America and the West Indies, and of course without any subsidy, large or small. We adverted also to the fact that the little town of Bergen has 119 steamers engaged in the ocean carrying trade, all making satisfactory profits without any governmental aid.

These facts effectually rebut the assumption that foreign nations have achieved maritime importance by reason or in consequence of subsidies. Subsidies they may have, but it does not follow that their shipping as a whole is benefited thereby. The Hamburg-American Line is a case in point. This company runs to New York, the West Indies, Mexico, and South America. It has no subsidy, and wants none, yet it is a prosperous line, and is constantly adding to its magnificent fleet. German subsidies, so far as any are paid, are coupled with conditions which leave no profit to the subsidized line. The ships are bound by iron-clad rules as to times of sailing, as to ports to be touched, as to rate of speed, etc., and these rules are enforced by fines for any deviation or shortcoming. In the same way the British mail steamers are held rigidly to the terms of contract. They are subjected also to competition with the steamers of all other countries in the bidding for contracts, and this fact alone takes the mail payments out of the category of subsidies. Senator Frye cannot fairly point to Great Britain in justification of his measure unless he admits British, Norwegian, and German steamers to competition with our own in mail-carrying, and awards the contracts to the lowest bidder. But this is no part of his plan. The plan is simply another raid on a Treasury already threatened with a deficit.

CONCIO AD CLERUM.

Now that the popular conscience is in a way to be aroused upon the subject of copy-

right, it is of the greatest importance that there should be no misunderstanding of the nature of the proprietary right involved. Fortunately, it happens that this right, far from being mysterious and questionable, is one of the clearest and simplest with which jurisprudence can deal, and is, moreover, exactly defined by the term in common use, "copyright." It is the right to copy, to imitate, to consciously repeat what has already been done, and negatives the idea of originality in labor, in thought, or in discovery. The expression "property in ideas" is a peculiarly unfortunate one to apply to this right. It implies either that the holder of copyright and his assigns are the only persons entitled to think certain thoughts, to entertain certain ideas, or that they alone may practically apply the thoughts or make use of the ideas. Neither of these implications has the slightest support in the facts of the case.

This expression is not improperly applied to the right conferred by letters patent, which is of an entirely different character from copyright. Nothing but confusion can result from attempting to consider the two rights together. The holder of a patent cannot, it is true, prevent others from thinking his thoughts and having his ideas, but he can prevent them from making any practical use of these thoughts and ideas. He can prevent them from moving portions of matter in a particular manner—that is, in conformity to certain ideas; and as all labor consists in moving matter, he has a legal monopoly of certain modes of labor. Property in material things exists when one person may move certain portions of matter in such ways as he chooses, to the exclusion of other persons, but this right, though called absolute, is subordinate to patent right. The owner of a patent, it is true, would not be able to use it unless he were at the same time the owner of matter; but the owner of matter may not use it in any novel manner if this novel use has been patented. There may have been a hundred men working independently, to each of whom the same idea would have occurred at almost the same time, but the one that patents it may forbid the rest of mankind from applying it in the use of their property. The idea may have come to the discoverer by accident, and without labor on his part, while accident has prevented those who sought for it from finding it; that makes no difference with his legal right. The invention may have been one that every one would have thought of when a certain stage of invention was reached, but the man that gets a patent on it holds it against the world. The application of the idea might relieve hundreds of thousands of men from burdensome toil; it might save many from suffering, some from death; but the law gives to one man absolute power to forbid every human being from enjoying the fruits of this knowledge.

If we turn to copyright, we see at once that it confers no such monopoly. The ideas contained in a copyrighted book are no one's property. They may be every one expressed in other words, which may be printed and published; they may be memorized; they may be applied to any use by any person, and the right of the author is not infringed. By this right no human being is prevented from making any use of his mind or of his property that he pleases, while it may suggest to him novel uses of both. By it no man is hindered from doing what he would have done did it not exist. No man can say that by it he is deprived of the use of any of the advantages that Nature has to offer to her children, or restrained in the use of any of the faculties that God has given him. As to property in ideas, in themselves, it is plain that they are not limited in quantity and not susceptible of appropriation; and as to property in the application or use of ideas, it is plain that copyright does not confer it.

Every objection that has ever been raised in any quarter to the right of property rests ultimately upon the ground that the subject of property—matter—is, in relation to the possible owner—the present or future generations of men—limited in quantity. Hence, the possession of one may necessitate the exclusion of another who, on the assumption of the equal rights of mankind, is entitled to his share of the common heritage. In short, the whole pother arises from the fear that there may not be enough matter to go around. No such objection can be raised against copyright. That right simply means that if a man has arranged words in a certain order, no other man shall arrange the same words in the same order. Now, although the number of words is limited, the number of possible combinations of words is, compared with the numbers of mankind, practically infinite. If all the writers of English since the language was written had been steadily writing down to the present day, not one of them would have written the words of one of Shakspere's sonnets in the order that Shakspere wrote them, unless he copied from Shakspere. If all the human beings that ever existed were to write from the creation of the world to the crack of doom, the probability that any one of them would, without copying, produce "In Memoriam," or even a single stanza of it, is about as great as that of the earth's presently colliding with one of the other planets. But if there is no possibility of the right of one excluding the equal right or another, copyright involves no interference with natural liberty.

Why, then, is copyright not acknowledged without question? Because of the natural rapacity of mankind. Covetousness will not suffer it. Property in material things became established in illiterate days by the might of its possessors. The conception of right in an arrangement of words would have seemed absurd when our fundamental laws were formed, and authors have never had the physical power to enforce their claims to a species of property that is peculiarly difficult to protect. As a result, those men whose glory is imperishable, whose services to mankind are perennial, who have added to our poor human life an ideal counterpart that has been a refuge for all who are overcome by the miserable reality, have been compelled to beg from their rulers some temporary shelter from the baseness of human ingratitude. They have enriched the world, and have been robbed for doing it. They have labored for the delight of others, and have been told with a malignant irony that on that account they should ask nothing for themselves. They claim no monopoly. They do not, like the laborer upon matter, appropriate what may be needed by others. They do not, like the inventor, prevent others from making use of the common gifts of nature. Their material—language—is not exhausted, but strengthened by their use of it; it is enriched and not impoverished for posterity. Their appropriation of words is as harmless to others as the appropriation of light by their eyes or music by their ears. They ask for no property in ideas; they write that others may share them; but they do ask that sneaking curs, without pretence of excuse except their greed, may not purloin the product of their labors. It is not very much to ask, for it is even doubtful if it would cost the public anything to grant it. It would, perhaps, amount only to the payment of the price of a book to the man whose labor produced it, instead of to the rascal who stole it from him.

LOCAL GOVERNMENT OF TO-DAY IN JAPAN.

TOKIO, May, 1890.

THERE is an amusing illustration of the way in which, in the early days, say 1873, the new ideas were carried out. At an election in Shimane *ken* for school officials, one of the countrymen refused to vote because he knew no one whom he thought worthy. The Governor insisted that he must vote, whereon he cast his ballot for the Governor himself. Enraged at being considered low enough for such a position, the insulted Governor ordered the offender to prison. The man appealed, however, and was released by the Government, who severely rebuked the touchy official. New institutions could not be made to work smoothly in a day, and from the state of things at that period much progress had to be made. Taking our stand at the present time, let us look briefly, first, at the people themselves, secondly, at their assemblies.

In the year 1880, an acute writer, Nishi Sensei, published an essay in which, analyzing the Japanese character, he noted two great influences, one political—the despotism of feudalism—and one moral—the Confucian principle of obedience to superiors; and two minor ones—the fidelity of the *samurai* to his lord, and the national complaisance of behavior—the combined effect of which was inevitably a deep-seated spirit of political inertness, of obsequiousness to authority, which formed the great obstacle to the success of representative government. That such has been a characteristic of the mass of the people is undoubted. To what extent have they risen out of it?

So far as comparative statistics of elections are of value, we are left with little material to judge from. Strange to say, neither the Home Department nor the *ken* offices have kept a systematic record of the voting figures since 1878. In Niigata *ken*, however, this has been done, and the Governor, Mr. Chida, has kindly sent me these figures:

	Electors.	Votes cast.	Per cent.
1880	51,088	27,732	54
1886	52,949	22,403	42
1890	48,932	30,122	61

It seems difficult, however, to draw any general conclusions, as the following figures from two *gun* (counties) show: (1.) Percentage in 1880, 22; in 1886, 44; in 1890, 68. (2.) Percentage in 1880, 48; in 1886, 43; in 1890, 29. Probably the explanation lies as a rule in local causes, each community having an electoral history of its own. So far as I can judge from reliable testimony apart from statistics, the last four or five years have seen a distinct advance in the interest taken by the mass of the people in the management of their affairs. Officials from various sections tell me that at present the vote does not as a rule fall below 50 per cent. of the electorate, while in many places, where cause for special interest exists, it runs as high as 90 per cent.

Figures showing the percentage for the whole country are not easily obtainable, as they are not forwarded from the *ken* to the Home Department. I can judge only by the following figures (election of February-March, 1890) kindly furnished by governors and others and coming from representative parts of the Empire:

	Electors.	Votes cast.	Per cent.
Tokio (*fu*)	12,281	4,845	40
Kioto (*fu*)	28,276	9,391	33
Awomori (*ken*)	18,556	13,394	72
Niigata (*ken*)	48,932	30,122	61
Chiba (*gun*)	2,410	1,522	63

There is a marked contrast here between the proportion in the metropolitan cities (*fu*) and that in the provincial regions. The percentage in the latter is on the one hand much better than that in Massachusetts in "off" years (52 per cent. in the period of 1871–'89), but not as satisfactory as that of New Jersey, Michigan, Wisconsin, and some other States (ranging, I believe, from 75 to 90 per cent. in the period 1876–'88). The *fu* seem to be distinctly behindhand in the interest shown by their citizens. Individual wards (*ku*) make an even more deplorable showing. In four wards in Tokio the percentages were respectively 10, 13, 16, and 17. Indeed, it was only by the aid of the suburban (rural) districts (one of which cast a vote of 75 per cent.) that the average was brought higher than 25 per cent. In Kioto, matters were little better: three wards returned percentages of 16, 19, and 19, respectively. The same lack of interest may be gathered from what one observes in mingling with people. For example, when inquiring the date of the Tokio election, I found at least four intelligent and highly educated gentlemen—men, too, who take a deep interest in the national progress—who could not tell me. Another, when I referred to the election in conversation, did not know it had occurred. "The Assembly?" one said; "oh, nobody pays much attention to that." I cannot venture to indicate with certainty the influences that produce this state of things; the fact is there plainly enough. Evidently Japan, like our own country, finds that in large cities the problem of local government develops special phases.

The proportion between electorate and population depends on the pecuniary voting qualification, already explained in your columns by an able correspondent. The notable fact is the repeated fluctuations in the size of the electorate. The figures for the Empire are as follows: 1880, 1,513,308; 1885, 1,637,137; 1887, 1,486,107; 1889, 1,602,249. Of course the causes of this are economic rather than political, and cannot be gone into at length in this place. Apparently the *fu* have on the whole been the losers. Thus:

	1880.	1885.	1887.	1889.
Tokio..	12,100	12,000	12,200	12,300
Kioto..	31,100	28,900	28,400	28,300
Osaka..	48,000	63,200	36,900	39,800

Probably the resumption of specie payment in 1886, the imposition of special taxes, and migration have contributed to the result. I am told, moreover, that in many districts financial distress, arising from various causes, has tended to make the rich richer and the poor poorer, thus thinning the electorate.

The three ranks are represented in the electorate as follows: *kwazoku* (nobles), 298; *shizoku* (corresponding to the old *samurai*), 63,337; *heimin* (commoners), 1,541,614. As to their relative influence in local politics, some inferences may be drawn from the statistics of membership of the assemblies. This is divided as follows: *kwazoku*, 1; *shizoku*, 508; *heimin*, 1,617. But the different sections of the country differ widely, and must be noticed separately. In the metropolitan cities the upper-class contingent is 17 per cent. of that of the commoners; in such old homes of clan feeling as Kagoshima (Satsuma) and the neighboring region, 678 per cent.; in the country districts elsewhere 13 per cent. The whole electorate in these different sections is divided about as follows: metropolitan cities, upper classes, 2.3 per cent.; Kagoshima, etc., 21 per cent.; other districts, 1 per cent. Making the necessary comparisons, then, we see that in the first section the upper classes, when it comes to the choice of members for the assemblies, wield an influence greater than that to which their mere numbers entitle them by 7.4 times in the first instance, by 34.2 times in the second, and by 13 times in the third. This indicates that, by reason of various historical influences, we cannot expect to find uniform progress throughout the country. It is, too, an instance of what may be frequently noticed in dealing with Japanese institutions, that, notwithstanding the comparatively small area of the country, there exist, as in our own country, in different sections widely different conditions, that in different regions may be found different solutions of the same problem, and that general truths must be laid down with hesitation.

The local political parties furnish another instance of this. In some districts parties exist, in others not. They separate usually on some question of local expediency. Not unlike the Athenian parties of the Mountain, the Shore, and the Plain, the lowlanders are frequently found fighting against taxation for mountain roads, and the mountaineers against the burden of dike and irrigation expenses. In Gumma *ken*, if not elsewhere also, the abolition of licensed prostitution has created two political camps. In Chiba *ken* for a long time the citizens have been divided over a certain Government-fathered bank, whose affairs were not satisfactorily managed. In Yokohama the merchants and the land-owners have been at odds, the disposition of some public property being at the root of the dissension. As to nomenclature, however, they have in many cases developed the custom, which so harms our own politics, of fighting local battles under national standards. Partly because the leading national parties have a widespread local organization, partly because prominent partisans become identified with opposing sides in local controversies, partly for other reasons, one finds the *Kaishinto* (Progressists) and the *Jiyuto* (Radicals), for example, contending in Chiba or Yokohama over questions that have not the remotest connection with their national platforms.

Party feeling often runs high, though here, too, it is impossible to make general statements about particular provinces, or even counties, much less about the Empire at large. In the town of Chiba, for example, I saw a very quiet and orderly election, while a small town only sixteen miles away has been notorious as one of the most turbulent places in the country. In the past few months the papers have reported at least half-a-dozen instances of violence. In Niigata *ken*, a few years ago, a too outspoken editor was decoyed from his sanctum and ducked in a muddy ditch. In Kagoshima a political murder occurred in March last. The country is troubled in various parts with young hare-brained *soshi*—a cross between hoodlum, anarchist, and reformer. Their creed is political liberty, but their methods are detestable and their character misguided.

As for the assemblies themselves, almost everything good can be said of them. To begin with, there is, according to universal testimony, none of our cheap jobbery and noisome corruption. Whatever exists is as yet sporadic. Tokio has furnished the only scandal I have heard of, an alleged bribery of members by proprietors in the Yoshiwara to obtain a diminution of the licensed prostitution tax. The members as a rule are of respectable, even of high standing, particularly in the country districts. From an examination of a small book giving the name, age, etc., of every member of the provincial assemblies, I find the average age to be as follows, with no special differences to be noted in different localities: 25 to 30 years 9 per cent., 30 to 35 30 per cent., 35 to 50 46 per cent., 50 to 70 15 per cent. In a country where young men, even youths, are so important an element among the educated classes, and are found so much at the front, this is certainly a very conservative showing. The occupations of the members are as follows (though these returns are not complete): Farmers 1,227, merchants 309, lawyers 64, physicians 59, bankers and brokers 17, printers and booksellers 3, liquor-brewers and dealers 10, pawnbrokers 11, journalists 10, teachers 16, corporation officers 5, artisans 2, local officials 16, miscellaneous 59, no business 192. The small number of journalists and the large number of those described as having "no business" are the peculiar features.

In the general conduct of the assemblies, entire decorum is the rule. Here and there one hears of a turbulent session or factional quarrels. In Niigata *ken* on one occasion a member of the Opposition was unceremoniously ejected by the angry majority. In another *ken* a member, who had fallen out with the presiding officer, took a somewhat erratic method of showing his disrespect by entering the Assembly wearing a mask. A spirited discussion ensued, which ended by the voluntary removal of the mask by its wearer and the restoration of harmony. *Hara-kiri* has long been abolished, but one notices now and then that, on the occasion of a supposed insult, or at a moment of uncontrollable indignation, the offended member will leave the Chamber, or even resign his seat out and out.

In the majority of cases the relations between Governor and Assembly are harmonious. The popular Governors seem to be more numerous than the unpopular ones. The personality of the official, the temperament of the community, the difficulty of the special problems of the district, all enter into the question. There seems to have been but one genuine failure, Gov. Mishima of Fukushima *ken*, in 1883. It may be noted that the first public criminal trial in the country was that of some young men who were goaded by his conduct into a defensive league and were charged with conspiracy. Two years ago the Governor of Awomori *ken* (apparently a man not easy to get along with), in a report not intended for the public, referred to his constituents as "doltish." The word got abroad, the provincials stormed, the local officials resigned in a body, and the Governor's recall was demanded. His place is now filled by another.

Outside of the metropolitan cities, the assemblies seem to be really representative—to be, in truth, the mouthpieces of the people. They lead as well as express the public opinion of the community. Considered, too, merely as a measure for keeping the people contented, they are a success. Officials tell me that under the present system taxes are collected of a kind and amount that would otherwise be cut of the question. That they are not always representative, however, in the sense of standing for all classes of opinion, is probably true. In some places, one is told, the educated and intelligent do not take part in politics. In some the mere politicians, not the sober citizens, preponderate. There is, however, as yet no antagonism between rich and poor or capital and labor. Great differences in wealth, where they exist, are not politically of consequence.

One characteristic, not easy to set forth briefly, stands out in contrast with the old attitude of thought. The difference between the law and government of former days and of to-day is the difference between precept and legislation. The people have emerged from a communal into a political system. Everything with them now is decision, law, statute—not mere custom or the unfettered discretion of an official. Apparently they are developing that habit of attention to exact expression, of drawing distinctions, of insisting on strict interpretations, which in modern times is characteristic of the Anglo-Saxon race. Take this incident for example. A few years ago, the Governor of an interior province obtained a two-weeks' furlough and was replaced by a deputy. Fretting over affairs, however, he returned unexpectedly in a few days, entered the Assembly, where his deputy presided, and took an outer seat. It chanced that the Assembly was taking the occasion of his absence to criticise his conduct, and that, too, without gloves. Angered at last by a specially severe hit (for the debaters continued, unawed by his presence), he jumped up and ordered the speaker to be silent. Nothing daunted, the member craftily inquired: "Do you speak as Governor or as an individual?" "As your Governor, sir, of course," indiscreetly replied the furloughed official. The debate over, the member made complaint to the Home Department, and the upshot was that the Governor was fined 100 yen for assuming to exercise the official prerogative while off duty. Now, the taking of such a distinction may appear to us natural enough, and hardly worth the mention. But here such incidents are much more than trivial. That such lines of reasoning have occurred, and have been accepted, is significant. That they should ever become general would denote a change in modes of thought which would be no less radical than subtle.

In the general management of business, conscientiousness and intelligence usually characterize the assemblies. A journal of the last session of one of these bodies lies before me, and, so far as can be judged from extracts, the debates are sensible and to the point, with perhaps a tendency to go a great deal into trivialities. The best opinion seems to be that the special need, if any, is greater experience and wisdom. Two extremes—a younger generation, visionary and unpractical, and an older one, conservative and behind the times—too often find a representation. In an interview with several Governors, which Count Yamagata, the Prime Minister, courteously procured for me, they said: "On the whole, we are satisfied. The assemblies suit the times. Give us ten years, when the old generation has gone and the new one has grown up. Then we will show you something better."

JOHN H. WIGMORE.

A DUTCH WATERING-PLACE.

SCHEVENINGEN, June, 1890.

Do not falter at the above apparently formidable name. You have only to make a skip between *sh* and *k*, and there you are! The place itself is so beloved of Hollanders that the harsh name trips lightly over the tongue of one to the marshes born, and there is an air of easy superiority about the speaker that quite puts down all claims of rival watering-places. But Scheveningen has truly a charm possessed by no other seaside resort. The North Sea itself has a character—gray and sullen in calm, terrible in rage—that at once fascinates and repels; and it is easy to account for the reverential fear with which it inspired the adventurous mariners who first trusted themselves to its dark waters.

The fishing village—for Scheveningen is a fishing-port as well as pleasure-resort—lies below the level of the sea, but is defended from it by a bulwark of dunes. It has told many a tale of devastation in the past, but, thanks to the skill and untiring energy of the indomitable Holland people, it has now little to fear from any onslaught its old enemy may make. It is exceptional in that it possesses the virtue of cleanliness along with the charm of picturesqueness, a combination one does not always find in a fishing village. As we walk through its narrow lanes it seems to be always washing or scrubbing day, for on every available projecting point are hung flannel garments, red and blue, bright-colored aprons and gorgeous kerchiefs that, together with the pots of blooming roses and geraniums in the windows, make fine bits of color in which to revel. But one must frequently dodge the deluge of water that might fall upon the too oblivious color-dreamer, for, when possessed by the scrubbing mania, Holland maids, though otherwise kindly natured, are no respecters of persons.

Up from the village towards the sea, we climb by a gentle ascent to the fashionable *Nordseebad*, situated on the dunes and commanding a fine expanse of sea and sky. Along the slope are gayly painted villas bearing Dutch and French feminine names, or inscriptions indicative of the joys to be found therein—such as "Rest and Pleasure," "Friendship and Society," "Sea Rest," etc. Extending along the high embankment, which is built of the most solid masonry, fronting the sea, are the "Kurhaus" and other bathing establishments, gay with flags and streamers of bright orange, filled with the wealth and fashion of northern Europe, and enlivened by a constantly moving stream of people from all parts of the world. The sea upon which these pleasure-seekers look is never a smiling one, and one can fancy the contempt it must feel for the chattering crowd that ranges along its strand. Sullen it lies in the bright sunshine, and when the late twilight steals over its wastes, it covers itself with a mantle of pale gray mist and moans sadly, or, rising in rage, beats against the solid wall of rock built by human hands to withstand its power. Meanwhile, bright lights flash out from the pavilions and gay music mocks the sea's moaning; only when weird notes sound forth inspired by German myth or some Viking-haunted soul do man and nature seem to interpret each other.

But the days, long though they are in midsummer, seem all too short for the delights of this Holland seaside. We wander down to the end of the strand nearest the village, where lie high and dry the broad, ruddy-brown fishing vessels waiting for the tide that shall launch them off to their labors along the north coast of Scotland. Picturesque groups of women, busily knitting, sit on the sand, under the lee of some old weather-beaten boat, waiting for the husbands and lovers who are to embark for a long voyage. As the fishermen arrive the boat is rolled into the water, the men jump aboard, the women and old men, who are to remain on shore, wade out along the shelving beach and slowly and laboriously push off the clumsy concern, while a few belated sailors, who appear with their belongings tied up in gorgeous handkerchiefs, are carried out safe and dry astride the shoulders of some stalwart old salt. As the brown sails catch the breeze and the boat plunges through the surf, good-bys are shouted, while, loath to leave, the women stand and wave their hands until there is nothing to be seen but a dark speck on the far horizon. Then, with grave faces and slow footsteps, the women go homeward, and the old men repair to a seat overlooking the sea and sit silently in a row while the smoke of their meditations rises heavenward. Later on we see the women at their net-mending, and a striking picture they make in their scarlet lined blue cloaks, sitting on the vividly green grass busily at work on the brown nets spread over its surface.

Down at the other end of the strand there is a different world of life and movement. Over the broad stone steps that lead to the beach a smiling throng of well-dressed people is constantly passing. On either side the walk are booths flying gay streamers and displaying heaps of red cherries, purple plums, and yellow apricots, with piles of the famous Dutch gingerbread, sweetened with honey and ornamented with generous slices of citron. From shining brass reservoirs there flows at call a stream of delicious milk, the product of the sleek cows we saw feeding in the green meadows on our way to The Hague; while the sign "Diverse Bieren" proclaims that one need not go thirsty. On the smooth broad beach, in cosey neighborly groups, the beach chairs invitingly stand, *windstoelen*, as they are aptly called; made of stout willow and having a closely woven back, with top shaped like a chaise, they effectually keep out wind and sun. For the price of about four cents of our money one can rent one of these chairs for half a day; receiving a yellow check, bearing a figure of a stork and the word "windstoel," together with the price and the length of time for which the check is good. Here sit dowagers and maidens reading, sewing, gossiping; while happy children build dykes of sand against the incoming tide, and gayly chatter to

one another in Dutch, French, and German, often asking rapid questions in French and being quickly answered in Dutch, with that childish facility for languages that grown people can only envy. Gallants in immaculate suits of white flannel hover about the chairs of the young maidens, and pretty boys in sailor costume go in and out among the people with waiters full of clinking glasses, the very sound of which wakens thirst. Now and then an officer in brave uniform, from the station near by, gallops along the hard sand, and the donkey-drivers with persuasive cries urge on the plump little animals with their joyous burdens.

And so the day melts insensibly away, and, while it is yet light outside, the "Kursaal" is brilliant with many gas jets, and music-lovers from The Hague come by carriage and tram-car and fill the large hall, while the symphony orchestra of eighty musicians interprets the great composers with faithfulness and delicacy. In the middle of the hall, immediately in front of the orchestra, there are comfortable, high-backed chairs for those who really come to hear the music; and up to five o'clock these may be reserved, in which case the word "Besproken" in large letters is pasted on the backs. All around the hall are small tables and chairs for those who wish to season their music with a social cup of tea or coffee, or perhaps something stronger—Schiedam not being far away. In spite of the many people, and the social element, there is little confusion, and the waiters are requested not to move about while certain pieces are being played. The love of music, as of color, seems to be spontaneous with the Holland people, and while there is little noisy demonstration, there is, apparently, fine appreciation. Love of country was evidenced by the whole audience rising to its feet when the national hymn was being played, and standing until the last note had sounded.

During the long twilight, the day's labors being over, the women from the village stroll in groups along the esplanade, grave and dignified in bearing, little heeding the gay world about them. They are uniformly dressed in black stockings, white wooden shoes, short skirt, of red or blue serge, puffed out—so we have been told—with twenty petticoats. A shawl of bright color is pinned across the breast, and a close, white cap covers the head, to which on Sundays and holidays are added, on each side above the temple, the heirlooms of gold spirals and pendant ornaments so dear to the heart of the Netherland peasant woman. With the exception of the gold ornaments, the children are exact copies in miniature of their elders, making in the distance a droll appearance; but on a nearer approach we see sweet, serious little faces with honest blue eyes; and if the stuff of the dress were of richer quality, we could fancy that the little figures had just stepped out of their frames from the galleries of The Hague or Amsterdam. On every occasion both women and little girls are engaged in knitting long black stockings. As they sit along the sea wall, or stroll along the strand, or walk by the side of the little dog-carts delivering milk, fruit, or vegetables, the stockings grow rapidly under their busy fingers, and we wondered where could be the market that required such countless pairs of hose. But we wondered no longer when we saw the favorite pastime of the children. Using their wooden shoes as toboggans, these apparently sober little creatures slide recklessly down the slippery stone embankment and in their stocking feet scramble back again with shouts and laughter; and as the woollen material is unhappily not so well suited as the wooden to withstand the wear and tear of contact with the stone, an explanation was soon found for the eternal knitting.

As we leave the gray sea, the lovely dunes, with their purple shadows, the sober fishing-folk and the crowd, to go on to The Hague, we note how the sand has drifted over the track since the last train has passed over it, so that laborers are engaged in shovelling it away. Along the track for many yards the sides of the great dunes have with infinite labor been paved with cut stone, and where it was impossible to do this a coarse grass is sown to keep the sand within bounds; and yet the fine white particles come swiftly and silently drifting in, blown by the fierce winds that sweep over these lowlands until, accumulating, they play an important part in the struggles of the people to maintain existence. If it be true that we love most what costs us pain and labor, then we need not wonder at the ardent love of the Hollanders for their country. The spongy soil, needing constant draining; the daily and hourly watching that the insidious sea does not undermine those great monuments of skill and industry, the dykes; the still more patient labor required to combat the seemingly inoffensive particles of sand—all serve to endear this little strip of watery land to its saviours.

Correspondence.

THE POINT OF ATTACK.

To the Editor of The Nation:

Sir: This week the text is furnished by Mr. David A. Wells. A foreigner reading his letter in your last issue, clear, crisp, and convincing, must ask himself whether the people of the United States have lost their senses, or really enjoy being put through the process which Mr. Wells describes. He could not see that in this country, which he supposes to be a pure democracy, the authority to which Mr. Wells's letter is addressed—that is, the mass of the people—has no more voice in the matter than the mass of the British people had as to the Corn Laws before the first Parliamentary Reform Bill, and that this country is governed by a combination of private interests to which Mr. Wells's letter is merely a subject of amusement.

I remember hearing Mr. Bryce say that he had not dwelt very much in his book upon the lobby because he was not sure that he quite understood it. And our foreigner may well be puzzled by this mysterious and self-constituted organization, which surrounds not only Congress, but every State Legislature and every City Hall in the United States. Yet the origin and structure of the lobby is the simplest thing in the world. Given a legislative body of some 300 members, for the most part strangers to each other, all precisely equal, all representing localities, with nobody to represent the general interest, and no official guide or leader of any kind—in short, a regiment of privates without any officers. When this body assembles, there is absolutely no business prepared for it, but it may take up any earthly subject which any of the 300 members may choose to propose, and may treat that subject in any way it pleases. The problem is how to get such a body to do any work. The natural way would be to let the Chief Executive—President, Governor, or Mayor—elected by and responsible to the whole people, prepare the business, submit it to the Legislature, and guide the latter in its deliberations. This, however, is strictly prohibited, the executive being limited to that which any other citizen can do just as well—written communications—to which the Legislature pays no attention whatever.

How, then, does the body get to work? It first splits itself up into a large number of committees, appointed by an officer elected for that purpose, a process by which, if the whole body is not at the outset converted into a hot-bed of corruption, it is because the popular control still keeps the men a great deal better than the system. The committees are no better off than the main body. There is no initial force whatever. What subject they may take up and how they may deal with it depends first upon chance, and then upon outside manipulation. This manipulation is equally open to any one of the sixty millions of inhabitants of the United States, and the exercise of it, of course, falls to those who have the largest capital and the most determined will; while, to make the conditions as unfavorable as possible, all the influence and all the negotiations are carried on in secret; every question is settled by dead weight of party majority and minority, with a complete gag upon anything like public debate, with no personal responsibility anywhere, and no protector of the public interest.

This is the origin of the lobby, which grows and flourishes with increasing vigor, as I have said, around Congress, every State Legislature, and every City Hall in the United States. It goes so far as really to create both Legislature and Executive, the people having no choice except between the candidates offered them by the two great parties, differing only as to which lobby manages them, if, indeed, the same lobby does not manage both. Under the "Trust" principle this is likely to take place before long if it has not already.

We have just had in Massachusetts a splendid specimen of this lobby product. It has culminated in that report which the State offers to an admiring world, and in which the Investigating Committee cordially agrees with the officials of the West End Railroad Company, that nothing can be done at the State House except through the lobby, and, therefore, that nobody can be blamed for making use of it, though such use should always be restrained by considerations of propriety.

The political future of this country depends upon whether it is to resign itself hopelessly and helplessly to this rule of the lobby. The only hope of escape from it lies in providing a substitute in a strong and responsible executive power instead of the caricature now called by that name, and in giving to it the conduct of business in the Legislature with such order and system as to enable the people to understand and control what is going on. At any rate, till this problem of the lobby is grappled with, Mr. Wells and Mr. Atkinson may continue to furnish, as they have done for the last twenty-five years, the most exhaustive demonstrations of economical problems with no more practical result than if, instead of printing them, they had stood on their front door-steps and talked to the north wind. G. B.

Boston, July 5, 1890.

POLITICS IN COLORADO.

To the Editor of The Nation:

Sir: Editorial comment in your issue of June 26 contrasting the speech of Senator Wolcott of Colorado at the New England dinner in 1887 and that recently made by him on silver in the Senate, puts him too much in the guise of a natural partisan undergoing for the first time an inchoate shock of reason. He said: "We find all the excitement we need in the two great parties, and we rather look upon the talk of anybody in either party being better

than his party as a sort of cant. The hypercritical faculty has not reached us yet, and we leave to you of the East the exclusive occupancy of the raised dais upon which it seems necessary for the independent voter to stand while he is counted." Drollery lurks in this masked confidence.

At that time the Senator was the most brilliant "kicker" in Colorado. The defeat of the Republican nominee for Governor in 1882 is acknowledged to have come from the Wolcott kick. It was fortunate; but the motive has been ungraciously ascribed, by friends as well as foes, to pique rather than to principle. It is, likewise, not denied that he voted for Cleveland on his first candidacy. Those trusting newspapers can learn from the Denver *Republican* that he cares not a fig for his party, and never did.

The question of punishing or rewarding a kicker turns on the significance of his pedal endeavors. The Republican party of Colorado rewards the Senator because he has kicked it successfully. The "hypercritical faculty" has never bothered him. That the Republican campaign at Denver in the fall of 1888 was one of unmatched sin is a part of the unwritten history of that city.

From that speech, one would suppose that the deep-chested, firm-striding, brawn-loving, lynx-sighted, hard-smiting, bold-thinking, and hope-wagering Man of the West, before all others, is abundantly content to scent his way blindly along the beaten path of party superstition. A protest should be entered against that inferable slur upon the Coloradans of rococo party servility—a slur seemingly convenient, however, for securing a glowing effect upon that occasion before the festive New Englanders. The "scratchers" in Colorado began to be feared long before that time. There is nothing in the geography of the "vasty West," or in the influence of the setting sun, to prevent an elector from siding with the struggle for good government rather than crawling in the party gutter and voting for the "yellow dog." The last Legislature in this State was unspeakably bad, and the present condition of the Executive Department is heartrending. So, just now, notwithstanding the boasted area of the State and its comparatively scant population, it would be hard to find another containing more Mugwumps per acre.

O. F. A. Greene.

Boulder, Colorado, July 2, 1890.

THE WEST END RAILWAY INVESTIGATION.

To the Editor of The Nation:

Sir: The article in your last issue entitled "A Study in Legislative Morals," doubtless written before the report of the Investigating Committee appointed by the Massachusetts House of Representatives reached you, contains some errors which I trust that you will permit me to correct. Perhaps the fact that I served as a member of that Committee, and that I voted against the bill on account of the methods disclosed, may be a sufficient guarantee that I am neither ignorant of the evidence presented nor disposed to distort it in favor of the railway company. The facts as found are sufficient to furnish you with a text without needing the exaggerations or perversions of the truth into which you have unwittingly been led.

It has not "been shown that, in getting their project to the point at which Mr. Williams stopped it, the company spent $113,516." The Investigating Committee, upon which were four lawyers, unanimously found from the evidence that the company had spent in round numbers $21,000, including the $7,500 paid to the newspapers, and that the amount still to be paid to legislative counsel and lobbyists, so far as it could be fixed by the testimony, was $10,500. A further considerable sum, not based upon agreements, and therefore impossible to determine, was also to be paid for the same purpose, but, judging by the scale of prices disclosed, the total amount, including a liberal estimate under this head, must fall short of $50,000. This is high enough without swelling it to $113,000.

Nor did the evidence show that "eight eminent legal lights of the Boston bar," including two ex-Governors, were retained as counsel in connection with the legislation petitioned for. While a number of lawyers of no special eminence as members of the bar were retained for purposes which did not seem to be of an altogether legal character, there were only two, outside of the regular counsel of the company, who could possibly come within your designation.

There is no foundation for your statement that "great efforts were made to 'fix' the Railway Committees of the two houses in the interest of the company," and very little for the statement that the company "put out money freely" to counteract the efforts of a rival applicant for a charter during the campaign. There are other minor inaccuracies that might be pointed out, but I will not trespass further upon your space.

Altogether I regret that you did not have fuller information upon which to base your article. We may be bad enough in Massachusetts, but you have painted us blacker than we are, so far as this matter is concerned.

I am, etc., Josiah Quincy.

Quincy, July 7, 1890.

TROS TYRIUSVE.

To the Editor of The Nation:

Sir: In the classic *Spectator* there is an account, by Addison, I think, of the writer's meeting a party of young men on horseback, one of whom impresses him as insignificant and effeminate-looking. The group shifts, and he sees that the supposed cavalier has a side-saddle and skirt—is, in fact, a lady; whereupon she strikes him as bold and masculine in her bearing. Some such modification may occur in your view of 'Les Américains chez eux,' noticed in your number of June 19, when the mistake is corrected by which this book has been announced in this country as the work of the Marquis San Carlos de Pedroso, and it is known to be by the Marchioness, who was in her girlhood a beauty of Parisian society not long before the fall of the late Empire.

Yours respectfully, S. B. W.

June 30, 1890.

[Not at all. Our opinion remains quite unchanged.—Ed. Nation.]

Notes.

G. P. Putnam's Sons have in press 'The Trees of Northeastern America,' by Chas. S. Newhall, with illustrations made from tracings of the leaves of the various trees; 'Among Moths and Butterflies,' by Julia P. Ballard; 'Dust and its Dangers,' by T. M. Prudden, M.D.; 'The Jews under the Romans,' by the Rev. W. Douglas Morrison; 'Gustavus Adolphus, and the Struggle of Protestantism for Existence,' by C. R. L. Fletcher; and the late G. P. Putnam's 'Tabular Views of Universal History,' continued to date by Lynds E. Jones.

Scribner & Welford will shortly publish 'Sanity and Insanity,' by Charles Mercier, and 'Hypnotism,' by Dr. Albert Moll.

'Language and Linguistic Methods in Schools,' by Dr. S. S. Laurie; Robert Drury's 'Journal in Madagascar'; and 'Glimpses of Old English Homes,' illustrated by the late Miss Elizabeth Balch, are on the list of Macmillan & Co.'s forthcoming publications.

Benj. R. Tucker, Boston, publishes this week a translation of the late Félix Pyat's 'Rag-Picker of Paris.'

MM. Hachette & Cie. announce, in their list of new publications of June 15, the first volume of M. Ferdinand Brunetière's "L'Évolution des Genres dans l'histoire de la Littérature." This volume is introductory, and bears the title: 'L'Évolution de la Critique depuis la Renaissance jusqu'à nos jours.' It will be rather a general view than a complete history of criticism. M. Brunetière says, in an extract from his preface which is given with the above announcement, that he shall strive to bring out his entire work in the course of the next eighteen months or two years. The second volume, which will take up the general question of the evolution of literature, and especially the evolution of *genres*, will appear next December. The third, 'Exemples et Applications,' will doubtless be ready by the month of May, 1891, and the fourth and last, 'Conclusions et Méthodes,' will come out in the winter of 1891–1892. MM. Hachette also announce that the seventh volume of their new edition of St.-Simon's 'Mémoires' has been put on sale.

The reprint of German literary monuments of the eighteenth and nineteenth centuries ('Deutsche Litteraturdenkmale'), supervised by Bernhard Seuffert, which already extends to thirty-two volumes, has passed from the publishers Henninger of Heilbronn to the house of G. J. Göschen in Stuttgart. The series will be continued with the complete poetic works of Johann Peter Uz (1720–1796).

"Speculative and Theological Essays" make the eighth volume of Prof. Masson's 'Collected Writings of Thomas De Quincey' (Macmillan). The frontispiece, a view of the nebula of Orion, is supplied to aid as it may the comprehension of De Quincey's essay on the "System of the Heavens as revealed by Lord Rosse's Telescopes." Prof. Masson remarks, with regard to the essay on "Plato's Republic," that De Quincey by exception ranged himself among the anti-Platonists or Aristotelians, for "if any man ever had the Platonic thumb, or whatever else is the true physiological indication, it was De Quincey." "Flat, spatulous, prosaic thumbs," it appears, predestine their owners to be followers of the Stagirite.

The scheme of presenting history in a compilation from contemporary writers gives us, for Scotland, 'The Days of James IV. (1488–1513),' edited by G. Gregory Smith (London: David Nutt). The period is not completely reflected in the extracts, for want of the proper narrative material; but the handy little volume is readable like its predecessors.

Book-buyers whose purchases have reference to the author's welfare may promote this and their own pleasure by buying 'A Japanese Boy, by Himself,' newly reissued by Henry Holt & Co. Mr. Shiukichi Shigemi is a student at New Haven, and his little book is a means to the prosecution of his studies. We have already spoken of it in praise, but we again commend it as an interesting example of the mastery of English by an Asiatic, and a

charming and naïf account of child and family life in Japan, with such power of description, especially of nature, as to make one feel very near the springs of Japanese art.

Corpulence is a sufficiently common infirmity in this country to make welcome such an attempt at its rational relief as Mr. N. E. Davies, an English surgeon, presents in 'Foods for the Fat' (J. B. Lippincott Co.). The sugars and starches, not fat itself, are the great formers of fat, and practicable substitutes are the great desiderata. This little book is the first we have seen that systematically replaces sugar by saccharin as a sweetening principle. Saccharin is a coal-tar derivative, nearly three hundred times as sweet as its weight of cane sugar, having none of the fattening properties of the natural element and harmless as a diet. It should be very precious to the corpulent and the diabetic. The essay is a very sensible one, with copious diet tables and numerous cooking recipes for the infirm; but to American eyes the elaborate provision it makes for alcohol in some form looks odd. This is done not because wine is antagonistic to fat, but because it is assumed to be necessary for comfort. A luxury is one thing, but such careful arrangement for a doubtful luxury for those who are physically unbalanced is another. The incidental allusion to the ordinary diet in Guy's Hospital, where "there is also a daily allowance of one-half pint of porter and two and one-half ounces of milk," more than three times as much porter as milk for the average patient, gives a clue not only to the drinking habits, but to the prevalence of corpulence, among middle-aged English. This is an American edition not edited except in name, for the editor appears to have regarded his duty done when he remarks that the seasons and the markets differ in the two countries. He complacently leaves on the list for the reader's selection, month after month, turbot, soles, plaice, skate, whitings, brill, cockles, barbels, crayfish, and what not, while our magnificent array of vegetables, covering the year, receives no word of commendation or warning.

Simultaneously with Harvard's Quinquennial Catalogue appears the 'General Catalogue of Dartmouth College,' less full, of course, than its elder sister's, less elegant in its typography, but in two respects more biographical. Not only is the date of a graduate's decease set down, but, close beside it, his age; and where his occupation is known, that too is briefly designated. There is even a difference in recording totals. Thus, of the class of 1848, the Harvard Catalogue reports *30+32=62, showing that 30 have died and 32 survive out of a total of 62. The Dartmouth Catalogue reports 53—*22, leaving the number of survivors to be computed by performing the subtraction. But whereas these two classes, selected at random, agree very nearly in total strength and in survivors, the class of 1888 at Harvard was 240 strong, at Dartmouth 63; and a graduating class of the former institution is larger than the four classes of the latter added together. The Dartmouth class of 1878, consisting of 74 members, seems to have been the largest on record; that of 1879 fell to 46, or below the figures for 1848, and fluctuations are still noticeable.

Mr. Horace E. Scudder has succeeded to the post of editor of the *Atlantic Monthly* upon the resignation of Mr. T. B. Aldrich, whose Pegasus is now unyoked.

The late Henry B. Dawson is commemorated, with portrait and text, in the July number of the *New England Historical and Genealogical Register*. Further correction of Knapp's untrustworthy "Life of Lord Timothy Dexter" is made by Mr. Wm. C. Todd. Mr. R. H. Greene sums up for six of the earliest American colleges the interesting statistics that have appeared in the *Register* as to high public positions held by them. Mr. Waters's "Gleanings" among English wills and records relate mainly to the family of Brett; but in an appendix the ever-growing Washington discoveries are recorded with the aid of illustrations.

Mr. J. R. Tutin of Hull, England, has just made the discovery of a variant and earlier form of Wordsworth's "Ode to Duty." It appears in a cancelled sheet of printed matter which Mr. Tutin found in a copy of the 1807 edition of Wordsworth's 'Poems,' in two volumes. The *Academy* of June 21 prints the first stanza of this earlier form, which, altered and improved, corresponds to the second stanza of the ode as we now know it. It is as follows:

"There are who tread a blameless way
In purity and love and truth,
Though resting on no better stay
Than on the genial sense of youth:
Glad hearts! without reproach or blot;
Who do the right and know it not;
May joy be theirs while life shall last,
And may a genial sense remain when youth is past."

Oud Holland, that handsome Dutch quarterly magazine devoted to the history of the art, literature, and industry of the Netherlands (Amsterdam: Gebroeders Binger; New York: F. W. Christern), enters upon its ninth volume during the present year. Among the articles promised is one on Kiliaen van Rensselaer and his American colony, by Mr. N. de Roever.

The office of *Artistic Japan* has been removed to No. 304 Fifth Avenue. The monthly issues of this unique publication have now been brought as far along as April, and the variety and quality of the plates are well sustained; in the matter of stuffs, particularly, the force of imitation need no further go. Since the new year came in, Mr. J. Brinkmann's discourse on "The Poetic Tradition in Japanese Art" has given way to "Animals in Japanese Art," by Ary Renan, and to an account, by Louis Gonse, of the master decorative draughtsman Korin, or Hotshiku (1661–1716), whose designs freely adorn the text. The colored covers of *Artistic Japan* are of a different pattern each month.

A discovery has been made on the site of the ancient Mendes which may be of more than mere Egyptological importance. A building has been partly unearthed, consisting of several rooms containing what was apparently a library of the Ptolemaic period. More than five hundred rolls of papyrus have been found in a carbonized condition, the building having evidently been burned. These papyri are written in Greek, and, so far as can be seen, are of the Ptolemaic or Roman age, and not Byzantine. There is a chance, therefore, of finding some works of value. But it will be necessary to spend several hundred pounds in excavation, and the Museum is just now without funds. Then comes the slow work of unrolling and deciphering, for which it will be necessary to employ one of the experts at Naples. Here is an opportunity for an exploring society to turn its funds to the best possible scientific account.

From Dietrich Reimer, Berlin, we receive the first four out of fifteen sheets of a map, by Dr. Heinrich Kiepert, of Western Asia Minor on a scale of 1: 250,000. In this work the veteran cartographer, now just completing his seventy-second year, returns in part to an early task. Half a century ago, as he relates, Moltke and other Prussian officers, on coming home from the Turkish service, intrusted to him the geographic data amassed in their official military journeys in Asia Minor, to which he added his own recent observations in the western portion of the peninsula, and, availing himself of all extant literary sources, produced in 1844 a map of Asia Minor on a much smaller scale than the present fragment (1:1,000,000). This map, repeatedly copied, and which has been of the greatest utility to travellers, has hitherto not been superseded, though the Russians have for political purposes within twenty years constructed a larger one (1:840,000). Dr. Kiepert has now used a great deal of unpublished material, and has received much aid from the labors of archæologists like Profs. Ramsay and Sterrett (who repay their debt to him), especially in the identification of places; all which he acknowledges most conscientiously and in detail. It is needless to add more to this account of Kiepert's always authoritative work. He has supplied the Turkish and the classical names, using for the former the transliteration recommended by a committee of the Paris Geographical Society. French and English equivalents are often annexed.

After twenty-five years of active service, the executioner of Prague, Seyfried, has just been celebrating his jubilee. A serenade was to make part of the programme, and it was a matter of some delicacy what song to select. A friend and admirer suggested that the "Lob der Polin" in the "Beggar Student" was just made for this occasion. It was adopted, and from a choir of twenty manly voices rang forth the words:

"Ich knüpfte manche zarte Bande."

A Society of Contemporanecus History has been founded in Paris under the auspices of the Bibliographical Society, and whereas the Société de l'Histoire de France drew the line of *ne plus ultra* at 1789, the new Society takes its departure from that date. A live society of this kind in the United States might be of the greatest utility. On payment of twenty francs one may become a member of the Société d'Histoire Contemporaine, whose headquarters in Paris are at 5 Rue St.-Simon.

The thirty-ninth meeting of the American Association for the Advancement of Science will be held at Indianapolis on August 19–27. The local Secretary is Mr. Alfred F. Potts.

—A remarkable collection of American colonial laws, and early Americana illustrative of these rare books, made by the late Charlemagne Tower, has been presented by his widow to the Historical Society of Pennsylvania. His son has added greatly to the value of the gift by his admirable catalogue, beautifully printed at the Lirpincott Press, and presented to the Historical Society for the use of its own members and of those of kindred bodies, and of other persons interested. The elder Mr. Tower was greatly assisted in forming his collection by the indefatigable labor of one of our best American bibliographers, Mr. Charles M. Hildeburn, Librarian of the Philadelphia Athenæum, and the son very wisely secured Mr. Hildeburn's help in making the catalogue, in which, characteristically, his name nowhere appears. It is an exhaustive description of each of the 942 numbers that comprise the early laws, and the 87 numbers that include the most important illustrative works. The catalogue is prefaced by a capital sketch of Mr. Tower's life, an eminently characteristic instance of American enterprise. Born in New York of good old New England stock, graduating at Harvard in 1830, in the class of which Charles Sumner was the chief pride, Mr. Tower practised law in New York, then went to Pennsylvania, where he married and settled, and gained the leadership as an authority on land and mining laws and titles. Retiring from active practice in 1875, he went to Philadelphia and at once became engaged in

the Northern Pacific Railroad and other great enterprises. Almost alone he developed the mineral resources of Minnesota, and finally transferred to a great and successful corporation the mines, roads, wharves, and other improvements which he had made. A few years of rest and tranquil enjoyment were granted him, and he died in July, 1889, in his eighty-first year, at his country-seat, near Waterville, New York, his birthplace. For forty years he had been gathering the collection now catalogued. It contains the first edition extant of the laws of almost each of the original colonies, supplemented by all the revisions down to 1800, and, the rarest of rare books, the original sessions laws. The set of Pennsylvania laws is unequalled, that of Massachusetts is the finest and most complete gathered together, and that of New York has the edition of 1789 in the copy specially bound for presentation to Washington, with his autograph and book-plate in each volume. The Americana are general histories, books on America printed in the sixteenth and seventeenth centuries, a fine series of the Eliot Indian Tracts, and other curious books relating to the Indians. All of these are bound in the best style, and are interesting as fine examples of the bookbinder's art, with some characteristic touches, for each colony has its distinctive color and each book its appropriate decoration. Altogether the Tower collection is a monument eminently worthy of the man.

— Few persons of New England origin are unable to trace their lineage through a half-dozen generations. Many can point to their first-comers within two or three decades of the *Mayflower*, and perhaps name the vessels in which they came. For this ability they owe a world of gratitude to James Savage and to the *Genealogical Register*, already approaching its fiftieth volume. But while well-nigh all the first-comers were from England, it is hard to say from what shire. Ten times more difficult is it to ascertain the cities, towns, hamlets, and especially the families from which early Americans emigrated. The last-century mistakes concerning the Washington pedigree, and the often-baffled endeavors to correct them, furnish one example among many of the labyrinths on which our family historians enter as soon as they cross the sea. In such mazes every clue which gives promise of sure guidance is worth consideration, especially if it is a new departure. Hence the following suggestion in a letter from Mark N. Bullen of Barnard Castle to an American friend is worth noting:

"The connection," he writes, "of American families with families in England will be best elucidated if your historical societies would combine and print our *Hearth Taxes* for circa 1660. You would thus have a most minute return by counties and villages of every inhabitant of England at that date who had a roof of any sort over his head. Our population was then not more than one-sixth of what it is now, and it was practically stationary [knowing few removes from shire to shire]; so in seventy-five per cent. of the cases I am certain an immediate clue would be given to the locality an American had emigrated from. Such a work would no doubt be heavy—the tax-roll for my own county, Cambridge, for 1664 covers one hundred and four skins of parchment; but I can speak positively as to its wonderful minuteness. It names, I am quite sure, every person who had so much as a hovel. This work should be done by us; but whenever an Englishman is curious about his family, he knows in what locality he is to look, and so goes to the Record Office and makes research for himself."

Such a publication is greatly to be desired as affording a base of operations abroad analogous to what James Savage and the *Genealogical Register* have provided for inquirers at home. If sister societies will associate in this publication, we are informed that the State Historical Society of Wisconsin will be prompt with its quota of pecuniary aid.

—The period covered by the fourth and fifth volumes of Sybel's 'Die Begründung des Deutschen Reiches,' although confined to a few years, comprises events of immense moment for the political development of Germany. Bismarck's diagnosis of the chronic malady which, he had declared, in his famous letter from St. Petersburg to the Minister von Schleinitz, must sooner or later be healed *ferro et igni*, had proved to be perfectly correct. This heroic and radical cure by bleedings and burnings now began in good earnest, much against the will of the rather obese and lethargic patient, but with excellent results. "Beneficia obtruduntur," the motto of Sybel's fourth volume, expresses exactly the relation of the surgeon to the sick man who, unconscious of the cankerous nature of his disease, loudly protests against the use of cauters and lancets, which are now the only means of restoring him to health. This bold method of procedure was thoroughly disapproved of by other influential councillors of the monarch, and met with strong opposition in the royal palace. The Crown Prince, Frederic William, feared lest a war with Austria should foment intestine disorders, and, by provoking foreign intervention, lead to a permanent dismemberment of Germany; and all the political principles, family affiliations and traditions, and personal relations of King William combined to render such a rupture extremely painful to him, especially as it seemed to involve the disagreeable necessity of a nearer approach to Napoleon and a possible alliance with France. The masterly diplomatic skill with which Bismarck avoided these dangerous complications appears especially in his negotiations with France and Italy, the description of which occupies a considerable part of the fourth volume. The fifth volume, which bears as its motto the words of Oliver Cromwell, "Pax quæritur bello," is devoted entirely to a history of the war of 1866 and the formation of the North German Confederation. Von Sybel excels in the clear and comprehensive survey of great military movements, and possesses the rare faculty of making plans of campaigns and battles intelligible and interesting to ordinary unprofessional readers. A masterpiece of this kind of narration is the description of the Bohemian campaign culminating in the battle of Königgrätz. According to Von Sybel, "the German Empire was founded in the autumn of 1866"; he therefore regards the task which he had undertaken as completed by the publication of the last of the two volumes now before us. Frederic William urged his father to assume the imperial title as early as 1867; but Bismarck opposed such a step as premature, and King William unhesitatingly rejected the proposal, declaring that he was content to be "the commander-in-chief of the Confederation and the first among his peers." Indeed, the proclamation of a North German Empire would have awakened no enthusiasm, and might have imperilled the ultimate achievement of national unity, whereas a North German Confederation under the hegemony of Prussia, and with the South German States bound by military treaties to recognize the supremacy of Prussia in time of war, furnished a firm and sufficiently elastic basis upon which to rear the permanent structure of a pan-German Empire. Von Sybel proposes to trace this natural and inevitable process of transition and development in three additional volumes, which will be published in the autumn of 1891, and will bring down the history of Germany to the conclusion of the Peace of Frankfort on the 10th of May, 1871.

—Since the effort to internationalize Egypt as distinguished from Anglicizing it, the claims of national right to places and positions go very far. Here is an instance: The present director of the Khedivial library, Dr. Vollers, is about to retire to accept a professorship at Tübingen. The pay is small, but there are several candidates for the place, the most important of them being Mr. Edward A. Van Dyck, an American. But the appointment of any one not a German will bring about a diplomatic storm, unless by any chance the German Government has *no* candidate. What is needed to make the library useful is a scholar already up to his work, and not a man sent out to make himself acquainted with colloquial Arabic. That principle might be well enough were it a German and not the Khedivial library. Dr. Vollers has probably justified his tenure of office by his dictionary of colloquial Egyptian Arabic now printing at Beirut. Mr. Van Dyck is the son of Dr. Van Dyck, the well-known Arabic scholar and missionary at Beirut. As he was born and has passed all his life in the East, he has a thorough knowledge both of colloquial and literary Arabic, to which he adds most of the European languages. Specimens of his serious studies are a careful monograph on the capitulations with the Ottoman Empire, a translation from the Italian of Gatteschi's 'Real Property, Mortgage, etc., according to Ottoman Law,' and translations from the French of 'The Right of Landed Property in Egypt,' and 'Public Instruction in Egypt,' both by Yakub Artin Pasha, and the latter recently reviewed by us. Such work ought to be encouraged, and the fact that Mr. Van Dyck has been in our State Department and our consular service and is now Professor in the Khedivial high school would, under ordinary circumstances, tell in his favor. But in Egypt!

—Another example. The Society for the Preservation of the Monuments of Ancient Egypt, of which the Earl of Wharncliffe is President and Mr. E. J. Poynter, R.A., Secretary, was founded about two years ago, not for the purpose of exploration and discovery, but for rescuing the monuments already discovered from further ruin and destruction, while there is still time. Any one who has travelled on the Nile will admit the urgent need of this society. The Egyptian Government does something, for it levies a tax of £1 a head on each Nile traveller for this purpose, and the receipts this last season must have amounted to fully £7,500. But this is insufficient. Moderate estimates of what is urgent and should be done soon surpass $37,500, without including the clearing away of rubbish and houses in the temple at Luxor at $7,000 more. Nor does this sum include anything for guards and enclosures, and of these the mutilations and robberies last autumn at Beni-Hassan and Tell el-Amarna show the absolute necessity. This society, therefore, last year proposed to spend $2,500 a year to begin with for props and repairs, but asked that the money might be spent under the supervision of some Englishman. Then politics came in. The French, with their sentimental ideas about Bonaparte's expedition, and Champollion, and Mariette, and Maspero, claimed the Museum as a purely French institution, and refused to accept an Englishman there in any capacity. "Rather a German!" The director, M. Grébaut, was ordered to resign at once if any such thing were attempted. This

would have been in many senses very satisfactory, except that the French would have attempted to put more spokes into the British wheel than they do now. So Egyptology and the Museum are sacrificed to politics to humor France. It can no longer be concealed or disguised that M. Grébaut is an indifferent Egyptologist and a poor museum director, and that there exist differences among the authorities which are bad for the Museum. He was bred to the law, somehow became a member of the French Archæological School in Egypt, and succeeded Maspero because there happened to be no other Frenchman available. This French school is, however, a very useful and creditable institution, though it has of late given its work chiefly to Coptic antiquities. In connection with the proposed English official, the name of Mr. Budge of the British Museum has been much mentioned.

PALFREY'S PEOPLE OF NEW ENGLAND.

History of New England. By John Gorham Palfrey. Vol. V. Boston: Little, Brown & Co. 1890.

Dr. Palfrey's diligence has not added much that is essential to what was known about the period covered by his fifth volume. The field had been too thoroughly reaped for profitable gleaning, and his views on American history too often expressed to warrant expectations of novel treatment. It is a compact and convenient résumé of the history of the "Great Awakening," the "French Wars," and of the events which led to the outbreak at Lexington in 1775. And it is something more: it completes Dr. Palfrey's 'History of New England,' one of the most considerable historical works coming from any American. Few historians have shown greater industry in gathering original materials, or a firmer grasp of complicated masses of facts, or greater skill in arranging them in perspicuous order, and presenting them in a narrative always clear and often felicitous.

Dr. Palfrey's scheme of a history of New England was full of difficulties. The people of the New England colonies were of the same race, it is true, and doubtless of a similar way of thinking on political and theological questions; but from the outset diversities of opinion or interest, or both, led them to seek different localities in which to develop their several autonomies. Nevertheless, from the coming of the Pilgrims to the withdrawal of Washington's army from Boston in 1776, the watersheds of New England's history inclined towards Boston Bay, and in Massachusetts was the main stream to which all other streams were affluent. But Dr. Palfrey's purpose was wider than is implied by his title: not merely to write a history of the several colonies as organized political bodies, but "the history of the people of New England," and, as we learn from the preface of his last volume, to show that "the work which in five generations was done in New England for the continent and the world, was done by Englishmen of Puritan training," and that, "as far as human judgment may trust itself, no other class of men contemporary with them was equal to the achievement."

For writing their history Dr. Palfrey possessed many qualifications, but his defects were serious. Without originality or special historical insight, he accepted the conventional theory of New England civilization, and did not go very far beneath the surface, or deal satisfactorily with facts which did not agree with his preconceived notions. The history of the New England colonies rests on patents, charters, or royal commissions; and for the interpretation of these, legal training, or natural legal insight, such as Belknap, Trumbull, Ramsay, and Deane possessed, is indispensable. Dr. Palfrey lacked both, and his constitutional discussions do not command respect. His imagination formed no pictures of domestic or social life, and we turn his pages in vain for the causes which in five generations changed Englishmen to Yankees, or to learn how, for example, living amid scenes of danger, they lost their inheritance of British pluck, and at the same time managed to preserve their moral courage and stamina unimpaired while acquiring wealth by slave-trading, piracy thinly disguised as privateering, and smuggling. He says of the Puritans that "the rank, the wealth, the chivalry, the genius, the learning, the accomplishments, the social refinements and elegances of the time were largely represented in their ranks. . . . The Earls of Leicester, Bedford, Huntington, and Warwick, Sir Nicholas Bacon, his greater son, Walsingham, Burleigh, Mildmay, Sadler, Knollys, were specimens of a host of eminent men more or less friendly to or tolerant of Puritanism." The wealth of England, he adds, was on the side of the Puritans, and so were many of the landed aristocracy, many of high rank in the army and navy; and, if few of the Elizabethan dramatists or writers of lighter literature are found among them, they may justly claim such names as Selden, Lightfoot, Gale, and Owen, and such poets as Spenser, Milton, and Marvell. Nor were they wanting in the amenities and graces of social life; and he records with satisfaction that Col. Hutchinson could dance and fence, loved music and played the viol, shot guns and bows, and delighted in painting, graving, and liberal arts. He completes what he has to say about the Puritan by adding that he was "a Scripturist," "a strict moralist," and, "in politics, the liberal of his day."

Doubtless Puritanism divided English society by a vertical line, on both sides of which were men of all classes and conditions. So far Dr. Palfrey is accurate. But there was difference in Puritans. Those who came to New England formed a horizontal stratum, not a vertical section, of English society. They were selected Puritans: above them, the nobility and gentry; below them, the peasantry and the rabble. Among them were two or three families of rank, and a few conventional gentlemen, who either died early or returned to England. No poets came; none addicted to art, science, or literature, save theological; none distinguished in statesmanship or arms, and but few who led the social life of Lincolnshire or of Suffolk. Some of their leaders were men of affairs and acquainted with law; a larger number Calvinistic clergymen, and a half-dozen with some pretensions to gentility; but mainly they were yeomanry, trades-people, mechanics, and servants.

Dr. Palfrey says that "the spirit of Puritanism was as old as the truth and manliness of England." This is quite true. Dr. Storrs has just told us that Moses, and several of the patriarchs, and Christ, and many notable pagans were Puritans. This is also true. But such truths do not describe the character or the work of those who came to New England. We may imagine, if we will, the statesmen, poets, and divines whom Dr. Palfrey has mentioned, engaged in ordaining party fences, the ringing of swine, or in an expedition against the Pequots, and burning them when found, or trying Mrs. Hutchinson for heresy, or inspecting her exhumed monstrous birth for evidence of a special providence, or we may imagine Col. Hutchinson and his family dancing and playing cards about Boston Bay; but such imaginings are not the history of the Puritan New England. Puritanism there was "the truth and manliness of England" specially vitalized and intensified by the Five Points of Calvinism enforced by the Synod of Dort. There were "State Puritans" and "Doctrinal Puritans" in old England, but only the latter found their way to New England. When Calvinism came into England, Armenianism came also; and between these two grew up a deadly hostility which did much to form the New England Puritans for their work, civil as well as ecclesiastical. King James, a renegade from Calvinism, allied himself to the Armenians; and so did Laud and his party who hounded the non-conforming clergy—a strange conjunction of liberalism in creed with absolutism in politics, which cost Charles I. his head, and, with other causes, George III. his colonies. All this and more Dr. Palfrey knew, but it was not an agreeable phase of his subject, and he left it alone.

The New England Puritans were narrow and intolerant, not because the age was narrow and intolerant; they were so from choice. They discussed the matter, and knew the difference between tolerance and illiberality quite as well as we do. Their testimony on this point is clear and explicit. Conscious of their mission, they made no apology for their principles; but they wished to be understood. It was their singleness of purpose, their absolute sincerity of belief, their utter conviction that happiness here and hereafter depended upon the acceptance of the Calvinistic scheme, which gave the New England Puritan his power and his success where others failed. Dr. Palfrey's misapprehension of this vital quality of New England Puritanism pervades his whole work, and no part of it more than the fifth volume. He treats "The Great Awakening" with entire candor, but as he would treat a modern revival of religion. He sees in it no connection with primitive Puritanism, or permanent influence upon other events of that day or of later days. He has noted in the second generation a declension from the high political spirit of the emigrants, apparent in the rise of parties at the revocation of the first Massachusetts charter, and during Dudley's administration, and he attributes this to the influx of commercial adventurers and the increase of wealth and luxury; but he fails to notice that this declension was rather in their theological belief, as is evident from the fact that the Mathers, Danforth, and others, the champions of civil and ecclesiastical liberty, and who as such merit and receive his commendation, were "faithful among the faithless found" in asserting and maintaining, with pathetic earnestness, the old Calvinistic doctrines.

There can be no doubt about the declension. It was manifest among the godly in the acceptance of the half-way Covenant and in some departures from discipline. Ratcliff, the Church of England chaplain of Andros, had preached in the Old South, and not without hearers; King's Chapel, Christ Church, and Trinity marked the growth of Episcopacy; Harvard College, having repudiated the Mathers, relegated herself to the mild doctrines of the "Dudleian Lectures," whose founder scrupled not at "Episcopal ordination"; and even more alarming to those of the ancient faith was the circulation of a book inculcating whispered belief in the salvation of all. To arrest "the great and visible decay of piety," a synod was called in 1725; but the

Episcopal clergy of Boston, through the Bishop of London, invoked the royal interdiction. There was no mourning in Zion, nor comfort, until Edwards, at Northampton, seizing live coals from the altar of Calvinism, touched the hearts of his own people. Then came Tennent and Davenport in New England, and Whitefield from Georgia to Maine, preaching predestination, election, free grace, and the wrath to come upon the ungodly. The effects were instantaneous. By estimation there were 40,000 converts in New England alone. Old professors were quickened to new life; Calvinism had free course. And to Dr. Palfrey this was the end of it.

But it did not end thus. One of its later effects was manifest in the expedition against Louisburgh in 1745—more like a crusade than a military movement—when the undisciplined yeomanry of eastern New England, inspired by the preaching of Whitefield, who inscribed their banner with "Nil desperandum sub duce Christo," attacked the French Catholics behind the bastions of Louisburgh with the zeal of the Christians against the infidels in the Holy Land. And there was still another effect. Calvinism in New England, differing from Puritanism in old England, was much more than a creed. It formed a habit of mind which, becoming hereditary, has survived to the present day as character. The creed has changed, but character remains; and the constancy, zeal, and singleness of purpose, and intolerance already spoken of—in a word, the Calvinistic spirit—of the remote ancestor reappears even in those whose measure of liberality is the intensity of their dissent from opponents, or who limit the universality of salvation to such as accept the doctrine. Character thus formed was the greatest legacy of the New England Puritans to their descendants, for by that they have prevailed. Of this transforming and sustaining power of Calvinistic Puritanism Dr. Palfrey gives us no hint. As he frankly informs us, with Geneva he had no sympathy. It may be so with us, but the facts remain.

More than half of Dr. Palfrey's fifth volume is given to the causes and events which led to the American Revolution. It affords little evidence of insight, and is disfigured by singular misstatements of essential facts. No doubt the causes which led to forcible resistance, whether originating in Great Britain or in the colonies, were earlier and more effectively operative in New England than in the other colonies. But it is nowhere noticed by Dr. Palfrey as extraordinary that, on the arrival of the news of the passage of the Stamp Act, months before it was to take effect, and therefore not as against "intolerable oppression," as he says, the people from Maine to Georgia declared their determination to resist it by violence to persons and property which there was no effort to prevent or arrest. It is obvious, therefore, that there must have been other causes operative anterior to that event, and not confined to commercial centres quick to discern whatever was likely to interfere with their interests, but pervading agricultural communities remote from centres of business or intelligence. Another interesting fact not adverted to by Dr. Palfrey, notwithstanding his frequent reference to events passing in England, was the contemporaneous English Revolution, going forward almost with equal step, and with the same general purpose of enlarging popular liberty against prerogative, which reached results more surprising, if possible, than those which followed the American Revolution. In both countries the revolution was brought about by agencies acting efficiently in the British Parliament as in the colonial assemblies.

Still more extraordinary is it that Dr. Palfrey nowhere thinks it necessary to state that the American Revolution—as was the case with the contemporaneous English Revolution—was the result of party action, not of unanimous popular action. He has, indeed, something to say about Government officials, placemen, and commercial adventurers opposing what he would have us think was the grand movement of an entire people towards their objective point—colonial independence. This view of the Revolution may have arisen from Dr. Palfrey's theory respecting the New England settlers and their descendants. In his judgment the work was mainly theirs, and one which no other contemporary generations of men could have done. At times they may have been a little too strenuous, a little inclined to magnify small causes of discontent with the mother country or her representatives; but even in these respects it was an excess of a noble spirit of liberty without taint of self-interest, or an unwillingness to share common burdens with others, or to submit to regulations necessary and reasonable for the commerce and government of an empire of which they were parts. On the other hand, they were loyal and dutiful subjects, glorying in the name of Britons, and "without the most distant thought of independence." But when, after the close of the French war, the British Government unconstitutionally undertook to tax them, then, and for the first time, as one man, on axiomatic principles of English liberty enunciated by Hampden, Sidney, and Locke, they resisted the King and Parliament, and took the field for a seven years' war.

This is the old, conventional theory of the origin of the American Revolution. But, by the estimate of John Adams, two-fifths—some others say three-fifths—of the colonists, including a large proportion of the cultured classes, were Tories, who, by an organized system of terrorism not easy to be understood in these days, were obliged to flee the country or to fall in with measures of the Whigs. Free speech was not allowed, nor would silent adherence to their convictions answer. They must speak—speak loudly, and only in one way. They must act—act promptly in accordance with the most vehemently expressed sentiment. Now it agrees neither with reason nor with the facts to represent this party, as Dr. Palfrey does, as made up of British placemen, colonial office-holders, mercantile sojourners, and a few men like Hutchinson, Oliver, Samuel Quincy, Jonathan Sewall, Daniel Leonard, Timothy Ruggles, and the greater part of the Episcopal clergy, who malignantly sought the destruction of their native land, which they had done much to improve, and in which were their dearest interests. Yet such is the general impression one gets from his history.

The degree of Dr. Palfrey's partisanship would be incredible without proof, but a few examples must serve. The Seven Years' War had added more than 300,000,000 to the British debt; and "was it not equitable," Dr. Palfrey represents the British Government as asking, "that the North American colonists, as subjects of Great Britain, should pay their proportion of it?" especially since the argument might be plausibly maintained that part of it had been incurred in their defence. Dr. Palfrey ought to have known—and with the statutes before him, it would seem that he must have known—that the British Government never asked, nor, so far as appears, ever contemplated asking, the colonists to do any such thing. They were asked to pay one-third of the estimated expense of their future defence. The preamble of the first revenue act of 1764, and that of the Stamp Act, set forth the purpose to raise money "towards defraying the expenses of defending, protecting, and securing the colonies and plantations." Such was the purpose—not to pay the British debt, or any part of it; and neither in the Parliamentary debates nor elsewhere is there any warrant for Dr. Palfrey's amazing statement. Of like nature is his assertion that the duties collected from the Sugar Act, after certain deductions, were to be remitted to the royal Exchequer in hard money, thereby draining the colonies of their specie. Not a penny was to go abroad. The sums collected were to be paid into the receipt of his Majesty's Exchequer by certificates to be entered apart from all other moneys, and applied from time to time by Parliament to defraying the expenses above mentioned.

Of wilful perversion Dr. Palfrey was utterly incapable. On the contrary, no historian ever wished to be more accurate. He had his theory of New England history, and, according to that, the prevailing party at every stage of it were right in their principles, purposes, and mainly in their measures; and the other party were entirely and malignantly wrong, with nothing to excuse or palliate their conduct. The history of New England neither requires nor will it bear such treatment. It will bear telling in its entirety from 1620 to 1787. It has its seamy side, as has the history of every period, however glorious; and this it is neither wise nor necessary to conceal as Dr. Palfrey occasionally does; nor to place it in a wrong light, as he frequently does; nor to apologize for it, as he invariably does—sometimes on grounds of necessity, which has always been made to condone some of the most flagrant acts of political and ecclesiastical tyranny recorded in history.

Dr. Palfrey's insight into the essential character of men is no more reliable than his insight as to the causes and relations of events. Nor is he impartial. He conceals the well-known blotch on the character of Samuel Adams, and dwells upon charges, now known to be false, against the character of Hutchinson. He performed a great service in writing the history of the New England colonies so that it need not be rewritten; but the history of "the people of New England" requires an historian of a different order.

THE AMERICAN JOURNAL OF PHILOLOGY.

The American Journal of Philology. Edited by Basil L. Gildersleeve. Vols. I–X. Baltimore. 1880–1889.

THE completion of the first ten volumes of the *American Journal of Philology* is an event which deserves to be marked. The establishment of such a quarterly journal ten years ago was a daring enterprise. The English *Journal of Philology* was dragging out a sluggish existence, with occasional intervals of a year between the appearance of its parts. The American Philological Association was kept alive only by a few faithful members; it had listened to many wild vagaries during its early years, and had not yet settled down to its most sober work. The American classical scholars who were most interested in the new developments of their science took in French and German periodicals, to which some of them contributed.

Philology in this country is not so old as many suppose. Latin, Greek, and mathematics were so long the staples of the college curriculum that many believe college graduates of a

hundred years ago to have been more widely read in the classics than men of to-day. This is a mistake, however. Latin was, indeed, the scholastic language, and was used on many occasions where men now use English; but that Latin was in quality not unlike the French of those boarding-schools where "no language but French is allowed at the table." The MS. of the Latin valedictory of Jonathan Edwards at Yale College in 1720 is in existence, and its Latinity is (to say the least) no better than that of the average "Latin salutatory" of 1890. No Greek but the New Testament seems to have been read in the regular course at Yale College until after the beginning of this century. "Previously to 1803," says the admirable Answers of the Immediate Government to questions proposed by a committee of the Overseers of Harvard College, in 1824, "candidates for admission were examined in Tully [Cicero], Virgil, the New Testament [in Greek], the rules of grammar and prosody, and the writing of Latin." In 1803, "the four fundamental rules of Arithmetick and Proportion, Sallust, and Collectanea Graeca Minora" were added to the requirements for admission to Harvard. In the college itself, for "several years prior to 1805, the course of Greek study consisted of about six books of Homer's Iliad, with a collateral translation in Latin, and about six books of Xenophon's Anabasis." Thus the Greek course of Harvard College at the beginning of this century was not broader nor more thorough than that of the best academies of the present time. And let no one think that the extra time was spent on mathematics. The extract quoted just above shows that the requirements for admission were raised in 1803 by the addition of the elements of arithmetic, but in the College only one recitation a week was given to mathematics, "except in the elements of geometry." In the Yale catalogue of 1833, candidates are asked to "observe that arithmetic is no longer studied in college, and an examination for admission is therefore held in both the theory and practice of arithmetic."

In Latin, the course at Harvard was confined to Livy, Terence, and Horace, until 1824, when "Terence is discontinued, and the following books are added to the Latin course, viz., Grotius de Veritate Religionis Christianae, 300 pages of Excerpta Latina, Cicero de Oratore, and two of the three volumes of Tacitus; besides Juvenal and Persius for those who choose Latin as a substitute for Hebrew" in Junior year.

The same year, 1805, which saw the improvement in the classical course at Harvard College, saw also the election of James Luce Kingsley to the Chair of Ancient Languages in Yale College. This scholar was one of the honored three (Day, Silliman, and Kingsley) whom the elder President Dwight gathered about him in the conduct of the College, and who made Yale what it was during the first half of the nineteenth century. Jeremiah Day was actively engaged in the service of Yale College as instructor for forty-eight years; Benjamin Silliman, for fifty-four years; Kingsley, for just half a century. Without being versed in many of the niceties of modern philology, Kingsley was an acute and broad-minded scholar, who did much for the breadth and accuracy of philological study in America.

In 1815, John Snelling Popkin, D.D., of whose oddities tradition has still much to say, the most thorough Greek scholar of his time in this country, was elected College Professor of Greek at Harvard, while Edward Everett was made Eliot Professor of Greek Literature in the same college. These were the first permanent appointments for Greek instruction in that institution. Everett never did much teaching, but the professorships of Kingsley and Popkin were no sinecures. The former, in addition to his duties as Professor of Greek, Latin, and Hebrew, was also the incumbent of the Chair of Ecclesiastical History. Dr. Popkin taught all the Greek that was taught to the three lower classes at Harvard at a time when that college had 300 students, or about as many as Williams College has now. While Everett had between forty and fifty hours of instruction (mostly lectures to the Senior class) each year, Dr. Popkin had 785 hours, or half as many each week as Everett had in the whole year. Classes were taught in largish divisions, divided alphabetically, not according to scholarship. Considerable quantities of Greek and Latin were read, but in general all students covered the same ground. Under such circumstances, advanced work in the classics was impossible. The necessary apparatus for scholarly work was lacking also. The country did not contain needed books. Among the thousand volumes given to Yale College by Bishop Berkeley, in 1733, was an excellent collection of classical books, unquestionably the best in the country. But in that collection, as it chanced, was no complete copy of Æschylus, and, a hundred years ago, neither Yale nor Harvard had a copy of Æschylus, and there is no evidence of the existence of a copy of that "father of Greek tragedy" in the libraries of Columbia or Princeton at that time. Harvard seems to have had no complete copy of the Attic Orators in 1790.

What has been said above indicates the rudimentary stage of classical scholarship in this country at the beginning of this century. Woolsey doubtless had more influence than any one else in setting a higher standard and giving a more vigorous tone to these studies. Hadley and Whitney were his apt pupils. Soon after the middle of this century two young Americans, Goodwin from Harvard and Gildersleeve from the University of Virginia, studied in Göttingen. These two scholars have been for years the unquestioned leaders of classical studies in America. Prof. Gildersleeve was called in 1876 to the first chair established in the Johns Hopkins University.

The combination of Prof. Gildersleeve's energy and a grant of assistance from his university was necessary for the establishment of the *American Journal of Philology*. No other university had funds for such a use. No other scholar was better fitted for the work by thorough training, by familiarity with all foreign work in his department, by broad interests and exact knowledge in a great variety of philological subjects, by a keen linguistic sense, and the sharpest eyes for typographical errors. With the best of German scholarship, Prof. Gildersleeve is never heavy nor dull. No one ever complained that the editor wrote too much for his *Journal*, and most readers have turned at once, on opening a number, to any article or note from his pen.

The *American Journal of Philology* has never lowered its high standard in order to present popular statements of philological truths. Perhaps it might have been more useful to the ordinary teacher in high schools and academies if it had not aimed to publish only what would be recognized as good original work. Of the 550 pages of the yearly volume, about 300 pages are devoted to original articles, and the remainder to book notices, reports (summaries) of philological periodicals, and bibliography. Almost exactly half the space, on the average, is given to articles of special interest to classical scholars. The rest of the space is devoted to articles and reports on linguistics, Sanskrit, Semitic languages, Teutonic languages, Romance languages, English, etc. Of the classical articles, about half have to do with Latin and half with Greek. The latter seem, in general, the more able—largely because of the editor's own series of articles on Greek syntax. But it is noteworthy that most of the articles on Latin subjects have to do with out-of-the-way authors, like Verrius Flaccus, Nonius Marcellus, and Maximinianus—not with the great authors—and that so few of our Latinists have contributed to the *Journal*. No article has treated of Cæsar, Catullus, Cicero, Ennius, Horace, or Ovid, and but two of Vergil. In linguistics, the reader finds valuable articles by Prof. Whitney on "What is Articulation," and "Logical Consistency in Views of Language," and by Prof. Bloomfield (Whitney's pupil) on the Greek accent and the "Ablaut of Greek Roots." Prof. J. Rendell Harris contributes studies on stichometry which make the *Journal* a store-house of information on that subject.

In general, the range of topics treated in the *Journal* is wide, from "Recent Platonism in England" to the "Reduction of EI to I in Homer"; from five articles on the "Pennsylvania-German Dialect" to the "Babylonian Woman's-language," from "Charleston Provincialisms" to the "Harbors of Ancient Athens" and the Revision of King James's New Testament. Only one article is to be found, in the ten volumes of the *Journal*, on the aboriginal languages of America, few articles on antiquities (a province which now may be left in part for the *American Journal of Archæology*), few on exegesis, few (and these mainly by Englishmen) on textual criticism. The department of book reviews is not so complete as it should be, but such reviews often have a money value, and are not easily obtained for such a periodical as the *Journal*. The reports of periodicals contain a great amount of philological information in a condensed form. The bibliography is important for those who do not have at hand the fuller German bibliographical publications.

The last number of the tenth volume contains a closely printed index of 44 pages to the work of these volumes, and is an index not merely to the philological work of this country, but to much of the best work in this department abroad, for ten years. The *Journal* has had in all 133 contributors, but several of these have furnished only reports. The only contributor to the first volume who has an article in the tenth volume is an Englishman—Robinson Ellis. The list of contributors to the first volume contains better-known names—Gildersleeve, Goodwin, Packard, F. D. Allen, Carter, Whitney, Toy, Nettleship, C. D. Morris, Ellis, Campbell, etc.—than the present list. Evidently the editor has not received such scholarly support as he had a right to expect. In the first volume four articles were by scholars at Yale and two by Harvard professors. In the last three volumes no article has appeared from either of those institutions. A fairly careful survey does not find in the ten volumes of the *Journal* a single article by any one at the colleges of Amherst, Brown, Dartmouth, or Williams. And yet this has been a period of unexampled philological activity. Very recently University Studies have been published at Harvard, Cornell, the University of Nebraska, and the University of Texas, while the *Journal of Archæology* and *Modern Language Notes* take much that would have gone to the *Journal of Philology*, and the *Classical Review*, which is lighter in its tone and aims

to give a survey of work in classical philology, has been introduced to this country—to say nothing of the Transactions of the Philological Association, and the "Papers" of the Archæological Institute and the School of Classical Studies at Athens. There are manifest inconveniences in this scattering publication of American philological work, which perhaps overbalance the additional stimulus that is afforded by so many media.

The first ten volumes of the *American Journal of Philology* contain plenty of sound learning—a mass of valuable philological facts, of which many are not yet brought into ordinary hand-books. Few scholars would fail to profit (as the reviewer has profited) from the study or review of the back volumes of the *Journal*. For the honor and welfare of his science in this country, we trust that the editor will not weary of his efforts, and that he may obtain more abundant support.

BISHOP SIMPSON.

The Life of Bishop Matthew Simpson of the Methodist Episcopal Church. By George R. Crooks, D.D. Harper & Bros. 1890.

Bishop Simpson's fame as a preacher was without a second in the Methodist Church. He had also great administrative ability and high personal character. Moreover, his full maturity coincided with great national events, in which he bore an honorable part. Hence it is not strange that his biography has been written. It will be especially welcome to those who were of the same household of faith, and will make others pleasantly acquainted with his life. The reader is warned in advance that there are no letters or papers illustrative of the Bishop's relations with public men. This is the more to be regretted as he saw much of Lincoln and Stanton during the period of the war. But we get no new light on either of these men; no trait, no anecdote comes out, as might be expected from a relation that is represented to have been extremely intimate. There is significance in the absence of any religious expressions on the part of Lincoln in harmony with the Bishop's views. It was Bishop Simpson's lofty privilege to make the address at Lincoln's burial in Springfield, Illinois. The address, as given, is a very slight performance for an occasion of such transcendent interest. There is a flavor of apology in what is said of Lincoln's religious life, but the statement is made that "he believed in Christ the Saviour of sinners," which will probably go with the glozings and suppressions of Messrs. Hay and Nicolay, in their endeavor to improve upon the actual features of the man. The truth would seem to be that Lincoln, beginning with an "infidelity" comparable to Thomas Paine's, came afterwards to be extremely sympathetic with the opinions of Channing and Parker, rejecting the supernatural theory of Christianity, and especially the idea that Jesus was the sacrificial Saviour of mankind. His ideal church was one that should, without theological obscurity, stand for the fatherhood of God and the brotherhood of man.

Bishop Simpson was born in Cadiz, O., June 21, 1811. He died in Philadelphia, June 18, 1884. The pious memory of some venerable Methodist assigns his baptism to the sainted Asbury, but his mother's memory could not confirm this honor. The father, dying in Pittsburgh, Pa., soon after his son Matthew's birth, the family returned to Cadiz, where the future Bishop's youth was spent, with the exception of two months at Uniontown College, where he was teacher as well as scholar. Fortunate in a local academy and an uncle Matthew friendly to his aspirations, he could do better at home than the Western colleges of that time could do for him, and few Methodist preachers of his generation were so well educated as he. His conversion was singularly devoid of any spasm of emotion for one whose nature was so emotional. He studied medicine, and had begun to practise it when his thoughts turned to the ministry, agreeably to his mother's hopes and prayers. There is no pleasanter page in the book than that which bears the picture of her face. He entered the ministry only to leave it shortly for the chair of Natural Science in Allegheny College, at Meadville, Pa., an humble institution, preaching meantime in the vicinity, and enjoying mightily the college library. This was a good library for the time and place, a remarkable collection of books that had belonged to quaint old Dr. Bentley of Salem, Mass., being a part of it.

In 1839 the young teacher was invited to the presidency of Asbury University in Greencastle, Ind. The outward and visible sign of this institution's existence was a two-story building some forty feet square. The faculty was stronger by one person than that reported to Mr. Bryce by the president of a Western college — "Mrs. Jones and myself"—and there were but eleven students. There was, however, plenty of hard work to do, with much anxiety, and a full share of the preaching excursions hither and thither which were the order of the day. In bodily presence Simpson was weak, and was seldom recognized by strangers as the expected man; once getting the corner of the table for his solitary meal, because President Simpson was expected. His presidency lasted ten years, when he became editor of the *Western Christian Advocate*. He held this position till 1852, and took an honorable part in the discussion of the compromise measures of 1850, winning the golden opinion of S. P. Chase, and the "curses not loud but deep" of a good many of his Methodist brethren.

One of the most interesting chapters in the book is that giving an account of the General Conferences of 1844 and 1848. The former was the Conference which dealt with the case of Andrews, the slaveholding Maryland bishop. The author's style perceptibly warms and quickens in narrating the events of that exciting time. There is a refreshing frankness in his dealing with them: "Mr. Calhoun trod in the footsteps of the Southern Methodist leaders"; "for the claim of the inherent right of slavery to go anywhere in the Church, in the person of a slaveholding bishop, was followed by the claim of the right of slavery to go anywhere within the limits of the nation." The indictment of the Church as "the bulwark of slavery" gets several counts in the course of the narration. President Simpson was "in delightful obscurity" at this Conference. He was interested in the examination of the titles of church property and in the preparation of historical records. But in the Conference of 1848 he took a leading part in repudiating and stigmatizing the action of the Southern Methodist Church. In the Conference of 1852 he was actively opposed to lay delegation, of which he was one of the most powerful advocates at a later time.

In this year he was made a bishop without any log-rolling. Doubtless the temptation was less then than now, but the man would have been equal to a greater strain. His episcopal tours made him a frequent traveller, and his journeys took a wide range and were enlivened with a good deal of various incident. From such a record it is evident that the Bishop's office was no sinecure. We follow him to Oregon and California, and to the Holy Land in search of his lost health. He made good use of it, when found, in the endeavor to make the Methodist Church a compact Unionist and anti-slavery body. His special task was to hold fast the Methodists of the border States. He was often in Washington, and his relations with Lincoln were of the most cordial character. The two men were much alike in the homely simplicity of their manners and their discourse. Bishop Simpson made powerful speeches on great public occasions, taking an active part in Sanitary Commission work, being deputed by Lincoln to speak for him at Philadelphia, and putting forth all his strength for him in 1864. The battles of the war were succeeded in the Methodist Church by the battle for lay delegation, which was crowned with victory in 1872. It was in the earlier stages of the final conflict that Bishop Simpson did his most effective work for the good cause. At the time of Garfield's death he was in London, and spoke impressively at the memorial meeting best remembered for the address of Mr. Lowell.

There is a lack of definition in Dr. Crooks's account of Bishop Simpson's episcopal career. The multitude of incidents obscures the general impression. It was probably the routine work of a bishop, reinforced by preaching of uncommon brilliancy and force. There was so little in his dress or manner to suggest episcopal dignity that sometimes he preached as "Brother Simpson" and got found out as he went along.

"To move among his countrymen as an unpretending, equal fellow-citizen was the study of his life. His dress was wholly unclerical, not even the customary white necktie indicating his vocation. Besides, there was ascribed to him at this period of his life [1853] an ungainliness of manner which gave him the air of a good, wholesome lay preacher from a rural district. [This is the man of the frontispiece portrait.] A certain lack of grace must have been visible, for it is a point of frequent mention in the newspaper notices of the period. It must be admitted that in hats he was always weak."

Sometimes he wore a hat so bad that he had to be taken with gentle violence to the hatter's for a more respectable article in that kind.

His voice, also, was against him till it was clarified and inspired by his emotion. Evidently his preaching was of that kind which cannot be reported. Something of the man went into it to make it great. What we can see, at this distance, is that it was perfectly simple, that it abounded in vivid illustrations, and that its aim was never to instruct, but always to persuade. Dr. Channing, advising a young preacher, said: "Never preach on any but great subjects." This was Bishop Simpson's rule. His subjects, as given by his biographer, are always large and general. His preaching was purely extemporaneous; he did not believe in any other. He scribbled a few notes beforehand, and left them at home. Such preaching lives in lives made better by its influence, if it lives at all. Bishop Simpson's sermons aimed to excite emotion—to shame, to shock, to terrify his hearers; to allure them, by a vivid presentation of the love of God, to repentance and a virtuous life. If his biographer has not done him great injustice, the Bishop's preaching was fairly representative of his life in its lack of any thoughtful quality. If ever any of the great questions in science, in philosophy, in criticism, in theology, which agitated his time, engrossed his interest, his biographer gives no sign of it. It is likely that he knew

the measure of his strength, and preferred to do his own work in his own way to bungling at some other man's.

After the formation of the Christian Commission it would appear that Bishop Simpson lent his zeal to it, but in this connection everything is very loosely said. What is told of the formation of the Sanitary Commission is erroneously if not deliberately unjust to the personal head of that great enterprise. The date of Lincoln's anticipatory proclamation is given as September 28, 1862, a mistake for September 22. The extracts from Bishop Simpson's correspondence are almost without exception from his domestic letters, and they reveal the warmth and steadiness of his affections in no doubtful manner. The illustrations of the volume are a valuable addition to the text. The Bishop's "skeleton" on page 296 is that of one of his most famous sermons, and the bones are very few. The picture of the original "Asbury University," a one-story school-house (not the building of 1839 above mentioned, a picture of which is also given), is calculated to provoke a quiet smile. Best of all are the two pictures of Bishop Simpson. They are evidently the work of the publishers' best engravers. The treatment of the second is very different from that of the first, but which is the better it would be difficult to say.

TAYLOR'S ORIGIN OF THE ARYANS.

The Origin of the Aryans: An Account of the Prehistoric Ethnology and Civilization of Europe. By Isaac Taylor, M.A.; Litt.D.; Hon. LL.D. [Contemporary Science Series.] Scribner & Welford. 1890.

"THE whilom tyranny of the Sanskritists is happily overpast, and it is seen that hasty philological deductions require to be systematically checked by the conclusions of prehistoric archæology, craniology, anthropology, geology, and common sense." Such are the words with which Canon Taylor closes his industrious, but ambitious, attempt to give a summary of the speculations of several recent scholars upon the vexed question, Who were the so-called Aryans, and where did they originate? It is plain that a very wide range of special knowledge is needed in such an undertaking to pass judgment upon the force of the various arguments urged; and it may well be questioned whether it will be any gain to human knowledge to have "the tyranny of the Sanskritists" replaced by that of "the craniologists," when we call to mind Oscar Peschel's caution that "craniological characters alone are not to be relied upon."

Dr. Taylor is a well-known and learned philologist, but his competence in the other departments of science to which he has referred has yet to be proved. That he is not proficient in prehistoric archæology, the first which he calls upon to check the conclusions of his brother philologists, is evident from his remark that "the flint flakes which constitute the earliest evidences of the existence of man in Europe, afford no criterion of language or even of race" (p. 55). Every prehistoric archæologist knows that "palæolithic implements" are not "flint flakes"; while that the former, only, "constitute the earliest evidences of the existence of man in Europe" is the opinion of all of them, except the few believers in the existence of the Tertiary man. Dr. Taylor quotes archæological statements without noticing their inconsistency with each other, and proceeds to draw important inferences from them. After having informed us that "the stone implements from the kitchen-middens, or shell-mounds, of Denmark are more archaic in character than those from the Swiss lake-dwellings" (p. 60), he states that "one of the oldest lake-dwellings is that of Schussenreid, on the Feder-See, in Würtemberg, which, from the character of the flint implements, has been thought to be coeval with the Danish kitchen-middens" (p. 153). Subsequently this becomes: "The types of the flint implements found in the lake-dwellings of Schussenreid are thought to be more archaic than some of those from the kitchen-middens" (p. 242). When it is known that, in the very passage quoted from, Dr. Keller informs us that among the remains found at Schussenreid were beautifully made arrow-heads, fabricated out of various silicious materials, the prehistoric archæologist may well feel inclined to question inferences made to rest in large measure upon the fancied contemporaneousness of the lake-dwellers of Switzerland, the very earliest of whom unquestionably must be placed in the Age of Polished Stone, with the men of the Danish kitchen-middens, who were certainly ignorant of the use of implements so fashioned.

We are constrained to think, therefore, that the author is scarcely qualified to pronounce judgment so confidently as he has done in favor of the Celtic, as opposed to the Teutonic, theory of the origin of the Aryans. But his book is a very interesting and readable one, and is the first to bring to the knowledge of English readers the remarkable change that is going on in the views of European scholars on the Continent upon the origin of the Indo-European races. Dr. R. G. Latham was the first to raise the standard of revolt against the Sanskritists, in 1851, by this incidental remark: "I doubt whether any man living has ever recognized the opposite alternative, viz., that of the Sanskrit and its allied languages coming from Europe" ('The Germania of Tacitus, with ethnological dissertations and notes: Epilegomena,' p. cxxxix.). But that school has had a notable champion in Max Müller, the fascination of whose style has done so much to give vogue to the Asiatic hypothesis, which he still maintains, despite the well-known opposition of Prof. W. D. Whitney. But Prof. Sayce, with characteristic hardihood, has been the first of its former supporters to announce his conversion to the theory that "the Aryan race had its first seat not in Asia, but in the Baltic provinces and northern Germany"; a view which he has set forth, in his usual interesting fashion, in an article upon "The Primitive Home of the Aryans," in the *Contemporary Review* for July, 1889.

The real assault, however, upon the ancient position was led by Theodore Benfey in 1869, when he reached the conclusion that, "since the investigations of the geologists have established the fact that, from immemorial times, Europe has been the abode of man, the whole of the arguments which have been adduced in favor of the migration of the Aryans from Asia fall to the ground." This was followed in 1871 by E. L. Geiger's arguments, mainly founded upon the tree names of the primitive Aryan vocabulary. The most convincing of these was that of the beech, the word denoting which means the oak in Greek; whereas the beech is unknown in Greece. Geiger, therefore, thinks that the Greeks migrated from a land of beeches to a land of oaks, and transferred the name of the tree with "edible" fruit from the one to the other, in opposition to Max Müller's explanation that the word originally denoted the oak, and was transferred to the beech at the time when the oak forests of Jutland were replaced by beeches. We have not space to give an account of the interesting discussion upon this point, which will be found clearly stated in a valuable article upon "The Ethnological Significance of the Beech," in *Science*, November 15, 1889.

In the same year, 1871, G. Cuno first insisted upon the proposition that race is not necessarily coextensive with language; that the existing extension of Aryan speech is largely the result of conquest and the incorporation of subjugated peoples; that the undivided Aryans must have been a numerous, nomad, pastoral race; and that the great plain of central Europe must have been their original home, as alone supplying the necessary geographical conditions.

After several contributions to the discussion by philologists, in 1878 Theodor Pösche brought forward anthropological arguments to show that while there might be Aryan languages spoken by races wholly unrelated, only the tall, blue-eyed, fair-skinned, dolicocephalic German race could claim to be the primitive Aryans; and that they originated in the great Rokitno marshes, where the river Dnieper takes its rise, and afterwards extended themselves as the pile-dwellers of Switzerland and upper Italy.

Karl Penka, in 1883, employing similar arguments to Pösche's, maintained that the race described by him had its original home in Scandinavia, where it is to be found in its greatest purity; and that it spread southward in neolithic times, and conquered the original populations. In the same year, 1883, Otto Schrader adopted the European hypothesis, mainly upon philological grounds, which he has developed in a later work, that has recently appeared in an English dress, in which the archæological material bearing upon the question is collected and reviewed. He, too, has reached the conclusion that the plains of southwestern Russia were the cradle of the Aryan race.

We have thus attempted merely to mention the more important recent contributions to the discussion of this difficult problem, and would commend to all who are interested in its study an extended bibliography of the subject of "The European Origin of the Aryans," compiled by Mr. A. P. C. Griffin, and just published in the Bulletin of the Boston Public Library for April, 1890. We have only space to indicate very briefly the conclusions reached by Dr. Taylor in the work under notice, and regret our inability to give in detail the reasons upon which they are grounded. He believes that in neolithic times Europe was occupied by four distinct races. A short, dark, dolicocephalic people dwelt on the Mediterranean and Atlantic shores, from Italy and Spain to Britain, to whom the name *Iberian* has been given; they buried their dead in long barrows, and seem to be related to the Hamitic race. In central France dwelt a short, black-haired, and extremely brachycephalic people resembling the Lapps, who seem to have belonged to the Turanian family; to them the name of *Ligurian* has been given. The Celto-Slavic race occupied central Europe: tall, muscular, brachycephalic, with yellow or red hair, and florid skins, they invaded Britain towards the close of the neolithic period, and buried their dead in round barrows. In the north dwelt the Scandinavian or Teutonic race, superficially resembling the Celts, but radically distinguished by the shape of the skull; they were tall, large-limbed, and fair-haired, but strongly dolicocephalic.

It is only one of the last two races that can be regarded as the original Aryans, if their home is to be sought in Europe, and the question which it was has been debated with needless acrimony. The Germans have contended

for their own race, and the French for theirs, as having been the introducers of the germs of civilization in Europe. Dr. Taylor has pronounced for the Celts in the following unmistakable language: "The energy, the self-will, the fondness for adventure, and the love of combat, which have enabled the Teutonic peoples to extend their rule over the world, come from the dolicocephalic race; but the intellect and genius of Europe, the great writers, and more especially the men of science, belong rather to the brachycephalic race, which has so profoundly modified the physical type in Germany, France, Italy, and England" (p. 245).

Court Life under the Plantagenets (Reign of Henry the Second). By Hubert Hall. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1890. Pp. vi, 271. 8vo.

THE title of this book does not give a clear idea of its contents. Either "English Institutions under Henry II." or "England under Henry II." would be a more appropriate title. The author, in his preface, admits that no scenes either of love or chivalry are depicted in these pages, and that the knight-errant and jester are wholly excluded from consideration. Seven out of thirteen chapters have almost nothing to do with court life, even in the broadest acceptation of the term.

The reader is introduced in chapter i. to Richard de Anesti, a baron of Hertfordshire, who receives a visit from his friend William Fitz-Nigel, a brother of Henry II.'s famous treasurer. The host describes to his guest the organization and economy of the manor of Anesti. Richard then accompanies William to London, and there meets his brother John the Clerk, Richard Fitz-Nigel, and other old friends. He wanders about in London guided by John or Richard, who explain to him the sights and institutions of the place: the buildings and streets of London, its Jews, commerce, and amusements, the royal household, the King's council, his court of justice, and the Exchequer (ch. ii.–ix.). Richard then follows the King's court to Windsor, where Henry II. and his courtiers indulge in hawking, to which subject a large part of chapter x. is devoted. Thence Richard goes with the court to Waltham Abbey, the organization of which is described (ch. xi.). Next we find him at St. Alban's, where the reader is introduced to the Schoolmen (ch. xii.) and a Martyrology, or the Passion of St. Amphibalus (ch. xiii.). The work, in its plan, resembles Palgrave's 'Merchant and Friar,' but is not as skilfully executed as the latter.

Little seems to be gained by adopting this mode of publishing the results of original investigation. There is not enough plot in the story to attract the ordinary novel-reader, who will also be dismayed by meeting many technical terms unintelligible to him; nor will the narrative satisfy the more sober historical student, who desires a more complete presentation of facts, together with chapter and verse for every important assertion. As it is, the book before us is neither romance nor history. It is history more or less warped by being forced into a mould not suited to preserve all its true outlines. It is history covered with a very thin sugar-coating of romance, which will not make the solid morsel more palatable to any class of readers.

Another fault of the book, to which all classes of readers will object, is the obscurity that marks and mars many parts of the narrative, for example, the description of an ancient tally on p. 119; other examples will be found on pp. 124–127, 142, 151. This same lack of clearness is perceptible not only in the general title of the book, as already indicated, but also in the headings of the chapters. "Commerce" would certainly be a more appropriate title for chapter iii. than "Guilds," for little is said concerning the latter and much concerning the former. Chapter iv. is called "Games," but it is almost entirely devoted to exercises of religion and learning. The subject of chapter vi. is "The King's Council," but less than half of the chapter deals with this topic, and the real functions of that body are very incompletely portrayed, nothing at all being said of its legislative powers. Chapter ix. is headed "At the Exchequer"; chapter viii. deals with the same general subject, but has a different title.

Another general weakness of the author is his use of later sources to explain certain institutions of a much earlier period (pp. 217–230). For example, in describing London during the twelfth century, he derives much of his evidence from the records of the fourteenth century, ignoring the great development of commerce, of craft gilds, and other civic institutions that took place under Henry III. and the three Edwards. Thus on p. 42 he ascribes to the reign of Henry II. a vast expansion of weaving and cognate industries that really took place not less than a century later, though it may be admitted that much industrial progress was made in the reigns of Henry I. and Henry II. It is legitimate for an historian to fill up gaps in our knowledge by reasoning from the analogies or survivals of a later period; but this method of investigation is easily abused, and often leads to the perversion of truth.

The book before us also contains errors of detail, and many statements of fact that are at least questionable. We will notice only a few of these. On p. 19, scutage is said to consist of twenty shillings for each knight's fee; but Stubbs and the 'Dialogus de Scaccario' both give twenty shillings as the usual scutage under Henry II. We doubt the statements that Henry I. granted a charter to the Jews of England (p. 33), and that the "Saxon laws" consign the ownership of the Jews to the crown (p. 233). Again, on p. 33, the author speaks of the status of the Jews before the Norman Conquest with more definiteness than the sources warrant. If Mr. Hall had carefully read the lectures delivered at the Anglo-Jewish Exhibition, he would have found a clearer and fuller statement than his own (pp. 233–234) regarding the towns in which Jews were allowed to reside. His list of such towns under Henry II. omits Hereford and Wallingford. We cannot agree with the author's excessive disparagement of mediæval satirical poetry as a source of historical information (p. 240). Much of it is certainly as useful and authentic as the satire of Walter Map, which Mr. Hall does not hesitate to use with the greatest freedom. On p. 88 the author speaks as though the Exchequer and "Curia Regis," under Henry II., each had a separate staff of officers. This is contrary to the view of the best authorities, and cannot be accepted without proof. Bigelow's 'History of Procedure' should not have been omitted from the list of authorities for the study of Anglo-Norman jurisprudence (p. 250). From the remarks on pp. 136–137 regarding murder (taken from the 'Dialogus de Scaccario') one would infer that presentment of Englishry had already ceased to exist in 1177; but it continued in vogue in the thirteenth century, and was not abolished until 1340.

Notwithstanding these strictures, we do not hesitate to say that students of history will find much of value in Mr. Hall's book, many portions of which bear evidence of conscientious research among original records. On some of the topics which he discusses (notably the Exchequer) Mr. Hall is a recognized authority. We may also add that the illustrations are numerous and admirable.

Scouting for Stanley in East Africa. By Thomas Stevens. With illustrations. Cassell Publishing Co. Pp. vii, 288, 8vo.

MR. THOMAS STEVENS, the bicyclist, out of somewhat scant material has written a very readable book. He was sent out early last year by the New York *World* to East Africa to find Stanley. As the Germans refused to allow him to go into the interior through their possessions, he made his way to the region at the foot of Mt. Kilima-njaro. Here he spent a few months hunting and "scouting" for news, but, being unsuccessful in this, he returned to Zanzibar. It was not till the end of November that tidings came to this place that the relief expedition was approaching the coast through the German territory. Mr. Stevens, accompanied by only five natives, managed to evade the frontier guards, and joined the party sent to meet Stanley, whom they found four or five days' march inland.

The reader of Thomson's and Johnston's well-known works will find nothing new in the description of the wonderfully beautiful and fertile region at the foot of the great snow-clad mountain, nor of the remarkable tribe which roams the vast plains to the northward. But those who are unfamiliar with these writers will be much interested in Mr. Stevens's account of the paradise of Taveta, the Chaga States, and the Masai. Particularly good is his description of the make-up and start of a caravan of porters for the interior. His hunting adventures, principally with buffalo and rhinoceroses, are entertaining, but differ in no respect from those of a hundred other sportsmen. The most interesting chapters, of course, are those relating to Stanley and Emin Pasha. There is a graphic picture of the great explorer's appearance, as well as of his camp and the expedition upon the march. This was headed by Mr. Stanley on a donkey "which was presided over by a young man with a red turban, red knee-breeches, and red shirt, and who seemed particularly proud of the exalted position to which he had, on his personal merits, climbed." Immediately behind followed his personal attendants, thirty or forty picked men, distinguished from the rest of the porters by their red blankets.

Stanley's officers appear to have talked freely with the correspondent of the *World*; but whether they would have done so had they known that what they said was to be published, might be a question. Of their leader one declared, "He is the hardest man to understand that any of us ever came in contact with or ever expect to."

"There have been times," replied another to an inquiry as to his treatment of them, "when we have thought Stanley a harsh, unfeeling man, who had no sympathy for the sufferings of others, and was bent on working us to death. I have seen days when, if I could have had the ear of the public at home, I should have felt inclined to vent, in the columns of the paper, some grievances that seemed very real, I can assure you, at the moment. But, now it is all over, I can look back and see that Stanley was right. Without the hard, exacting work, we should never have pulled through, and Stanley's seeming harshness never goes beyond the point necessary for the success of the undertaking he is engaged in."

According to Surgeon Parke, Stanley was in reality a tender-hearted man. "Whenever there was important work to be done," he added, "so long as we could totter on our feet,

half-dead perhaps with fever, Stanley demanded from us our last gasp of energy and strength. But, the strain of the situation over, Stanley was himself again—a kindly, though never effusive, soul."

During the march to the coast Mr. Stevens had several conversations with Emin Pasha, the substance of which is given in the closing chapter. Among other things he expressed the opinion that the Mahdist rebellion was not a religious movement, but simply an uprising of the Sudanese against the corrupt Egyptian rule. In explanation of his own failure to maintain himself through the unfaithfulness of his officers, he said that "the Equatorial Province has always been considered a sort of Egyptian Siberia by the authorities at Cairo. Most of my officers were sent to me as a punishment for committing some crime or some act of insubordination in Egypt." At another time he said:

"The Egyptian Government has always sent the worst of everything to the Equatorial Province. Even the ammunition which Mr. Stanley brought, sent to us from the Government magazines at Cairo, was for the most part utterly worthless. They were old, damaged stores that the corrupt officials at Cairo took this opportunity of getting off their hands, to cover up their wretched speculations. Percussion caps were sent to us not one in a dozen of which would strike fire. This was not the Khédive's fault, nor, of course, Mr. Stanley's. It was very discouraging to my poor soldiers to find that, even when so much trouble had been taken to reach us, they had sent us worthless ammunition mostly. This outrageous treatment from the Egyptian Government, while a powerful enemy was within our very gates, would have shaken the loyalty of any body of troops in the world. Yet my brave fellows fought a great battle with Omar Saleh at Dufile, after Mr. Jephson had joined me and Mr. Stanley had returned to the Congo to bring up his rear column. On this occasion we captured a very interesting relic, the first Mahdist flag, the sacred banner of the Mahdi, that was carried into Khartum after the death of Gen. Gordon."

The Stanley part of Mr. Stevens's instructions was very fairly carried out, but he seems to have neglected other parts of considerable importance to his employers. He has very little new to say about the slave trade, and nothing at all "about the troubles between the Germans and the Arabs." Nor does he give us any information, as he was directed to do, about Zanzibar and its political and commercial situation. If he had employed the three months during which he waited for Stanley in studying the actions of the Germans on the coast, in finding out what the two great rival companies had accomplished, and what were their prospects in the future, he would undoubtedly have written a book of considerable value. As it is, it does not rise above the rank or importance of an ordinary letter to the newspapers.

The Civil War on the Border: A narrative of operations in Missouri, Kansas, Arkansas, and the Indian Territory during the years 1861–'62, etc. By Wiley Britton, War Department. G. P. Putnam's Sons. 8vo, pp. xvii, 465.

We have here a straightforward effort to tell the story of the campaigns in Missouri and the adjacent territory during the first two years of the civil war. The author served on the national side, and most of what he narrates occurred under his own eye. He is able, therefore, to give more of local color than a mere compiler could give, and estimates the officers and men on both sides according to the impression they made upon those who were in contact with them. The character of the troops is also brought out, incidentally, in an instructive way, showing something of the peculiar quality of the well-organized and disciplined, as well as of the irregulars, the "jayhawkers," the Indian contingent, and the "guerillas."

While we are thankful for what the author has given us in this respect, we cannot help regretting that he has not given us more. Each theatre of operations has something peculiar to itself. The "border-ruffian" struggle on the confines of Missouri and Kansas had imprinted peculiar traits upon the people, and modified the conflict when it came under the outer guise of regular warfare. The fact that the half-civilized Cherokees and Creeks were also divided between the Union and the Confederacy introduced another peculiar element into the struggle. The author could profitably have put much more of his strength upon the characteristics thus brought into play, and so have given us what no one but one to the manner born could supply. We can search the official records for ourselves. We are in danger of losing the things which made the fight on that border different from any other.

The narrative is a clear and evidently a conscientious one. The writer's impressions of the officers in high command are given with frankness, and with no more prejudice than is almost necessarily begotten in a subordinate whose point of view is often limited by narrow bounds. The grasp is not large nor strong, but the writer's purpose is evidently honest, and we may accept him as a candid witness without pinning our faith too closely to his opinions or his criticisms.

We are puzzled a little by his statement that he is not aware that any one "has hitherto undertaken to give an account of the operations extending over that section during the period covered by this volume." The "section" must be limited by boundaries that exclude the engagements at Wilson's Creek, Pea Ridge, Lexington, etc., or the author must be strangely ignorant of what has been written. Snead's brilliant volume, 'The Fight for Missouri,' has made the Confederate side of it familiar to readers of our war history.

The style of the book has, for the most part, the merit of simplicity and directness, though the author occasionally lapses into rhetorical efforts which are not entirely happy. These are not frequent, however, most of the narrative having the good quality of freedom from proofs that the author was making any special effort at fine writing. It is a valuable addition to the list of special memoirs on the war written by men who took part in what they describe.

The book is beautifully printed by the Knickerbocker Press, with tasteful head and tail-pieces to the chapters. Folding maps of the fields of Wilson's Creek, Pea Ridge, and Prairie Grove are given, but a book of this character should have an outline map of the whole theatre of operations, and smaller sketch maps on the page to illustrate the several engagements and movements. Readers ought not to be put to the trouble of hunting up atlases in perusing such a book, and even atlases lack the necessary detail.

Social Aspects of Christianity, and Other Essays. By Richard T. Ely, Ph.D. Thomas Y. Crowell & Co.

The predominant "social aspect" of Christianity revealed by these essays, we regret to say, seems to be uncharitableness. The writer "deals damnation round the land" after a most promiscuous fashion, and preaches Christian love in a manner that might well arouse the envy of the most polemical divine that ever devoted those who differed with him to perdition. "The leaders of the Church," he says, "the representative men and women in the Church, profess to love the working classes, but, as a matter of fact, they do not love them." The feeling is reciprocal, but, on the other hand, "Christ moved among the masses, and understood them, and to-day the poorest laborer and the most obstinate trades unionist, yes, even the despised walking delegate, will feel a strange attraction for that wonderful Being who spoke words which go straight to the heart." It is not generally questioned, we suppose, that the words of Christ appeal to all mankind, but the irreverent invocation of his name which is painfully common in the ordinary conversation of persons of the class mentioned, perhaps justifies the description of the attraction which they feel as strange. For Christians, again, luxury is for ever an impossibility; their attire especially "should be plain and simple, such as will not divert attention from the word of God." Nor is there to be any quibbling about this; "the simple dressing so often admired in fashionable churches is frequently more expensive, far more expensive, than the gaudiest dress in poorer churches," and "an entire absence of everything in dress which cultivates worldliness and awakens a desire for perishable riches must be enjoined. Absence of such dress as will awaken envious desires in weak natures is equally a matter of course."

We were for some time at a loss to understand how the Christian who had attained such entire absence of dress as to extinguish worldliness and the desire for perishable riches, could further decently denude himself or herself, so as to lull to sleep envious desires in weak natures; but we are convinced that the author added the sentence last quoted for a personal reason. He is in some sense a rival of Mr. Edward Atkinson in philanthropical work—Mr. Atkinson pointing out to working people the means of bettering themselves by economy, fidelity, industry, and invention, while the author recommends the expenditure of their savings in the support of the Knights of Labor and the maintenance of industrial enterprises directed by our legislatures and city governments—in which work Mr. Atkinson is thought by many to have done more good than the author of these essays has mischief. Now, it may not be generally known that Mr. Atkinson occasionally appears before his audiences in a plain and simple suit of clothes, well-made, well-fitting, and of good material, but apparently not at all of a character to divert attention from the word of God, or to cultivate worldliness, or awaken a desire for perishable riches. The cost of these garments is represented by Mr. Atkinson to be something like $8, so that they are certainly not expensive, and would seem to conform to all the requirements of Christianity. Yet such is the perversity of weak human nature that all the men in the audience have their envious desires immediately awakened by what would perhaps be called by our author the lack of absence of such dress, and may be heard to lament the sad estate into which their tailors have brought them. How much keener, then, must be the feeling of one who aspires to rival Mr. Atkinson in the favor of the public!

That our theory of the interpretation of this sentence is correct we think is established by our author's reprobation of Mr. Atkinson's views. That Mr. Atkinson is meant, no one who has read his recent publications can question, when Dr. Ely mentions, as one of the "reli-

glous subjects" which the Church ought to take up, "a refutation of those ridiculous persons who would have us believe that wage-earners now receive nine-tenths of all the wealth produced—quackery and jugglery which must delight Satan."

But the utter hollowness of the professions of modern Christians is most severely reprehended by our author in his exposure of their heartless neglect of the American Economic Association, an institution of which he is secretary. The purpose of this organization "is to study seriously the second of the two great commandments on which hang all the law and the prophets," and the author pathetically puts to his readers the query, "Now you would imagine this something to appeal to every Christian, would you not?" It may appeal to them, but, like spirits called from the vasty deep, they do not respond to the appeal. The American Economic Association has piped unto them, but they will not dance; they are apathetic and indifferent when asked to contribute even small sums, and few of them, comparatively, "seem to care to do anythiug more for their suffering fellow-creatures than to administer some kind of soothing-syrup." The situation, we apprehend, is hopeless unless the author's doctrine of "coercive philanthropy" can be applied, and Christians who neglect so plain a duty be made to sweat for it.

It may seem a waste of space to call attention at such length to this ill-tempered screed; but so much of this wretchedly materialistic perversion of the teaching of Jesus is now tolerated, if not encouraged, by the Church, that it is well to consider whether it does not seriously menace her usefulness. The attitude of the Church towards natural science has repelled from her a large proportion of the intelligence of the community, and if she is to surrender herself to the control of the "Christian Socialists," a still larger proportion must in self-respect withdraw. At this stage of the world's development it is doubtful if such a defection would not be permanent; for it might prove that functions hitherto exercised by her, if now resigned, could never be resumed.

A Comparative Glossary of the Gothic Language, with Especial Reference to English and German. By G. H. Balg, Ph.D. With a Preface by Prof. Francis A. March, LL.D. Mayville, Wis.: The Author; New York: B. Westermann & Co.

Dr. Balg's 'Gothic Glossary,' of which a preliminary notice was given in these columns, has been appearing in instalments since 1887. Its last part, containing the promised preface by Prof. F. A. March, and the author's introduction, together with an appendix and indexes, enables us to give a critical estimate of the whole work, and to determine how well it has justified the good-natured encouragement of such well-known philologists as Professors Whitney, Max Müller, and Skeat, whose "commendatory testimonials" have heralded the book in the publisher's announcement. The Glossary is, besides this, of no slight importance in that it is the first extended work ever produced in America in any department of purely scientific Germanic lexicography, and may justly be viewed, in its indication of increased scholarly attention in this direction, as a hopeful sign of the times. In its character, however, as a "scientific comparative glossary of the Gothic language," it is open to some degree of criticism for the use it has made of the material at hand and the total result attained. While it has been, in fact, unmistakably, to no small extent a labor of love carried out with manifest painstaking, the work bestowed has not always been well directed, and the whole appears to lack a sufficiently definite purpose. Gothic dictionaries cannot, from the nature of the case, be written every year or every decade. The only Gothic glossary in English down to the appearance of this work was Skeat's 'A Mœso-Gothic Glossary,' published in 1868, and now wholly superseded by more exact textual criticism and more accurate etymological knowledge. There was, consequently, a place for a work that should embody all the late results of investigation in this particular field, and the opportunity, because it is so rare, should have been carefully used to the fullest and minutest extent of the material.

The Glossary contains, according to the author in his introduction, "the extant words of the Gothic language." In reality there have here been glossed the Ulfilas translation, the commentary on John called by Massmann the 'Skeireins,' the fragments of the 'Calendar,' and the signatures of the Naples and Arezzo documents, as contained in the best edited text that we have, viz.: Bernhardt's 'Vulfila, oder die gothische Bibel.' Completely to justify the author's statement, the few runic inscriptions now conceded to be Gothic ought to have been, as they very properly might have been, incorporated in the book. These consist, to be sure, only in the names on the Kowel and Müncheberg spear-heads and the *gutaniowi hailag* of the Bucharest ring; but because they have been directly transmitted they are clearly of value in a vocabulary as circumscribed as is the Gothic in its known constituents. The indirectly transmitted words and names have been collected elsewhere and do not properly come into consideration here. In transliteration, Dr. Balg has wisely followed the rational orthography of the second edition of Braune's grammar, which prints a special ligature for what is according to the usual transcription the twenty-fifth sign of the Gothic alphabet (voiceless *w*; English *wh*), variously represented elsewhere by *hv*, *hw*, *w*; *q* for the sixth sign (labialized *k*; Latin *qu*), variously represented by *kv*, *kw*, *qu*, *q*; *w* (half-vowel) for the twenty-second sign, usually represented by *v*. In the order of words in the glossary the ligature naturally follows *h*, as *q* follows *k*.

Dr. Balg disclaims the idea of having "tried to write a complete etymological dictionary of the Gothic language," and Prof. March, in the preface, calls attention to the fact that though "this glossary is largely occupied with comparative etymology, it should not be judged as a scientific etymological dictionary merely." Completely to have fulfilled the measure of its usefulness, however, it should have been a scientific etymological dictionary, thorough, and, on the present basis of comparative grammar, complete and definitive. There is no such book, and there is need of one. Another valid criticism touches the presence of extraneous material—material, to be sure, perfectly good in its place, often well worked out, and, it may be, suggestive to an etymological dilettante. Such material is, furthermore, not infrequently placed where no one would think of looking for it and must happen upon it incidentally. A similar difficulty occurs in the cases where, to use the language of the prospectus, the Glossary "treats of cognate Romanic words that have supplanted or increased the number of English words." This part of the work, moreover, is, as it could not but be, wholly desultory, and it and instances from German similar to those from English should have been left to Skeat and Kluge, in whose pages they will still invariably be sought in spite of their incorporation here. Just this fact, that in order to make the English and German part reasonably complete it has been found necessary to bring in the sort of material described, is argument enough, even if there were no other, as to the fallacy of making Gothic the basis of a comparative Germanic dictionary, which is what this book really is. In such a dictionary, instead of being proceeded from, Gothic, with its limited vocabulary, should be led up to wherever it is possible. Had the author used the room employed in citing the reference place of every word glossed, the book would have been infinitely more valuable and not as voluminous as he has feared.

In the preparation of the Glossary the author has made in the main an intelligent use of the best subsidia on the subject, but it does seem that in cases of etymological doubt we might have been spared the not infrequent references to Diefenbach. Although it is not always possible, with the order of arrangement, to connect the reference with its particular shade of meaning, the Gothic words are usually well glossed in their different significations. In etymologies, according to the author, the dictionaries of Kluge, Skeat, and Schade, and Feist's 'Grundriss' have been most often used. Kluge, unfortunately, in a few instances has been imperfectly understood, and some errors in statement have thus crept in. The separate indexes at the end, of Greek, Latin, English, Old Norse, Old Saxon, and German words opposite the Gothic word glossed, serve, in some degree, to offset the peculiar disposition of the material.

Dr. Balg has evidently selected Gothic as his especial field of labor. Besides the present work, he published, in 1883, an English translation of Braune's Gothic Grammar. He announces, furthermore, as well under way, an edition of the Gothic texts, with a syntax and notes.

Golf. By Horace G. Hutchinson. [The Badminton Library.] Boston: Little, Brown & Co.

It has been said of the Badminton Library of books on Sport that it differs from all similar collections in that the writers are not only experts in the sports they describe, but also more or less skilful in the use of the pen, whereas most sporting books are written either by sportsmen who are no writers, or by writers who are no sportsmen. The present volume possesses this combination of attractions, and is ushered in by a chapter on the history of the game of golf from the ever-ready pen of Mr. Andrew Lang. The word "golf" he connects with the German *Kolbe* and the Belgian *chole*, both signifying "a club," and the origin of the game itself seems to be lost in the mists of the middle ages. It was played to such an extent in the time of James VI. of Scotland that that thoughtful monarch clapped a prohibitory duty on golf balls imported from Holland, not, as Mr. Lang would have us believe, because "it was not then the crazy fashion to encourage foreign at the expense of home manufactures," but because the wise men of the period had begun to grapple with the problem of the balance of trade, and warned the King against an export of "siller" to pay for the balls! In 1592 the Town Council of Edinburgh contributed to the "pious gloom of their country" by prohibiting golf on Sunday, and the far-reaching effect of such legislation may still be seen by the traveller of to-day whose misfortune it is to experience a Scotch Sunday.

And now what is this "royal and ancient" game of golf? A humorist has declared that it consisted in "putting little balls into little holes with instruments very ill adapted to the purpose"—but this description is inadequate. The course, or links, as it is called, over which the game is played, may be of any size, but, if possible, it should be between one and two miles in length, giving room for nine holes from 100 to 500 yards apart on the journey out, and as many more on the return. These holes are four inches in diameter, and are surrounded by a piece of smooth turf called the "putting green." The ball is made of compressed gutta-percha, and is a little less than two inches in diameter, and the clubs used in driving it are of many different sorts and sizes, according to the nature of the ground from which the ball is to be hit and the fancy of the player making the stroke. The aim of the player is to drive the ball into the first hole, and thence into each succeeding hole, in the smallest possible number of strokes; and as the ground between the different "putting greens" is full of "hazards" in the shape of sand holes, bushes, long grass, etc., and the ball—after the first shot—must be hit from the spot where it happens to fall, however rough that spot may be, it is easy to see that the game calls for much skill, both in the hard drives from the starting point and in the more nicely calculated "approach" and "putting" shots nearer the holes.

The exercise is moderate, but still sufficient for the young, and not too violent for the old, and, according to Mr. Balfour (who, by the way, to judge from his contribution to this volume, has a keener enthusiasm for golf than for the Irish question), the game "should be begun as soon as you can walk, and continued as long as you can walk." In respect of the accuracy of stroke, which is so essential to success, the game may be said to resemble the venerable game of *real* (not lawn) tennis, while the short strokes on the putting green may well have suggested the modern game of croquet. Mr. Balfour quotes the complaint of the keeper of a racket court in the neighborhood of an English golf links, that "since this d——d Scotch croquet came into fashion no one comes into the court," as a proof of the superior attraction of the game. Undoubtedly it has the fresh-air advantage, which is a very important one, over any game played in a court; but, on the other hand, in such a climate as ours it could only be played with comfort for a comparatively small part of the year. And yet so excellent a game is it that it is strange that New York, which has become a centre of athletics, and is, moreover, the abiding place of many "gentlemen of the Caledonian persuasion," should not possess a good links. The game is not an expensive one, and it suits so many different tastes that it ought to be cultivated, and we may hope that this book will give it a start. The chapters on Elementary Instruction and Style are admirably illustrated, and give all the necessary technical information, and, but for the well-known aphorism that "nothing is so misleading as facts, except figures," the reader might be inclined to look upon the royal and ancient game as a simple and easy one. But in golf, as in most other games, mediocrity is easy, expert play exceedingly difficult, and this will be the conclusion of the reader when he puts his book-knowledge to the test of practice.

The Lutherans in America. A Story of Struggle, Progress, Influence, and Marvellous Growth. By Edmund Jacob Wolf, D.D. With an Introduction by Henry Eyster Jacobs, D.D. New York: J. A. Hill & Co.

THE keynote of Dr. Wolf's book is struck on his old-fashioned title-page without equivocation. The big drum is beaten in that way all through the twenty following chapters. Dr. Jacobs tells us, in his introduction, that there are "three forms of historical composition, the documentary, the philosophical, and the popular." Dr. Wolf has chosen the last-named as the best suited to his purpose. He has written a panegyric, a glorification, of his sect, in the manner of a Fourth of July oration by the local orator. After some general considerations on the Church, which, if not popular, are certainly not philosophical, we have a chapter on the Reformation which is characteristic of the general manner of the book. Everything is passed over that would detract in any way from the glory of that event. We have not a word about the Anabaptists of Münster and the Peasant War, and the name of Zwingli is not even once mentioned. In a chapter on the formation of the Lutheran Church there is not a hint of any possible defect in its subordination to the State. It is spoken of as if, like the black stone of the Kaaba, it came straight down from heaven moulded by God's hand. Indeed, there is something smacking of impiety in Dr. Wolf's continually recurring claim of supernatural interposition. One should be very deep in the counsels of the Almighty to make his confident assertions.

The coming to America of the Dutch, the Swedish, and the German Lutherans is treated in three separate chapters which have the charm of small and hard beginnings. "The Church of the Dispersion" is the fit naming of a chapter which describes the condition of things before Muhlenberg's unifying spirit blew upon the scene. In the account of Muhlenberg there is no stinting of his rightful praise. The next chapter brings out afresh what every ecclesiastical history of the post-Revolutionary period must needs recite, the disintegration of the churches and theology by the war and by the influence of French ideas. Several chapters are devoted to the formation of the general and independent synods, the General Council, and the United Synod in the South. In the last-named connection, Dr. Bachmann of Charleston, S. C., is perhaps overrated as an ornithologist, while no mention is made of his distinguished part in the convention which passed the South Carolina ordinance of secession. An almost solitary exception to Dr. Wolf's omission of unpleasant matters is his treatment of the attempt of the German Lutherans to make their language the perpetual language of religious ministration.

The obligations of other communions to the Lutheran Church are loudly heralded, but without exaggeration. That Dr. Wolf claims for his Church the credit of the Thirty-nine Articles is evidence that he has the courage of his opinions. In treating of the distinguishing doctrines of the Lutheran Church, Dr. Wolf resents the opinion that one of them is consubstantiation; but in stating the actual belief he makes it precisely that which is commonly understood by consubstantiation, viz, that "there are present with the elements [which remain bread and wine] and received, sacramentally and supernaturally, the body and the blood of the Lord Jesus Christ." The chapter on the numerical strength of the Lutherans will be astonishing to many. In 1780 there were 70 ministers and 300 congregations. In 1885 there were 3,720 ministers and 7,037 congregations. Among the sects the Lutherans rank fourth, the Methodists, Baptists, and Presbyterians outranking them, and in this order. The approximate number of communicants given is 1,099,708. The Presbyterians are allowed 200,000 more, and the Congregationalists less than half as many.

The book is very coarsely made; the coarseness reaching its climax in the numerous illustrations, which have been grubbed together from all quarters, and inserted in the text without any reference to local fitness. Those of buildings are much better than those of persons, but these last are at least amusing. Many of them are made from plates battered by long use or ruined by neglect. One, so bad that it is worth many of the best, is that of Dr. Paul Henkel. But there are several that approximate to its naïve absurdity.

BOOKS OF THE WEEK.

Bates, K. L. Hermit Island. Boston: D. Lothrop Co. $1.25.

J. H. MANSFIELD,
38 BROMFIELD STREET,
BOSTON.

"Better than I," wrote Victor Hugo, to Felix Pyat, "you have proved the royalty of genius and the divinity of love."

A Rival of 'Les Miserables.'
THE
RAG-PICKER OF PARIS.
By FELIX PYAT.
Translated from the French by BENJ. R. TUCKER.
Just Published.

A novel unequalled in its combination of dramatic power, picturesque intensity, crisp dialogue, panoramic effect, radical tendency, and bold handling of social questions. Originally written as a play, this masterpiece achieved THE GREATEST SUCCESS KNOWN TO THE FRENCH STAGE. Recently, and just before his death, the author elaborated his play into a novel, in which form it presents a complete panorama of the Paris of the present century.

What great critics think of it:

Heinrich Heine—"The passion of Shakspere and the reason of Moliere."

Alexander Dumas (to the author)—"You have killed Frederic Lemaitre for us. After his Father Jean in 'The Rag Picker of Paris,' he can create no other role."

Victoria, Queen of England (to Actor Lemaitre, after seeing him play in the piece)—"Is there, then, such misery in the Faubourg St. Antoine?" *Frederic Lemaitre* (in reply)—"It is the Ireland of Paris."

Theophile Gautier—"The work of a Titan."

325 large pages. Cloth, $1; paper, 50 cents. The cloth edition contains a fine portrait of the author. Sent, postpaid, on receipt of the price, by the Publisher,
BENJ. R. TUCKER, Box 3386, Boston, Mass.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay are now first offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

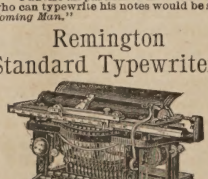
"I advise all parents to have their boys and girls taught short-hand writing and typewriting. A stenographer who can typewrite his notes would be safer from poverty than a great Greek scholar."—*Charles Reade on "The Coming Man."*

Remington Standard Typewriter.



For Fifteen Years the Standard, and to-day the most perfect development of the writing machine, embodying the latest and highest achievements of inventive and mechanical skill. We add to the Remington every improvement that study and capital can secure.

Wyckoff, Seamans & Benedict,
NEW YORK.

The Nation.

NEW YORK, THURSDAY, JULY 17, 1890.

The Week.

THE adoption of the Conference report on the Silver Bill by the Senate is a very happy termination of a bitter controversy. The bill, as we have said, is a better measure than the existing law. It puts an end to the arbitrary coinage of $2,000,000 per month on the first of July, 1891, and although the coinage meanwhile will be at a higher rate, the bill puts in the hands of the Secretary of the Treasury a fund for meeting the possible drain on his resources, namely, the $55,000,000 held to redeem the notes of national banks retiring their circulation. Hitherto this fund has appeared among the assets of the Treasurer in his monthly statement, but has been offset by an equal liability. The law does not exactly wipe out that debt, but authorizes the Secretary to treat it as a contingent and undetermined liability, and to use the $55,000,000 like any other funds in his hands. Therefore he can draw upon it, if need be, to purchase the 4,500,000 ounces of silver bullion per month. His ordinary receipts will not be lessened during the next twelvemonth by the bullion purchases. The question whether the Secretary is really required to purchase any bullion under the new law was hotly debated in the Senate. The opponents of the Conference report contended that he was not required to buy a single ounce. The other side "had no doubt" that he would purchase 4,500,000 ounces per month till the 1st of July, 1891, nor have we; but we also have no doubt that he could fix the market price so that none would be offered to him. The bill was drawn so as to protect the Treasury against embarrassment and possible insolvency. The discretion left to the Secretary was really necessary to this end, and is, therefore, right.

The admission of Wyoming as a State is a notable event, because it brings into the Union for the first time a commonwealth where women exercise the suffrage upon the same terms with men. Wyoming was the first Territory to try this experiment, and never has shown any disposition to retrace the step. The admission of a woman-suffrage State is a decided victory for the cause, which has not of late been making much progress in the older commonwealths.

Most of the press censorships in Europe are content to order certain articles to be left out of the newspapers, without dictating what they shall print. The Republican dictatorship set up at Washington, which has Speaker Reed at its head and "Jim" Belden as press censor, is not content with any half-way authority. Having coerced the Republican Senators into holding a caucus on the Elections Bill, the Speaker directed his press censor to put the screws on the Republican press of the country to compel the caucus to take the action he desired. Listen to the closing paragraph: "Will you not do your duty in urging that the Senate shall respond promptly by the passage of the measure which the House deems essential, absolutely essential, to the purity of the elections of its own members?" We do not know which was the most amusing feature of the execution of this order—the prompt obedience of such leading papers as the New York *Tribune* and the Philadelphia *Press* (edited respectively by the United States Ministers to France and Russia), or their stupidity in publishing Belden's order along with the evidence of their servility. As for the "dignity of the Senate," of what avail will executive sessions and all the other time-honored precedents be to preserve it if the Speaker of the House, issuing his orders through the newspapers, can decide what the action of the Senate shall be? If Horace Greeley sees the *Tribune* in his present abode, it must make him blush for his old paper to see it meekly allow its course to be dictated from Washington by two country politicians, one from Maine and one from Syracuse.

Mr. Blaine's last letter on the McKinley Tariff Bill, relating especially to the sugar clause thereof, shows that he is very much in earnest, but there is small probability that it will accomplish the end he seeks, namely, the retention of the duty on sugar for reciprocity trading purposes. The repeal of the tax on raw sugar is the one thing that the Republican leaders rely upon to sweeten the McKinley Bill to the farmers. Mr. Blaine knows this, and therefore he drives straight at the farmers with his argument. He tells them that if the sugar duty is retained, he can use it as a wedge to force open the Cuban and other foreign markets for their breadstuffs and provisions. If it is repealed, as the McKinley Bill proposes, he tells them that a duty of more than 100 per cent. will be put immediately on flour in the ports of Cuba and Porto Rico in order to protect the Spanish millers. He says more. He tells them that "there is not a section or a line in the entire bill that will open a market for another bushel of wheat or another barrel of pork." This is a condemnation of the entire McKinley Bill. It is really a stump speech against the measure. Mr. Blaine has reached the time of life when persons in responsible station usually weigh their words. It cannot be doubted that he weighed these words, and that he had a purpose in writing them over and above the sugar duty. It looks as though he intended to "knife" somebody. Very likely McKinley himself is the person aimed at. To tell all the farmers in the United States that their interests are ignored in the whole bill is to furnish the opponents of the McKinley Bill, and especially the opponents of McKinley himself, with a weapon of destructive power. This saying of the Plumed Knight will cut some figure in the next campaign. The somewhat startling figures presented to the Senate by Mr. Allison, betokening a Treasury deficit of $70,000,000 to $140,000,000 the coming year, may help to carry Mr. Blaine's wishes into effect, by showing the very great danger of throwing overboard $54,000,000 of revenue in such a crisis.

It is a matter of some significance that the commercial classes of Germany are moving to have the prohibition of American pork rescinded. Probably the movement would be successful but for the new barriers against German trade that we have lately put up in the McKinley Administrative Bill, and those we are preparing to put up in the McKinley Tariff Bill. That these measures have had a most irritating effect all over Europe there is every reason to believe. Even in England there has been talk of retaliation, but England is probably the only country in which there will be none. It is the only country, too, in which American protectionists would be glad to see measures of retaliation adopted.

Retaliation in the way of tariffs is having a great run at the present time in Europe, the latest example being the prohibition of Servian pigs and pork by Austria. This action on the part of the great empire against the small land-locked principality is intended in part to have a political effect, and to teach the Servians to keep a civil tongue in their heads. It has nevertheless an economic side also, and is intended to give the native swineherds a monopoly of the home market. The area of the commercial war that was declared against Rumania by Austria a few years ago, and which has been productive of untold misery to the poorer classes in both countries, is thus extended southward, and more half-starved ignorant peasants and half-starved ignorant operatives are made to suffer by being deprived of the right to buy their food and sell their products to the best advantage. The weakness of the poor is their poverty. It is impossible to make these victims of the protective policy understand what it is that takes the bread out of their mouths and the clothing off their backs. Rumanian peasants have been obliged to sell their sheepskin coats at the beginning of winter in order to pay their taxes since the commercial war with Austria began. Yet they have apparently no conception of the cause of their misfortunes, and would not be able to understand it if it were explained to them.

The collection of half-a-dozen British war vessels at Esquimault harbor has given occasion for some surmise that they may be intended to protect British sealers in Bering Sea. It is not unlikely that the orders to these ships, which must have been issued months ago, were given with a view to such

contingencies. It does not follow that guns will be fired. The latest advices from Washington are altogether peaceful. The official despatches will be published shortly, and they may be followed by the *pourparlers* of Mr. Blaine and Sir Julian Pauncefote. What we have been led to expect in the latter batch is some evidence that Mr. Blaine and Sir Julian had arrived at an understanding some time ago, but that President Harrison refused his assent, being moved thereto by the entreaties of the North American Commercial Company, the new lessee of the seal islands, which, having bid more than it can afford to pay for its privileges, is extremely anxious to prevent any seals being taken anywhere at any time by anybody except itself.

Lord Salisbury has probably removed one of the elements of danger from the Newfoundland trouble by informing the French Government that French officers cannot be permitted to exercise police powers, and enforce the regulations of a treaty with Great Britain on British soil. It was the landing of French naval officers to order the removal of the Newfoundlanders' huts and nets which promised to make the existing complications really grave. The execution of the treaty belongs to Great Britain. The French are only entitled to call attention to infractions of it and ask for redress. It is for the British naval officers to see that Newfoundlanders respect it. Accordingly we believe the practice on the spot is now so amended that the French officers complain to the British officers, who then see that right is done. But that any colony will submit to the usufruct of its shore and waters by foreigners very much longer is most unlikely. If the French are not bought out by the home Government, the Newfoundlanders will certainly discover some other way of getting rid of them.

The establishment of cable communication with Bermuda is one of the great events of the century to that little fragment of the British Empire, and a matter of interest to the many Americans who have learned the charms of that delightful winter resort. Not a few, doubtless, will feel a mild regret that the isolation which has been so notable an attraction of the place is thus broken, but they can console themselves with the reflection that the daily paper in Bermuda seems very remote, so that they may still escape hearing what is going on in the rest of the world every day. The "modern improvements" are, of course, great things, but the people who knew Bermuda before there was a cable, will always feel that they were more fortunate than those who "can send a message to any part of the world."

The adjournment of the Louisiana Legislature leaves the lottery question in a muddle from which only the courts can extricate it. Finding that they lacked in the Senate one vote of the two-thirds required to override the Governor's veto, the lottery managers made a virtue of necessity, changed front, and took the ground that the Governor's signature was not essential. It is a fair question which is the correct view, and precedents can be found by each side in other States, the Pennsylvania Legislature, for example, having submitted at the same session two proposed amendments, of which one went to the Governor for his signature and the other not. The Louisiana bill, however, contains other provisions than the one regarding submission. In case the courts hold that the amendment may go to the people, the issue will not be decided until 1892, and there will be a chance that a healthier public sentiment may be aroused in the meantime.

Evidently the Republican managers are becoming uneasy over the "Farmers' Alliance," the party press beginning to offer urgent advice on the subject. A paragraph in the Cleveland *Leader*, for example, which is now going the rounds of the rural postmasters' newspapers, informs the farmers that "The efforts that are being put forth in this and many of the Western States to induce the Farmers' Alliance to act as a political body are purely selfish, and have in view the aggrandizement of some clique or party rather than the benefit of the farmer or the advancement in strength and influence of this organization." "The proper field for such an order," the *Leader* thinks, "is educational and coöperative. It can do the farmer vastly more good by keeping him acquainted with improvements in the methods of production, changes in markets, and the like, than by becoming a political body. Class parties are never successful for any length of time and rarely benefit the classes organized." This advice is meant to be taken as disinterested, and in reproachful contrast to the "purely selfish" efforts of others who "have in view the aggrandizement of some clique or party," and no doubt the *Leader* would be much comforted by the spectacle of the farmers educating each other in "improved methods of production, changes in markets, and the like," and abstaining from political action. But, unhappily for the *Leader's* party, the farmers themselves are "purely selfish" so far as this movement goes; they are in it for their own "aggrandizement," and political action is the only means by which they can effect anything. They will get improved methods of production and changes in markets, for instance, as the result of a rational and just system of taxation.

The Postmaster-General, who has just been celebrating his fiftieth birthday by a more than usually unctuous discourse to his Sunday-school, has written a long letter to the Post-office Committee of the House in answer to the publishers who protest against the passage of a bill which proposes to put paper-covered books in the same postal category as bound books, and make them pay one cent postage for every two ounces. He argues that it is not cheap postage which has made books cheap, but various other agencies, including "the absence of an international copyright law, enabling publishers to reprint books without authorial expenses." We think this phrase, "authorial expenses," is perhaps the most amusing contribution this particular pirate has made to the copyright discussion. The calm, and gusto even, with which he points out to the publishers that one of the advantages they enjoy in this happy land is the privilege of stealing the materials of their business, is very droll. It is very much as if he were to deliver one of his religious addresses to some Southern negroes of larcenous antecedents, and remind them that one of the great advantages of their condition under our Constitution was that "they could all get their chickens without paying farmerial expenses." He recently declared in an advertisement that what sustained him in robbery of the Blacks was that in "handling" their Encyclopædia he was doing what was morally right, and therefore felt perfectly "serene." We have no doubt this is true. To be miserable when doing wrong, one needs a moral sense, which in most pirates is very imperfectly developed.

Some of the phenomena produced by strikes in this city are very curious. T. K. Garside, the leader of the cloakmakers' strike, gave this account of his followers in one of the morning papers:

> "I can but refer with honest pride to the work we have accomplished in this strike. An almost unorganized body of men, with little or no knowledge of the principles of unionism, with no money in the treasury, ignorant of the English language, standing against hunger and privation, forms a scene of pure heroism unlike anything yet witnessed."

One would suppose naturally that men in this condition, suffering from want of food, and cut off, through ignorance of the language, from knowledge or understanding of the institutions of the country, would be so absorbed in the economical aspects of their struggle with their employers that they would have neither time nor inclination for the general work of legal reform. But we find in the *Tribune* of Sunday the following report of what occurred at a general meeting of the unions connected with the cloak business on Saturday:

> "At a meeting of the unions yesterday morning in Pythagoras Hall, resolutions were passed instructing the Amalgamated Board of the strikers to insist on that clause in the demands submitted to the Manufacturers' Association which provides that the strikers shall be paid full wages for the time they have been idle. Resolutions were also passed condemning the June and July Grand Juries, which refused to indict the manufacturers for conspiracy, and it was decided to request the State Legislature to abolish the system of trial by grand jury as 'a relic of the feudal ages.'"

This surpasses the demand of the Minnesota Farmers' Alliance that the Supreme Court should be abolished, because the farmers were presumably acquainted with the English language and to some degree with the history and functions of the Court. But we presume all the cloakmakers knew about the Grand Jury was that it was something, either animal, vegetable, or mineral, which prevented the employers from being tried, convicted, and sent to the penitentiary for conspiracy. Labor has already in this city asked for the repeal of all laws

against boycotting and for the abolition of the police. If all these demands for reform from this quarter were complied with, New York would probably be the funniest place in the world for an able-bodied and well-armed man of a humorous turn to live in.

The death of Gen. Frémont removes from the stage one of the notable characters of our time, but his career was too uneven to leave any lasting mark in history. There was a romantic coloring to his earlier years which led to his nomination for the Presidency in 1856, but, after the election, the opinion gained ground among Republicans of a reflecting turn of mind that his success would have been more disastrous to the party than his defeat. This opinion was considerably strengthened after the outbreak of the war, when he was put in command at St. Louis and gathered about himself, or allowed to be gathered, the so-called "California gang." When at a still later period he was summoned to trial in a French court on the charge of swindling and was condemned in his absence to fine and imprisonment, the glamour of the Pathfinder, for the most part, faded away. Nevertheless, there remained sufficient gratitude for his early services, and perhaps sufficient sympathy for his early defeat, to warrant President Hayes in appointing him Governor of Arizona Territory. This was the only civil distinction that he held, but he was, a few months ago, raised to the dignity of Major-General in the Army, and put on the retired list for the purpose of giving him a salary.

The British Ministry have finally settled their troubles in the most ignoble way by abandoning the Irish Land Bill and the Welsh Tithes Bill, as they have abandoned the License Compensation Clause. So there is now no contentious matter left on their hands, and the Opposition has won a complete victory. They made a feeble attempt to get the Standing Orders changed, so that bills might go over from one session to another, and be taken up in the next session at the exact stage in which they had been left, but they could not come to an agreement with the Opposition on this point, and did not dare to adopt a bold suggestion of Mr. Balfour's that they should propose the change and make the motion non-debatable. Their plan now is to have a November session, and in it start the bills afresh; but this brings down on them curses not loud but deep from the rank and file of their supporters, for it will interfere with hunting and other sports. Of their dissolving Parliament there is not any more likelihood than of a condemned criminal's asking to have his execution hastened. They will stick until 1892, come what may in the interval.

Two or three weeks ago Mr. Gladstone gave his views upon the subject of education at considerable length before a committee appointed to investigate the claims of Hawarden to the establishment of a school under the new Welsh Intermediate Education Act. After briefly discussing the local question, he expressed the opinion that classical education was "the very best of all for all those capable of profiting by it and proceeding far enough to realize solid attainment"; but terrible errors, he added, had been committed in the past in endeavoring to force the mere rudiments down the throat of everybody in a certain condition of life, irrespective of either circumstances or capacity. To technical education he attached the highest value and importance, and, by way of illustration, he pointed out that the main purpose of education is to make the youthful mind not a mere repository that is to be filled with goods like a shop, and to remain in its original condition when the goods have been withdrawn from it, but a supple, effective, strong, and available instrument for whatever purpose it may be applied to. In referring to recent triumphs of women students at Cambridge, he said that a great deal was yet to be done in the way of technical education for women. He was not, he said, an enthusiast for educational endowments in general, and had grave doubts whether the large amount of educational endowments in England did not make education dearer, although the initial endowments, which enabled boys and girls to get into the running, as it were, he held to be excellent. He resented extremely, he added, the arrangement by which girls and young women, while admitted as students, were prevented from touching one penny of the vast wealth accumulated by the universities. With regard to Greek he was inclined to think that it was waste of time to teach it to boys who would not continue the study of it after they were sixteen years old, although there were exceptions to all rules. Physical and corporal education generally, he thought, ought to be promoted. The hand and the eye ought to be trained, and in the training of the eye natural history was very beneficial. His distinct feeling, he said, was that in the higher classes of schools during the last thirty or forty years too much consideration had been given to modern languages, and too little to the observation of nature. One of the sorest places in the whole educational question, he remarked in conclusion, was the competitive element in the awarding of scholarships, but he scrupled to give an opinion concerning it, choosing rather to be governed by the experience of those who had been actual witnesses of the results of the modern academical system.

The formation of a Conservative Ministry in Spain was an event not expected in that country even by sanguine Conservatives themselves; the latest utterances of their newspaper organs before Sagasta's resignation being in the nature of a despairing recognition of his command of the situation. This makes it probable that his resignation was entirely voluntary and considered by him to be his wisest political move. If he can return to power after the next elections with a strengthened majority behind him, as it is very likely that he may, the brief Conservative interregnum will have simply served to relieve him from some awkward temporary embarrassments. He was manifestly not yet ready to dissolve and go to the country, though a declaration of his made a couple of years ago, to the effect that the passage of the Suffrage Bill would necessarily carry with it the dissolution of the Cortes, was triumphantly adduced by his political opponents in support of their cry for an immediate bringing on of the general election. Their zeal cooled at once on coming to power, and they adjourned the Cortes till Christmas, fixing February as the time for the choice of new Deputies. This seems to be playing into Sagasta's hand, though it must still remain doubtful if he can effect a reconciliation among the factions of his party, and get the full benefit of his popular-suffrage measure, by next February. At all events, the Conservatives cannot undo the Liberal enactments of the past five years; indeed, Cánovas is a man of most enlightened and progressive views, and will doubtless be ready to declare now, as he did at the time of a former return to the Premiership, "The Conservatives do not propose to change the history of Spain, but to continue it."

There is a good deal of difference of opinion over the execution of Maj. Panitza, the Bulgarian officer, who was shot the other day for conspiring against the Government of Prince Ferdinand. The Russians, and the French as Russian allies or partisans, as a general rule condemn it in strong terms as an act of inexcusable brutality on the part of the Prince and his Minister, M. Strombuloff, while the Germans and English are disposed to approve it. A bad complexion was given to it by the Prince's having signed the warrants just as he was starting on a junketing tour, and by the fact that the prisoner had no warning that the sentence would really be carried out. The truth is, that this is the second attempt of Bulgarian military officers—men who have sworn allegiance to the government of the principality—to overturn it. The first one succeeded in actually kidnapping the reigning Prince and carrying him out of the country, and this one, had it succeeded, would have resulted in anarchy and the intervention either of Russia or Austria. Bulgaria is having a hard struggle for life and a very heroic one; Russia being her principal and most dangerous enemy, because Russia organized the Bulgarian Army, wrung Bulgarian emancipation from the Porte, and has therefore a great many partisans in the Bulgarian service, many of whom, it is said, are really in her pay, and doing her bidding, and Panitza was undoubtedly among the number. Strombuloff, the present minister, is a man of the Stanton type, able and patriotic and unscrupulous, who is determined to save his country by any means within his reach, and he had made up his mind that if the habit of mutiny and conspiracy was allowed to grow up unchecked among the regular troops, the game might as well be given up.

THE FORCE BILL.

THE main difference between the Federal Election Law which the House has just passed and that already on the statute-book lies in the increased powers the former gives to the supervisors of election. The act of May, 1870, empowered the Circuit Court to appoint supervisors of election on the petition of two citizens in cities having over 20,000 inhabitants, or on the petition of ten in any county or parish in a Congressional district. These supervisors were to watch the registration of voters wherever such registration existed; to mark as challenged all persons whom they thought improperly registered, and to affix their signatures to the list. They were also directed to attend at all elections of all Representatives in Congress and watch the voting and counting and "scrutinize" the manner in which the poll-books and tallies or check-books were kept, and they were further to "personally scrutinize" each ballot cast. It will be seen from this that the duties of the supervisor were simply those of inspection or verification. He was to examine the register and verify it by house-to-house visitation if necessary. He was to mark the names of those whom he thought improperly registered. He was to watch the polls on election day and challenge when he thought it necessary, and he was to be present at and participate in the final count.

The Lodge bill provides that this supervision shall take place in any city on the petition of 100 voters, and in any Congressional district on the petition of 50. But the supervisor's powers go much beyond those assigned him by the Act of 1870, for he may pass on the qualifications of challenged voters; and, not only this, he may take any ballot which the State officers refuse to receive, and put it in the ballot-box himself, making a record of the case, and also may show voters in what boxes to deposit their ballots, in case the voter, through inability to read, should be unable to discover the proper boxes. Moreover, when the persons declared to be elected by the Federal canvassers are not the same as those declared elected by the State canvassers, the Clerk of the House is required, on pain of fine and imprisonment, to place on the rolls of the House the name of the person declared elected by the Federal officials. In short, the bill, to all intents and purposes, takes the election of members of the House out of the hands of the State officials. It is, whether called for or not, a tremendous step towards centralization.

The strongest speech made against it in the House came from Mr. Tucker of Virginia. He maintained with great force that the power given to the supervisor to pass upon the qualifications of voters was a direct violation of the second section of the first article of the Constitution, which says:

> "The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature."

Under this bill, clearly, the supervisor will pass on the qualifications of State as well as of Federal electors, for they are one and the same. He pointed out, also, that whether Congress has the constitutional right to interfere with elections in this manner or not, it was the belief of the framers and their contemporaries that such powers would never be exercised. He showed that the construction put, at the time of the adoption of the Constitution, by Massachusetts, South and North Carolina, New Hampshire, New York, Rhode Island, and Pennsylvania, either by protest or declaration, on the provision that Congress might "by law at any time make or alter" the State regulations as to "the times, places, and manner of holding elections," was that it would take effect only when, to use the language of the Massachusetts convention, presided over by Hancock, "a State shall neglect or refuse to make the regulations therein mentioned, or make regulations subversive of the rights of the people to a free and equal representation in Congress." It was, in short, they thought, a power only to be used in case the State governments refused to hold Federal elections or converted them into a farce. It was never supposed that the Federal authority would undertake the police power of seeing that the elections were fairly conducted, by actual inspection, and even by the creation of a sort of drum-head tribunal for trying the qualifications of voters.

Of the impolicy of the bill, for any other purpose than creating sufficient disturbance and disorder at the South to revive the Southern question in Northern politics, and divert attention from questions of administration and taxation, there can be little doubt. By far the smallest part of the suppression of the negro vote occurs at the polls. The bulk of it, in so far as it exists at all, takes place long before the election, through the influence of the rich on the poor, of the creditor on the debtor, of the employer on the laborer, of the landlord on the tenant. No power the law can create can interfere with the operation of these influences. The Federal supervisor will be no more able to check or counteract them than to stop the tides. What his presence at the polls will do will be to produce continual exasperation and irritation and disorders, and probably to strengthen such arts of coercion as the whites now use in preparation for the election.

SPEAKER REED'S ERROR.

THE anonymous article under this title in the July number of the *North American Review* has attracted much attention, but not more than its merits as a piece of pure ratiocination warrant. It has been ascribed (erroneously, we think) to the pen of Secretary Blaine, and has been printed in the *Congressional Record* as part of the speech of a member of Congress. It is signed "X. M. C." It is so far above the average production of the Congressmen of the present day in dignity, force, research, and literary finish that curiosity is considerably piqued to know who the author may be. To every impartial reader of it, the thought will promptly come that this ex-member of Congress ought to be reëlected, no matter which party he may happen to belong to.

Speaker Reed's error, according to this writer, consists in substituting the new rule (No. xv., clause 3), which authorizes the Speaker to count a quorum by eyesight when the yeas and nays do not show a quorum, in the place of the old rule (No. viii., clause 1), which requires every member to be present unless excused, and to "vote on each question put." The latter rule has been in force from the beginning of the Government to the present time. It is now in force, just as much as Rule xv., and it is optional with the Speaker and the majority of the House to have recourse to it at any time. Speaker Reed's error is really two-fold: it was an error to have adopted Rule xv. at all; it is an error to neglect and supersede Rule viii., as he habitually does. "Speaker Reed," says the writer, "is the first author of any code of law, parliamentary, municipal, or public, who deliberately inserted a mandatory rule on one page, and then on the next page inserted a mandatory rule making proclamation that no one need obey the first." The only example of this kind in literature (he continues) is that of *Dogberry*, who ordered the watch to comprehend all vagrom men and bid them stand in the Prince's name, but, if they would not stand, to let them go and thank God they were rid of a knave.

The capital point made by the writer of the article against the Speaker's new rule and practice is that the Constitution requires a two-thirds vote to override a Presidential veto, and also requires that the vote shall be taken by yeas and nays. There can be no House to do any kind of business that has not a quorum. What evidence can the President rely on to show that there was a quorum present—*i. e.*, that there was any real House in session when his veto was considered? If the yeas and nays together amount to a quorum, and if two-thirds of them are recorded as voting to pass the bill notwithstanding his objections, that is sufficient. But if the yeas and nays show less than a quorum, he will be justified in saying that the bill has not passed. "But," replies the Speaker, "I saw enough members inside the bar to make a quorum." "That is nothing to me," the President might reply; "the Constitution has for me three things, and only three, viz., quorum, two-thirds, and yeas and nays. Your rules do not apply to me. I am not a member of your body. I cannot know any rules except those which the Constitution has laid down." Under such circumstances would the bill be a law or not?

This is a crucial test. If Speaker Reed's rules will not apply in this case, they must fail everywhere. There cannot be two kinds of a quorum for legislative purposes, one kind for ordinary use and another kind for passing bills over a veto. The President's approval is as essential to the validity of an act as its passage by House and Senate,

except that, in the event of a veto, both houses shall have a quorum present, and two-thirds shall vote by yeas and nays (and not otherwise) to pass the bill. The question is whether the President is *bound* to accept other evidence than the yeas and nays of the presence of a quorum. Congress has no means of interpreting the Constitution for the President. They are coördinate and equal in this behalf. Taking the most favorable view of Speaker Reed's position, we have here the seeds of a conflict respecting the validity of laws—a conflict fraught with the gravest consequences, and one which has hitherto been undreamed of in our frame of government.

There are, the writer points out, several other cases where a two thirds vote is required to do certain things—four in the House and six in the Senate. Two-thirds are required to propose an amendment of the Constitution to the Legislatures of the States. What evidence can the States rely upon to satisfy them that two-thirds of both houses have proposed an amendment? "That two-thirds of a quorum should actually vote is as imperative as that the number of States ratifying shall be three-fourths of the States in the Union. The philosophy of the Speaker's rule would not require three-fourths of all the States. If only four States voted and three of them supported the amendment, Speaker Reed, if he adhered to his logic, would be compelled to declare the amendment adopted."

This is but one of the applications of the *reductio ad absurdum* by which the writer in the *North American* utterly demolishes the Speaker's position. The question what shall be done in case the minority refuse to vote is easily answered. In the first place, the Government has been carried on upwards of one hundred years, in peace and in war, without any need of counting a quorum. But supposing that we have fallen upon evil times; supposing that we are in a worse plight as regards the conduct of public business than we were in *ante-bellum* days, when the fierce passions engendered by slavery were rampant in both branches of Congress; supposing that party spirit runs higher now than it did when Sumner was bludgeoned by Brooks, and when Potter and Pryor were on the point of spilling each other's blood, so that it is really necessary to take extraordinary steps now in order to get on at all. What would it be possible to do instead of "counting a quorum"?

The writer suggests the enforcement of Rule viii. The House can compel the attendance of absent members; even a minority can do that. "Compel" is a strong word. It has no limitations. Any absent member can be dragged to the House on a hurdle if need be. But the difficulty, it is said, is not in getting members into their proper places: it consists in getting them to vote. But Rule viii. says that they "*shall vote* on each question put." What does that imply? It means that if they do not, they may be punished for disorderly behavior, under Article 1, section 5, clause 3 of the Constitution. A fine of $50 for each refusal to vote would be a very moderate punishment. Such a fine, cumulative for repeated offences, would be effective, and would probably never need to be exacted. But the power of the House to punish disorderly behavior—and certainly any deliberate infraction of a rule is disorderly behavior—is not limited to pecuniary penalties. In fact, there is no limit to it, except that the punishment must not be "cruel or unusual."

The conclusion upon the whole matter is that Speaker Reed has devised a plan, for his own temporary convenience, which will not bear the constitutional tests applied to it, and which, therefore, puts in jeopardy all the acts passed by "counting a quorum." He has done this without attempting first to enforce a rule as old as the Government itself, which has never been found wanting in any case where it has been invoked. One of his newspaper apologists has sought to excuse him by saying that he has simply followed the line of least resistance in his endeavor to get the public business transacted. If that were true, it would prove nothing as to the legality of the proceeding. It might be the line of least resistance to throw his mallet at the head of any member whom he conceives to be obstructing business. But the question whether counting a quorum is the line of least resistance or the line of most resistance, is yet to be determined.

THE MYTHOLOGY OF SILVER.

We find in the speech of Senator Cockrell of Missouri, on Wednesday of last week, when the Silver Bill was under debate, the following eloquent passage:

> "You say to the silver to-day, bound hand and foot, bucked and gagged, and upon its back as a mere commodity, 'Stand up like a man beside your gold dollar that has been endowed by law with free coinage, absolute legal tender, and an equality between coin and bullion.' You might just as well say to a twin brother of two great athletes, who has been bucked and gagged, and bound hand and foot, and prostrate on his back, 'Stand up by the side of your twin brother here and show yourself a man,' as to say to silver, bucked and gagged, and cast down as it is, 'Stand up on an equality or parity with gold.' No metal on the face of God's green earth could lie bound and gagged as it is by legal prescriptions and be on an equality with any other. It is an impossibility."

It appears to be impossible for the silver men to understand that money is a tool which enables men to exchange their products and services with the least possible friction, being analogous to a wheelbarrow, a wagon, or a railroad car. Without money we should be obliged to trade by barter, just as, without conveyances, we should be obliged to carry goods on the backs of animals, or on our own backs. The history of money shows that mankind arrived by progressive stages at the knowledge of what things would best serve the purposes of a medium of exchange. Cattle, skins, shells, iron, copper, tin, silver, and gold were tried successively, some in one country and some in another, just as pack-saddles, wheelbarrows, wagons, and railroad cars have been tried for the moving of goods.

It is not so very long since tobacco was the prevailing currency in Maryland, Virginia, and the District of Columbia, and was legal tender for many purposes. It is within the memory probably of some persons still living that 'coon skins were the money of a large section of the Western country, including that portion now represented by Senator Cockrell. Cows were once legal tender for taxes in Massachusetts. Now, let us imagine a Senator from Virginia breaking out in this way: "You say to the plug of tobacco to-day bound hand and foot, bucked and gagged, and upon its back, a mere chew, 'Stand up like a man beside the ten-cent piece that has been dignified with the Government stamp.'" Or this: "You might as well say to a 'coon that has been bucked and gagged, and bound hand and foot, and prostrate on his back, 'Stand up by the side of this legal-tender cow and show yourself a man,'" etc., etc. Not a whit more absurd would it be to exclaim in Senator Cockrell's frenzied way: "You say to the wheelbarrow to-day, bound hand and foot, bucked and gagged, and upon its back, a mere conveyance, 'Stand up like a man beside the railroads that have been endowed with public lands and pampered with refrigerators and Pullman cars.' No handcart on God's green earth could lie, bound and gagged as it is, and be on an equality even with a two-horse team."

How it comes about that so many Americans, ordinarily sane, invest with human or divine attributes any paper or metallic thing of which money is made, is one of the mysteries of the modern world. We find nothing like it in Grecian or Roman mythology. Nor do we recall any instance in which a Hindu or Chinese or African native has personified the raw material of which his idol or fetish is made. That peculiarity belongs to us. It is not fully agreed, however, which sex silver belongs to, although the majority incline to the female. Senator Cockrell speaks of it as a twin athlete, like Castor or Pollux. The late Senator Beck looked at it as an abused woman, something like Niobe. Mr. Dana Horton speaks of it in a general way as an orphan, sex not indicated. The *Silver Dollar* newspaper, published at Cleveland, argues strongly that silver has been deprived of its "constitutional rights." This would imply the male sex, and it raises the question why silver has not brought suit to recover them.

One thing the mythologists of silver have strangely forgotten to mention, and we think they ought to be reminded of it before the sentiment of patriotism is wholly dead. Senator Oglesby of Illinois once eulogized the paper dollar as our ally and friend in the darkest hours of the war. It never deserted us. The more gloomy our prospects were, the closer it stood by us. It was "battle-scarred and blood-stained." The eloquent Senator invested it with the bravery of Mars and the wisdom of Minerva, leaving us in some doubt whether the rebellion was put down by Gen. Grant or by Gen. Greenback. Now where, in this dark hour, was Silver? Did not he (or she) abandon us in the time of trial? Was not he (or she) a deserter? Did not he (or she) join hands with gold, and

flee across the ocean, seeking refuge among the aristocrats and rebel sympathizers of England and France? Ought not he (or she) to receive thirty-nine lashes and be drummed ignominiously out of the camp? Let Senator Ingalls answer this question, since he it was who once publicly castigated gold for its dastardly conduct during the war.

RAILROAD PASSENGER FARES.

THE zone system of passenger tariffs which originated in Hungary bids fair now to modify the passenger charges on all the railways of continental Europe. The system, in brief, is one of group rates, the same fare being charged to all towns within the zone. For journeys from 140 to 457 miles (the longest journey in Hungary) the fare is the same to all stations, as if the Albany fare were charged from New York to all the cities along the New York Central as far as Buffalo. The result in Hungary is a reduction to all short-distance points, and a very large reduction for long-distance travel. These zones are made by circles drawn from Budapest, the capital, as a centre, the reduced fares applying only to and from that city. A passenger going from one village to another through the capital must buy two tickets. All special tickets are abolished, and all baggage carried is a special charge.

When we begin to reason about American passenger reforms from this Hungarian experiment, we do injustice to our own railroads unless we take the greatly different circumstances into account. Prof. E. J. James of the University of Pennsylvania, for example, prints in the new quarterly, *Annals of the American Academy*, a review of the zone system, with comments upon America, which are very misleading. One sentence is, "The fare [under the zone plan] from New York to Philadelphia would be thirty-two cents." This is without excuse. As before stated, an important part of the Hungarian system is the great reduction in journeys over 140 miles. Prof. James has taken the rate per mile for the longest and (comparatively) cheapest trip and applied it for ninety miles, which is the very thing that Hungary does *not* do. Then, again, he has taken for comparison the lowest-class fare in Hungary—a train with board seats and at slowest speed. It is true that at the end, not of his article, but of the translation of the Hungarian tariff appended, there is a note saying that the extreme rates used for comparison are for third class, with no free baggage; but, being without cross-reference, this looks like an afterthought. Let us see how the New York-Philadelphia rates really compare, taking the Hungarian station about the same distance from Budapest (ninety-five miles):

Hungarian.	Slow trains.			Express trains.		
	First class.	Second class.	Third class.	First class.	Second class.	Third class.
Former fares.....	$3.72	$2.60	$1.84	$4.32	$3.04	$2.16
Present fares.....	2.00	1.60	1.00	2.40	1.92	1.20

The price of an excursion ticket to Philadelphia (from New York and return) is $4, a single-trip ticket being $2.50. Looking at the express trains, it is seen that the old fare of $4 32 first class is higher than the American road's, and that the reduction now brings the fare to a little below the Pennsylvania charge, if we add to the latter's ticket 50 cents for a Pullman seat; though if the Hungarian took a trunk, it would make the prices about even. But the advantage of the new plan lies in the third class, for a poor man can now travel in Hungary a distance equivalent to that between New York and Philadelphia at $1.20, if he will put up with inferior accommodations, yet on a fast train.

The principle of cheaper travel for poorer people is the key to the whole question of passenger reform, whenever it can be applied. The great increase in the quantity carried, and the relative profitableness of our railroad tonnage, come primarily from our ability to discriminate between silks and pig-iron and from our charging upon each its own rate. Dear and cheap freights are carried at separate charge often in the same car, while trade in each is stimulated to the advantage of both merchant and carrier. Obviously we cannot ask a traveller what a journey is worth to him and charge him accordingly, for people cannot be treated like merchandise; yet an approach to this has already been made. Our limited Chicago trains charge $28, while the same trip in another and slower train costs $18 or $20. In England the same fast train carries first-class passengers at three cents per mile and third-class passengers at two cents. The result there and on the Continent has been that the entire increase of recent years is in third-class travel. In other words, comparatively the same number of high-priced tickets is sold, while the number of cheap-fare passengers is capable of great yearly growth, though generally for short distances only.

Upon this matter Prof. James has a word: "The American people," he says, "reputed to be the most restless in the world, has not nearly as many passengers per head of the population as England, and is far exceeded in the number of passengers to mile of railway by half-a-dozen countries in Europe." But the implication against America is unwarranted. Take Great Britain: The United States, omitting Alaska, in round numbers has twice the population, eight times the railroad mileage, and thirty times the area. Is it not rather to our credit that our railroads are four times longer, proportionally to population, than in Great Britain? We have one mile of railway to every 400 of the population; in Great Britain and in Europe it is about one mile to every 1,800 persons. Does Mr. James expect 400 people to travel on the average as often as 1,800? The fact of our much larger territory has, too, an important influence upon our passenger problems. Strange to say, in spite of having thirty times the number of acres, the average length of the railroad journey in the United States (twenty-six miles) is not quite twice that in Great Britain, thus showing that it is to the short-distance travel we must look for any large increase.

General-Manager Findlay of the London and Northwestern presented an elaborate paper on English traffic, with statistics, to the International Railway Congress last year in Paris. His conclusion is: "As regards long-distance traffic, I do not believe that the reduction of fares or any other concessions tend materially to increase the volume of business; as a rule, people do not take long journeys unless from actual necessity, and in that case they will travel, whatever the fare may be, within reasonable limits. Of course, this remark is not intended to apply to traffic between large towns and seaside and other holiday resorts, this being a case in which, by judicious concessions, a traffic is created which could not otherwise exist." A long journey in Great Britain would be, say, as far as from New York to Buffalo or Pittsburgh, 444 miles. Our American railroad managers agree with Mr. Findlay in thinking that large reductions in long-distance fares would not increase the number of passengers correspondingly, though it must be confessed that the Hungarians are ahead of us in the opportunities for cheap travelling. This is the traffic in the United States which, in the words of the English manager, "can be created" to a greater extent than at present exists, and it is to this that our American railroad men should seriously address themselves.

GERMAN COMMERCE WITH SPANISH AMERICA.

THE expansion of Germany's foreign commerce since 1870 has long been known in a vague way to be especially marked in the case of her South American trade. The ubiquity of German commercial travellers has been a subject of remark by South American tourists, and an occasional specific account of the increase of German commercial relations with this and the other country has been made public, such as Consul Baker's striking showing, in his last annual report, of the advance of German interests in the Argentine Republic; but a full survey of the whole subject has been wanting. It was reserved for Dr. L. Francke to furnish this, and he did the work in a late number of the *Zeitschrift* of the Royal Bureau of Statistics of Prussia. Indeed, he covered the whole field of Germany's foreign trade, under the somewhat warlike title, "The Duel with England and France in the Markets of the World." His method throughout is to compare the position of the three great exporting countries in any individual market, by means of tables extending over several years; and some of the more important of his showings, as respects the South American trade, we adduce below.

It is only since October 15, 1888, that Hamburg and Bremen have been included in the Imperial *Zollgebiet*, and only since that date, accordingly, that there have been consolidated statistics of German foreign trade. As Dr. Francke's survey lies almost entirely anterior to that customs unification, he is obliged to give the returns for Hamburg and Bremen separately. The exports of Ger-

many in general to Mexico and Central America are thus set forth:

1880	2,173,000 marks
1882	3,442,000 do
1886	4,035,000 do
1887	4,531,000 do

The trade of Hamburg with the same countries doubled in the same period, 1880-87, while that of Bremen remained nearly stationary.

The point of Dr. Francke's article is the greater relative gain of Germany compared with England and France, and (in the case of South American commerce) the United States, and this he proceeds to show, for the countries alluded to, by giving the figures of the rival exports as follows:

	Great Britain.	France.	United States.
	Pounds.	Francs.	
1881	1,690,000	23,800,000	$13,320,000
1883	1,620,000	23,800,000	11,000,000
1885	870,000	18,300,000	6,860,000
1887	1,180,000	23,100,000	9,240,000

Thus, while Germany's exports to the republics in question were doubling, those of her competitors were either barely holding their own or distinctly declining.

A similar comparison is next made for South America. Proceeding as before, the general exports of Germany are given as below:

1881	26,638,000	marks.
1883	37,313,000	do
1885	34,366,000	do
1887	50,016,000	do

Meanwhile, the exports of Hamburg to South America increased more than 40 per cent., and those from Bremen about 30. Turning now to the corresponding exhibit for Germany's rivals, we find it to be this:

	England.	France.	United States.
	Pounds.	Francs.	
1881	17,360,000	264,200,000	$26,470,000
1883	18,550,000	256,700,000	30,430,000
1885	15,370,000	212,700,000	25,280,000
1887	19,650,000	280,400,000	28,610,000

Here, too, Germany is gaining much faster than the nations she has to compete with.

The reasons assigned by Dr. Francke for this wonderful quickening of his country's foreign commerce are mainly the impetus given by the unification of Germany, her superior technical education with its results when applied to the leading manufacturing industries, and the persistence and shrewdness with which she has sought entrance to foreign markets. The last causes mentioned have certainly been of great power, as much concurrent testimony could be adduced to show; but we fear they will appear wholly inadequate to our own demonstrators of the way to get a foreign commerce. To them the German idea that the way is to make goods better and cheaper than your competitors, and then make intelligent and sustained attempts to sell them, must appear simply ridiculous. Something like pain will be caused them, too, to be told that Dr. Francke makes absolutely no mention of steamship communication as a means of building up foreign commerce, although we well know, for we have been told it again and again, that German subsidies are the sole cause of German trade abroad. There may be a deep conspiracy here, to deceive the American people and still keep them from the enjoyment of subsidies, though more likely it is only another proof of the essentially plodding and unstatesmanlike type of the German mind.

Dr. Francke speaks rather hesitatingly of the probable effect of the increasingly protective policy of Germany upon her foreign commerce. As his examination was brought down no later than 1888, the influence of that policy had scarcely had time to show itself in the returns. He says it is too soon to judge of the precise effect, and expresses the somewhat perfunctory and evidently forced hope that it will be found possible to retain exclusive control of the home market, and at the same time go on enlarging foreign trade. It would be interesting to know what he would say of the statistics for 1888 and 1889, which show a great falling off in Germany's foreign commerce, and a corresponding gain for both France and England, and whether he would agree with those French and English economists who maintain that such a result was only to have been expected from the advancing German taxes on raw materials and provisions.

FOUR EDUCATIONAL MEETINGS.

THE meeting of the National Teachers' Association at St. Paul which closed on July 11 was perhaps the largest ever held, nearly 12,000 teachers from nearly every part of the country having been present. The programme, too, was on the whole perhaps the most meritorious. In the National Council, a select body of leading educators which met at St. Paul the preceding week, the value of the new plan was very apparent. Select committees report on standard topics once in three or four years, and the practice of presenting a vast body of opinions, more or less systematically collected from all parts of the country, has become the rule in the proceedings of the Council. In the Association itself the numbers have become too large for effective joint meetings, and the best papers are to be found in the departments. The chief interest in the national meeting last year centred in the discussion of religious training by Mr. E. D. Mead and Bishop Keane of the Catholic University; and this year the parochial question, which in two States has grown so hot as to dissolve party affiliations, was brought to the front by Bishop Ireland—forced, it is said, upon President Canfield by the local authorities. There is, however, need of much more specialization and organization before the greatest possible good can be derived from so vast a meeting. The great fact most strikingly impressed upon every competent observer was the superiority of the Western over the New England teacher in professional interests and wide professional reading and intelligence, not to say also in physique.

The American Institute of Instruction is composed of New England teachers, and met this year for the sixty-first time for four days at Saratoga. The chief papers were those by T. W. Bicknell, advocating a high-grade normal school in Boston for graduates of colleges intending to enter upon high-school work. This plan was devised by the Massachusetts Board of Education, but action upon it was deferred by the Legislature till next year. The plan is warmly supported by many leading Massachusetts educators, while it has been vigorously opposed by the State Superintendent and by normal masters. Another important paper was by the Boston Superintendent, Mr. E. P. Seaver. His plan proposes that the State should favor the establishment of departments of pedagogy in Massachusetts colleges, particularly female colleges, by paying to the college $200 or $300 for every graduate in pedagogy who passes a State examination. This, he believes, would accomplish better results than Mr. Bicknell's school. The third plan was presented by Dr. Stanley Hall, and was more modest and inexpensive. It involves a collection of select educational books and journals, English and European, in a central location in Boston, kept by a curator who should lecture on Saturdays, employ other lecturers, take apprentices, etc., and gradually develop a course of pedagogy to meet various needs. Special attention was called to the fact that the new course announced for next year at Clark University could not possibly meet any of the ends sought by any of the three plans proposed. The other papers were good—in fact, there was not a bad one—but the chief interest at this session of the Institute centred on the training of teachers.

The New York State Teachers' Association held its annual meeting in Saratoga during the week beginning July 6. An excellent address was delivered by President Seth Low and another by Prof. N. M. Butler of Columbia, where new departures in psychology have just been made and others in pedagogics are impending. Perhaps the chief feature of the meeting was the address of Judge A. S. Draper, State Superintendent of Schools, outlining from many original sources the history of the State school system. The other chief topics were a plea for closer relation between the university and the school, school training for political duties, and school reading. A striking contrast between the New York and the New England (Saratoga) meeting was often remarked. The New York teachers were mostly men, and therefore more permanent in their vocation and more serious and interested in it. Three long sessions each day were held, and nothing but educational work was presented. At the New England meeting three-quarters of the attendants were women; there were two quartets, organ music, recitations, and other diversions, to say nothing of repeated picnics, receptions, etc., and but two sessions a day were held. To plead for the pro-

fessional education of teachers in such a meeting is a little difficult. The President deserves all praise for handling his piebald programme, which was no doubt necessary under the circumstances; but the New Englanders should not again meet where such comparisons are challenged.

Most important of all these meetings in a sense was the Regents' convocation in the Albany Capitol. The admirable historical address of the new Chancellor, George William Curtis, was made to a distinguished audience, and was one of his best utterances. In New England, college presidents and faculties associate once a year to discuss common interests, but with very great reserve. In New York most of the colleges of the State were represented at the Regents' meeting, and even so sensitive a question as degrees was fearlessly and publicly discussed. It was moved that hereafter only universities with an income-bearing fund of half a million be allowed to give degrees, and it was suggested that two or three of the oldest and most valuable of the sixty academic degrees now conferred in America be selected by the Regents for their especial supervision and control. The existence and powers of this Board of Regents give to New York an opportunity and a responsibility possessed by no other State. With the cordial coöperation of Columbia College, which we trust is now assured, as well as of Cornell and the very vigorous State Superintendent, we may fairly look for very rapid educational development in New York.

From all this pooling of educational opinions the following seem to be indisputable facts: (1.) In New England, intermediate or secondary, if not primary, education is falling not only relatively but absolutely behind the West and the Middle States. This we believe to be due to the greater age, complacency, and unprofessional qualifications of the city and State superintendents in New England. (2.) At all these meetings the necessity of reform in normal training and the fundamental necessity of better qualification for teachers were emphasized. (3.) College and university presidents who have rarely attended these meetings were present; the heads of nearly all the best institutions in the country being in attendance, if not on the programme. When we reflect how the choicest educational influences work from above downward, this is not without its significance. (4.) What is most important of all is the fact of the astonishing broadening and deepening of all educational interests within the last two or three years. Never in the history of this country has there been so much unsettlement in all educational grades. This means exceptional opportunity, and no one can doubt that very great changes are impending

POSSIBILITIES IN EASTERN PERU.

IQUITOS, March 22, 1890.

IT is often more easy to enter a South American town than to effect an exit. It is almost impossible for the agents in charge to secure the departure of steamers on schedule time. Obstructions arise on every side—from officials whose correspondence is "not ready," from merchants who "will have more cargo to-morrow," from others who desire to force the companies to accept freight and collect charges from the consignee. By making these and other representations to the Captain of the Port, the citizens can usually induce him to withhold the "despatch" without which the steamer dare not depart. Accordingly, passengers booked for the voyage are obliged to live in a state of expectancy, with baggage packed, for days before finally setting sail. After an excited contest between the agent and the obstructionists, the *Mujú* got away from Iquitos four days after her advertised date for sailing.

This venerable craft possesses a history in which Americans may justly take a patriotic pride. She was built in Philadelphia for the "Companhia do Pará é Amazonas," now defunct, and, under a succession of different owners, has been in active service in this most trying of climates for twenty-three years! The same timber is in her to-day as when she was first built, and she is in as good condition as any vessel of English make which has been in the Valley of the Amazon as long as seven years. The assertion is often heard in tropical countries that none but the English can construct vessels which will hold together under the severe tests to which the heat and moisture of such climates subject them. One reason assigned for this is that they employ teak, an East Indian wood unobtainable by Americans; but in the face of all this exists the fact that the oldest boat on the Amazon was built in the United States, and that, with the exception of her iron hull, the material used in her construction was none other than Georgia pine (*Pinus palustris*, known in various sections of the country as yellow, hard, or long-leaved pine), which, by reason of being so heavily charged with pitch, has been found to last three times as long as teak.

The *Mujú* makes regular monthly trips between Iquitos and Yurimaguas, which latter town is at the head of navigation on the Rio Huallaga, about 100 miles from the Amazon, and 500 miles west-southwest from Iquitos. It was sunset when the lines were cast off from the pontoon dock, and the steamer started up the river. The current was excessively strong, and doing our utmost we could only make four miles during the first hour. At this distance we cleared the upper end of Iquitos Island, and, coming into the main channel, made better speed. Almost every foot of space on each side of the long table on the after deck was by this time occupied by the hammocks without which no one travels in this country—white, gray, and red cotton hammocks, with deep fringes hanging down; rich gray and brown chambira hammocks—all loaded with human freight, swinging in unison with the slight swaying of the vessel. It was characteristic and pretty. Outside, the faint gleam of the growing moon caused the vine-draped giants of the tropical forest to display their beauty with the added charm of shadow and sheen of moonlit night. In the woods all was still, save now and then the note of a querulous parrot. Suddenly a concertina or accordion whined the cue to a *cancion*, and in an instant a dozen voices had lifted the strain of "Perla preciosa," a wild, weird, plaintive song of love.

By the following morning the boat had reached Omaguas, a pleasant town scattered irregularly through a grove of sapota and mango trees. The land is rolling, and is not only cleared, but is kept as clean as any Northern farm. Corn was growing in several fields, and in the pastures were herds of cattle and horses. During the day several smaller towns were passed, all having a creditable appearance of thrift. The houses were built of canes and roofed with palm, but such a construction is far preferable to mud walls, which prevent free passage of air. The moisture in the atmosphere is so great that houses built with thick walls are always damp and chilly. Around these little villages, or pueblos, were great varieties of fruits. Oranges grow to perfection. Instead of the lemon, the lime tree is most commonly cultivated, and another intensely acid fruit called cidro, which resembles an orange in shape and size, is very abundant, and is highly prized for making a refreshing drink. The mango, sapota, and guayaba are found beside every hut. The last is often stewed and served as a dessert. The beautiful Pihuayo palm (the Pupunha of Brazil) is universal, and its large red, acorn-shaped, mealy fruit furnishes another highly relished dessert when boiled and floated in syrup. Another fruit greatly enjoyed by all classes is the huava, which looks like an enormous okra pod on the exterior, but contains a series of lenticular seeds thickly enveloped in a substance resembling cotton, which completely dissolves in the mouth to a juice of delicious sweetness. The banana orchard, of course, is a necessary adjunct to every settlement, for this wonderful fruit supplies to a great extent the place of meat, bread, and vegetables throughout the Valley of the Amazon, and coffee of excellent quality is also commonly raised for home consumption. Samples of this coffee tested by experts in New York are reported to equal the finest grades of Rio, and to possess in addition a suggestion of the flavor of Old Government Java.

Every town, or more properly chacra or hacienda (since nearly all are under the sway of a single Don), has its distillery, for the people use aguardiente (fire-water) in amazing quantities. The choicest native liquor is cherry brandy, perhaps the hottest beverage ever made. Orange brandy comes next in favor, while the standard drink of the country is rum of sugar-cane. Vast fields of the cane are cultivated, and all for this one purpose, not a single pound of sugar being produced for domestic use, and only a little, known as *chancaca*, made for strengthening the fermenting liquors. This chancaca resembles the crude sugar from Demerara. Corn, likewise, is only raised for the cattle and for making a beer called *chicha*. In a very few places tortillas and hominy are used, and the flavor of these is so excellent that it is difficult to comprehend the local prejudice which so narrowly restricts the applications of this nutritious grain. At many places were considerable patches of peanuts, *mani*, which serve as an article of food, as chestnuts do in Southern Europe. They are eaten roasted or boiled, and are very generally stewed with meats, in which form they are by no means disagreeable. Lastly, which is of peculiar importance to the Indian, a beer, *chicha de mani*, is brewed from them. To make peanut beer, the fresh nuts are mashed and boiled for several hours. All the liquor is now strained and expressed from the lees, sugar is added, and it is then fermented. At San Regis and several places further west, grapes were growing and apparently doing well. The inhabitants declare that they mature perfectly and bear abundantly, but complain that they require too much attention. The grape, however, demands care in any climate, and it is worth while to remember that down here anything which will not grow by simply sticking a shoot or cutting in the ground is deemed bothersome

and unprofitable. In a few places, notably at San Lorenzo, near the mouth of the Rio Huallaga, the natives cultivate a little rice, which ripens into a large, plump grain.

The cattle seen at the various chacras would create enthusiasm even in Chicago. There is one breed, mouse-gray in color, which is extremely beautiful, attains a large size, and fattens easily. Cattle are raised here solely for beef, milk never being used. It appears that in the tropics milk is even more likely to be infected with the bacillus tuberculosis than in the North, and so many cases of consumption have been traced to its use that the entire population, with scarcely a single exception, leave it absolutely alone. A few sheep are raised, and multitudes of pigs, chickens, and ducks, together with a great many fowls indigenous to the Amazonian forests which have been domesticated, and even crossed with the older breeds, with good results.

In spite of the evident possibilities for successful farming, in spite of the power which bountiful nature has given the provident husbandman to render himself largely independent of the outer world, the great majority of the East Peruvians *purchase* the common necessaries of life, rather than produce them. They use brown sugar imported from the West Indies, which costs them thirty cents a pound; rice brought from India, at forty cents a pound; canned vegetables from France, inferior to those they could raise in their own gardens; canned meats from Chicago, and flour from Baltimore, instead of having recourse to native corn meal. Then, to pay for all this, they are forced to endanger their lives by exposure in the jungle where they go to gather rubber. It has occurred to three, or perhaps four, men in this region that it would be more profitable and less dangerous to plant orchards of rubber trees on their haciendas. This is the dawning of a wisdom which must in time become triumphant, and bring prosperity and gladness to thousands who shall find homes in this land, where naught is needed but thrift and prudence to turn it into an earthly paradise. Within ten years a rubber orchard may be depended upon to yield a yearly profit of not less than one hundred dollars an acre, even in a so-called dry season, which is a phenomenon that occurs perhaps once every decade. Then, like the olive, the rubber tree endures and yields to posterity through many generations. While the trees are growing, many things can be raised upon the same land which will remunerate the planter. Climate and soil alike are adapted to the culture of heniquen, or jute; and coffee, which requires the shade of other trees to perfect its berry, could here be grown under the most advantageous conditions. Hemp is said to thrive well, and the cotton certainly develops remarkable characteristics. Instead of being an annual, as in the North, it grows into a shrub, or small tree, often twenty feet in height, and lives from forty to fifty years, being filled at all seasons with a profusion of yellow blossom and snowy boll.

Peru is proud of her "Montaña," as this vast eastern state of Loreto is called, and she well may be, for already, while there is not a single town or hacienda that is not upon the very banks of the rivers, while the population does not average more than one person to every sixty square miles of territory, and while a careless, thriftless people, too nearly content with mere existence, hold dominion here, the exports amount to upwards of two millions of dollars a year. When the railroad which is now building across the Andes shall have reached this region, and the tide of emigration shall have been turned into it, under the new genius which will then preside over her destinies, the plantations of Loreto may enrich the world more even than the wonderful mines of Peru's famous metalliferous mountains.

At San Lorenzo the steamer turns from the Marañon, or Amazon, into the Huallaga, which stream it follows southwardly, for thirty-six hours, through a region constantly growing more rolling, until the limit of navigation for vessels of six feet draught is reached at the picturesque town of Yurimaguas. This is the beginning of the overland route to the Pacific Coast. The journey is by no means as arduous an undertaking as it is commonly represented. At present it is necessary to go in a canoe a six days' voyage to Balsa Puerto, and thence to walk four days to Moyobamba. From that point a horse-road leads to the coast. The entire journey from Yurimaguas to Pacasmayo occupies from twenty-three to thirty-five days, and costs about $350. An engineer, Señor Perez, is at present laying out a road from Moyobamba to Yurimaguas, so that in a few months it will be possible to ride on horseback from the latter town to the Pacific. Yurimaguas is growing rapidly. The evidence is written clearly in the absence of many old buildings, in the number of new ones, and in the quantity in process of construction. Its population is now reckoned at three thousand, and when the Moyobamba road is opened, it will receive a new impulse of growth. The valley in which Moyobamba is situated is one of the most fertile in Peru. Its climate is that of perpetual spring. It is neither too cold for the fruits of the tropics, nor yet too warm for the cereals and vegetables of the North. In this favored valley are also other large towns—Chachapoyas, one of the ancient centres of Inca civilization, and Tarapota, famous for producing the finest tobacco in the Valley of the Amazon. The inhabitants along the river below Yurimaguas want the productions of this elevated valley, and it is for the sake of these that the new road is being built. All the cargo bound into this valley, and all that bound out of it, will then have to be transshipped at Yurimaguas. It is easy to see what an amount of business must arise at this point.

There is another region almost rivalling the valley of Moyobamba in natural fertility and advantages of climate, into which the steamers do not at present enter. This is that portion of the Amazon, locally known as the Alto Marañon, extending from the Huallaga up to the first cataract, the Pongo de Manseriche, in the eastern range of the Andes. It is now in large part an unbroken and almost unknown wilderness, but at every turn of the great river appear new evidences of its richness, and near to the mountains the land is broken into a series of little valleys whose beauty is almost ideal. Here are untouched resources of Peruvian bark. Here grow both the caucho and the rubber trees, the copal and the copaiba, the sarsaparilla vine and the wild cocoa. Here, too, are forests of the finest cabinet woods in the world. But as for that, the whole of the Montaña of Peru will afford these in almost limitless quantities. In this lies an unusual opportunity for a company of enterprising capitalists. The world already knows of the rich mahogany in these splendid woodlands. But here are likewise the palo de sangre, richer even than mahogany, and the palo de cruz, looking, when quartered, like sandalwood inlaid with imitations of water-plants in ebony. Of equal value, and of deep concern to the engineer, there exist others, particularly the huacupú and pauviní, which resist rotting in wet places longer than creosoted timbers—lasting, in fact, when used as piles and as sills resting upon the damp ground in this climate, for periods of twenty years. To get these timbers to market it is only necessary to make rafts, using the extremely buoyant cedro for the lower courses, piling the heavy timber on top of this, and then tow the whole down to Manáos, Brazil. The cedro could there be sold to be made into packing-cases for rubber, and the more precious woods shipped by steamer to New York—the present freight on timber being only eighteen cents per cubic foot.

From the few hints given in this article, it may appear wise for Americans seeking an extension of their commercial operations to pay some regard to the opportunities offered in eastern Peru. COURTENAY DE KALB.

BARANTE'S MEMOIRS.

PARIS, June 26, 1890.

M. DE BARANTE played a not unimportant part in the first half of this century, during the First Empire, the Restoration, and the Government of July. He saw many men and many things; it is a pity that he waited till he was eighty years old before resolving to put in order the notes which he had used in some of his historical works on the Convention, the Directory, and the Empire. He died before he could end his work; the first volume of his 'Souvenirs,' just edited by his grandson, M. Claude de Barante, goes as far as the beginning of the Restoration.

His grandfather, Claude de Barante (1669–1745), was a great Jansenist, and, during the persecution of the sect, he became the legal adviser of the Jansenists in Auvergne. His family was connected with the family of Pascal, who was also of Auvergne. He knew Nicole intimately and worked with him at the 'Epigrammatum Delectus'; he was a great scholar, and translated several Greek works. The father of the author of the Souvenirs was *lieutenant criminel* and *trésorier de France* in the *sénéchaussée* of Auvergne and the *présidial* of Riom. Like most of the *gens de robe*, he was a Liberal; he adopted the ideas of 1789, but was soon alarmed by the excesses of the revolutionists of Paris. It was not long before he was persecuted. He left Riom and retired to the country. He was arrested during the Terror, and conducted from Barante to Thiers. His wife, though on the eve of her confinement, rode to Thiers; she was delivered, before the term, of a daughter, who became Mme. Anisson du Perron. This lady, by the way, died only two years ago. She was much beloved and respected by all her friends, and had much literary culture; she left memoirs of which a part has been published by the Duc de Broglie in the *Correspondant*. The estate of M. de Barante was confiscated; his wife, as soon as she could move, went to Paris, in order to obtain his liberty. She spared no effort and put herself in communication with some of the Deputies from Auvergne. Young Barante, who was a boy at the time, went sometimes to Thiers to see his father in prison; he had to wear a tricolor cap for the occasion, and sometimes heard people sing under the windows of the prison:

"Il faut du sang, il faut du sang
Pour affermir la République."

Mme. de Barante succeeded, almost by a miracle, and through a sort of misunderstanding. She took her husband back to Paris, but never felt quiet till the revolution of the 9th Thermidor sent Robespierre to the scaffold.

Young Barante ended his studies in Paris, at

a *pension* in the Rue de Berri, which, before the Revolution, called itself "Institute of the Young Nobility." "All felt the influence now of the new times: there was no longer a chapel, a priest; there was no question of the mass or of any religious performance." By degrees, however, things changed there, as they did in the political world. Young Barante was admitted to the Polytechnic School in 1798. This famous school was one of the creations of the Revolution. Its first masters were Monge, Lagrange, Foureroy, Chaptal. Bonaparte reorganized everything; he became, after the 18th Brumaire, an almost absolute master of France. He wanted to change the whole administration. Barante's father was placed on a list of prefects and sent to the Department of the Aude. He went to Carcassonne, leaving his son at the Polytechnic School.

"It is difficult to imagine in what a state of happiness France then found itself. After ten years of anarchy, of civil war, of bloody strife, after the fall of an ignoble domination, public order was reëstablishing itself as if by miracle. The envious, haughty, and defiant aristocracy, issued from the Revolution, had ceased to dominate and to practise its vexations. Honorable men were placed in public office; every day a branch of the administration was regulated, an injustice was cured. Equality before the law, that symbol of French society, received for the first time a tranquil application. A desire for amelioration and national glory was felt everywhere. Youth embraced with rapture such happy hopes. It saw before itself a noble future, and everything excited its emulation."

It is curious to note this state of mind of France delivered from the Terrorists. History can no longer deny that the eighteenth Brumaire was hailed as a deliverance. M. de Barante's anecdotes concerning the society of the Consulate are highly interesting. You may read in Gouverneur Morris's memoirs that Mme. de Staël had been very intimate with Talleyrand during the early part of the Revolutionary period. M. de Barante tells us that when Talleyrand came back to France, after the Terror, his position became insupportable to him; he had no importance and no money, which to him seemed the greatest possible misfortune. One day he said to Mme. de Staël: "My dear child, I have only twenty-five louis left; I can hardly go a month with that. You know that I do not walk and that I need a carriage. If you don't find the means of giving me a suitable position, I will blow my brains out. If you love me, you will know what to do."

Mme. de Staël ran immediately to Barras; she contrived, with much cleverness, to dispose him to call Talleyrand to the Foreign Office. He was not, however, quite decided, and wished to talk to Talleyrand. Then comes the story of a small dinner at Suresnes between Barras and Talleyrand, which must be read in the book. Talleyrand paid court to the most corrupt of men in a way which pleased Barras, and he became the Minister of Foreign Affairs. He resolved from that time never to fall again into a poor and secondary position. With his immense diplomatic talent and knowledge, he became the great negotiator of peace after every war. Mme. de Staël and Talleyrand soon quarrelled, and their friendship ended in a lasting antipathy.

Napoleon's signing of the Concordat with the Pope was a great event; the churches were opened again. It is curious to see how rapidly irreligion had gained ground. The installation of the new bishops had to proceed with great caution. Some cities gave them a bad reception. The military element was hostile to the priests; in some places the mob entered the churches and threw stones at the priests. At the time of the conspiracy of Cadoudal there was a new sort of terror: hundreds of priests were arrested by the police. Barante was arrested one day by mistake, and had to be claimed by his chiefs. The execution of the Duc d'Enghien was the terrible answer of Bonaparte to the Royalist conspirators. Barante enters into some important details on the part played in this horrible tragedy by Talleyrand and by the First Consul.

"It is idle," says he, "to try to justify Napoleon. He never manifested the slightest remorse for the assassination of the Duc d'Enghien. Notwithstanding his habit of considering every action and every thought under its different aspects, he did not think, politically speaking, that he had committed a fault. . . . A few days after the death, exasperated by the severity of public opinion, he explained himself on the subject before the Council of State with an anger which excluded all regret. . . . The words which he pronounced were noted down. They are in the Memoirs of Miot."

Bonaparte obeyed the feeling of the Corsican *vendetta*. He thought himself in his right: "They wished to kill me, I have killed them."

The Empire was established by law on the 17th of May, 1804. When the Assembly brought to Napoleon, at St. Cloud, the new constitutional acts, Napoleon merely said: "I accept the title which you think useful to the glory of the nation. I will submit to the sanction of the people the law of heredity. I hope that France will never repent of the honors with which it surrounds my family." The new Constitution established in reality an absolute government. Fifteen years after 1789, France submitted again to the *bon plaisir* under a new form. The genius of Napoleon was her excuse; he saw everything, looked into every detail, his head was clear, his activity unlimited. He left on every part of the French Administration a mark which will be felt for centuries.

Barante was appointed *auditeur au Conseil d'État*. These auditors became a sort of civil aides-de-camp to the Emperor; he employed them constantly in all sorts of missions. His father had become Prefect of Geneva. He went as often as possible to see him, and became intimate with the society at Coppet, with Mme. de Staël and Benjamin Constant. He was sent with despatches to Spain, and was hardly back when he had to go to Prussia.

"There is," says Barante, "no comparison to be made between the effect produced by the battle of Jena and the enthusiasm excited by the victories of Marengo and Austerlitz. Marengo had saved France; Austerlitz had consecrated the establishment of the Empire and glorified the nation. The war against Prussia was universally regarded as having been undertaken without necessity, from a mere desire for glory and for conquest. The Emperor had left his army in Germany; he had manifestly wished that his negotiation with England should have no results; he had formed the Confederacy of the Rhine. Now it was a question of the submission of all Europe, of an Empire of the West, in short of a policy of imagination. Admiration for the genius of the Emperor was still increasing; but the progress of despotism, a consequence of the state of war, was beginning to preoccupy the public mind. Even about the Government, between friends, people were beginning to talk with censure and with affliction."

M. Daru, who was Barante's chief, was a most intelligent man. He was a sort of perpetual hyphen between the populations of Germany, the commanders of the army, and the German princes. "I was reflecting all the time," said Barante, "on the feelings which we should leave behind us, among the Germans, on the instability of our domination, on the vengeance which we might some day suffer from." He represents the generals as completely intoxicated by their victories; Vandamme, for instance, saw the greatest fortresses open their doors to him, almost at his first request. Barante was appointed intendant of Dantzig even before it was quite certain that Dantzig was occupied by our troops. After the formidable results of Jena, Napoleon was drawn to the Vistula, and the whole of Poland was in a state of ebullition. Napoleon was not moved by this exaltation; he said to a Polish deputation, with much coldness: "Gentlemen, this is a serious affair: it is war, with its chances, its dangers, its miseries." He was not ready to help them yet, but the idea of a war with Russia was beginning to occupy his mind. Warsaw became for a time an imperial residence; it was there that Napoleon saw Madame Walewski, but their *liaison* only began to make some noise afterwards.

Barante tells many interesting details about the succeeding events, the negotiations at Tilsit; but he is specially instructive when he talks about his own missions. Daru once said to him:

"'The Emperor the other day, when he was entering his carriage at Koenigsberg, said to me: "You will remain with the army; you will feed it, and you will bring me back 200 millions." I exclaimed. "Well, bring 150 millions," he said. The door was shut and he did not wait for my answer. You see by this that Prussia still owes us 150 millions, and my accounts will prove it. We shall make our calculations to that effect.' I replied quietly to Daru: 'Well, I shall not have to discuss with the people in Silesia, and I shall not have the annoyance of hearing them say that we do not fulfil the promises we made to them.'"

He had, in fact, just received his nomination as sub-prefect at Bressuire, in La Vendée. He was probably not thought sufficiently ardent or unprincipled for the task of a conqueror. He submitted quietly to what was a sort of disgrace, and came back to France. I regret that space does not allow me to follow him to La Vendée; he behaved there with his usual gentleness and moderation. He made the acquaintance of Mme. de Larochejacquelein, and helped her to write her memoirs, which were afterwards published, and which give perhaps the best account of the war in La Vendée.

Correspondence.

MR. HEARN'S PROFICIENCY IN PATOIS.

TO THE EDITOR OF THE NATION:

SIR: In your review of Mr. Lafcadio Hearn's book, 'Two Years in the French West Indies,' you say that so admirably has the author rendered his frequent quotations from the French patois, you hardly think you do him an injustice in suggesting that he may have received some assistance from his friend M. Léopold Arnoux of St. Pierre, Martinique. In making this suggestion you overlook the fact that Mr. Hearn published in 1885 (New York: Will H. Coleman) a 'Dictionary of Creole Proverbs,' which he entitled: 'Gombo Zhèbes' (*i. e.*, Gombo aux Herbes). In this little book he gives selections from six Creole dialects, that of Martinique being among the number, and translates them into French and English, at the same time making such a comparative comment on the various dialects as to justify us in inferring that he has a very thorough knowledge of these Creole patois. Mr. Hearn, if not a native of Louisiana, has lived there a good part of his life, and hence has had an excellent opportunity for becoming acquainted with Creole life and patois. But for this he

could hardly have written so well of the French West Indies.

SAMUEL GARNER.

ANNAPOLIS, MD., July 7, 1890.

TRUE CONSIDERATENESS.

TO THE EDITOR OF THE NATION:

SIR: For several years past I have lived in provincial England. Although so far from home, every now and then a transatlantic blast, pure and undefiled, fans to a white heat the fervor of my patriotism.

This morning, most appropriately to the day, a lady from one of our Eastern cities applied to my landlady for apartments. In the process of telling her that she had no rooms to let, the landlady said that there was an invalid in the house, whereupon the lady exclaimed: "In that case perhaps it is just as well that you cannot take us in, for my little girl, who is thirteen, likes to have plenty of liberty and to *scream* through the house."

Yours very truly, INVALID.

ENGLAND, July 4, 1890.

Notes.

IN a prefatory note to the English edition of Stanley's 'In Darkest Africa,' the announcement is made that the publishers, Messrs. Sampson Low & Co., have in preparation a third volume, uniform with this, to appear in the fall. It is by Mr. Mounteney Jephson, one of the expedition, and will contain an account of his adventures while imprisoned with Emin Pasha by the rebels of the Equatorial Province. The English edition of Stanley's work differs somewhat from the American in having an index to each volume, while the portraits are better, and the maps, instead of being in a pocket, are bound in the body of the work.

Ginn & Co., Boston, have in preparation 'English Prose, from Elizabeth to Victoria,' selections by Prof. James M. Garnett of the University of Virginia; 'Selections from Chaucer's "Canterbury Tales,"' edited by George Lyman Kittredge of Harvard; 'English Poets of the Seventeenth Century, from Donne to Dryden,' edited by L. B. R. Briggs of Harvard; 'A High School Rhetoric,' by John F. Genung; 'Lessons in Rhetoric and Literature,' by Mrs. T. W. T. Curtis and Mrs. Sara E. H. Lockwood; an 'Illustrated Vocabulary to Xenophon's Anabasis,' by Prof. John Williams White of Harvard; 'Hygienic Physiology,' by Dr. David F. Lincoln; 'Topical Outlines of American History,' by Prof. A. B. Hart of Harvard; 'The Leading Facts of American History,' by D. H. Montgomery; 'Reference Handbook of English History,' by W. H. Gurney; 'Political Science and Comparative Constitutional Law,' by Prof. J. W. Burgess of Columbia; and a 'Practical German Grammar,' by George Hempl of the University of Michigan.

J. B. Lippincott Co. desire it to be known that the statement that they have discontinued the publication of non-copyrighted books is entirely false. They have, on the contrary, just completed arrangements with a number of foreign authors and publishers for a simultaneous issue of their works in the United States.

Mr. Moncure D. Conway has written a Life of Hawthorne for the "Great Writers Series," which will be published simultaneously in England and in this country (A. Lovell & Co.).

We have received two thoughtful lectures by Prof. Nettleship of Oxford upon "The Moral Influence of Literature" and "Classical Education, Past and Present" (London: Percival & Co.), which contain a discursive treatment of their subjects, meant for a popular audience, but full of matter for reflection. They have a more or less direct bearing on education, are large-minded and temperate, and betoken the relaxation of the scholastic methods of English instruction, and an aspiration, if no more, to make the body of literature effective in education by its ideas rather than by its grammar and syntax.

A more elaborate treatise to the same end is Prof. Laurie's Cambridge Lectures on 'Language and Linguistic Method in the School' (Macmillan), a laboriously logical analysis and synthesis in educational science, which is too brief to be condensed, but ought not to be neglected by those interested in the theory and practice of teaching. The little work is very lucid in statement and practical in advice. It is revolutionary in its spirit, and desires a reform all along the line in the teaching of grammar in all languages. It insists on the superlative value of the literature which should be the basis of education, on the necessity of an education mainly literary if the object is to induct the child into those ideas and ideals which constitute the moral life of the race, and on the new methods of grammatical instruction which force the child's mind to acquire real processes and power of thought, instead of memorizing half-understood terms of the grammarian's vocabulary, and processes of parsing which resemble the manipulation of Chinese puzzles more than any intellectual act. Prof. Laurie argues with much vehemence and effect. He understands his own theory and its underlying metaphysics perfectly;-but here, as in other pedagogic works, the real difficulty is not in approving the better way, but in finding teachers able to understand, to value, and to apply the better way. An interesting minor point is the author's defence of language-teaching where there is no expectation of the pupil's acquiring the language, either for speech or reading, to any really useful degree.

Little need be said about the 'Annual Statistician and Economist' for 1890 (San Francisco: L. P. McCarty). What is new in it is not important, and what is important is not new. It is high-priced, and it is not useful in anything like a reasonable proportion to its cost. It is sold, or offered for sale, at a price as high as that at which the 'Statesman's Year-Book,' and higher than that at which the 'Almanach de Gotha' may be purchased in this country with the duty added. It attempts to cover a much wider field than either of those standard publications, but in doing so it demonstrates anew that the jack-of-all-trades is not likely to be master of any. Little discretion is shown in making up the book. Space is occupied with such things as the list of all the rulers of each country in the world since the days of Romulus, the vote of each county in California at every election since 1849, and the name of every man who has ever been Governor of an American State or Territory. It might have been well enough to print these things and others of a similar sort once, but when they are reprinted year after year, they are simply padding.

The 'Élite Directory' for 1890, published in this city by W. Phillips & Co., raises anew the question of the principle of selection. Those omitted can take a sardonic satisfaction in seeing the names of the more fortunate "misspelled in the despatches." The suburbs are looked after as well as the metropolis, and in the nature of the case criticism will in these small communities be the more searching as regards both exclusions and errors. It would seem a fatal inconsistency to allow any of the Élite to appear only by their surnames, yet dashes abound in place of the distinguishing initials or Christian names.

About five years ago we spoke in very favorable terms of a treatise on the calculus by Prof. James M. Taylor of Madison University. Prof. Taylor now presents the public with a 'College Algebra' (Ginn & Co.). It is almost needless to say to those acquainted with his Calculus that the Algebra is also a good piece of work. It treats all the subjects which in our opinion ought to be included in a college algebra, treats them well, and at the same time is a much smaller book than such treatises usually are. The mere appearance of a 12mo volume somewhat less in length and breadth than the ordinary text-book, and containing only about 300 pp. of rather coarse print, is itself an encouragement to the student.

That indefatigable author of mathematical text-books, Prof. G. A. Wentworth of Phillips Exeter Academy, has just given us a new 'School Algebra' (Ginn & Co.)—not a new edition of his former work, but an entirely new one. There is throughout the book a manifest attempt to attain perfection of form, and to state everything with all possible clearness and precision. The most prominent characteristic of all Prof. Wentworth's books is the great number of exercises and problems, or, as most teachers and all boys call them, "examples," which they contain. In the present volume he has "beaten his own record." The last chapter, "General Review Exercises," contains 154. There are scattered through the work 117 sets of these exercises, containing from 10 to 100 each. From a rough estimate made by averaging several of the sets taken at random, we are certain that there are at least 3,000 examples in the volume, and we should not be surprised if an actual count should bring the number nearer 5,000 than 3,000. The other characteristics of Prof. Wentworth's books are too well known to require comment.

Prof. William Martin Conway is best known for his admirable researches and editorial work in the domain of art, and particularly of wood-engraving, but he is also an indefatigable Alpine climber, as was manifested nine years ago by the publication of his 'Zermatt Pocket-book.' This vade-mecum became at once a model for imitation, and, having long been out of print, has now been overhauled by Mr. Conway, and reissued as the 'Climbers' Guide to the Central Pennine Alps' (London: T. Fisher Unwin). It proceeds eastward from the Great St. Bernard, beginning with the Vélan district, and breaking off at the Theodul Pass. Another volume, which must be deferred till next year, will complete the Pennine chain as far as the St. Gothard; and Mr. Conway contemplates, at a still later period, a Mont Blanc Pocket-book. The condensation of the present volume, and the unprecedented minuteness with which the ground of the climber is mapped in words, must be studied to be believed. They remind us of the qualities of thoroughness and accuracy manifested in Mr. Conway's volumes on the Woodcutters of the Netherlands and on Albert Dürer, and (in connection with such maps as are recommended) they do all that can be done to promote reasonable calculation, insure safety, and indicate the finest views. The members of our Appalachian Club ought alone to absorb the 400 copies to which the edition is restricted, in order to learn how to perform a like if an humbler service for American mountaineers.

Another unpublished book of Victor Hugo's was brought out in Paris on June 17 by the

house of Hetzel-Quantin. It is called 'En Voyage,' and is a journal of two trips that its author made in 1839 among the Alps and in 1843 through the Pyrenees. The *Temps* says of it (with what seems in some sort a perfunctory civility), that there will be found in its chapters "the same descriptive manner that we have already noted and admired in the 'Rhin,' and more recently in 'Choses Vues.'" Doubtless; and doubtless, also, it is a manner that we liked a good deal more day before yesterday than we do to-day or than we ever shall again.

Not long ago Mrs. Jessie White Mario, the widow of one of Garibaldi's favorite lieutenants, published a life of Agostino Bertani, one of the Italian revolutionists, whose influence was much wider than his fame. A physician of broad education, he early joined the movement for the liberation of his country. A republican by principle and a disciple of Mazzini, he nevertheless refused to accept the rule-or-ruin policy of the extreme Mazzinians. His most notable achievement was the organization of the Sicilian Expedition of 1860. Afterwards, like Bixio and Medici, he held the middle position between the Monarchists and Republicans, and was respected and trusted by both. Mrs. Mario has done well to issue a supplementary volume containing extracts from his writings and speeches ('Scritti e Discorsi di Agostino Bertani.' Florence: Barbèra). Besides purely political speeches, there are able discussions of such subjects as universal suffrage, public education, the admission of women to the bar, the State control of railways, and public hygiene. The parliamentary work of Bertani is a fine illustration of the intelligence with which the best class of public men in Italy have applied themselves to the problems of government.

Spanish-American literary activity in this city is indicated afresh in the 'Poesías' of Francisco Sellén, published by A. Da Costa Gomez. The collection of verse is miscellaneous and of widely varying merit.

The fourth and concluding number of vol. xii. of the *American Journal of Mathematics* comes to us with the title-page and index to the volume. It contains two papers; one of fourteen pages by Prof. F. Franklin, "On Confocal Bicircular Quartics," and one of sixty pages, by Mr. Henry Taber, "On the Theory of Matrices." The titles sufficiently indicate that they can be interesting, or indeed intelligible, only to professional mathematicians. Mr. Taber's paper is a regular treatise, very complete, and of especial interest to those who are acquainted with Peirce's 'Linear Associative Algebra.'

A new *Critical Review* of Current Theological and Philosophical Literature will be founded next autumn in Edinburgh by T. & T. Clark (New York: Westermann), under the editorial conduct of the Rev. Prof. S. D. F. Salmond. It will appear quarterly, and its reviews will be signed.

The *Revue Internationale de l'Enseignement* (Paris: Armand Colin & Cie.; New York: Christern), opens the number for June 15 with an account of the recent festival of the University of Montpellier which a correspondent has already sketched in these columns. This is followed by the brief but admirable address, on the historic progress of the University, by Prof. Maurice Croiset.

We had overlooked the Quinquennial Catalogue of the Harvard Law School (1817–1889) which appeared at Commencement time; a stout volume of 260 pages, fairly divided between the lists by classes and the alphabetic list. A vast deal of labor has been bestowed upon it, to record death dates and places of residence, with other data. The name of Caleb Cushing stands second on the list of graduates.

Cushing, by the way, with Rufus Choate and Robert Rantoul, forms the subject of a noticeable address delivered some eighteen months ago before the Essex bar, and just printed in the Essex Institute Historical Collection (January–March, vol. xxvi.). The orator was Mr. Eben F. Stone, a graduate, like Cushing and Choate, of the Harvard Law School. Steel portraits accompany the address.

'Meyer's Konversations-Lexikon' at length comes to an end with the close of the seventeenth volume (Leipzig: Bibliographisches Institut; New York: Westermann). Among the general articles of this supplementary volume we remark a list of planetoids discovered during the present century, with names of observers and dates; and a list of pseudonyms in recent literature. The biographical articles added are considerable in number and do much to freshen the work. Americans are represented, for example, by the late Prof. Stowe, A. G. Riddle, the historian McMaster (whose middle name is disfigured as *Bech* for Bach), Horace E. Scudder (the new editor of the *Atlantic*), and John Wanamaker. Of this worthy it is said: "Auch für kirchliche Interessen war er thätig, . . . und spendete ½ Mill. Dollar für die Kosten der Wahl des republikanischen Präsidenten Harrison, der ihn im März 1889 zum Generalpostmeister der Union ernannte." There is an index to topics not revealed by the general alphabet, another to the plates and cuts, and a colored map of the elections to the Reichstag in 1890. The editors, *more Germanico*, will now, instead of resting from their labors, prepare for a new edition. In American matters we suggest once more a special American collaboration.

—Ever since the announcement of Miss Philippa Fawcett's distinguished success at Cambridge, people have been asking why it is that she does not receive the B.A. degree which comes as a matter of course to the Senior Wrangler, and to the long list of Honor and Pass men who stand below him. The feeling that prompts the question is, no doubt, based upon a sense of justice, but the difficulties that lie in the way of the University's giving a degree to Miss Fawcett are unhappily very obvious. To begin with, she is not a member of the University, and her name appears on the Mathematical Tripos list only by courtesy. Harvard College, for the same reason, is debarred from giving a degree to a graduate of the "Annex." It is, of course, a question whether this is not all wrong, and whether women ought not to be admitted as members of both universities. A movement is already showing itself in the English Cambridge towards this end, but it cannot attain it by anything short of a complete revolution of the present university system. There is one complication in the matter which is peculiar to England. A Bachelor of Arts there proceeds in course to his M.A. degree, which involves a right to vote for members of Parliament. Each of the universities is a Parliamentary constituency. It is not likely that Parliamentary suffrage will ever be granted to women in England by any side-wind; while, on the other hand, a B.A. degree which did not lead directly to an M.A. would be but a barren honor. The academic distinction attained by Mrs. Butler and Miss Fawcett opens a question which will perhaps be more worthily treated if it be directly met.

— Not quite beside the name of Miss Philippa Fawcett, whose great academic distinction may perhaps for a long time stand unrivalled, but somewhere near it, room must be made for the name of Mlle. Sarmiza Bilcesco, who has just received from the Faculty of Law at Paris the first doctorate of laws that has been conferred by them upon a woman. Mlle. Bilcesco is described as a tall young woman of twenty-three, *brune*, very pretty, and very shy. She was born at Bucharest, and studied at home under the direction of professors of the Bucharest Faculty, taking at the age of seventeen baccalaureates in science and in letters *maxima cum laude*. To these she added the first piano prize of the Conservatory at Bucharest. In 1884 she proceeded to Paris to enter herself at the Faculties of Letters and of Law. She was received at once at the Sorbonne, and after only some brief delay at the Faculty of Law, and has been pursuing her studies at both, with marked distinction and success, during the last six years. The subject chosen for her thesis as doctor was: "De la condition légale de la mère en droit romain et en droit français." It makes, the *Temps* says, a stout volume of 500 pages, and would have contained 200 more if she had not withdrawn from it a discussion of the question of filiation. Mlle. Bilcesco will return to Bucharest and apply for admission to the bar there, not with a view to practising law herself—"Je suis trop timide," she says—but in the hope of smoothing the way for other women who may wish to try the bar as a means of getting a living; and, at any rate, to obtain a ruling on the question whether women who have passed the same examinations as men will be permitted to plead in the courts. There seems to be no great danger that the bar will be overrun with women if Miss Bilcesco gets a decision in her favor, for she has left behind her in Paris only two other women students at the Faculty of Law.

—Talleyrand's Memoirs are at last to be published, and the long-deferred hope of a multitude of readers in all parts of the world is at the point of being realized. Two volumes of the Memoirs will be published before the end of the present year by Calmann Lévy, and three more will soon follow, completing the work. The way in which the publication has come about is a little curious. On the 29th of May the London *Times* printed a number of fragments of the Memoirs, which were sent to it by its well-known correspondent from the Continent, M. de Blowitz. How these papers came into M. de Blowitz's hands nobody knows, or even if they have been accurately transcribed. One theory is, that they may have come from a collection in the possession of a rascally secretary of Talleyrand's, who is long since dead; another is, that M. de Blowitz, whose memory is remarkable, has been one of the very few people who have been permitted to read the Memoirs, and has carried away these portions of them in his head. At any rate, the appearance of them in the *Times* made a great stir. They were reprinted in the next day's *Figaro*, and then followed at once a multitude of letters and interviews and explanations about the causes and origin of M. de Blowitz's indiscretion. On June 2 the Duc de Broglie, who is one of those having the Memoirs in charge, wrote to the *Temps* to say that both he and M. Chatelain, the other legatee, were entirely ignorant of the nature and origin of the manuscript from which the writer in the *Times* had taken his extracts. Further, that neither he nor his colleague had been moved in the least by what had appeared in print, and that, in fact, the contract with

M. Calmann Lévy was made more than a month before any portion of the Memoirs appeared in the *Times*.

— Talleyrand's faithless secretary was a certain M. Perret, to whom for more than thirty years Talleyrand had given his entire confidence. He discharged him at last, and from that time on—that is, for the last fifteen years of his life—he was in constant dread of the mischief he might make. Perret could counterfeit Talleyrand's handwriting perfectly, and, as he had taken opportunity upon his discharge to purloin many important papers from the Prince's cabinet, it was easy work for him to make trouble. He could strike out or insert passages at will, or produce whole documents out of new cloth. In the newly published memoirs of the Baron de Barante, mention is made of a special instance of this. At the time of the arrest of the Duc d'Enghien, a report upon the subject was brought in by Talleyrand to the Special Council that was convened by Bonaparte. Perret showed about freely what purported to be a copy of this paper, which put Talleyrand in a most odious position. He would not let either this or his other documents go out of his own hands to be copied, but sought out people of consideration whom he had met formerly at Talleyrand's house, and read them to them, apparently as often and as many times over as anybody cared to listen. M. Pasquier, in fact, heard the D'Enghien report so often that he was able to copy it out from memory, and has inserted it in his 'Mémoires manuscrits.' On his death-bed, Perret seems to have felt some remorse for his conduct, for he confessed that many of his documents had been forgeries, and that especially the D'Enghien report had been seriously altered.

—Not long ago M. E. Naville, who is connected with the work of the Egypt Exploration Fund, wrote a letter to Lord Wharncliffe, the President of the Society for the Preservation of the Monuments of Ancient Egypt, with regard to the royal mummies in the Ghizeh Museum. He thinks that they will not last, and that they have already begun to suffer from salt efflorescence, especially that of Seti I. "The mummies," he said, "have been photographed, studied, measured carefully; it is our duty to transmit them intact to future generations, and not to let them perish for the sake of a few visitors, for whom a well-made cast would answer just as well." He proposed that they be wrapped again in silk, hermetically sealed in leaden coffins, and walled up in one of the chambers of the Great Pyramid where they would be safe from robbers. As regards the method of storing the mummies, it might be better to put them back in their cases, and then they could be left in the Museum. M. Naville feels, as many visitors to the Museum feel, that, after all, these old kings were human beings, and that exposing their bodies to the public gaze, not for scientific reasons but to satisfy mere curiosity, is, even after so many thousand years, a desecration of the dead.

—M. Naville's letter produced some excitement in official circles at Cairo, and Dr. Fouquet, who took part in the unwrapping of the royal mummies, and who made the measurements and medical observations at the time, has now made a new examination of them, and has written a report to M. Grébaut, the Director of the Museum, which was published in the *Journal Officiel* of June 7. Dr. Fouquet says that at the unwrapping of the mummy of Seti I. on June 16, 1886, this efflorescence existed in the same places where it is now seen. Part of the efflorescence was taken off in the presence of witnesses and put in two vials, of which one was given to Dr. Fouquet, and the other preserved in the Museum. A careful microscopic examination shows that the efflorescence is not mould, but scales and crystals mixed with particles of bitumen and fine linen fibre. The chemical examination showed that there was no sesquicarbonate of soda, no nitrate of soda, and no chloride of sodium. "The efflorescence is evidently of a very complex composition, to the formation of which the salts employed in the primitive preparation of the mummy, and the bitumen used afterwards for preserving it, have contributed (for the tomb had been violated, the mummy broken, and subsequently coated with melted bitumen). This matter has formed slowly in the course of ages." Further, attempts were made without the slightest success to cultivate and propagate mould on bits of mummy of the Ptolemaic period, and on bits of mummy-cloth coming from the royal mummies in question. Two mummies found with them at Deïr el-Bahari seemed in full putrefaction, and, on account of the stench, the unwrapping was impossible. They were put away where the air had access to them, when they became gradually disinfected, and are now in good condition. Dr. Fouquet concludes that, in the dry air of Ghizeh, and sheltered from too strong a light, as they are, "they seem in extremely favorable conditions for preservation for centuries." This, of course, does not affect the question of propriety.

PROCONSULSHIP UNDER THE BRITISH EMPIRE.—I.

Thirty Years of Colonial Government: A Selection from the Despatches and Letters of the Right. Hon. Sir George F. Bowen. Edited by Stanley Lane-Poole. 2 vols. Longmans, Green & Co. 1890.

The British Empire may, for convenience sake, be divided into two Empires, namely, the Indian and the Colonial Empires. How the colonies of Great Britain are now governed, we may learn from the two volumes of 'Thirty Years of Colonial Government' which Mr. Stanley Lane-Poole has compiled with considerable judgment from the official papers of Sir George Bowen, one of the ablest and one of the most successful of British governors, in present or past times. Like the Marquis of Dufferin and Sir Hercules Robinson, his compeers in colonial administration, Sir George Bowen was born in Ireland. It is, indeed, a notable fact how prolific Ireland has been in producing men of the state and men of the sword among the descendants of the English, Welsh, and Scotch colonists who have in times past gone over as settlers. Mr. Francis Galton should find in the fact of the success of Anglo-Irish governors fresh materials for his studies in heredity. Educated at the Charterhouse and at the University of Oxford, where he gained the distinction of taking his degree in the first class with classical honors, Sir George Bowen is shown by his official papers to have fulfilled the first Lord Lytton's ideal of the scholar and statesman, who alone could fully "appreciate what Bacon calls 'the heroic work of colonization.'" But the future Governor was more than a scholar in the classic languages: he had skill in modern tongues. French, German, and Italian were not sufficient, and he added to his intellectual outfit by learning to speak and to write modern Greek. Fond of field sports, he was enabled, when governing new countries, to undergo the hardships of long journeys in districts which railways had not reached. His geniality of manner and talents for conciliation, his power of hard work, and his strength of will when it was right that he should make a stand, whether against a powerful colonial clique or an ill-informed Secretary of State, all qualified him to succeed as a Governor, and especially, as he would have himself remembered, as a *constitutional* Governor.

It was in educational work that Sir George Bowen was first employed by the Government. At the age of twenty-six he was sent out to Corfu, as President of the Ionian University, to reorganize that institution of learning. His success was such as to gain him the approval of the English Government and the thanks of the Ionian Senate. His work of university reform did not, however, prevent his travelling far and wide among the Greek and Turkish provinces, during which journeys he acquired much information of a practical as well as of an archæological kind. Hence his 'Handbook for Greece,' contributed to Mr. Murray's series, and his 'Ithaca in 1850.' Mr. Lane-Poole says that the latter has been recognized by Mr. Gladstone and other Homeric scholars "as a conclusive identification of that island with the Island of Odysseus." A third book by the future Governor was called 'Mount Athos, Thessaly, and Epirus.' He also contributed to the periodicals of the day.

In 1854 Sir George Bowen was appointed Chief Secretary of the Government of the Ionian Islands, then under a British protectorate, and ruled by a Lord High Commissioner. He seems to have recognized that the protectorate had proved to be "a tough and unprofitable job," as the Duke of Wellington had foretold that it would. While, however, he was for giving up all the other islands to Greece, Sir George advocated, officially, that Great Britain should retain Corfu, with its satellite Paxo. As all the world knows, England, to the joy of the Hellenes, handed over Corfu, along with the other islands, to the care of Greece in 1864. It was while serving in the Ionian Islands that Sir George Bowen married the Countess Diamantina Roma, daughter of a nobleman of an ancient Venetian family, who was President of the Ionian Senate. As the wife of a Governor is a very important factor in the making or marring of her husband's viceregal administration, Sir George was singularly happy in his alliance with a lady who has been recognized as the queen of society wherever her husband has represented his sovereign. When on his wedding tour, Sir George had one day a long talk with Lord Palmerston, who wished to obtain information upon matters relative to Greece and Turkey. In their conversation, the question of Greek pronunciation arose. The Ionian Secretary explained that the modern Greeks pronounce η and υ like the Italian *i*, and that consequently ἡμεῖς, *we*, and ὑμεῖς, *you*, are pronounced identically. "Ah! they confound *we* and *you*, do they?" said Lord Palmerston; "I fear that is not the only way in which modern Greeks confound *meum* and *tuum*." In the same letter from which this anecdote is taken, Sir George relates an experience of Dr. Wilberforce, the famous English prelate, with regard to his examination of a candidate for orders who was the son of an English merchant settled in Greece. "I examined him myself," said the Bishop, "in the Greek Testament, when he used what to me was an unknown pronunciation. 'Oh! Mr. M.,' I cried, 'where *did* you learn Greek?' '*At Athens*, my Lord,' faltered out the trembling candidate."

In 1859, the District of Moreton Bay was cut off from the colony of New South Wales and was constituted into a separate government,

the new colony being named Queensland, by Queen Victoria herself. This colony now comprises about 670,000 square miles. The honor of being the first Governor of this embryo State was conferred upon Sir George Bowen, who held the position from 1859 to 1868, with high distinction. The new Government started business with fifteen cents in the Treasury. A few nights after the Governor's arrival, a thief broke into the Treasury and carried off the amount named. Money was obtained by borrowing from the banks, and in a short time the public revenues grew to large sums. Queensland sprang into existence with responsible government as its own by birthright, and the Governor was fortunate in having as his first Prime Minister Sir Robert Herbert, the present permanent Under Secretary at the Colonial Office, who is alike distinguished in scholarship and administration. In the early years of constitutional government in the British colonies, ministries are very short-lived. Parties seem to play at turning each other out of office. As the colonists get accustomed to their responsibilities, matters settle down into a more stable condition and governments grow longer lived. But, in Queensland, the earliest ministers were for years left undisturbed in power, and Sir Robert Herbert ceased to be Premier only on his resigning office in order to go to England.

When the Governor had put the public departments in order, he travelled far and wide over the vast colony. His journeys were usually made when the local Parliament was in recess. Hundreds of miles did Sir George Bowen ride on a single such visitation, one day getting over as many as seventy miles in eight hours, with a change of horses. The colonists were, wherever it seemed practicable, urged to apply for municipal government, it being a marked feature in Sir George's character that he would have the colonists educated as far as possible to self-government. In this he differs from many others who govern colonies, and who seem to regard the concession to colonists of power to manage their own affairs as in some way an infraction of their own excellency. Such governors are evidently in sympathy with Sancho Panza, who expressed his preference for a government of blacks, because, if they and he did not agree, he might sell them. The land question, long a burning one in Australia, was settled in Queensland to the satisfaction of the colonists. There was a question as to the portion of the colonial debt which Queensland ought to undertake, on its separation from New South Wales, and this cause of trouble was amicably arranged. Soon a liberal system of education was established in the colony, for Sir George Bowen was always a stanch promoter of public instruction. Railways were laid down, and telegraph wires were carried over the country. The colony was ushered into the world without the cost of a single soldier to the parent State. In the total absence of what Sidney Herbert called the "drum and red-coat system," the Governor appealed to the public spirit of the colonists, and forthwith the Queenslanders combined for defence as citizen soldiers. As a portion of Queensland is well suited for the cultivation of tropical products, the Governor took every opportunity of urging upon the settlers the introduction of cotton and cane cultivation.

In fact, for the time being, Sir George Bowen made the interests of the colony his own. Government House was all the time the head of social life in the colony. A British governor's term of office is as a rule limited to six years. A compliment was paid to Sir George in extending his governorship of Queensland to eight years. After the extension had been granted, a political crisis came about, which found the Governor strong and capable. With the example of the United States greenbacks before them, the Queenslanders, under pressure of a monetary crisis, proposed to issue inconvertible notes, and to make them legal tender, which the banks held would be equivalent to a forced loan upon British capital in the colony. Governors of British colonies are, on appointment, furnished with Instructions even to this day. It may be remembered that at the famous interview between Benjamin Franklin and Lord Grenville, in 1757, when the latter's conversation a little alarmed the former as to what might be the sentiments of the Court concerning the American colonies, so that he "wrote it down as soon as he returned to his lodgings," Lord Grenville stated that *instructions*, when received by the governors, were "the laws of the land; for the King is the legislator of the colonies." The instructions to Governors of colonies in our own age, do not, however, pretend to set aside colonial laws. They are such as colonists themselves, when not heated by party strife, will readily accept as fit and proper. In Sir George Bowen's instructions, he was directed to reserve for the sovereign's approval or disapproval "any bill whereby any paper or other currency may be made a legal tender, except the coin of the realm or other gold or silver coin." Adhering to his instructions, the Governor withheld his assent to the bill—a threat to burn down Government House, and to treat Sir George Bowen "as Lord Elgin was treated at Montreal in 1849," notwithstanding. The Governor's firmness carried the day. A law was passed authorizing the issue of Treasury bills, like the Exchequer bills of England, and the financial crisis was tided over.

From 1868 to 1873 Sir George Bowen was Governor of New Zealand. His predecessor in that proconsulship was Sir George Grey, of whom Mr. Froude gives a pleasing picture in his 'Oceana.' The second New Zealand war, begun in 1860, had not been brought to a close when Sir George arrived. The warlike Maoris, in their native fastnesses, had not been subdued, notwithstanding that at one time as many as 10,000 British regulars, besides the colonial militia, had been in the field. In the absence of roads, the latter were unable to concentrate upon the enemy, while the Maoris, issuing out of the forests in small war parties, chose their own time and place for falling upon the British. The Governor found, too, that almost every leading member of both houses of the Legislature had a native policy of his own. The war, which had for a while been suspended, broke out afresh with the massacre at Poverty Bay. Encircled as he was with difficulties, the Governor had to bow to the decision of the Imperial Government to remove the regular troops. Not a single regiment would the inexorable Home Ministers allow to remain in New Zealand, even though the colonists offered to pay for the privilege of keeping the troops. Sir George Bowen was impressed with many points of resemblance between the Maoris and the Highlanders of Scotland in the first half of the eighteenth century, and bethought himself that the policy of Lord Chatham and Gen. Wade might be adopted in New Zealand, for the settlement of the native question. His Colonial Ministers approved of and acted upon that policy. Friendly natives were employed to make roads and in the construction of public works, and, on the cessation of the war, in 1870, some thousands of Maoris who had not long before been in arms against the colonists were employed in this manner and in garrisoning posts for the Government. Sir George Bowen frankly acknowledges the indebtedness of the colony to those friendly natives, who stood by the English so manfully in storm and sunshine. The Governor's tact in dealing with these people tended to confirm their attachment to the Crown, while his conciliatory management of the natives generally was undoubtedly of benefit to the colony. He showed wisdom in providing for the representation, in the Council and Assembly, of Maoris by Maoris. The general affairs of the colony were not neglected, but were so administered that the Governor left New Zealand with increased reputation.

The Colony of Victoria is beyond doubt one of the most vigorous of the British lion's whelps. With a revenue, including the income of the colonial railways, equal to that of Portugal, and far exceeding that of Denmark, of Greece, and several others of the minor kingdoms and republics of the world, the present is but the forecast of its future grandeur. A remarkable feature in the welfare of Victoria is the fact that, of its whole revenue, as much as a third is spent upon educating the people, from primary education to the means of instruction provided by museums and picture-galleries. Of this splendid colony Sir George Bowen was Governor from 1873 to 1879. On his assumption of office he found the colony in a state of complete tranquillity, such as prevails wherever the people of a country are prosperous. The Governor entertained the colonists, and they, in turn, entertained him. He made speeches upon public questions, and played the part generally of a benevolent Viceroy. The shepherd kings were visited by him in their stately homes, while the Mayor and the Town Council of Melbourne, now a city of 400,000 inhabitants, were warned as to the absolute necessity for sanitary measures in the face of an ever-increasing population. The natural advantages of Melbourne were so much in favor of health that the authorities too long neglected to realize the wisdom of their Governor's advice.

After sixteen years' absence from England, without a holiday, Sir George now took leave of absence, sailing for England on the 30th of December, 1874. On the 29th of April, 1875, the Governor of Victoria was entertained in London at a grand banquet given in his honor. Some three hundred persons took part in the fête, many of them of high distinction, and the Duke of Edinburgh presided. As the *Times*, in a leading article, suggested, it was a question whether Sir George should not, after receiving so much honor, have committed the happy despatch, and have left the world in a flash of glory. During his leave of absence the Governor came into contact with many interesting persons. On the Continent he made the acquaintance of Pio Nono and of Victor Emmanuel, of both of whom he has something interesting to tell. In London he was much in request, and had to decline an invitation to dine with the Prime Minister (Disraeli) because he was already engaged to the Archbishop of Canterbury. "How unwise!" said his friend Mr. Lowe (now Lord Sherbrooke). "What possible good can an Archbishop be to a Governor? Oh! I see how it is. You are tired of being a Colonial *Governor*, and wish to become a Colonial Bishop!" On his return to his government Sir George Bowen passed some weeks in the United States, where he evidently enjoyed himself. He also visited Canada. Sailing from San Francisco, which he remarked as not being so handsomely or so solidly

built as Melbourne, the Governor was back in Victoria early in 1876.

Having left Victoria in a state of political peace, the Governor returned to find it in a state of political storm. The Acting Governor had declined to dissolve the Assembly at the request of the Colonial Ministers, and three successive Ministries had failed to carry on the business of the colony, in the face of a factious opposition. Matters were soon arranged smoothly by Sir George Bowen. But in 1877–1878 a most formidable crisis arose in the political history of the colony. Unlike the struggle in 1875–1876, the later contest was a wrestle between the two houses of the Colonial Parliament, the Council and the Assembly. The question at issue was the payment of members of the Legislature. The law authorizing such payment had expired by effluxion of time. The Assembly wished to continue the system. A majority of the Council was against such continuance. The Council, which, being elected as well as the Assembly, claimed to be "a second House of Commons," threw out the appropriation bill by which provision was made for the maintenance of the Government of the colony. A constitutional dead-lock was the consequence. The Ministers, supported by a large majority of the colonists, not being supplied with the means of carrying on the Government, to reduce expenditure dispensed with the services of a large number of officials. The Council (that is, the majority), trusting to the support of absentees in the old country, who might be able to put pressure upon the Secretary of State, arrogantly required the Governor to side with them. Holding that the question at issue was one of purely local concern, and in no way imperial in its character, Sir George Bowen declined to become a partisan of the Council, and, as a constitutional ruler should do, he held himself bound to act on the advice of his Ministers. As ill-luck would have it, Sir Michael Hicks-Beach, who had become Secretary for the Colonies, allowed himself to be misled by the absentees in London, persons not in touch with the bulk of the colonists, with the result that the Governor's influence was weakened, while the truculent Councillors received a corresponding amount of encouragement. It was only after Sir George Bowen had ceased to govern Victoria that, in a despatch dated May 25, 1879, Secretary Hicks-Beach plainly laid down that the action of the Council had been reprehensible.

Before we follow the Governor to Mauritius, it should be noted that, having always had the closer union of the Australian colonies at heart, he had, during the last two years of his rule in Victoria, so arranged that the neighboring governors met together, as his guests, at Melbourne.

ATHENIAN MYTHOLOGY.

Mythology and Monuments of Ancient Athens, being a translation of a portion of the 'Attica' of Pausanias by Margaret de G. Verrall. With introductory essay and archæological commentary by Jane E. Harrison. Pp. clvi, 635. Macmillan & Co. 1890.

Every lover of Greece might well desire the publication of a commentary on Pausanias that should fittingly represent the information which we possess to-day touching the countless subjects treated by the old traveller and mythologist. Monographs and articles we have without number, perhaps in every European language, upon special parts of his work, or special phases of it—even volumes of no mean size; but a comprehensive treatment of the whole still awaits the spirit bold enough to undertake it. Miss Harrison fully comprehends the magnitude of the task when she says:

"To produce an adequate archæological edition even of one book of Pausanias would have been in some respects beyond my scope. Such an archæological commentary would demand a scholar who should be at once philologist, topographer, epigraphist, architect, as well as mythologist and mythographist. My competence, at first hand, is confined to the last two branches of classical learning. My work as regards the other departments has been rather to weigh the opinions of others than to originate my own."

In this volume of nearly 800 pages Miss Harrison has confined herself to the first book of Pausanias, and within that to such parts as relate to the mythology and monuments of Athens alone. This work has already been done in English, with the information of their day, by Leake and Wordsworth, and more recently by Dyer ('Ancient Athens,' 1873); but excellent and extensive as even the last treatise is, the changes which have been wrought during the last seventeen years by excavations in Athens, and by the genius of scholars who have devoted themselves to the solution of its perplexing problems, have rendered a thorough reconstruction of the subject necessary. To this task Miss Harrison has addressed herself with a zeal and ability which all will be glad to recognize.

Qualified by years of study, by experience in writing and lecturing upon various archæological subjects, by long and minute examination of the monuments on the spot, and possessed of a style at once lucid and correct, at times picturesque and striking, she has produced a work which the student of Athenian culture cannot afford to ignore, and which the earnest visitor to the spot will find an ever-present help and stimulus amid the myriad perplexities of opposing theories. Miss Harrison's own contributions to mythological problems will be found to contain many ingenious combinations and solutions deduced from the principle that "in the large majority of cases *ritual practice misunderstood* explains the elaboration of myth"; while in other fields she has carefully ransacked and utilized "Mittheilungen," "Bulletins," "Journals," "Papers," *et hoc omne genus*, till the reader may rest assured that he is put in possession of the latest and most valuable results which have been attained. Above all, she has given us what no one else, perhaps, was likely to do, a systematic construction of the views of Dr. Dörpfeld, Director of the German School, upon the topography of Athens. This gentleman has lectured for several years to his own classes and to English and American scholars during the winter, going about from monument to monument and discoursing, in his lucid manner, upon the problems which these monuments present. Some of his conclusions have been published from time to time by himself; but, amid his busy days, their publication has never been complete. He has now given Miss Harrison leave to use all the material she has gathered from his lips, and he has supplied her with much more; he has even read her proof-sheets and added his corrections. To have incorporated in this way the views of the dominant topographical authority in Athens is an achievement which renders the book unique in its way. One might justly describe it by the sub-title of "The Topography of Athens as revised and reconstituted by Dr. Dörpfeld." Some of the chief points of this may be mentioned.

The Eridanus has generally been identified with one of the branches of the Ilissus quite outside the limits of the city, to the east of the Stadium. Dr. Dörpfeld maintains that it had two sources on the southwest slope of Lycabettus near the Lyceum, flowed westerly through the valley north of the Acropolis, and, passing beyond the limits of the city near the Dipylon gate, emptied into the Ilissus towards the southwest and the Peiræus. This view is based mainly on a passage of Strabo, on the lie of the land, and on some vestiges of an aqueduct following this route. The aqueduct is supposed to have been bridged in ancient days at the crossings, and to have been completely covered in later times. The Sacred Gate which has been pointed out for some years near the Dipylon, is now metamorphosed into the exit of this stream from the walls.

The much-contested Theseum is described as the Hephæsteum mentioned by Pausanias. The so-called Theseum cannot be the temple constructed by Cimon, as proved by architectural peculiarities which set it too late, between the building of the Parthenon and the temple at Sunium. The real Theseum was on the east side of the Agora.

The Agora is not limited to the district north of the Areopagus and Acropolis, but extended round to the west of the Areopagus as far as the proper front of the Acropolis. West of the Areopagus was the "Orchestra" and an Odeum, more properly the Agrippeum, and near the southwest point of this hill was the fountain Enneacrunus, which has often been confused with Callirhoë to the east of the Acropolis. At this western site is to be fixed the rape of Orithyia, according to the earliest version, not by the Ilissus. Between the Enneacrunus and the Acropolis lay the Eleusinium, not north of the Acropolis as usually conceived.

The Pnyx returns to its rights once more upon its native rocks, from which it was dislodged by Curtius. In this Dr. Dörpfeld coincides with the conclusions of Dr. Crow of the American School, whose excavations on the site proved many points of Curtius's theory untenable.

It had been supposed that the Olympieum was originally adorned by ten columns at each end. Dr. Dörpfeld concluded from certain architectural evidence that it could have had but eight. Excavation proved this to be true.

Dr. Dörpfeld's revolutionary theories in relation to the theatre are coming to be pretty well known. In the days of Æschylus, Sophocles, and Euripides, he says, there was no stage, no stone seats, no substantial structure for the scene. The actors spoke from the level orchestra where the chorus sang. This orchestra was circular. Believing this to be the case from comparison of other theatres, Dr. Dörpfeld dug and found remnants of the circular wall of the enclosure still existing under the present walls of the stage structure of Lycurgus.

The Pelasgikon extended from the Asclepieum to the Pan Grotto, and the sacred character of the southern slope, which forbade the construction of buildings upon it, was first seriously infringed by Herodes Atticus when he erected his Odeum there. Dr. Dörpfeld points out a fragment of the Cyclopian wall which bounded this precinct on the east. He has reconstructed the original plan of the Propylæa as conceived by Mnesicles, but abandoned in part for various reasons. He was the discoverer of the old temple between the Parthenon and the Erechtheum, and has waged an uncompromising battle in defence of his views against numberless foes. During the recent excavations on the Acropolis he has found many facts to confirm his belief. One is important. It has generally been maintained that a temple mentioned by Pausanias in the vicinity of the Parthenon belonged to

Athena Ergane, and was situated directly west of the Parthenon on the somewhat lower terrace. Dr. Dörpfeld asserted that no temple of Athena Ergane existed on the Acropolis: on the contrary, the temple seen by Pausanias was the one which he has discovered. The last excavations have proved that no temple stood on the supposed Ergane terrace, but only a secular building, perhaps the Chalcotheke. No one denies the existence of his "Athena" temple, nor its destruction by the Persians. He contends that it was reconstructed soon after without its peristyle, and continued in use till the time of Pausanias. A strong æsthetic objection to this lies in the fact that, if it be so, the beautiful Caryatid hall of the Erechtheum must have been practically hidden by the temple, standing as it did almost within arm's length. This objection, frequently urged, has driven Dr. Dörpfeld to the answer that the architect of the Erechtheum expected that the old temple would soon be removed, but his expectations were never fulfilled. According to this theory, it was in the opisthodomus of this temple, and not in the Parthenon, that the state treasure was kept.

One of the latest novelties is his removal of the "Limnæ," or Dionysiac district of the "Marshes," from its usual haunts south of the Acropolis, to the northwest part of the city, between the Dipylon and the Agora, connecting it with the Dionysiac Temenos in that vicinity, and with the Eridanus for its marshy character. The argument has not yet been published. It may possibly connect the "Hero Calamites" of Demosthenes, *de Cor.*, 129, the Theseum, and the "Hero Physician" of Demosthenes *Fals. Leg.*, 249, the first of which is said by recently discovered scholia and Hesychius to have been named from the reeds growing about his sanctuary, which was near the Lenæum; and inscriptions relating to the "Hero Physician" have been found in the district now assigned by Dörpfeld to the Limnæ. But all this runs full tilt against the universally accepted interpretation of Thucydides ii. 15, where the Limnæ are set down among the old sanctuaries of the Olympieum, the Pythium, and others at the opposite side of the town. The evidence for marshes in this district at an early period is sufficiently supported by the Codrus inscription.

We may now turn to some points in Miss Harrison's work which may deserve correction in a second edition that ought to come soon. On p. xxvi. she speaks of the arbitration of Cecrops between Athena and Poseidon as probably a late invention of grammarians. She has overlooked Xen. *Mem.* iii. 5. 10, where it is mentioned as a commonplace. Do we know, as stated p. 25, that the Areopagus consisted of 100 members? It was not Athens that lay in ruins after the Peloponnesian war (p. 28), but her walls. An inexactness of expression somewhat similar on pp. 116 and 406 is likely to offend the epigraphist. The date of the Dionysiac monument of Lysicrates is fixed on p. 247, by the archonship of Eucænetus, in the year 335 B. C. As a matter of fact, the victory could not have taken place till 334, the latter half of the archonship. In connection with porticos erected adjacent to theatres, the words of Vitruvius are translated, "Behind the scene porticoes should be set up, porticoes like those at Pompei and also at Athens." Vitruvius undoubtedly refers to the portico adjacent to the theatre of Pompey at Rome. For "Archinos, son of Alupetos of Skambon: Menekretaia, wife of Dexikrates, Daughter of Ikarieus" (p. 332) substitute, Archinos son of Alupetos of Skambonidæ; Menekrateia, daughter of Dexikrates the Ikarian. The printer's demon has been at work on p. 283 with unusual malice. In the description of the beautiful relief adorning the proscenium of Phædrus, Miss Harrison is made to say, "Ikarios brings the goat Erigone with the dog; Mæra bears the cakes," for, Ikarios brings the goat; Erigone, with the dog Mæra, bears the cakes. Some other misprints are these: "Ardellos" for Ardettos (p. 232) (should not this be also read on the map for "Hymettos"?); "Olnetor" for Onetor (p. 243); "Nearchmos" for Neaichmos (p. 346); "Löl-ling" for Lolling, "Pherekides" for Phœnikides (p. 371); "inches" for metres (p. 469); "looking east" for looking west (p. 463); "Soskates" for Sostratos (p. 491); "built" for burnt (p. 466).

In the "Plutus" of Aristophanes, the slave *Carion* does not tell the story of the cure of *Plutus* to his wife (p. 306), but to the wife of *Chremylus*. Thucydides does not speak of the Pelasgikon in connection with the Athenians who came back after the Persian war (p. 537), but in relation to those who flocked into the city upon the invasion of the Spartans at the opening of the Peloponnesian war. "Pausanias" is written on the same page for Thucydides.

Occasionally a fact does not seem to be thoroughly thought out. On page 253 we are told that "The general limits of the precinct [of Dionysus] can be roughly defined, and the precise sites of the two temples seen by Pausanias are, fortunately, known beyond doubt"; on p. 280, that the back wall of the stage of Lycurgus "was built over a corner of the northern wall of the smaller and earlier temple, which must then have been in ruins." If so, it should for the same reason have been in ruins in the time of Pausanias. There are no signs of rebuilding, and yet Pausanias saw two temples, one containing the old Eleutherian image. We are told at p. 516 that the basis of the Athena Promachus on the Acropolis "has been found, and gives a fixed point"; on p. 523, that "it is usually thought that the large basis marked on the plan near to the Propylæa belonged to the statue, but this is not certain." Such a swift unsettlement of opinion on matters of Athenian topography is not confined to our author. Perhaps the Tower of the Winds lies at the bottom of it all.

But this ungracious task of the critic may well be left to a more careful revision. It is pleasanter to turn to a discovery which had not yet come to light when Miss Harrison wrote her pages, but is announced by Dr. Dörpfeld in a supplementary note. In his description of the entrance to the Propylæa, Pausanias remarks casually, "I cannot say with certainty whether the figures of horsemen represent the sons of Xenophon, or are merely decorative in character." Dr. Lolling had conjectured that they stood one on each side by the *anta* of the north and southwest wings respectively. This has been proved by some plinths which were found near the Parthenon, and have been rebuilt as a base for one to the right by the short stairway that led to the Nike temple. The slab upon which the horsemen stood exhibits the trace of the feet, and discloses the fact that the figures were about half the size of life. The inscription shows that Pausanias did not take the trouble to read it, or he read only one word. It states that the statues of the horsemen were constructed from spoils of the enemy when Lacedemonius, Xenophon, and Pronapus were Hipparchs. The artist was Lycius, son of Myron. The forms of the letters prove that it was originally erected about the middle of the fifth century, two generations too early for the sons of Xenophon the writer.

The translation of Pausanias by Mrs. Verrall is easy and flowing. Opportunities for criticism are rare. Pausanias might object when made to say that Mycalessus was "in the middle of Bœotia," and one who has stood on Tegea's site and looked out upon the mountains to the east feels the slight implied by the expression, "Hill of Parthenion"; but such things are not monstrous.

Miss Harrison's opinions upon the artistic merits of the objects she describes are rarely expressed, but such as she gives us are frank and unreserved. Witness her observation upon the reliefs of the Nike balustrade: "They are very beautiful, but they are restless, and a certain striving after effect has begun to corrupt both pose and gesture. They do not wear well to the eye. They are now set up to good advantage in the second right-hand room of the Acropolis Museum, but they were better in their own place, where a man might look at them once, wonder, and go by, up the steps." A very notable merit in her work is the untiring assiduity with which she has gathered material for its illustration. She has utilized not only the ordinary photographs to be had in Athens, but she has taken others herself, and has pressed the cameras of her friends into her service, with the result that the book would be of permanent value, simply for its illustrations, which are to be found nowhere else. Unfortunately, their reproduction is but indifferent, in some cases very bad. The engravings of vase paintings, which are made a special feature by Miss Harrison, are often most excellent. She marshals her forces with great skill, clinching her arguments by appeal to the eye in the most effective way, as may be seen, for example, in her proof of the art type of Athena Polias. It is a pleasure to see Pausanias treated in this way; and while we may despair of having all of his ten books so elucidated, we may suggest to Miss Harrison that scholars would welcome heartily from her pen a similar treatise upon Olympia.

Social History of the Races of Mankind. Third Division: Aoneo-Maranonians. By A. Featherman. London: Trübner & Co. 8vo, pp. xxiii, 480.

WITHOUT information kindly furnished by the author of this formidable volume, no reader of its title would or could form the conception that it signifies the North American Indians. Doubtless the latter is a most unfortunate designation, always recalling the blunder of Columbus, and the writer who shall suggest another name having any chance of popular acceptance will deserve thanks. This has been attempted by the phrase Red Indian and Red Man, but it is now becoming understood that the pre-Columbian peoples of this continent were not red, except when painted, and the title that perpetuates another blunder is properly falling into disuse. Dr. Featherman's amendment is as cumbrous as "North American Indian," while it is not more acceptable on the ground of accuracy. He calls all the peoples of the western hemisphere "Maranonians" from "Maranon, the ancient Indian name of the Amazon River." It may be remarked, in passing, that this was not the name given to that river by all Indians in its vicinity, and, indeed, that there were different names for the several parts of its course. But the valley of the Amazon, called by whatever name selected, is pronounced to be the place of origin of the whole race. Then follows the statement

(p. 6), "That the Northern Indians came from the southern part of America is conclusively proved by the fact that the only products they cultivated, before the white man had invaded their country, were maize, tobacco, and squashes, which are all of southern origin." Without dwelling on this violent assertion, about which a volume could be written, it might be admitted that all the plants mentioned came from the far South without requiring as a corollary to the proposition that the people also came from there. The conveyance of maize and the knowledge of its cultivation, through intertribal channels, is known to have actually taken place between the Arikara and their neighbors and congeners who first received the "Ree corn" after they were established in the localities where they were earliest met by Europeans. The cultivation of maize among the Siouan tribes does not prove that it was brought by them or their ancestors from South America, any more than does the use among them of the horse, which was introduced into South America, but likewise directly into North America.

The author, notwithstanding his above-quoted dictum, is hopelessly muddled about tobacco. On page 50 he argues that the sacrifice of tobacco among the Iroquois was not ancient because it did not grow in North America, but was introduced there by Europeans. But if it was so introduced, any argument derived from the assertion that the people brought it from South America is demolished. Then, in confusion, he asserts (page 117), that the Powhatans did make a religious use of tobacco. The fact is, that the *Nicotiana tabacum*, the tobacco of commerce, was indigenous to and was cultivated in the West Indies and South America; but the *N. rustica*, also a true tobacco plant, was probably indigenous to and from ancient times was cultivated over a large area of North America. The Indians, from New York to Georgia, are familiar with the difference between these plants. The tobacco used either for ceremonials or for sensual gratification before the advent of the Europeans the Onondagas yet call "real tobacco," and the Cherokees "old tobacco," and from this plant undoubtedly came the old name of the Tobacco Nation of Georgian Bay.

Having decided upon the homogeneity of all the peoples of the continent as Maranonians, Dr. Featherman attempts to name their grand divisions in a less commonplace style than by the mere geographic North and South; so he selects for the Northern tribes the title of "Aoneo." This is a highly euphonized form, copied from Schoolcraft, of ha'-yo-hwe'-no, which in some of the Iroquoian dialects means "the island that floats," referring to the mythic turtle which became magnified into an island and finally into the habitable world. This would not be a bad poetical expression for the continent, but is not likely to prevail, because it requires so much explanation. The above special detail and symbolic name taken from one of the cosmogony myths were never generally known among the Indians, and they are now familiar to very few persons of any race.

The feature in the volume that first strikes the reader is that it pretends to give a classification of the Indian tribes which in fact is no classification, but a mere scheme of chapter headings which, by arbitrary selection of names and illogical grouping, leads to serious errors. Among many examples the following may be noted: The Iroquois, or Five Nations, are called Mengwes, the "Mingos" detested by Cooper's Hawkeye; but that term was not Iroquoian, nor did it apply exclusively to the Five Nations, which were a comparatively small part of the Iroquoian tribes. The word is Algonkian, and, meaning "people of another speech," was in fact applied to the Nottoways of Virginia, and, indeed, to all the Iroquoian tribes. Among these were the Hurons, to whom a separate chapter is assigned, and who are strongly distinguished from the Iroquois proper, or the Five Nations. There is no great objection to the comprehension of all the Iroquoian tribes under the heading of Mengwe, but the description should not be confined to the Iroquois proper, and all the other divisions of that linguistic stock should not be scattered through the volume without order. For instance, the Tuscaroras appear far away in pages from the Mengwes; the names of the Tuscarora tribes are set forth with the error that half of those inventoried were in fact Algonkian, and then (p. 132) comes the statement that they and "the Iroquois or Sinnagars" were mortal enemies. Sinnagars is a bad shot for Senecas, the largest of the Five Nations, and most American schoolboys know that the Tuscaroras spoke the language of the Iroquois and voluntarily united with them, forming the sixth nation. The great Algonkian family is also left in wild confusion. The Iroquoian "Maquas," or Mohawks, are noted as part of it (p. 66), and the Algonkin tribe on the Ottawa River, from which the name came, is not mentioned. On page 89 the "Marechites" are a part of the "Abenaques," and on page 97 they are under the heading of the Micmacs.

The author provides a chapter headed "Mobilians," which he says belong to the Muskogee family and yet comprise about all the Muskogee (or Muskoki) and also other tribes named, notably the Cherokee, who undoubtedly were Iroquoian. It will be information to Congress that the last-mentioned tribes, which are in the Indian Territory, send a delegate to that body (p. 151).

By the chapter-heading "Bonaks" the author chooses to signify all "the California tribes proper," by which he mixes together a considerable number of linguistic stocks much more distinct from one another than the Italians are from the Germans. But perhaps under the head "Chippeways" he excels himself in muddling a simple and thoroughly known subject. He says that they are also called Athapascans, and that one of their divisions is the Chippeways proper, also known as Ojibways. Now the Chippewyans (not Chippeways, who are also known as Ojibways and are Algonkian) are a large branch of the large Athapascan family, and Dr. Featherman has been misled by some authority consulted so that he gives a long description in the wrong place.

The absence of any orderly or correct arrangement has been the occasion of immense repetition. If there had been any proper grouping, remarks and characteristics, whether true or false, might have been expressed in general about the component parts of the several groups. As it is, they are repeated all over the volume, sometimes in the same words, and swell its bulk to inconvenience. Moreover, in copying authorities, by which the author evidently means any book of the mass of published Americana without regard to its comparative value, an enormous number of errors have been painfully transcribed. They begin to astonish the reader in p. xiii of the preface, where it is declared that the Indians in their warfare "did not conquer or appropriate any territory," which is exactly what they did. But it is futile to attempt the enumeration of errors in the work. They appear, on a hasty average, at least once on every one of the five hundred pages.

The author's queer turns of fancy when he tries to discriminate are more interesting than his mere blunders. In many places (*e. g.*, pp. 114, 124, 156) he dwells upon the Indian picture-writing, yet takes a notion (p. 151) that the only comprehensive work on these pictographs, which gives illustrations of them by hundreds, has no value because one or two of the examples are evidently modern, not understanding that the continued use of pictography is most valuable because, its existing methods being known, they explain those of the ancient and undeciphered characters made by the ancestors of the present practitioners, to whom the art has descended. The fact is also noticeable that while the only statement made about the Indians which is at once important, true, and somewhat novel—*i. e.*, that their religion did not include the concept of a single supreme deity—is in the body of the work, the corrections of the popular error on the subject are nearly all made in footnotes or in the preface, which was written later. This fact leads to the inference that Dr. Featherman had read some publications quite lately issued in this country which met with his approval, though he did not see fit to acknowledge them. But if he had read a little more about the totemic system, with its special rules of marriage and descent, he might have corrected his text by more good footnotes. If he had then published his footnotes without the text, his book would have been much improved.

When a volume is without logical order, or, indeed, without any recognizable method, as this is, it may be made of some use by a very good index, but the index to the present volume is as slovenly as the text. It contains but three and one-half pages, and really does not serve any purpose as an index—being only a bad table of contents—and thereby forms an appropriate finial to the whole work which may fitly be regarded as a monument showing how not to write about the North American Indians.

The Economic Basis of Protection. By Simon N. Patten. Philadelphia: J. B. Lippincott Co. 1890.

THE author of this work holds a professorial chair in the School of Finance and Economy established by Mr. Wharton in the city of Philadelphia as a propaganda of the dogmas of protectionism. The tutelary divinity of this school of the prophets is, of course, Henry C. Carey, the interpretation of his somewhat obscure utterances having become an occult science employing many devotees, who fill numberless books with their vaticinations. These books, like other amorphous products, are not easily described. Chronologically they belong to the era of the allegorical school of commentators, whose achievements in identifying the scarlet woman and the beast with two horns were thought so admirable some hundreds of years since. By assigning arbitrary and preposterous meanings to words and phrases of well-defined connotation, the writers are able to attain to heights of misunderstanding that are but one step from the sublime. They sincerely believe that a steady current of British gold is poured into this country for the purpose of destroying our manufactures, and that under British rule the fertile and populous plains of India have become a howling wilderness. Fables that nurses would not trust the credulity of infants to believe are gravely expounded as history, and the typical fallacies upon which the mediæval school-men exercised their pupils are selected as the corner-stones of protectionist argument.

The term "free trade" has become invested with a mystical potency of horror that inflames these votaries with fury, and the youth of Philadelphia are frightened with it into good behavior, as children were once tamed in Italy with the name of Hannibal. The free-trader is there, indeed, no better than an infidel, and he is commonly refuted, as pious writers formerly refuted the unbeliever, by putting in his mouth arguments of the last degree of fatuity, which of course enable the faithful to obtain an easy triumph.

The fundamental proposition upon which these writers construct their system is the celebrated discovery of Carey, that the early settlers of a country generally expend their labor upon such portions of it as are least productive. From this it plainly follows that as they extend their operations, more productive land is continually reached, thus practically demonstrating the absurdity of Ricardo's theory that men will select for occupation that land which they consider will give them the best return for their labor, and that, as population increases, other land will be brought under cultivation. This discovery of Carey's is more fruitful than it might at first seem, for it may be inferred from it that if early settlers are such fools, their descendants are not to be trusted to know what is for their own interest, and need the stimulus of a protective policy on the part of their rulers. This inference is actually drawn in the book which is before us. The abandoned farms in the Eastern and Middle States are pointed out as illustrations of the deceptive character of self-interest as a guide. Instead of working these lands, the farmers ought to have waited until Government opened railways to the prairies of the West, where labor would have a better reward. The further inference may be derived that the use of stage-coaches was always a blunder, and people ought to have gone afoot, or sat still until their rulers discovered the use of steam. In fact, they never should have worn clothing until their Government had developed the arts of spinning and weaving and invented the sewing-machine.

That there is no exaggeration in this appears from the proposition of the author that Congress should put a stop to the use of woollen clothes. He considers that cotton is a more suitable material than wool for clothing, and that the sooner people are brought to see it the better; although, singularly enough, considering the difficulty of dyeing cotton, he also maintains that the use of white clothing must be discontinued. He has decided that that color is not suited to our climate. With much complacency he observes that wool has become very expensive, that the use of cotton in our winter garments is rapidly increasing, and that "the day is not far distant when many of them will be woollen more in name than in fact." That day, so far as poor people are concerned, has in this country already arrived. It is interesting to learn upon such good authority that this is the result aimed at by protection. The same principle applies to food. Our "Government should raise the price of our agricultural products, now crudely produced, so as to give more inducement to scientific production." Taxes should be imposed upon the staple articles of consumption to assist our development. "Taxes on tobacco and liquors are of particular value in this respect, and have done much towards reducing the use not only of these articles, but also the whole diet consumed by those who use them."

The policy of reducing the "diet consumed" by the common people is certainly characteristic of paternal governments, but experience has shown that too low a diet is not conducive to long life. If Congress should be composed of thinkers like this author, there is ground for apprehension that many of its subjects would find themselves without the means of support while new occupations were being provided for them. Prof. Patten has discovered that the soil of the West, and, in fact, of America, "is poorly fitted to the cultivation of grain." The Southern planters make a mistake in not devoting part of their cotton lands to the cultivation of tea. "Drain the whole surface of Florida, and our dependence upon Cuba would cease." In general, we Americans "are not using our land for that for which it is best fitted, nor are we cultivating it in a way that will make it most productive." Congress ought to change all this by proper taxes.

Another important discovery made by Prof. Patten is, that "the past development of the American people has been the gradual surmounting of a series of obstacles." We are not quite sure that this discovery is original, but as it may not have been heard of in Philadelphia, it is well that it should be impressively announced. Of course, it follows from this that obstacles are necessary for our further development, and that it is the duty of rulers to provide them—a duty which we had supposed had never been neglected. The aim of society is not the production of wealth, but the "opening of new occupations." Articles which are produced in semi-tropical countries, "where nature supplies all the conditions necessary to production," ought not to be produced there. "They must be cultivated in places where nature is less favorable and does less for the production of the crop, but where this disadvantage is counteracted by the greater efficiency of the labor in civilized countries, together with a greater use of capital." To work harder and spend more to produce a result now attained with less exertion and expense, is certainly the quintessence of protectionism.

It is clear that if most of the occupations which men choose for themselves are shut up, others must be opened up, so that the policy of protection is simpler than it appears. Only stop men from doing what they think will be profitable, and you may be sure you are adopting a wise national policy. National prosperity is a very different thing from "that of the individuals who form the nation at any given time." It seems that every citizen might be enjoying the greatest prosperity while the nation itself was in ruins. No historical examples are produced of this remarkable phenomenon, and in fact no arguments from experience are adduced in the book, the author wisely observing that "the theory of a subject must always be developed previous to any intelligent study of the facts." Those who would investigate this theory further, whether to disclose its merits or draw forth its frailties, may be appeased with the statement that "national prosperity depends upon the natural laws regulating the supply of raw material, and upon the industrial possibilities of the people."

We have made a sort of anthology from this book, culling from its pages a number of most delectable passages, but it would be unfair to give more of them. Doubtless it has occurred to our readers that the author is not serious, and that he intends to satirize the protectionists under cover of a pretended exposition of their views. It certainly seems incredible that the dismal scarecrow of protectionism here exhibited should be soberly presented as a national ideal. But while this supposition would be kind, so far as the intellect of the author is concerned, it is hardly probable that he would deliberately discredit the doctrines that he is employed to teach. Yet we confess that we are perplexed by his contention that the tariff is unfavorable to natural monopolies. This can hardly be satisfactory, if it is honestly meant, to the protected monopolists who control our mines and forests; and how about Mr. Wharton's monopoly of nickel? Still, if Mr. Wharton is content, we are not aware that it matters to any one else, unless the pupils of his School of Finance and Economy are to be considered. These young gentlemen seem to enjoy educational privileges that have never been equalled outside of the University of Laputa.

The Unknown God; or, Inspiration among Pre-Christian Races. By C. Loring Brace. A. C. Armstrong & Son. 1890.

THE tone of Mr. Brace's present work is distinctly different from his 'Gesta Christi'—so different as to suggest contrast rather than comparison. It is much more liberal and catholic than that, which, in its anxiety to claim for Christianity the credit of all beneficent activities contemporaneous with its development, read *propter hoc* for *post hoc* all the way, making little or no allowance for circumstances of nationality or race as affecting the result. We were left to infer that Christianity in India and Buddhism in Europe would have brought forth the same fruits that we have seen could they have been transplanted in the germ; whereas in that case Christianity would probably have been very much like what we now call Buddhism, and Buddhism very much like what we now call Christianity. Mr. Brace's new volume is a palinode correcting the bias of the former. Here he has brought together a great mass of evidence, in a perfectly apprehensible and thoroughly popular form, in proof of the stock of moral and religious ideas common to the religions of antiquity. (Taoism and Confucianism and the religion of our Teutonic ancestors are omitted from his consideration.) Instead of pursuing the old method, which branded these religions as false, and sought only to place their defects in contrast with the merits of Christianity, he has sought out what is excellent in them, and, by massing it, has made it exceedingly impressive.

The book is well calculated to abate the conceit of many Christians that their religion is the sole depository of truth and good. It has nothing of the trick that vitiates a book which is superior to this in many ways, viz., Dr. James Freeman Clarke's 'Ten Great Religions,' which was bent throughout on showing that Christianity is a *pleroma* containing all the good there was in the other nine religions without any of their defects. It will be strange if the Christian reader does not covet many of the sentences that are quoted here for his own Scriptures, or even if he would not be willing to exchange for them some of those passages in the Old Testament or New which are the delight of those to whom the Westminster Confession is entirely satisfactory without the slightest emendation.

Nothing in Mr. Brace's book becomes it less than its title. It is the Known God it celebrates, not the Unknown. Mr. Brace's contention throughout is, that the non-Jewish races knew the true God, by whatever name they called him, not with the fulness of the Jewish revelation, but very wonderfully and gloriously. For all his catholicity, Mr. Brace still holds to the Jewish and Christian revelations as something special; and while frequently appearing to make their difference one merely of

degree, he often gives a different impression. He speaks of them as being full and perfect. But if the Jewish revelation was so, the Christian revelation would seem to have been superfluous.

A few other matters call for the briefest word. From Mr. Brace's chapter on "The Jews and the Egyptians" it would appear that his Old Testament studies have been meagre in comparison with his studies of other religions. Either he has no acquaintance with the course of such criticism as is represented by Kuenen and Wellhausen and Reuss and Robertson Smith, or he does not consider it as worth a passing word of refutation. We read of Moses as if he were a clearly defined historic character, and as if the Pentateuch, if not written by him, were fairly representative of his morals and religion. Hebrew monotheism is set down as an inheritance from Egypt, and not a gradual acquisition, attaining no consistency till many centuries after the time of Moses. Yet he quotes the extremely interesting and significant prophecy of Micah (720 B. C.): "Every people will walk in the name of his God, and we will walk in the name of Jahveh for ever," implying clearly that, even to a prophet so advanced and spiritual, Jahveh was not the only God. In the mention of Enoch (p. 48) there is no suggestion of the possibility, suggested by his 365 years, that he was a solar myth; and to say that the doctrine of a future life "comes forth clear and distinct in Job, the Psalms of David (*sic*), and the Prophets," is to go counter to the whole tendency of recent criticism, of which Warburton's 'Divine Legation of Moses' was a blundering anticipation. It is the more strange that Mr. Brace finds the resurrection of the body clearly set forth in Job xix., 25-27, because he quotes from the Revised Version, which makes the force of the passage tolerably plain, viz., that before Job dies, however his body be wasted by disease, he will see his Redeemer—*Goel, i. e.*, Vindicator—on the earth. The author of Job is spoken of as if he were a patriarch of the times in which the story has its setting, and not a writer probably as late as 600 B. C. It is not correctly said that "Schrader derives the name Jahveh from the Assyrian god Jahon [*sic*, a misprint for Jahou], and Renan, in his 'History of Israel,' follows him." Renan allows the possibility of truth in Schrader's derivation, but inclines strongly to the opinion that Jahveh was a local god of the region about Sinai or a provincial god of Palestine, and he regards him as a dreadful failing-off from the primitive Elohim to whom prophecy returned.

One of the strangest of Mr. Brace's freaks is his forgetfulness of the Christian doctrine of the devil. Several times he attacks the dualism of the Zorastrian religion without, apparently, the ghost of a suspicion that Christianity in its historical development has always been a dualistic faith. To say that "such a faith cannot feed the human soul, and dies out at last," is to criticise Christianity severely as well as Parseeism. What is dying out is apparently the dualism, leaving the general faith unharmed, though that has had an able advocate of late in Dr. Edwin A. Abbott, author of the article on the Gospels in the 'Encyclopædia Britannica.' On page 125, Tennyson's "Higher Pantheism" is quoted as one of his early poems. The volume in which it first appeared was 'The Holy Grail, and Other Poems,' published in 1869, when the poem was of recent date.

But Mr. Brace's book might lack much more than it does of carefulness and it would still be at least a beautiful anthology, well calculated to foster that sympathy of religions which is a steadily increasing element in our modern life.

Life and Times of Ephraim Cutler. Prepared from his Journals and Correspondence by his daughter, Julia Perkins Cutler, with biographical sketches of Jervis Cutler and William Parker Cutler. Cincinnati: Robert Clarke & Co. 1890.

THIS biography is a chapter in the early history of Ohio. Ephraim Cutler was the son of Dr. Manasseh Cutler, one of the principal promoters of the Ohio Company, and naturally sought his fortunes with the early emigrants. He was born at Edgartown, Martha's Vineyard, and bred by his grandparents at Killingly, Conn., and on their death went to Ohio with his wife and children. He was then twenty-eight years old. His reminiscences of these early years contain trifling anecdotes of the Revolutionary times, and some illustrations of the character of the Puritan communities, but little of any personal interest. The story really begins with the hard journey overland to the Western settlements, on which he lost two children and suffered severely from illness; and from this point the picture of the pioneer life becomes full of detail, and the more instructive inasmuch as there is no attempt to do anything but set down a plain record of facts. He began immediately the work of felling trees and planting corn, cutting roads, surveying, exploring, and the rough, hard labor of an energetic and public-spirited settler. His father's influence, who was then a Representative at Washington, procured him some official appointments in the Territory, and he soon made an impression upon the people among whom he was to pass his life, as a capable and trustworthy man. He was neither brilliant nor ambitious, but merely ready to serve and conscientious in his work. His own account of the difficulty he had in overcoming his diffidence, and in feeling himself a man of weight and influence, is on its face sufficient proof that he was no more than a man of sound and vigorous sense trying to do his duty.

His public service was really considerable in the end. He was a member of the Territorial Legislature, and officially interested in education at an earlier time; but his first conspicuous service was in the convention that framed the State Constitution. He was opposed to the project of Statehood, and consequently in a minority, but he succeeded in winning over his opponents on several important points; and in particular the judiciary article, which established a circuit system, the prohibition of slavery, which was adopted against the advice of Jefferson and after considerable opposition, on the ground that it would discourage Southern emigration, and the articles upon religion, education, and the schools, were all from him. He was not upon the popular side in politics, and had little further employment in them until after a score of years, when he served again in the House and Senate. During this second period he carried two most important measures after great effort. The first was to make effective that article of the Constitution which directed the establishment of schools "for ever" by the State, but which had been a dead letter up to the time that Mr. Cutler introduced his public-school legislation; the second was a reform of land taxation, by which the system of an assessment at cash value on actual view was substituted for that of an assessment by dividing all land into three classes, each of which paid a tax the same per acre for all parcels within the class. In both of these instances he deserved great credit for overcoming the peculiarly obstructive opposition of those who raised the cry that every man should pay for his own children's education, and, in the other case, of those richer and more populous counties which profited enormously by the old class system of land values. The reform of taxation, which touched also upon other sources of taxes besides land, was practically his individual work, and it required considerable administrative ability to draft the scheme of officials and duties which the new legislation made necessary. He was also in later years a mover in the improvement of the roads and introduction of railroads, and for thirty years was an active trustee of the Ohio University at Athens.

Together with these public interests, he carried on his own business of farming, setting up mills, founding new towns, driving his own cattle to market, and helping and advising the new settlers. He assisted, it is said, at least 200 families in acquiring their new homes, conveying them the land, and waiting their convenience for payment, besides being a generous friend in other ways. He lived this laborious and useful life until 1853, when he died, at the age of eighty-six, in consequence of an accident received in riding horseback. The pages of his journal are strewn with kindly notices of others of the first settlers and leading men of the community, whose hard lives and simple strength of character belong to the same school.

The volume concludes with brief accounts, first, of his brother Jervis, in whom the natural ability of the Cutler family showed itself in less noteworthy ways, and finally took the form of engraving, a profession which he followed in Tennessee and Indiana; and secondly, of his son William Parker, who, though hampered by ill health, won prominence in politics, was a member of the Thirty-seventh Congress, and afterwards was employed in the building and extension of railroads, notably in the Hocking Valley. He died in 1889. A curiosity of the volume is found in the notes kept by Mr. Cutler of the sayings and doings of the secret Republican caucus in Washington in '62-'63, in which the temper of the time towards Lincoln is strikingly illustrated. An appendix contains some speeches and historical papers.

The English Novel in the Time of Shakespeare. By J. J. Jusserand. Translated from the French by Elizabeth Lee. Revised and enlarged by the author. Illustrated. G. P. Putnam's Sons. 1890.

THE subject of this volume is the English story before it became the novel of De Foe and Richardson. The author goes back to 'Beowulf,' and describes also the Norman-French tales, the old English romances, and generally all the primitive forms of story-telling before he takes up the main part of his matter in the chapters on Lyly and his imitators, Sir Philip Sidney and the 'Arcadia,' and the Elizabethan novels. He treats of these origins of the novel in a popular and at the same time a scholarly fashion, filling his pages with large extracts from the texts and with ample and curious illustrations out of old books. He discriminates between the romantic tales and the realistic sketches of Green, gives a sufficient account of Lodge, and a very full analysis of Nash's prose work, in whose 'Jack Wilton' he finds the most promising and complete foreshadowing of the novel as it was to become, and pays sufficient attention to the literary history of his subject to speak of the Spanish origin of Euphuism and the "picaresque" tale, to show how "Arcadianism"

differed from Euphuism, and to narrate the fortunes of "Grobianism." The whole is entertaining, and lays open to the general reader the character and contents of many books not easily accessible and not worth much attention except from the professional student. Finally, M. Jusserand describes the "heroical" romances of the seventeenth century, imported from France, and the reaction against them, touches on the work of the "matchless Orinda," the Duchess of Newcastle, and Mrs. Behn, and concludes by giving an excellent impression of the literary atmosphere that fed the dramas of Dryden and his companion playwrights, the little masters of mere extravagance. Throughout the volume one sees the signs and prophecies (mostly in the form of prodigies) of the novel, its infertile beginnings, experiments leading nowhere. To bring philosophy down from the clouds was not seemingly a harder task than to subject imagination to the yoke of this life.

The point of view taken by the author, which is our modern novel, gives an air of extraordinary crudeness and stupidity to the tales of the early writers. It seem inexplicable that, after Sidney's 'Defense of Poesie,' English prose was so long in finding its canons, and that, with the strong sense of reality in the English race, the "heroical" novel should have held its own, and have imposed upon Dryden the mountain-labors of his absurdities. But these, and other curiosities of the intellectual development of literature, its retardation, its incredible conservatism, its foolish fashions, are well set forth by M. Jusserand, who, however, is more sensible of the meritorious and attractive in these early writers than of the qualities we have hinted at. Among the more interesting cuts, besides some excellent portraits, we notice the interior of the Swan Theatre from the drawing of 1596, recently discovered in the Utrecht Library, and the map of the "tendre" country out of Scudéry's 'Clélie.'

Henry M. Stanley: His Life, Travels and Explorations. By the Rev. Henry W. Little. London: Chapman & Hall; Philadelphia: J. B. Lippincott Co. 1890. Pp. xv, 456, 8vo.

THIS is not so much a biography as an account of the various enterprises in which Mr. Stanley has been engaged. The chapters upon the Abyssinian and Ashantee wars, for instance, give brief but interesting accounts of their causes, the country marched through, and the striking events of the campaigns. In addition to the narrative of the personal adventures of his hero in tracing the Congo to its mouth, Mr. Little relates at some length the political history of the Congo State. There is also much information about Central Africa, the people, their language, customs, the climate, and the scenery. Although recent events in the Sudan and the work of Emin Pasha in the Equatorial Province are sufficiently dwelt upon to explain the necessity of an expedition for his rescue, the author has the good taste to treat of this very briefly, evidently not desiring in any way to forestall Mr. Stanley's own book.

Mr. Little is no mere compiler, but writes intelligently and with some personal experience of Africa. The first part of his work is better than the last, which shows many signs of haste in its preparation. His style is picturesque, though at times too ornate, and his tone is more that of a panegyrist than of a sober historian. The book, nevertheless, has a value as a trustworthy record of important events in the development of Equatorial Africa.

BOOKS OF THE WEEK.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 300 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," NO. 65 Duane St., New York.

PUBLISHED THIS DAY:
RARAHU;
OR, THE MARRIAGE OF LOTI.
By PIERRE LOTI. One vol. 16mo, paper, 50 cents; 12mo, cloth, $1.00.
Sent by mail, postpaid, on receipt of price.
W. S. GOTTSBERGER & Co., Publishers,
11 MURRAY ST., NEW YORK.

To Clubs, Libraries, Colleges, Schools, etc.
BRENTANO'S invite attention to their stock of books, in all Departments of Literature, embracing the classic and standard authors, current Fiction, Belles-Lettres, and a complete collection of French and other foreign literature.
Our own houses in Paris and London, with reliable correspondents in other European capitals, enable us to serve those purchasing through us with entire satisfaction in every respect. *Book-Chat*, a monthly publication covering the entire field of current literature and comprehending an Index to the leading periodicals of the world, is of instant and practical value to all interested in books issued from day to day. Sample copy, 10 cents; $1.00 per year. Address
BRENTANO'S, 5 Union Square, New York.

Reference Handbook of English History. For Readers, Students, and Teachers. By E. H. GURNEY. 12mo, cloth, pp. 114, 75 cents.
This little book identifies every prominent man from the Confessor to Victoria, giving the date of his death, to whom married, the names of his children, etc.
It saves the reader hours of labor and makes his work a pleasure.
GINN & COMPANY,
BOSTON, NEW YORK, AND CHICAGO.

NEW ENGLISH BOOKS.

Sewage Disposal Works.

A Guide to the Construction of Works for the Prevention of River Pollution. By W. SANTO CRIMP, C.E., Assistant Engineer to the London County Council. With numerous Lithographic Plates and Illustrations, 8vo, cloth, $7.50.

H. M. Stanley:

HIS LIFE, WORKS, AND EXPLORATIONS. By the Rev. H. W. LITTLE. 8vo, cloth, $3.00.

Travels in Africa.

By Dr. WILLIAM JUNKER. With 38 Full-page Plates and 125 Illustrations in the Text, and Maps. Translated from the German by Professor KEANE. One vol. 8vo, cloth, $5.00.

Two Summers in Greenland

An Artist's Adventures among Ice and Islands in Fjords and Mountains. By A. RIIS CARSTENSEN. With numerous Illustrations by the Author. One vol. 8vo, cloth, $4.50.

Decorative Design.

An Elementary Text-Book of Principles and Practice. By FRANK G. JACKSON, Master Birmingham Municipal School of Art. Fully Illustrated. Crown 8vo, cloth, $2.50.

A Modern Zoroastrian.

By SAMEL LAING. *Third Thousand.* 8vo, cloth, $1.25.

For sale by all booksellers, or will be sent postpaid, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, JULY 24, 1890.

The Week.

MR. BLAINE'S letter to Mr. Frye on the McKinley Bill continues to be the chief subject of agitation in tariff circles—except in the *Tribune* office, where it is not yet known whether it is a good letter or a bad one. Senator Aldrich has been interviewed by the Philadelphia *Press*, and he says frankly that if what Mr. Blaine says is true, then the whole theory of protection is false. That theory maintains that, in proportion as you exclude foreign goods, you make a market for farm products at home. Mr. Blaine says that the McKinley Bill will not make a new market for one bushel of wheat or one barrel of pork. Mr. Aldrich contends that

> "Under the bill, should it become law, this country would be able to manufacture its own woollen and worsted goods, of which $52,564,942 worth were imported last year. This would give employment to many thousands more workingmen in this country, all of whom would be consumers of farm products. The $21,000,000 worth of tin plate now imported would, under the bill, be manufactured in this country, giving steady employment to at least 24,000 men, all of whom would be consumers of farm products. Then the large importations of Canada barley and other farm products would be stopped. All of this would make so much more of a market for the products of American farms."

We are now in the second century of our endeavor to carry this beautiful theory into practice, and are no nearer to its realization than we were in the beginning; in fact, farther away than we were at the start, because the progress of invention substituting machinery for hand labor is always in the progressive and cumulative stage. Perhaps Mr. Blaine sees that the task of providing mouths on our own soil for all of our farm products is somewhat Sisyphean, although he has not exactly said so. What he said was that the whole McKinley Bill will not make a new market for one bushel of wheat or one barrel of pork.

Mr. Frye's answer to Mr. Blaine's exposition of the shortcomings of the McKinley Bill opens oddly enough with the phrase: "Your letter leaves me in some doubt as to the facts." This proposition is true, we think, of nearly every letter Mr. Blaine writes or has written. Indeed, it is a peculiarity of his letters to leave people in doubt as to the facts, but none of his Maine friends has ever called attention to it before as Mr. Frye has done. He then goes on to catechise Mr. Blaine, with some appearance of acidity, as to his knowledge of what the effect of the "Hale Amendment," which Mr. Blaine himself is said to have drawn, would be. This amendment authorizes the President to open our ports, by proclamation, to the products of all American nations who on their part will admit to their ports free of duty a long list of American products. What Mr. Frye wants to know is whether Mr. Blaine knows how the nations of the "American Hemisphere" would receive this, and, in particular, how it would affect sugar. But little sugar, he says, would come from any American States but Cuba and Porto Rico. But Spain controls the imports of these islands, and how much of our list would she let them receive? The probabilities are that this is intended to draw farther particulars from Mr. Blaine, and that they will be forthcoming shortly, for he is evidently in a communicative mood. But upon the main points, the advantages of foreign trade with anybody, he has not been sufficiently explicit. Is it advantageous to exchange commodities, even with American republics, or with Latins more than Teutons? Mr. Blaine seems fully committed to reciprocity, but he has not as yet set forth the principle of the thing with sufficient clearness. How, for instance, would reciprocity be secured? The natural tendency of the Latins will be, after selling us their goods, instead of ordering some of ours, to take their pay in gold and sneak off and spend it in London. How is this to be checked? Will it do to let foreigners sell cargoes here without some assurance that they will carry away our goods in exchange? Confidence is a good thing, but we would not trust these men too far.

Those Republican newspapers which are trying to agree with Mr. Blaine in his views about the sugar duties, and also with Mr. Blaine's opponents, say that the Secretary of State is right in theory, but that he made a mistake in waiting so long before announcing the theory. If he had communicated his views in good time, before the House had committed itself, it would have been possible to frame the bill according to the Secretary's enlightened views, etc. That this is a subterfuge on the part of the puzzled editors a few facts will make clear. The House doubled the duties on flax and linen. The Senate did not find itself at all embarrassed by that circumstance: the Committee on Finance struck out the increased duties on these articles without the slightest compunction. The House admitted the yellow sugars of the West Indies free of duty. The Senate Committee put a duty of 3-10 cent per pound on them for the benefit of the poor refiners. The House put a duty on sulphuric acid. The Senate Committee restored it to the free list. Many other equally impressive instances might be found showing that it is never too late to amend. But perhaps the most impressive of all is the present tariff itself—the tariff of 1883, now in force. The House, after a long controversy over the Tariff Commission's bill, had decided that it was not desirable to pass any tariff bill at all. It did, however, make some amendments to the Internal Revenue Law. These were sent to the Senate. The latter body proceeded to enact a new tariff from beginning to end, and to attach it as an amendment to the Internal-Revenue Bill of the House. That was not all. A conference committee took up the subject and changed some of the duties that both Senate and House had agreed upon. These facts show that there is no lack of time to adopt Mr. Blaine's suggestions, which are in themselves extremely simple, if there is any disposition to do so. And there does seem to be a disposition in some influential quarters to adopt them. Senator Hale of Maine has been interviewed on the subject, and he declares himself in favor of it. One of the North Dakota Senators is also in favor of it. When the debate is opened on the revenue and expenditures of the next fiscal year (the year 1892), there will be found sufficient arguments for retaining the sugar duties, even without the reasons furnished by Mr. Blaine.

The cartoon in last week's *Judge* entitled "Jealous Jim," and representing Mr. Blaine as peering over a wall at Mr. McKinley, who is conducting an apparently successful flirtation with Miss Republican Party, is naturally attracting a great deal of attention. The close relations which *Judge* bears to the President's family are of themselves sufficient to make this treatment of Mr. Blaine noteworthy. The President's son is an avowed partner in business with Mr. Arkell, who is the proprietor of *Judge*. In August last, when a statement was made that the President's son was part proprietor in *Judge*, Mr. Arkell published a card denying that such was the case, but a few weeks later he impaired the value of this denial by sending out the following invitation to the press:

> DEAR SIR: Mr. Russell B. Harrison is returning from Europe on the *City of Paris*, due here on Wednesday next, and a number of *his co-laborers on Judge* and *Frank Leslie's Illustrated Newspaper* intend going down to Quarantine on the steamboat *Laura M. Starin* to meet him. . . . We shall be very glad to have you, or, if it is impossible for you to go personally, a representative of your paper, accompany us on the trip. Very truly yours,
> W. J. ARKELL.

The *Judge's* ridicule of Mr. Blaine, as the victim of jealousy, therefore puts the President's son in the position of poking fun publicly at his father's Secretary of State. There has been much speculation as to the real cause of Mr. Blaine's assaults upon the McKinley Tariff Bill. Some observers have thought that he was actuated simply by a desire to show that he is not, as his rivals have been saying he is, a political "back number." Others have said that he is really in earnest in thinking that the protection policy has been pushed far enough, and that the time has come for the party to begin to move towards tariff reform and free trade by the indirect road of American reciprocity; still others think that he is not aiming at McKinley and his bill at all, but is really trying to "knock out" Speaker Reed, whose preëminence and power in the party are believed to be most displeasing to him. The White House semi-official declaration that the real cause of the commotion is jealousy of Mr. McKinley will add interest to the specula-

tion, but will not be generally accepted as final.

The *Tribune's* Washington correspondent is very anxious to have it understood that the term "Force Bill" applied to the Election Bill now before Congress is a misnomer, and that the bill does not in the least resemble the real "Force Bill" of 1875, which authorized the President to suspend the habeas corpus and establish martial law in the Southern States in certain contingencies, of the occurrence of which he was to be the judge. It is true that the present bill is not as strong a dose as the Force Bill of 1875, but it nevertheless resembles it so closely in certain particulars as to make the common name appropriate. The first point of resemblance is, that the Republican majority in the House were just as confident of the necessity and expediency of the original Force Bill as they are now of the necessity and expediency of this one. They insisted upon it that the safety of the Government and the establishment of justice called for its passage, and they passed it, and denounced the people who opposed it in almost the same terms in which they denounce the people who oppose this. It failed in the Senate, and fifteen years of experience has convinced everybody of the folly, if not wickedness, of its supporters. Time has shown that it was not necessary and not expedient, and would have proved a piece of deplorable partisan folly. The second point of resemblance is that this bill, like the first, is of doubtful constitutionality—that is, the bar and judiciary would probably be divided as to the legality of some of its provisions, such as giving the Federal Supervisor the right to pass on the qualifications of voters. The third point is that it is proposed to use the army and navy, if necessary, to enforce it. The fourth point is that the present bill, like the first one, is supposed to be passed in the interest of the negro, but that no intelligent negro sees how it is going to improve his condition. Nearly all extraordinary legislation of this character has, or professes to have, some good object in view. If this plea had always sufficed to secure the passage of such measures, there would now be no such thing as free government in the world.

One of the melancholy features of the bill is the part that Mr. Lodge is made to play in its passage. He is doubtless very glad to have it bear his name, as he is in politics for party popularity and general notoriety, and doubtless the more he is abused on account of his connection with it, the better he is pleased. But no one, probably, sees more clearly than he the weight of the objections to it of all kinds, and it was probably for this very reason that the task of introducing it was assigned to him. When the managers get hold of a real docile and tractable "scholar in politics," they like to break him in with repulsive jobs. They like to exhibit him to the world as the servile instrument of their will, *perinde ac cadaver*, as the Jesuits say of their novices. When poor Laurence Oliphant joined the Harris Community, he was, simply because he hated horses, put to work as a teamster and made to groom and clean out the stable. In like manner, it was not by mere chance that Lodge was sent down into Rhode Island two years ago to stump the State for a defaulters' ticket. It was to discipline him and take the moral starch out of him. For the same reason they have set him to perorate over the need of this bill, and show the wondrous work of purification it will accomplish at the South. Whether it passes or not, he will be thoroughly broken in.

The Reed-Lodge managers of the Force Bill have followed up their attempt to bully Republican newspapers into supporting the scheme by inducing some professional colored politicians, mostly holding Federal offices in Washington, to issue an appeal to the Senate for its passage. The reason urged is, of course, the necessity of such a measure to secure free and fair elections in the South. As the Chairman of the Association puts it: "The great question involved in the passage of the Lodge Bill is not the advantage which the Republican party will reap by regaining its lost Congressional districts in the South, but the permanent and effective reëstablishment of negro suffrage, which, since the overthrow of the reconstructed Republican State governments, has been practically nullified and suppressed." But how can the Lodge Bill "reëstablish negro suffrage" and restore the State governments in the South to the Republican party? Take the next election which occurs in that part of the country—the one in Alabama on the first Monday of August, for the choice of a Governor, Legislature, and county officials. If the Lodge Bill were enacted to-morrow, it would have and could have no influence whatever upon the State election in Alabama, and the State election is the only one which is of any importance to the negroes. What possible advantage could it be to them if the Lodge Bill were to become a law and to be enforced in the November elections for Congressmen, so long as it has no bearing upon the choice of the men who make and enforce the State laws under which they live?

One argument which supporters of the Force Bill are using is based upon the action recently taken by Mahone's Republican State Committee in Virginia, refusing to contest several of the Congresssonal districts this year, on the ground that a fair election cannot be had under the State Election Law. Here, say the bloody-shirt organs in the North, is ample justification for the passage of a Federal Election law. But what does the leading Republican newspaper of the State, the *Valley Virginian*, say about it? Why, simply that "this is all sham and pretence," an attempt by Mahone to "convey the impression by this contemptible device that his disgraceful defeat last fall was attributable to that law," whereas "the fact is, it was the result of the contempt and disgust the people of Virginia feel for him." The *Valley Virginian* points out that the Republicans carried the State in 1886, electing six out of ten Congressmen, when Mahone kept out of the canvass; that they lost the Legislature in 1887 because he thrust himself to the front again; that it was his treachery alone which deprived the Republicans of the electoral vote of Virginia in 1888, and that the deserved defeat of the party in 1889 was due solely to his forcing himself to the front. In short, this deliverance of Mahone's Committee, according to this Republican editor, who understands the exact situation, is simply an attempt to "make it appear that he is a martyr of the State Election Law, and thus invite sympathy from Republicans elsewhere, when the fact is it is because the people have determined that Mahone shall never again rule this State."

Mr. Max Jaegerhuber writes to the *Dry Goods Economist*, as the result of a recent sojourn in Europe, that while the business communities of the Old World concede the right of the United States to adopt any kind of a tariff that suits them, yet that if the "wild absurdity" known as the McKinley Bill passes, they will "unite in the most rigid retaliation ever known in commercial war, and will reduce our exports to a degree we do not now dream of." This is very encouraging news for tariff-reformers. What they most desire to see incorporated in the laws of Congress is "protection" in its ideal state—that is, a prohibition of foreign trade. This kind of industrial paradise can be reached much sooner if foreign nations cooperate with us than if they remain passive. It seems quite certain that the Continental countries will do so to our satisfaction if the McKinley Bill passes. Mr. Jaegerhuber is a close observer and a competent authority, as well as an impartial one. What he says upon this subject can be depended upon. We commend his observations to Senators Aldrich, Sherman, and Morrill, and indeed to all who think that the road to general prosperity and a flourishing public treasury lies in the way of prohibiting foreign trade.

New terrors are added to the proposed increase of the duty on tin plates by facts set forth in a petition sent to the Senate a few days since by the Chemical Section of the Manufacturers' Club of Philadelphia. This petition asks for a great many increased duties, and among others it calls for a duty on "red earth, or raddle, used for polishing lenses," the same being now on the free list. Several reasons are advanced why we should have a good stiff duty on raddle, which is one of the oxides of iron. One reason is thus stated in the petition:

> "If the tin-plate industry is to be added to the iron manufacture of this country, it will soon be found that the enormous amount of spent acid which it will have to dispose of cannot be run into the rivers and streams as is now being done."

In order that our streams may be saved from pollution with spent acid from tin-plate works, it is necessary, in the view of these

chemists, to put a duty on raddle sufficiently high to induce its conversion into that useful commodity. The petition is printed at length in the *Manufacturer* of July 16. It includes, of course, a request for a duty on quinine, the manufacture of which is said to be in a shaky condition.

"It is a fact that the proposition was made to one of our leading linen-importers," said Mr. Henesey of No. 81 Franklin Street, "that Senator Matthew S. Quay, if liberally retained, would prevent the proposed increase of duties on linen." This statement was published in the *Times* of Friday and in the *Herald* of Saturday, and has not yet been questioned. Mr. R. H. Ewart, a man of character, and the President of the Linen-Importers' Association, said that he was satisfied that the proposition had been made, but that he did not know whether the person making it could retain Mr. Quay's services or not. He did know, however, that W. W. Dudley of the Blocks-of-Five was "behind the effort to raise the tariff on linen," and he considered it strange that one of this noble pair should be on one side of the linen question and the other open to an engagement on the other side. This betrays much innocence on Mr. Ewart's part. We have no information respecting any engagements or retainers of either Quay or Dudley, but we see no reason why they should not be on opposite sides of the linen question in a business way, and yet be on the most amicable terms. "All is fish that comes to our net" is a venerable maxim, and one of frequent application. We should say, however, that in a friendly contest of this kind (if there were one), the chances would be much in favor of Quay, since he has a vote to give in deciding the question, while Dudley has none. Another thing very helpful to him, if he were retained, would be the fact that the Senate Committee on Finance has already decided against the increase of the duties on linen proposed in the McKinley Bill, notwithstanding the generous offer of Barbour & Co. not to raise the prices of such linen as they manufacture in this country, if the duties are increased. This public-spirited proposal has not met with the recognition due to it, either in the trade or in the field of politics. The only place where it is appreciated is in the columns of the *Dry-Goods Economist*, and possibly in the mind of W. W. Dudley.

Senator Sherman has reported from the Finance Committee a bill providing that national banks shall not be required to hold more than $1,000 of United States bonds as a mere condition of their charters, and that they may issue notes up to the par value of their bonds instead of 90 per cent. as at present. The existing law requires every bank to deposit with the Treasurer of the United States at least $30,000 of bonds, and a greater amount in proportion to their capital. This is a requirement which has nothing to do with their circulation. The theory is that the lending of money to the Government is a necessary legal condition of a national charter. Whether this be a correct theory or not, it is immaterial in a legal point of view whether the amount of money so lent is large or small. It is also immaterial in a financial point of view now, although at the time when the Banking Act was passed it was of importance. One thousand dollars will answer all requirements of every kind and description, and it is especially desired now that as many bonds be released as possible, in order that the Secretary of the Treasury may make his sinking-fund purchases at the lowest rate. The other part of Mr. Sherman's bill has been before Congress many times, and has always been "kinked" with some greenback or silver fanaticism, so that it has failed to pass. There is some danger that it may fail now for the same reason, but it ought certainly to receive the support of the Senators who have been lately bewailing the shortage of currency. The bill will insure the adding of 10 per cent. to the bank-note circulation upon the basis of bonds already deposited for that purpose, and may lead to the depositing of other bonds for the same purpose—that is, to an extension of the system.

The French have taken, or attempted to take, deep offence at the assumption by the British of the protectorate of Zanzibar under the Anglo-German Treaty, because in 1862 a joint declaration was signed by the French and English Governments reciprocally guaranteeing the independence of the Sultan. Moreover, the final act of the Berlin Conference in 1885 obliged every European nation which meant to establish a protectorate over any portion of the African coast, to give notice to all the other Powers. When M. Brisson brought the matter up in the French Chambers, the Minister of Foreign Affairs fenced off the question by declaring that he felt quite sure Great Britain would adhere to her agreement, and that no notice had been received of her inclination to do anything else. But notice has by this time been received, and though the French are very angry, no trouble is anticipated in England, for the simple reason that there exists between England and France a precisely similar agreement to respect the independence of Madagascar, and this has not prevented the French from establishing a protectorate, and indeed one might say, a sort of sovereignty, over half the island. What is likely is, that the Zanzibar protectorate undertaken by agreement with Germany alone will irritate the French into increased captiousness about Newfoundland and other outstanding causes of dispute, especially Egypt. M. Ribot's speech about Egypt has in fact verged on the provocative, and has probably furnished Lord Salisbury with his best defence of the Anglo-German Treaty, as it has shown the need of an ally in case France completely lost patience.

The Committee of the House of Commons has favorably reported the bill to fix more definitely the liability of directors for false or misleading statements in prospectuses. English papers seem to think that the bill will go through Parliament and become a law without material modification. It provides that where a prospectus or notice invites persons to subscribe for shares in or debentures or debenture stock of a company, every person who is a director of the company at the time of the issue of the prospectus or notice, and every person who is named in the prospectus or notice as a director of the company or as having agreed to become a director of the company, either immediately or after an interval of time, and every person who has authorized or is responsible for the issue of the prospectus or notice, shall be liable to pay compensation to all persons who shall subscribe for any shares, debentures, or debenture stock on the faith of such prospectus or notice, for the loss or damage they may have sustained by reason of any untrue or misleading statement in the prospectus or notice, or in any report or memorandum incorporated therewith or referred to therein, unless he proves affirmatively his non-liability according to certain rules laid down in the bill. It will be observed that the bill makes the directors liable only for losses incurred through *misleading statements*. This is conservative, and ought to quiet the fears of those who think that good and responsible men will now decline to take the management of incorporated companies. Losses due to lack of judgment in management are not referred to.

Gen. von Moltke has put on record his testimony against alcohol, which he says he never uses and thinks unnecessary; and he sets down as "one of the greatest enemies of Germany the misuse of alcohol." But he stands manfully by beer, and wishes that "tea, coffee, and light beer could be made cheaper than they are." For light wine he has apparently nothing to say. The greatest objection to beer, if it be not the only one, as a popular drink, is, that people keep at it all the time. The quantities that a real votary consumes in the day, and especially in a hot day, are enormous, and the reason is, perhaps, that it really does little or nothing towards quenching thirst. On the contrary, there is much reason for believing that it steadily excites thirst, or, in other words, provides for its own increased consumption. It bids fair, however, to conquer the world. The product in America is enormous, and it makes steady strides in supplanting light wine in France. But nearly all the arguments in its favor are based on the assumption that it is consumed in moderation, whereas, as a matter of fact, it is consumed immoderately, and when so consumed is an undoubted deadener of some of the faculties, although it may not produce what is called intoxication. The force of Gen. von Moltke's testimony in its favor, too, is somewhat weakened by the question whether even his greatness in the popular German eye would bear the strain of an attack on beer.

OPTIMISTS AND PESSIMISTS.

Bishop Potter's Phi Beta Kappa address at Harvard, in which he pointed out, with a very courageous touch, some of the social and political dangers of the time, has brought down on him what a certain class of politicians consider the most serious reproach that can be addressed to a critic of public affairs or of public men—the reproach, namely, of being a "pessimist." And it is not surprising that politicians should consider this a serious reproach, because there is nothing from which they themselves shrink so fearfully. No man who wants to make his way in public life ever allows for a moment that anything can fail to "come out right in the end," in this very best of republics, unless, indeed, the opposite party should stay in power too long, or should happen, by any untoward chance, to succeed his party in power. In either of these cases no view of the future of the Republic is too dark for him to take. He positively revels in the prospect of coming woes. Those who can recall the pictures of what was to happen in case Cleveland were elected, which used to appear in the New York *Tribune* and other Republican organs during the campaign of 1884, will admit that no drearier future was ever held up before a trembling community than that with which the American people was threatened during those eventful months. At that time it was held in Republican circles to be the duty of a true man to be as pessimistic as he knew how to be, and not to keep his gloom to himself either, but to fill every market-place with his groans and lamentations. We remember one despondent Republican assuring us that in case, by some shameless trick on the part of his supporters, or by some extraordinary intellectual collapse on the part of the American people, Cleveland succeeded in making his way into the Presidential chair, we should, in one-half year after his inauguration, witness the unchecked highway robbery of the rich by the starving poor in the streets of this city; while another declared that, in the same event, his own accumulations of a lifetime of honest industry—which were considerable—would be offered to his friends at fifty cents on the dollar.

But, of course, campaign pessimism does not count. As a general rule every successful member of the party in power is an optimist of the first water, and the more he is exposed to any kind of obloquy or suspicion, the firmer is his faith in the national destiny. It would not do to say that every optimist is a corruptionist, for it would be far from true—many men being optimists from temperament—but it would be strictly correct to say that every corruptionist is also an optimist. We doubt if there be in the Union to-day more hopeful and cheerful spectators of events than Matthew S. Quay and John Wanamaker, and we all remember that on the very eve of the collapse which withdrew John F. Plummer from national politics, he publicly expressed the most buoyant confidence and pride in the future of his country. If any one doubts our judgment on this point, let him go about among the Boys of the Republican party and ask them, either individually or collectively, whether they see anything in the present posture of public affairs, barring the attitude of the Democrats on the McKinley Bill, to cause any one except a crank or a person whose applications for "recognition" have failed, to feel in the least uncomfortable over the condition or prospects of the American people. We know well what the answer would be.

What is most curious about the optimism of politicians, however, is, that it bears very little resemblance to the optimism of private and business life. In all other spheres of human activity, while the cultivation of the habit of cheerfulness and hopefulness is greatly commended, nothing brings a man into more disrepute than an optimism which pays no attention to facts and bears no relation to them. In business a man who kept saying that "all would come out right in the end," and that precautions and safeguards against failure or mischance were therefore unnecessary, would soon cease to be trusted, and would end by being generally laughed at. Out of politics, people's expectations about the future are expected to be based on reason and experience. A man, in order to be respected or confided in, must take note of the fact that there are bad people in the world; that health and character are exposed to many risks; that the heart has many deceits in it; that money does not come when it is looked for; that all trade is not profitable; that railroads sometimes pass their dividends and default on their bonds; that banks occasionally burst up; that sons sometimes go to the bad; that daughters often marry the wrong men; that sermons and briefs have to be carefully prepared in order to be effective; that sick people have to be closely watched; that surgical operations sometimes fail; that, in short, the race is not always to the swift, nor the battle to the strong—and must govern himself accordingly. A man who does not do so, and who trusts to luck in the management of his affairs, is said to dwell in "a fool's paradise." When Bishop Potter gets up in the pulpit and reminds us of these things, people say: "What an excellent discourse; how full of wisdom!" But when he gets up in the rostrum and applies to political phenomena the lessons of ages of human experience, all the fools in the country pop out of their paradise and say that his view cannot be sound or useful, because it is so "awfully unpleasant and gloomy, don't you know."

Human nature and the course of human events are very much the same in politics as elsewhere. When that egregious blatherskite, Senator Ingalls of Kansas, in his famous excision of the Ten Commandments and the Golden Rule from his system of political morality, likened politics to war, he forgot that in war it is only ceaseless vigilance and remorseless pessimism which keep an army ready either to march or fight. Nothing can be left to chance. The whole day and often the whole night have to be passed in providing against possible crimes, offences, and shortcomings, in dragging abuses to light and eradicating them. It is hardly an exaggeration to say, indeed, that all the advances the race has made in civilization have been due to the labors and sacrifices of thoughtful, reasonable, and public-spirited pessimists. The optimists in every age have as a whole filled the jails and the almshouses, or lived on the bounty of their gloomier friends and relatives. A cheerful temper and a hopeful spirit are great and valuable gifts; but they do the world little good when they are not backed up by a clear-sighted perception of the work which has to be done, and the vigilance which has to be exercised, to keep us all from relapsing into barbarism.

THE NATIONAL BALANCE-SHEET.

It is, of course, too early to say with anything like positiveness that the Secretary of the Treasury will or will not be able to make ends meet during the present fiscal year. The question is one of momentous importance in a political point of view, for if the people should find the Secretary borrowing money to pay current expenses after all the clamor that has been raised about the surplus during recent years, they would visit with condign punishment the party responsible for such a disagreeable surprise; and they would do this quite regardless of any views that might be entertained about the tariff or the Force Bill, or any other matter of public concern. Therefore we must expect that the party in power will maintain stoutly that the income will be greater than the outgo, while the opposition will maintain the contrary if there is any ground for doing so.

Attention has been strongly drawn to the subject by a Senate resolution, adopted on the motion of Senator Edmunds, asking the Committee on Appropriations to state the aggregate amount of the appropriations made or now pending in Congress. Senator Allison replied that they amounted to about $359,000,000. Senator Gorman thereupon remarked: "But the Senator does not include in that estimate, as a matter of course, the permanent appropriations, amounting to about $100,000,000?" To which Mr. Allison responded: "Of course I do not include in that the permanent appropriations." The permanent appropriations, as shown in the estimates of the Secretary of the Treasury, amount to $52,000,000. The sinking fund ($49,000,000) accounts for the balance of the $100,000,000 referred to by Mr. Gorman, this being also in the list of permanent appropriations in the Revised Statutes, although kept in a separate account at the Department. We have, then, a total of $459,000,000 of ordinary disbursements laid out, not including anything for the purchase of silver bullion, or for pensions under the new law, or for bounties or subsidies of any kind. Where is the income to meet these bills?

The Secretary of the Treasury has estimated his receipts at $385,000,000, to which should be added the postal revenue, which for the year 1889 was $56,000,000, and which will probably be $60,000,000 during the pre-

sent year. It has been estimated at $65,000,000, but it can hardly be as much as that without entailing a large increase in the expenses also. The Post-office appropriation always gives an indefinite sum to cover any deficit that may arise. Apparently, then, the receipts will be $445,000,000 and the expenses $459,000,000—a deficiency of $14,000,000. But it was stated by Mr. Dockery in the House the other day that the appropriations for regular pensions (*i. e.*, exclusive of the new bills) were $8,000,000 short of the amount actually called for last year, and this was admitted by Mr. Cannon, who said that Congress would be in session again before the 4th of March next, and could deal with any deficiencies that might be discovered meanwhile.

So the probable deficit of $14,000,000 rises to $22,000,000 without more ado. There is also pending, and not included in Mr. Allison's estimate, a bill appropriating $636,000 for new clerks to examine pension claims under the new bill. It is expected that the adjusted pension claims under the new bills will begin to reach the Treasury within ninety days after this additional force gets in working order. How much money will be actually required to meet these claims within the present fiscal year is a matter of conjecture. It is within safe bounds to say that the new pensions will absorb as much as will be left over from the appropriations for rivers and harbors, fortifications and new battle-ships, not more than one-half of which can be expended within the year. We have seen no account as yet of the sums required by the raft of private pension bills that have passed during the present session. These claims do not wait for adjudication, Congress having adjudicated them outright. Probably the $8,000,000 of deficiency conceded by Mr. Cannon, as noted above, will be swollen to $10,000,000 or $12,000,000.

If there is a probable deficiency of $22,000,000 on the basis of present taxes, what resources can the Secretary rely upon to meet it? He has $55,000,000 of the national bank-note redemption fund. Probably $15,000,000 of this will be required during the year to meet redemptions over and above the amount that may be deposited by other retiring banks. The $40,000,000 remaining may be needed for bullion purchases under the new Silver Bill, for although these purchases are met in the first instance by an issue of Treasury notes, the notes are only due-bills, which the Treasury must take care of all the time and keep on a par with gold under the terms of the second section of the act. It is hardly possible, therefore, to look at this fund as available for general purposes, although the authority to use it is ample. Another resource is the $55,000,000 of net cash on hand as reported on the 30th of June. Of this sum $31,000,000 was deposited in national banks. The remaining $24,000,000 is the Secretary's "working balance," which cannot with safety be much reduced. The $31,000,000, however, is a plum which can be eaten at any time, but can be eaten only once. It will choke the deficit of the coming year and leave something over, *unless* there is a material reduction of the revenues. Such reduction may come either by repealing Custom-house taxes or by making them so high as to check importations. Both of these ends are sought in the McKinley Bill according to the declaration of McKinley himself. Now that this subject is before the Senate, we shall probably learn what relations the McKinley Bill bears to a possible deficit.

There has been some talk of suspending the payments to the sinking fund, and some commentators have referred to this matter as though the Secretary had a discretion either to make those payments or not to make them. This is an error. Only Congress can suspend those payments. The Secretary can determine at what times within the year they may be made, but he cannot fail, under existing laws, to make them at some time within the year.

THE FORCE BILL IN OHIO AND MICHIGAN.

THE Force Bill is commonly discussed as a purely Southern measure, which will have no application to the North. In point of fact, if the bill becomes a law, it may be taken for granted that its enforcement will be called for in every Congressional district of the North. It requires the signatures of only one hundred persons in a district to a petition asking that it be applied, and the machinery must be put in operation. It will probably be the policy of the Democratic party to insist upon the enforcement of the law throughout the North, with the idea that it will prove so unpopular as to injure the party responsible for its enactment. However this may be, there is not a Congressional district which has not enough Prohibitionists, Greenbackers, or labor-reformers, to call for Federal supervision, so disgusted have they become with the results of elections under State authorities. In the States of Ohio and Michigan there is not a particle of doubt that the Prohibitionists will insist upon Federal supervision in every district, because they claim that in each State they have been cheated out of the adoption of prohibition amendments at elections under State laws.

Federal supervision has its origin in the United States Circuit Court. There are nine circuit judges, and it appears to be universally taken for granted that these nine judges are all good Republicans, and consequently will give the Republican party control of all the supervisors and other officials who are to be appointed. The truth, however, is that one of the nine judges is a Democrat; worse still, a Southern Democrat; worst of all, a Southern Democratic "rebel." To cap the climax, the circuit over which this "rebel" presides, includes the two "truly loyal" Northern States of Ohio and Michigan. On the 12th of April, 1886, President Cleveland appointed Howell E. Jackson as Circuit Judge of the United States for the Sixth Judicial Circuit, which covers the States of Tennessee, Kentucky, Ohio, and Michigan. Mr. Jackson is a native of Tennessee, and, when the Rebellion broke out, he supported the cause of the South, holding an office under the Confederate Government. A Democratic President thus appointed to interpret the Federal Constitution a man who had given his support to the movement for the overthrow of the Federal Government.

What will happen in Ohio and Michigan if the Force Bill is passed? In the first place, Prohibitionists in every Congressional district will, probably, call for its application. But how is that to be secured? Only by a resort to this "rebel" Judge, who lives in Tennessee. And what power will this Tennessee "rebel" have over the loyal Republicans of Ohio and Michigan? Briefly, the power to dictate the control of their Congressional elections by boards a majority of which shall be Democrats. To begin with, the Circuit Court will appoint a chief supervisor for each of the judicial districts in the circuit, of which there are two each in Ohio and Michigan. The chief supervisor will assign to each voting place three supervisors, "but two of whom shall be of the same political party," and two of whom will of course be Democrats, who are to have virtually absolute control of the registration of voters and the casting of the ballots. But the counting of the votes is a much more important matter than the registration of voters or the casting of the ballots. The counting will be under the absolute control of men appointed by the Circuit Court. The bill provides that the judge of this court shall appoint for each State within his circuit three persons to be known as the United States canvassers of the Congressional vote of the State, and when their count does not agree with that of the State canvassers, it is to overrule the latter, and the person whom they declare elected must be placed upon the roll of the House by the Clerk of that body, who is subject to both fine and imprisonment if he neglects to do this. Of course, a majority of these Federal boards of canvassers in Ohio and Michigan appointed by a Democratic judge will be Democrats.

This, then, is the way it will work. A Tennessee "rebel" will appoint Democrats as chief Federal supervisors for the judicial districts of Ohio and Michigan. These Democratic chief supervisors will appoint three supervisors, two of whom will be Democrats, to take charge of the election at every polling-place. Finally, the "rebel" judge will appoint boards of three canvassers, two of whom in each case will be Democrats, in each State, and the men to whom the Democratic majority of these boards award certificates will be entitled to seats in the next House of Representatives.

Take, for example, the Congressional district which includes the northern peninsula of Michigan. Hitherto the Congressional election in that district has been under the charge of local officials appointed under the authority of the State of Michigan, and controlled by the Republican party. If the Force Bill becomes a law, these officials may still be appointed and the Republican Governor of Michigan may stand ready to give a certificate to the Republican candidate

whom they return as elected, but local officials, Governor and all, will be powerless if the Democratic canvassing board appointed by that "rebel" Judge down in Tennessee says the Democratic nominee was elected.

So far as we have observed, attention has not been called to this peculiar feature of the way in which the Force Bill will work. But, of course, the Republicans of Ohio and Michigan will not object. For the sake of having Republican circuit judges appoint Republicans to control the Congressional elections throughout the South (except in Kentucky and Tennessee), they will gladly surrender the control of the elections in their own States to a Tennessee "rebel" who sustained Jefferson Davis during the civil war.

INDUSTRIAL STOCKS.

WE are reasonably certain of seeing in the United States a large increase in the number of companies incorporated to carry on such trading or manufacturing as has hitherto generally been conducted through partnerships. (We are not now speaking of Trusts.) There are many reasons for this. Two or three men as partners, by their ability and hard work, have, we will say, built up a prosperous business. The founders are growing old, or for good reasons wish others to be in training for future managers. Of the sons some show aptitude for the business, while some prefer a life of such leisure as they think the family wealth and their education entitle them to. How shall justice be done to all these in any arrangement for the future? Or if new blood must be brought in, how shall it be done? Aside from the advantage of non-liability for reverses beyond the amount invested, incorporated companies with capital divided into shares offer the easiest and most secure way of portioning a founder's interest in a business among his sons or successors, according to any plan he may select. Shares can be transferred in any number and at any price without disturbing the business, and without expensive and protracted litigation. There are many incorporated trading companies so formed for these reasons, whose shares are not for sale.

It is an inevitable step from such companies owned by the managers to those where a greater or less amount of the capital stock is offered to the public. These are certain to grow in number also, though they introduce new questions of finance. Founders of established industries easily see that, through a company whose shares are held partly by themselves and partly by the public, a much larger sum can be realized than could be obtained by any sale of plant and good-will to private parties. Another point in favor of the modern method is that stock in the new company can be allotted to junior heads of departments, and even to important customers, whereby a community of interest can be maintained which in any large undertaking is of the highest importance to the best results. The point of difficulty in the sale of a business to an incorporated company part of whose shares are for public subscription, is the value of the good-will. In England industrial companies have fallen into a slight temporary disfavor because of the enormous amount paid to the Allsopps for good-will, that business after the sale showing a large falling off; so that the question is now seriously debated abroad whether a firm's possible and future trade is worth more than a nominal sum.

Evidently, about such a question no hard-and-fast rule can be laid down. Procter & Gamble of Cincinnati, the latest large concern to become incorporated, have a proprietary article whose sales, already large, will for some time to come depend upon keeping up the reputation already established. They should be credited with this; yet it is also true that all the large soap-makers are now manufacturing the same kind of article, though, of course, not under the same brand. This company proposes to capitalize its business at $6,500,000, divided thus:

Appraised value of real estate....	$2,525,000
Quick assets (stores and personal property).....	1,250,000
	$3,775,000
Leaving for good-will.....	2,725,000
	$6,500,000

The old firm get $2,000,000 in bonds, $3,000,000 in stock, with $1,500,000 in cash, less expenses and commissions. Thus the good-will is valued as high as the real estate. Whether it is overestimated or not is a question each investor must decide for himself. By the agreement the old firm can sell all its securities except $1,000,000 of common stock, and further agrees that two of the present managers shall remain in charge at salaries aggregating $30,000 per year. This latter agreement, intended to be favorable, might be construed contrariwise, for $15,000 is far too small a salary for a man capable of building up and continuing so large a business, provided he sells his stock and so has only his salaried interest in the company's success. In the somewhat melancholy record of the world's attempts at the different forms of coöperation, one fact stands out clear—executive ability is of the highest order of talent; a man possessing it and employed by others must be correspondingly well paid, and is worth all he costs, for without such a manager no large company has ever yet succeeded permanently.

Granting that there is a place among investments which the industrial stocks may fairly and legitimately occupy, it must be said that time is yet required to determine their real value for capitalists. New business experiments appealing for public subscriptions must go through a period of financial measles before attaining maturity. It is perhaps a weakness of a railroad that its traffic is limited to such passengers and goods as seek its narrow right of way; for it cannot turn north or south at will, and as occasion may require, in search of trade, as can a manufacturer whose field is in all directions. Yet, on the other hand, when its traffic is once secured, it has a stability unknown as yet in commerce, where a novelty paying well today may be replaced by another novelty tomorrow. Then, too, our railroad system is old enough to have educated a class of professional managers in the different departments. It is always possible to secure a good superintendent of a railroad, though he may not own a dollar's worth of the property; but we might be embarrassed to find an equally good superintendent for some special form of manufacturing. Leaving out of view the Trust and similar highly speculative stocks, we can scarcely expect to find for an indefinite time to come even the better class of industrial stocks as great favorites with capitalists in the United States as are railroad securities; yet when we shall have had experience as a guide in estimating the values of plant and good-will, it seems safe to say that our business conditions eventually will make possible a reasonably safe investment in the corporate capital of those manufactories whose operations are best known and whose business is most easily followed.

THE ENEMIES OF DEMOCRACY IN GERMANY.

HANNOVER, July, 1890.

AFTER living almost a decade and a half in the United States, it has been my good fortune to revisit the Fatherland for a space of nearly three years. During my stay in America I was in due time naturalized, and became so attached to our institutions that democracy, if it means not only "I am as good as you are," but also "You are as good as I am," is now a kind of gospel with me, which I try to preach in season, and sometimes, I fear, also out of season. During my present sojourn in Germany, I have therefore been greatly interested in observing what progress this gospel is making here, and what are the obstacles in its way. The conclusion to which I have come is this—that the causes which keep a people with so strong a native superfluity of individualism and independence from advancing more rapidly on the road towards democracy are chiefly three: Militarism, officialism, and, thirdly, what may be conveniently called historicalism. There may seem to be nothing novel whatever about this conclusion. In some form or other most of us have probably reached it; whether consciously or not, makes but very little difference. Nor does it matter much what is the exact number of causes to which Germany's slow progress in democracy, or rather her present reaction towards the most conservative royalism, is traced. Pretty plain it is that militarism, officialism, and historicalism, or the *furor historicus*, are at least three of the causes of this reaction and are therefore worth considering as such.

As regards militarism, its final incompatibility with true democracy can always be predicted with certainty; and thus we have seen the democratic tide receding at the same rate at which Prussia, the most military of all German States, has been advancing and growing in power. The present condition of things is exactly that against which Miquel warned his countrymen years ago: the military, feudal spirit of the eastern provinces has conquered the more liberal modern spirit of the western. Prussia's mission was preëminently, if not exclusively, military; and what she has accomplished in this direction for Germany is beyond all calculation and worthy of everlasting gratitude. But with that, with the unification of the German States, her mission was practi-

cally ended. The trouble—or shall I call it the irony of fate?—lay in the fact that, after finishing her own peculiar task, she was called upon to undertake a mission of peace and civilization which was entirely foreign to her. And this she has been trying to fulfil in the same rigid military spirit in which she beat back the French, conquered Alsace and Lorraine, and compelled her German allies to unite under her hegemony. Surely, it looks like irony of fate, for grand and unequalled as the Prussians are in war, as civilizers they can hardly be said to have emerged from feudalism. And yet Prussia is the Power which has been intrusted with the government, that is, with the education in liberty and in self-rule, of this noble and gifted nation! Far be it from me to put all the blame on the Prussian Government itself; half of it probably belongs to the representatives of the people who were weak enough to allow their power to be wrested from them step by step and inch by inch. We have only witnessed over again the old spectacle with which we are also quite familiar in our republic. Somebody distinguishes himself in war, becomes colonel or general, and straightway is held to be capable of managing with equal success any or all of the affairs of peace, from the smallest village post-office up to the Presidency at the White House. So with Prussia.

But there are numerous signs that the Germans are tiring of this peace in arms, and are getting their eyes open to see the inevitable financial ruin which is awaiting them if the Prussian military policy be continued. Any one who has had the opportunity of living among the real people, of talking with them and drawing them out, cannot but have been struck by the spirit of disappointment and hopelessness that pervades them. Proud enough they are, and grateful, too, that the Fatherland is one, that the visions of their poets and of the nation itself have been realized so unexpectedly and so grandly. But they also remember that unity was not the only thing they had dreamed of. There was another watchword, dearer far than unity, and expressing the very essence of what lies most deeply imbedded in that old Teutonic nature, and that was liberty.

Some good things, it was thought at the close of the Franco-Prussian war, were sure to follow for the people themselves as distinguished from the various States—a larger share in the management of their own affairs, greater freedom from the paternal control of the government; in short, more real personal liberty. Now, let any one go and inquire among the people as to these hopes. Have they been realized? Has Germany become a freer country in the sense that greater freedom of movement across the ancient boundaries of class and caste prevails? Is the people's will more respected than formerly? Have their leading-strings been at all slackened? Has the privilege of initiating movements of their own been granted them? Is the press in general more independent? Or, to put the question negatively, is the press less given to fawning and cringing before the powers that be? I am sure that none but the average German journalist and the most inveterate optimist could answer these questions with anything like a decided yes. In all the discussions that I have had with Germans, as well as with Americans who know Germany, I have found that a no came far nearer to being the true answer. And why? What is it that has checked the march of liberalism and democracy which the Germans seemed willing to take up soon after the war? It is militarism, with its artificial and exaggerated distinctions of rank, with its haughty word of command from above, and its dumb, unreasoning obedience from below, and, worse than all this, militarism with its decivilizing and even brutalizing influences upon German life in general—influences which find their strongest expression in Prussian officialism.

If three years in the army do not succeed in weaning a young German from any democratic aspirations bequeathed to him, it may be, by a father who remembers '48, it is likely to be accomplished by his return to civil life, with all its official ordinances and regulations. And this, too, is a thoroughly Prussian trait. Officialism is simply militarism with a few brass buttons less, sometimes also without the awe-inspiring helmet and the clanking sword; but only too frequently it retains all the arbitrariness and brutality of the barracks. And how could it be otherwise? Is a régime like the Prussian, which does not distinguish between governing simply for the sake of governing and governing for the sake of educating a people into self-government—is such a régime more likely, or even able, to discriminate between managing the affairs of children and administering the affairs of grown people? Certainly not. The fact is that for such a régime no grown people exist, and, with the help of the God that makes the right of kings divine, never shall exist; for if they did, there would then be no longer any honor, any dignity, attached to being an official. Hence the constant interference with the doings of the people from above, the constant cry for such interference from below; hence the insolence of office on the one side and the exaggerated regard for official station on the other, down to the very *Heiratsgesuche* of lonely maidens, young and old, with their stereotyped *Offizier oder Beamter bevorzugt.*

The number of State officials in Germany is appalling even now, but it is sure to increase for a good while to come. Their exclusiveness, and their desire to be regarded as in some way or other superior to persons who are not paid by the State, has become a matter of serious concern with not a few, and sometimes borders upon the ridiculous, as when even city mayors, aping the officials of the State, petition for the right of wearing a uniform. Indeed, it is often hard to tell whether the officials exist for the people or the people for the officials.

Not that military discipline does not go far towards training a man into habits of order, decision, and obedience, habits which are very essential to the majority of officials, for it does; but at that point mere military discipline must also stop, and if no higher course of training can be added, if no further opportunity of developing the resources of intelligence and personal initiative can be granted, we get simply the machine official of the Prussian type, possessing neither so many good qualities nor so many bad ones as his long and peculiar training would warrant us to expect, but always those qualities which arise from a circumscribed field of activity, from a stunted growth of intelligence, and from the prospect of a far-off pension to be paid by the State—qualities which are sure *not* to make for democracy.

If militarism and officialism are calculated to repress democratic tendencies in the outward German life, historicalism lends itself to combating democracy with the weapons of reason and philosophy. And what I here mean by historicalism, or the *furor historicus*, is the form which the current mania for historical research takes when applied to social and political problems. Historicalism is the exaggerated, pedantic love of history for history's sake, or that perverted belief in historical development which often amounts to downright fatalism. Its minute, microscopic search in the dust of the past has blinded and incapacitated it for a broad and bold look into the future. An historian of this sort will not say that a thing or an institution may become this or that until he has gloated, as it were, over every single step by which it has developed into what it now is. Or, if perchance he ventures to predict its further development, he is apt to disregard the factors which the present age has introduced into the problem, and keeps on figuring with the old ones only, thus arriving at the conclusion that whatever has been will also continue to be, in spite of transient indications to the contrary. For him no William Tell, neither the ideal nor the real, has ever lived and inspired the Swiss, if he cannot get hold of the hero's bow and arrow. For him a poem in which Goethe sings of "yonder mountain" loses in poetic value if he cannot locate the mountain on the map. For him, too, the wail of the millions and their confused and desperate attempts at self-help are matter for historical comparison with former ages rather than signs of an approaching change or crisis. Hence the sublime complacency with which a Treitschke defends Prussian royalism, and the summary manner in which even so excellent a philosopher as Paulsen settles the question whether a monarchy or a republic is the better form of government. As well ask, says he, whether it is better to breathe through lungs or through gills!

One must have read some of the German campaign literature and the provincial newspapers before an election or on a prince's birthday in order fully to appreciate the kind of historical padding that is being used nowadays to preserve the ancient shapeliness of royalty. Besides that, one must have talked with schoolmasters, preachers, and others who have charge of the instruction of the young. Almost everywhere the same prescribed and circumscribed views of history, combined with the most preposterous worship of royalism, particularly as embodied in the Hohenzollerns. So thoroughly has this mechanical or fatalistic notion of historical development been inculcated, and so common has it become, that it is met with at every turn. Tell a German something about America, especially about the way in which people govern themselves, and even if you do not ask him, "Why don't you try to do the same?" he will anticipate you by saying, "But America has had a very different historical development. We cannot pattern after your republican institutions; you know we are monarchists and always have been." Any insinuation that they may not always continue to be is promptly met with the same kind of cut-and-dried arguments with which people who had read Butler's 'Analogy,' Paley, and other apologists used to meet the attacks of freethinkers.

It may not be superfluous to add that I have simply tried to point out what democracy has to hope for or to fear from these three powerful factors of the present German life: militarism, officialism, and historicalism. I have not for a moment intimated that the democracy of our Republic is in all points, or even in any one of them, perfect. Heaven knows we are at times making sad enough work of our self-government, and, like the trees in the fable, are in constant danger of having the bramble instead of the vine or the fig-tree rule over us. And yet I firmly believe that, in spite of all these shortcomings and apparent failures, the goal of the evolution of more adequate forms of civilized government lies in or

beyond democracy, and that, notwithstanding the present reaction, even Germany is sure to reach that goal. Prussian militarism and officialism will only have served as correctives of that excessive individualism and *Partikularismus* from which the Germans have suffered so much in the past. And historicalism, too, that enervating craving to know how the fates made history for us or through us in the past, will have had its day, and will give place to a worthier desire to know how men ought to make history for themselves in the present and for the future. Just now, to be sure, life in Germany seems cramped, dark, and hopeless in not a few of its aspects. Even the intellectual life, once so broad and cosmopolitan, seems to have been despoiled of some of its greatest charms by a narrow nationalism, but not, let us hope, permanently, for the real excellences of the German national character remain the same as of old, and a temporary reaction will not prevail against them. X.

REPRESENTATIVE INSTITUTIONS IN JAPAN.

TOKIO, June, 1890.

AMID the gratulations and plaudits which have attended the grant of the Japanese Constitution of 1889, we must not forget, if we would understand the conditions and historical influences amid which it is to be put in force, that its advent is but the final one of a series of events, the culmination of repeated efforts spread over the years from 1868 to 1881. To attempt to comprehend its significance in history, except in the light of the decree of 1875, the agitation of 1876-81, the decree of 1881, and the attendant circumstances, would be as great a mistake as to ignore, in considering our own Constitution of 1787, the Declaration of 1776, the ensuing struggle, and the peace of 1783. In the questions at issue there is, of course, no parallel, but in the order and relative importance of events there is not a little resemblance. As no connected account of previous efforts to establish representative institutions has, I believe, ever been published, I will venture to relate the story briefly.

The resignation of the Shogun, November 9, 1867, and the *coup d'état* in Kioto of January 3, 1868, left the Imperial party in possession of the power for which they had so long schemed and toiled. This party was led by a small band of men, composed of a few leading *kuge* (imperial nobles) and some influential *samurai*, representing three or four of the clans. The whole movement of the Restoration had practically been supported by the general body of the samurai, and the reconciliation of conflicting opinions and rival claims was a pressing question for the new leaders. It was just at this time that men began to look to the West for guidance, and to borrow attractive features of its civilization. The Western method of securing political harmony, a representative assembly, seems to have been in their minds and to have suggested the body which was speedily organized. By the famous imperial oath of April, 1868, it was promised that a parliament should be established, and all measures be decided by public opinion (though doubtless at that time the constituency to whom these privileges were to apply did not in their minds extend beyond the samurai themselves).

The plan of this assembly was under discussion for some time. The form at last fixed upon involved a representation of the samurai only, on the basis of the clan organization. Three samurai were to be sent by each large clan, two by each of medium size, and one by each small one. These delegates were appointed nominally by the daimio, but in fact by the leaders of the samurai of each clan, that is, practically by the public opinion of the clan. Their powers were meagre enough, and were deliberative only. They met first in Kioto in 1868 and discussed various subjects. The debate on the colonization of Yezo was published in the London *Times*. In April, 1869, the assembly met again, this time in Tokio. The name *Kogisho* (Office of Parliament) was given to the place of meeting, and *Gi In* (Parliament), afterwards changed to *Shiugi In* (House of Commons), to the body itself. They debated the question of permitting partnerships between foreigners and Japanese, and of forming a new constitution, but no decided conclusions were reached.

The future of this body would doubtless have seen the gradual concession of greater powers, but its end came soon, from causes within itself. The debates showed the leaders of the Government that the samurai of the time could not be looked to to assist by political action the progress that was absolutely necessary for the nation. On motions, for instance, to abolish *hara-kiri* and the carrying of swords, the figures of the unfavorable votes were respectively 200 to 9 and 213 to 0. In the same year the Shiugi-In adjourned sine die, and was never resummoned. The truth was, that it had not been created in answer to an explicit demand, either of the people at large or of the samurai, for political rights, but rather as a means of uniting the clans by deferring in semblance to public opinion while yielding nothing of the real control; and its existence could, in the nature of things, hardly have been more than temporary.

The principle of consulting outside opinion, however (so it was given out), was to be retained. The place of the Shiugi-In was taken by the Sa-In, a sort of Senate, created in 1871, whose members were nominated by the Prime Minister. But this was in no sense a representative institution. It was regarded as a home for all kinds of visionaries; its debates were never published, and it was quite without influence. Its successor of 1875, the *Genro-In* (usually called Senate), though heralded as marking an important advance, was for a long time of little more practical consequence, and only within a few years has it shown evidences of an influence on legislation. The next essay at genuine national representation had its beginning in 1873. It came about not so much through the desire of the Government to consult public opinion as through the very need of obtaining information and advice for administrative purposes from various parts of the country. Beginning with 1872, if not earlier, uprisings in different provinces, and other signs of discontent, had made it clear that the new order of things—involving as it did changes in methods of taxation, in political status, in various customs of immemorial validity—was not to be introduced without friction. In April, 1873, Inouye, then acting Minister of Finance, called a meeting of the provincial governors, to listen to their views upon the pressing administrative problems. They seem to have accomplished nothing definite, but this meeting of 1873 was the germ of an institution which, from 1875 onwards, occupied the place of a national assembly, and, nominally at least, did not end its existence until the present year.

This body was the *Chihokwan Kwaigi* (Parliament of Local Officials). Along with the distress and discontent of the time, there had been naturally some talk of a representative assembly as the balm of all evils. Late in 1873 the resignation of Itagaki, Soyejima, Goto, and others, on the question of war with Corea, gave them a chance to utilize the situation, and in January, 1874, they presented a memorial calling for a national assembly as the one means of governing smoothly. They did not, of course, escape the reproach (certainly unmerited by some of them) that their discovery of the crying need of the country occurred strangely soon after their departure from office. But their memorial was widely read, and gave a countenance to the agitation which powerfully assisted it. It is noticeable, however, that the memorialists were unable to take their stand on charges of oppression of any sort, but claimed simply that an assembly would educate the people, concentrate public opinion, and strengthen the Government. The *Kwaigi* was already in contemplation by the Ministry, and early in 1875 came its establishment. When the change of constitution was made by which the Genro-In took the place of the Sa-In, and the *Daishin-In* (Supreme Court) was created, the same decree contained the following provision: "We also call a council of the officials of our provinces, so that the feelings of the people may be made known and the public welfare attained. By these means we shall gradually confer upon the nation a constitutional form of government. The provincial officials are summoned as the representatives of the people in the various provinces, that they may express their opinion on behalf of the people."

The Kwaigi (sometimes called *Gi-In*) met in July, 1875, at the *Hongwanji* (a temple), and was hailed as a decisive token that the promise of 1868 was in process of fulfilment. It consisted, of course, of appointed officials only, but the Government treated it as the mouthpiece of the people, and undoubtedly regarded the method of selection of its members as only temporary. An imperial speech opened the session, and the able Kido (the "brain and pen" of the Restoration) was appointed *Gi-cho* (President). There were seventy delegates, who were either governors or their deputies. Rules of procedure had already been drawn up by the Government. The results of this first session were not at all promising. The Assembly had no initiative. It occupied most of its time in discussing a system of roads and bridges laid before it by the Government. The meetings were not opened to the public or to the press, and the publication of the debates by the Government did not mitigate the general dissatisfaction which this caused. The Assembly itself showed a conservatism which did not tend to commend it to the people. In a discussion on the proposition to establish a national representative assembly, the vote was to constitute it of *ku-cho* and *ko-cho* (county and town mayors, appointed by the Government). At the same time its influence was weakened by contrast with the action of some of the citizens of local prominence, who had been brought up to Tokio by the governors to assist with their advice. These met and drew up a memorial asking for an assembly founded on popular election.

These and other events combined to doom the Kwaigi from the beginning as a body which would not be accepted by the people in place of a popular assembly, even as a basis for further development. Indeed, the withdrawal of Itagaki (for he had reëntered the Government in 1874) for the second and last time in 1875 was upon the express issue whether the Kwaigi should be accepted, even temporarily, as a substitute. Itagaki thenceforward dedicated himself to the cause of popular representation, and the movement for it now began in earnest. The Kwaigi was not called

together in 1876, because of the Emperor's extended journey to the north, said the Government; because the Government was afraid to allow the popular discontent to receive utterance, said others. With Itagaki and Saigo in secession, the very existence of the Government—practically made up of the little band of able men who had achieved the Restoration—was threatened. All sorts of charges were rife of official misgovernment and corruption. In the midst of all came the Satsuma rebellion. Every one knows of Saigo's failure. But it was Itagaki who, having no different causes of complaint and standing in no different attitude towards the Government, avoided brave, blunt Saigo's blunder—the resort to arms—and, with Tosa shrewdness, struck a note to which the nation responded as they did not and could not to Saigo's. When the Government sent to Itagaki, in 1877, at the time that he was raising troops "for the protection of Tosa," as he said, and asked whether his intentions were hostile, he replied: "Not if you guarantee the establishment of a popular assembly."

His society, the *Risshi-sha*, which had been formed in the preceding year and had for its object the establishment of a national assembly, spread far and wide. Its memorial of June 14, 1877, making eight specific charges of misgovernment and praying for representative institutions, has, by some, been considered one of the most important political documents since the Restoration, and certainly puts the case as favorably as can be for the popular cause.* A society on a similar basis, the *Aikoku*- (Patriotic) *sha*, was started by Itagaki in Osaka in 1878. By the next year the *Aikoku-sha* had branches in fourteen provinces, and was said to have over 13,000 members. The agitation went on with the greatest activity. In one district the Risshi-sha gave lectures daily to audiences of hundreds. They set songs of the French Revolution to Japanese airs, and even the children sang them in the streets. An old saying was remembered that "Liberty shall spring forth from the forests of Tosa," and its prophetic meaning was now seen.

Amid this fervor of feeling, the second meeting of the Kwaigi, in April, 1878, received little attention from the people. On this occasion reporters were admitted, but a new cause of complaint was found in that the President (Ito, then Minister of Public Works) was again appointed by the Government, not chosen by the members. That most important measure, the Local Assembly Act of 1878, was passed in this session, but even this proof of the readiness of the Government to establish popular institutions as soon as needed did not satisfy the popular clamor. The Kwaigi we may here dismiss from our attention, noting that it met again in 1880, omitting both 1879 and 1881, and that in 1882 a decree provided for the holding of an annual session until the national Parliament should assemble.

The agitation now took (1880) the form of petitions and memorials. From all parts of the country these were showered upon the Government. They bore thousands of signatures, representing all classes. Even women, wives of influential men, employed agents to canvass for signatures. The hotels in Tokio increased from 414 in 1879 to 1,605 in 1880, owing, it is said, to the presence of so many persons bringing petitions for a national assembly. Some of the nobles began to advocate it. By the end of 1880 it was rumored that all but two or three of the Ministry were favorable. It is certain that throughout the year the subject had been under discussion in that body, and that there existed a division of opinion. A draft constitution, said to be circulating among the societies, was made public. Finally, on October 12, 1881, came the well-known decree establishing a parliament in 1890.

This result was apparently a foregone conclusion, for all the members of the then Ministry, excepting perhaps the Satsuma men, were only delaying matters until they felt sure that the country was ripe for popular institutions. But the circumstances immediately responsible for the decree were as follows: To Okuma, then Minister of Finance (and undoubtedly one of the four or five ablest of the Restoration statesmen, and in some ways the cleverest of them), the crisis seemed to present a tempting opportunity to gain popularity for himself and at the same time to restore to some extent the waning influence of the Hizen clan in the Government; for now that Eto and Soyejima were gone, Oki and Okuma alone represented Hizen, and its power had diminished. Accordingly, just before the Emperor's departure for the North in the fall of 1881, Okuma laid before him a proposition for the establishment of a national assembly within six months. To this, of course, his colleagues would never agree. On the very night of the Emperor's return (till then the subject had necessarily been postponed) a protracted session took place, and at two o'clock in the morning the decree was agreed on establishing the Parliament, but not for nine years to come. But Okuma had gained his point; and, accepting with satisfaction his expected defeat, immediately resigned office, threw himself upon the country, and was able to fulfil his hopes and to form a political party which is to-day one of the most powerful political influences in the nation, as well as his own most efficient ally.

The moving cause of the grant of the Constitution seems clearly to have been the agitation of 1876–'81. But just how far the clamor arose from a thoroughly national emotion, just how far it was factitious, just how far it was the work of professional agitators—on these questions it is difficult to reach a conclusion. It is the opinion of Mr. Fukuzawa (than whom there could certainly be no keener or more impartial observer) that "not only has parliamentary representation not been conceded in consequence of any general demand on the part of the people, but that it has been given voluntarily, so far as concerns the great mass of the nation." That is to say, "the temporary agitation on the subject" was "a display of enthusiasm confined to a very limited circle, being merely a piece of strategy, wrought by various sections of the then unemployed *shizoku* (samurai)." To corroborate such a weighty opinion we have the undoubted fact that the *heimin* (commoners) of Japan have always been politically passive and indifferent, not greatly moved by sentiments of self-respect and self-assertion, and that a recognized problem has been that of educating them up to their rights, private as well as public. Yet, even if we cannot reasonably suppose them to have originated a broad political movement, we can at any rate believe that under the lead of the shizoku they would understand the issue and join in the protest. Certainly, to judge by appearances, there must have been a participation of some sort on their part. The Government, too, must have believed to some extent in these appearances, for the promise of 1881 was undoubtedly drawn forth by the agitation.

Mr. Fukuzawa, however, explains their action on the theory that they were aware of the ferment existing among the younger educated men as well as the samurai of the Restoration, who had never been admitted to taste official power, and were willing to provide a "national palaver" as a harmless place in which their efforts could be expended. Perhaps we cannot, with our present sources of information, venture much beyond this. It should be conceded, on the one hand, that the people as a whole took a real part in the movement; on the other hand, it is probable that the true grievances for the redressing of which a national assembly might properly have been looked to, were those of the shizoku alone, and that the mass of the people, harassed by economic difficulties for which the Government itself was not responsible, had no real occasion to demand representative rights, except on grounds of abstract justice and political theory which were not appreciated by them, and *a fortiori* could not be urged in their favor.

The genesis of the Japanese Constitution, then, is not to be explained according to the categories of European experience. It was neither wrested by the nation nor withheld by the Government. The people grew up to it, not the Government down to it. Historically it does not signify a safeguard against oppression, but a means of bringing the methods of government into accord with the popular wish. It was not the surrender of inherited power by an autocrat or an aristocracy to a plebs; it was (in token, of course, rather than in fulfilment) the relinquishment to a people of power hitherto held in trust for them by a self-chosen body of their own number until they should arrive at political majority.

JOHN H. WIGMORE.

Correspondence.

HARRIET SHELLEY AND CATHERINE NUGENT.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation*, Nos. 1249 and 1250, June 6 and 13, 1889, appeared copies of twenty-three letters from Harriet Shelley to Catherine Nugent, which I had transcribed some years before from the originals. I expressed the opinion, "It is probable the originals have been destroyed." Fortunately they were discovered. They are now in the possession of Prof. Dowden. In my transcription, in retranscription for the *Nation*, and in putting into type, it was inevitable that minor errors should creep in. Prof. Dowden permits me to make use of his collation of the *Nation* with the originals. I append such errata as are of any importance. Most would have been avoided if I had, as I should have, compared the copies visually, not orally.

Letter III. Line 23, for "mist" read "rain."

Letter IV. Line 2, for "North" read "South." Last line, for "Baneichs" Prof. Dowden suggests "Barracks."

Letter V. Line 25, for [*sic*] read "go." Line 32, for "astounding" read "astonishing."

Letter VI. Line 68, for [*sic*] read "been."

Letter VII. Line 55, for "write" read "wish."

Letter VIII. Line 36, for "Irishwoman" read "Irishman."

Letter IX. Line 67, for "enough" read "a little."

Letter X. Line 12, for "are" read "were." Line 29, for "once" read "twice."

Letter XI. Line 54, for "plantiff" read "plantive." Lines 68 and 70, "Tory" and "Tories" read "Wig" and "Wigs" [*sic*].

Letter XIII. Line 11, for "stopped" read "stepped in."

Letter XIV. Line 22, for "he" read "we."
Letter XVII. Line 5, after "next" insert "spring." Line 11, for "immeasurably" read "unusually."
Letter XVIII. Line 30, for "was" read "were."
Letter XX. Line 39, for "heavily" read "keenly."
Letter XXI. Line 15, for "secure" read "seduce."
Letter XXII. Line 25, for "am about" read "mean."

I regret that these notes should be necessary.

ALFRED WEBB.

DUBLIN, July 10, 1890.

TALLEYRAND AND GABRIEL PERREY.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of July 17, in speaking of Talleyrand's Memoirs, we read: "One theory is, that they may have come [fragments of the Memoirs] from a collection in the possession of a rascally secretary of Talleyrand's who is long since dead"; and, further on: "Talleyrand's faithless secretary was a certain M. Perret, to whom for more than thirty years Talleyrand had given his entire confidence. He discharged him at last, and from that time on—that is, for the last fifteen years of his life—he was in constant dread of the mischief he might make."

The name of Talleyrand's private secretary was Gabriel de Perrey, a member of an old and most honorable noble family of Franche-Comté. Like almost all the members of his family, he never used the *de* as a prefix to his name. He was not discharged by Talleyrand, but he declined to accompany Talleyrand to London when Louis Philippe appointed Talleyrand Ambassador to England, on account of his age and infirmities.

His position of private secretary of such a man as Talleyrand brought him constant demands for information from many quarters; and he was tempted more than once, and by high political personages (French as well as foreigners, more especially English statesmen), with reference to several questions and historical events in which Talleyrand played an important part. Never were any notes or papers furnished by him to anybody. A more scrupulously honest secretary than M. Gabriel Perrey has seldom served a great diplomat, and until the death of Talleyrand he was constantly in friendly communication with him.

Perrey was a tall man, with a most intelligent face, a fine physique, a gentleman in every way. His only weakness—a family weakness—was a special taste for good old French wines; and sometimes, at a choice dinner party, he would indulge, perhaps, beyond reasonable bounds. Those who tried to get secrets out of him, knowing his weakness, made use of it, more than once, and got in that way a few indiscretions—*in vino veritas*—which very likely were worked up by others. But as soon as he was sober, Perrey denied all knowledge of the matter.

The last time I saw Gabriel Perrey was in 1839 at Salins, Franche-Comté, a few years before his death. The conversation turned on the famous Col. Oudet, the chief of the secret society the "Philadelphes," an old and intimate friend of Perrey and his family. Being then a young man, I was all ears, and I remember distinctly Perrey saying that Oudet was massacred, with almost all the officers of his regiment, on the evening of the battle of Wagram; that he had fallen into an ambuscade, prepared to annihilate all the chiefs of that secret society, which had many members in the army, more especially among the soldiers and officers of the Army of the Rhine commanded by Gen. Moreau. He added: "If Gen. Mallet had been successful in his conspiracy against Napoleon in 1812, Gen. Lecourbe, a Philadelphe, would have been the military dictator of a French Republic until the return of Moreau from New York."

Perrey knew the inside of many questions and many of the secrets of the Consulate, Empire, and Restoration; and his memoirs, if any exist (which is not likely, for he was a very reserved person), would be most interesting.

J. MARCOU.

CAMBRIDGE, MASS.

THE THREE-YEARS' UNIVERSITY COURSES.

TO THE EDITOR OF THE NATION:

SIR: To those who have had anything to do with the management of Canadian universities, it seems not a little singular that there should be so much controversy over the proposal to allow Harvard students to take a degree in arts in three years. In the University of Toronto, the immemorial practice has been to let the student take either a three or a four-years course, as best suited himself. There are two regular matriculation examinations, the junior and the senior, and the latter corresponds exactly to the examination at the end of the first academic year. A considerable proportion of candidates for matriculation have always preferred the senior entrance test, their aim being to proceed as soon as possible with advanced university work, and to turn that work as quickly and effectually as possible into a means of professional advancement.

Whether a three-years university course may be made as effective as a four-years course for purposes of culture, depends very largely on the character of secondary education. In the Province of Ontario we have what may fairly claim to be one of the best systems of secondary schools in the world, and the best of these schools can do much more for a first-year university man in some ways than any university can do. Their school year lasts from the first of September to the first of July, and as the matriculation examination takes place after the latter date, the candidate may get in school a longer preparation. He may also get a more thorough one, for in universities there is apt to be less individuality in the treatment of students than there is in well-conducted schools.

I have used the term "university" in our own sense of it, namely, as connoting an institution which educates candidates for the degree of B.A. As we have no post-graduate universities, we are not troubled with the necessity of distinguishing between a teaching university and a degree-conferring college.

WM. HOUSTON.

TORONTO, July 15, 1890.

ONE-MAN POWER.

TO THE EDITOR OF THE NATION:

SIR: Measuring everything by one standard, I find myself applying it to the case of Speaker Reed and the interesting article of X. M. C. in the *North American Review*, which has elicited such high praise from the papers. Of course, it pulverizes Mr. Reed as far as logic and constitutional law go, but what else does it even tend to accomplish? The Speaker holds his place, for the duration of this Congress, by the choice of the majority of the House, and though he may have committed what in another century would have been called high treason, no earthly power can touch him, except a similar majority which is firmly held by the Democrats. It may be said that his course tends to destroy the future supremacy of the Republican party. But is that so clear? The Republican party, as shown by its every act in the last year, has deliberately chosen force and fraud as the means of perpetuating its rule. Its leaders are, politically speaking, sagacious men; and as far as success goes, and with the way in which our Government is carried on, it is by no means certain that they have not made a wise choice.

The last *Contemporary Review* contains a striking article, by M. Gabriel Monod, on "French Affairs," in which he says: "The history of the last two years has made it abundantly plain that the masses of the people are not to be satisfied with purely anonymous government. The State must be symbolized for them under the form of some man whom they can love, admire, and applaud." That is just as true of the United States as of France.

It may be doubted whether the Republicans have not gained more by putting forward a strong personality like Mr. Reed, than they have lost by the irregular methods he has adopted. A few thousands may read with indignation X. M. C.'s article. Hundreds of thousands, not to say millions, wholly unable to appreciate the constitutional argument, will be delighted at the appearance of an individual who, by sheer force of will, can make business in Congress move along.

The position of the Speaker in general is an illustration of the necessity of some leader in such a body as the House. The committees, which are its working machinery, must be created, and if by election, the process would be much more cumbrous, and much less certain to produce a purely partisan result. Hence the power of appointment was given to the Speaker, making him, instead of an impartial presiding officer, at once the most powerful man in the Government and the blindest tool of party, with almost complete freedom from responsibility. Mr. Reed's course this winter is only one more step in the continuous development of as dangerous a one-man power as could easily be imagined.

If Congress must have leaders, who ought they to be? Why, the Cabinet officers, who alone represent, through the President, the whole nation, and who are intrusted with executive work which just as much includes the conduct of business in Congress as the administration of the Post-office or the Mint. If this was the condition of things, such action as Mr. Reed's this winter would be wholly impossible, first, because the Speaker would hold the splendid position of the corresponding officer in the British House of Commons, or, for that matter, of the moderator in a New England town meeting—that of an impartial mediator, knowing no party, and equally respected by both sides; and secondly, because, while the party majority now tends constantly more and more to uphold its elected Speaker in the most outrageous usurpations, including the gagging of the minority, both sides would be always ready to join in resisting encroachment by the Executive. In fact, their combined hostility from the very start would be almost irresistible, were it not that, as the conflict would be carried on in full view of the public, a cabinet of competent men would, so long as they were careful to keep right on their side, have a compensating advantage in the simple but powerful element of personality.

G. B.

BOSTON, July 19, 1890.

Notes.

THE Baker & Taylor Co. publish immediately 'Talks with Ralph Waldo Emerson,' by Charles J. Woodbury, with a hitherto unpublished portrait.

Robert Clarke & Co., Cincinnati, have in press 'Abraham Lincoln's Pen and Voice,' an indexed compilation by C. M. Van Buren; and 'The Antiquities of Tennessee and the Adjacent States,' by Gates P. Thruston.

D. Appleton & Co. have nearly ready 'Expatriation,' a novel and a study of Anglomania.

D. C. Heath & Co., Boston, will add to their series of German texts 'Selections from Heine's Poems,' edited by Prof. Horatio S. White of Cornell.

Mr. W. J. Loftie, the learned historian of London, and the author of an elaborate work on the parish of Kensington, is preparing 'London City: its People, Streets, Traffic, Buildings, History,' which will contain some two hundred and fifty illustrations from drawings by Mr. W. Luker, jr. It will be published by Field & Tuer.

A Centenary Lexical Concordance to the Poems of Shelley that will rival in bulk Schmidt's 'Shakspere Lexicon,' is to be published by Bernard Quaritch on Aug. 4, 1892.

From the Clarendon Press (New York: Macmillan) has now issued the third and last volume of the fourth edition of G. F. Chambers's 'Handbook of Descriptive and Practical Astronomy.' We have already characterized this the most extended treatise of a general nature in the English language. The third volume, "The Starry Heavens," runs somewhat thin in comparison with the foregoing, as if the author had tired of his labor. It is largely occupied with a great variety of catalogues of stars and other celestial objects, and there is an index to the entire work.

Mr. Edward A. Samuels's 'With Fly-rod and Camera' (*Forest and Stream* Publishing Co.) is an illustrated account of the experiences of the writer in angling for salmon, sea-trout, and winninish in various streams of Canada and Maine. The illustrations are, as the title indicates, photographic, and, besides the very grave though common defect of being in most instances unrelated to the adjacent text, are many of them so poorly taken as to make one think that Mr. Samuels either did not know what he should, or did not care what he did, put in his book. The text is interesting and well written, consisting almost entirely of personal reminiscences of various salmon and trout rivers. The so-called land-locked salmon, variously known as the Schoodic or Sebago salmon and winninish, is the subject of parts of several chapters, and much useful as well as pleasing information is given concerning him. We can recommend the book as good reading for any lover of angling.

'The Lazy Tour of Two Idle Apprentices,' written by Dickens and Wilkie Collins in collaboration, and published in *Household Words* as a holiday number, has not hitherto been reprinted. It is now published in a volume with 'No Thoroughfare' and 'The Perils of Certain English Prisoners,' both having the same double authorship, and both being now reprinted for the first time in full.

Psychical influences, long recognized in the causation and the cure of disease, are receiving a new impulse under the collective name of hypnotism, to which increasing attention has been paid in the last ten or fifteen years. The charlatanry of Mesmer brought disrepute upon his facts as well as upon his theory, and the phrase "animal magnetism" became equivalent to an expression of quackery. But the scientific investigation of Braid (1842), and the numerous surgical operations of Esdaile (*circa* 1850) under this induced anæsthesia, were preludes, although with long intervals, to the studies and practice of Liébault, Charcot, Bernheim, and Florel. At this time hypnotism is an assured fact, with marked powers for good over a wide range, and with dangerous possibilities for evil in morals as well as in health. Both foci of this ellipse are clearly explained in 'Hypnotism,' by Fredrik Björnström, M.D., translated from the second Swedish edition by Baron Nils Posse, M.G. (New York: The Humboldt Publishing Co.).

'Cradle and Nursery,' by Mrs. Herrick (Harpers) is a prose proverbial philosophy of infancy reprinted from *Harper's Bazar*. Because it strains no one's receptivity, it is probably popular, and as it is true it is commendable. Mrs. Dacre Craven's 'Guide to District Nurses' (Macmillan) is a little book full of concise and clear advice for the care of the sick poor of crowded cities, and particularly admirable in not requiring special appliances nor contemplating impossibilities. 'A Manual of Nursing,' by Laurence Humphry, M.B., etc. (Philadelphia: Blakiston), is bald and pedantic, and of no use for the object in view.

One after another the contributors to the Paris *Figaro* are collecting their weekly articles. M. Albert Wolff, M. Bergerat, M. Fouquier, M. Vitu, M. Blavet have put their journalism into books as though it were literature. Finally, M. Philippe Gille, who prepares what passes (in the *Figaro*) for literary criticism, has begun a series called 'La Bataille Littéraire' (Paris: Victor-Havard; New York: F. W. Christern), to contain the few lines of obvious comment by which he has been wont to piece together abundant extracts from the book of the week for the Saturday supplement of the *Figaro*.

'A Waif of the Plains,' 'A Yankee at the Court of King Arthur,' and 'The Heritage of Dedlow Marsh' are the latest American books reprinted in the Tauchnitz series. But that Baron Tauchnitz still chooses to appeal to the purely British audience, one might expect, besides Mr. Hamerton's papers on "French and English," to see added to the series the acute and interesting 'French Traits' of Mr. Brownell.

The editions by Dr. Ferdinand Tönnies, the well-known sociologist, of Hobbes's 'Behemoth' and 'Elements of Law' (London: Simpkin, Marshall & Co.), deserve to be recommended as very helpful college text-books for instruction in history and political science—the former, a report by an eye-witness of the Civil War from 1640 to 1660; the latter, of which Diderot said, "C'est un livre à lire et à commenter toute sa vie," a most lucid exposition of the fundamental principles of Hobbes's philosophy. Both treatises appear here for the first time in such a manner as to satisfy the demands of modern text criticism.

The picture of Goethe's mother, although familiar to us from Bettina's sketches and from Goethe's own recollections in 'Dichtung und Wahrheit,' has only now received its final touch through the publication, by Bernhard Suphan, of her letters to her son, daughter-in-law, and grandson ('Schriften der Goethe-Gesellschaft,' vol. iv.). One does not need to be initiated into the mysteries of that strange science called "Goethephilologie," to take delight in this pure draught from the fountain of classic German literature; and it is to be hoped that a Sainte-Beuve or a Herman Grimm will be inspired by it to give us the long looked-for biography of a woman who, as she herself said, like Cæsar, would tolerate none but cheerful faces at her court, and to whom her son owed a gift which she described thus: "Meine Gabe, die mir Gott gegeben hat, ist eine lebendige Darstellung aller Dinge die in mein Wissen einschlagen, Grosses und Kleines, Wahrheit und Märchen: so wie ich in einen Zirkel komme, wird alles froh und heiter, weil ich erzähle."

There has recently appeared 'Les Inscriptions de Salmaneser II., Roi d'Assyrie, 860-824 B. C.,' by A. Amiaud and V. Scheil (Paris, H. Welter). The work consists of a transliteration and translation of all the texts of the king, together with the other Assyrian texts thus far known which have reference to his reign. Such a work has a considerable value for the historical student, both because of its completeness and from the fact that the various portions of the texts relating to the same period are placed together. Appended is a valuable philological commentary, showing at times much acuteness and originality, and an index of proper names. All Assyriologists will no doubt regret the absence of an index to the words of the text. The text of the Black Obelisk contains many new readings, and, both in this regard as well as in the translation, exhibits a marked advance over the recent work on the same subject of Drs. Winckler and Peiser. As this is probably the last work we shall see bearing the name of Arthur Amiaud, we cannot let the opportunity go by of expressing the profound regret of all Oriental scholars at his untimely death in Paris just one year ago. His loss left a void not only among French scholars, but in the entire school of scientific Assyrian workers, which it will take years to fill.

In the midsummer number of *Puck*, the editor, Mr. H. C. Bunner, begins a series of brief semi-humorous, semi-pathetic sketches called "Short Sixes: Stories to be told while the Candle Burns." They are to be illustrated by Mr. C. J. Taylor. Of late, Mr. Bunner's chief contributions to the weekly he edits have been his direct and incisive editorials on current politics, and his fiction has more generally been printed in one or other of the magazines. The first sketch, "Col. Brereton's Aunty," gives promise of an entertaining series.

The July Proceedings of the Royal Geographical Society contains the annual address on the progress of geography by the President, Sir M. E. Grant Duff, and the report of Mr. Mackinder, Reader in Geography at Oxford, showing an increase of interest in this study at the University. Two courses of lectures were given on the Historical and the Physical Aspects of Geography, the former being much more largely attended than the latter. There is also a paper on the Solomon Islands, by Mr. C. M. Woodford, which is principally devoted to notes on their discovery by the Spanish expedition of Mendaña in 1567–'69. An excellent map accompanies the paper, showing the track of the Spanish vessels and the names which they gave to the islands and places visited.

The *Scottish Geographical Magazine* for July opens with Mr. Stanley's address to the Society. This is followed by a paper descriptive of a voyage inland from Canton made some years ago by Dr. W. G. Dickson. There is also an admirably clear political sketch-map of Equatorial Africa by the well-known cartographer Mr. J. G. Bartholomew, showing the new boundaries according to Lord Salisbury's despatch of June 14, 1890. It is hardly necessary to say that it entirely ignores the Portuguese claims to the "Hinterland," both that back of their possessions on the Mozambique

coast, as well as that rich country watered by the Kasai lying to the east of Angola.

The second and last volume of that original publication, 'Les Ports du Monde Entier' (Paris: Librairie Scientifique et Économique; New York: F. W. Christern), has been begun with *fascicules* 1 and 2, and starts off with America, leaving Asia, Africa, and Australia to follow later. Montreal is the first port to be described and illustrated, then Quebec, Halifax, St. John, Boston, New York, etc. There are some queer transformations of familiar names, as Bunkerhill-Obelisk, Common-Park (Boston Common), Brooklyn-Brücke (!), etc, and Franklin is wrested from his birthplace in Milk Street, Boston, and made to lend an "historic interest" to Governor's Island. The work attempts to combine statistics with literary form and readableness.

Mr. William S. Baker has undertaken a much-needed itinerary of Gen. Washington during the War of Independence, or from June 15, 1775, to December 23, 1783. The first instalment appears in the *Pennsylvania Magazine of American History* for July. Apt citation of authority for each stage makes the reading of this diary very pleasant and instructive.

Part II. of the 'Handy Lists of Technical Literature,' compiled by E. K. Kaferkorn and Paul Heise (Milwaukee, Wis: National Publishing and Printing Co.) comes to us with the endorsement of Mr. Linderfelt, Librarian of the Milwaukee Public Library. It embraces military and naval science, navigation and ship-building in all forms, etc., and furnishes a supplementary list of non-technical books illustrating the life of soldier and sailor, and lists of pertinent periodicals. A Key to publishers accompanies the List.

A one-year's course in the History and Principles of Education will be given at Clark University from October, 1890, to June, 1891, by President Hall and Dr. Wm. H. Burnham, Docent in Education. The historical exposition will deal respectively with antiquity, the middle ages, and the present time, and will be followed up by philosophical conclusions and practical applications, with American needs in view.

The eleventh annual conference of the American Library Association will be held at the Fabyan House, White Mountains, from September 9 to 13. Library trustees are particularly invited to be present.

The fourth International Black and White Exposition will be held in the Pavillon de la Ville de Paris (Champs-Élysées) from October 1 to November 30. Pastels and water-colors will be included. President Carnot offers a *prix d'honneur*, and the Director, M. E. Bernard, a travelling purse of 500 francs. M. Bernard's address is 71 rue de La Condamine.

The Harvard College Observatory gives notice that it is empowered by Miss C. W. Bruce to distribute $6,000 during the present year in aid of astronomical research, in sums not exceeding $500 each, as a rule. Applications must be made to the Director, Prof. E. C. Pickering, before October 1, and he will also be glad of suggestions as to the best mode of meeting the donor's wishes.

—A more striking case of maladministration of public funds could hardly be found than that of which Mr. Edward Cummings tells the story in the July issue of the Harvard *Quarterly Journal of Economics*. Mr. Cummings contributes a review of the history and promise of coöperative production in France and England, and caps the narrative for the former country by an account of the legacy which Benjamin Rampal left to the city of Paris in 1878 for the aid of coöperative societies. The legacy amounted in all to 1,500,000 francs, and a first instalment of 400,000 francs became available in 1883. This large sum was loaned to forty-nine societies. The results, as gathered from an official statement of December, 1889, are summarized thus:

"There are fifteen societies still to be heard from whose time of repayment has not yet expired, their joint loans amounting to 196,950 francs. Three are actually behindhand—14,250 francs; eighteen are either in process of liquidation, or have already dissolved and disappeared—132,250 francs; seven are bankrupt—89,900 francs; and six societies only, representing the modest sum of 13,950 francs, have met their obligations. . . . The sums lost or compromised are nearly half the total loan of 447,200 francs, a percentage of loss which is simply astonishing when it is remembered that 196,950 francs are not yet due, and that the losses really represent an enormous proportion of the 250,250 francs actually in question."

This discouraging outcome is not surprising when one reads of the attitude of the municipal officials towards the coöperators, and, indeed, towards all aspirants in the ranks of "labor." The coöperative societies are coddled and encouraged; they are preferred in public contracts, and at the same time freed from the guarantees usually required of public contractors; in the official report they are excused for failure because of "the redoubled energy of competing houses" and "the distrust of their customers." The report states that the loans were made to societies selected on the grounds of "their constitutions already tried, their interior organization, and the professional merit of their members"; but it is obvious that in fact they were made indiscriminately and almost eagerly to the first applicants for the spoils. Conditions of this sort are not likely to bring out the moral fibre indispensable for a successful coöperation, and the Rampal legacy so far has only added to the long list of coöperative failures.

—'Zur Gutturalfrage im Gotischen' (Boston, 1889) is a doctor's dissertation of ninety pages presented to the Faculty of the University of Zürich by Miss Helen L. Webster of Boston. The dissertation is a purely scientific contribution to the history of the labialization of the guttural, concerning which there is among philologists a diversity of opinion. Grassmann, in 1860, opened the discussion with the assumption that the process of labialization was already present in the original language, and that the absence of the labial affection in the different Indo-Germanic languages is to be explained by a subsequent disappearance. Miss Webster considers the question solely from the standpoint of Gothic. She shows that if the labial affection is absent in the other labialized languages, it is also absent in Gothic; and that it enters in Gothic not only not initially, but in no part of the word before consonants. Comprehensively stated, the result arrived at is, that Gothic "has retained unchanged almost without exception, as regards this question, the phonetic condition existent in preceding Germanic." To establish this point it has been necessary to determine the character of the guttural wherever it occurs in the whole Gothic vocabulary, and to distinguish whether the presence or absence of the labial affection is, or is not, dependent upon specific laws. The whole historical etymology of the words, so far as it is known, is, accordingly, given with the use of complete subsidia. The dissertation is a thoroughly scholarly and conclusive treatise upon the special point selected, and well merits for itself the *summa cum laude* with which the doctor's degree was bestowed upon its author. Since her return, Miss Webster has delivered a course of five lectures on the "Study of Philology" at Barnard College. More recently, she has been called to Wellesley College to fill in that institution the new chair of Comparative Philology.

—M. Kayserling, so well known for his researches into the history of the Spanish and Portuguese Jews, has laid this department of study under a new obligation by the production of a 'Biblioteca Española-Portuguesa-Judaica' (Strassburg: K. J. Trübner). This handsome volume consists of an introduction on the literature of the Spanish Jews, the bibliography (including a large number of MS. works), a list of Jewish-Spanish journals (among them we notice one in the City of Mexico founded last year), Spanish writings against the Jews, a collection of the proverbs of the Spanish Jews, and three carefully prepared indices. When Spain was conquered from the Saracens, the Jews of the country, and especially of Castile and Aragon, rapidly replaced the Arabic with the Spanish language. It is said that a Spanish translation of the book of Esther was made in the thirteenth century; by order of Alphonso X., three Jewish scholars translated some works on astrology from Arabic into the vernacular. From that time until their expulsion in 1492, the Jews of Spain produced works of permanent literary value and scientific interest. With the expulsion they settled in many places—Constantinople, Egypt, Italy, Rumania, Amsterdam, London—and for centuries continued to use, to some degree at least, the Spanish language. In northern Africa the Jews have preserved the Spanish of the fifteenth century; and they developed, probably before the expulsion, a dialect called Ladino, which has much interest for Romance philologists.

—M. Berthelot, the Perpetual Secretary of the French Academy of Sciences, has just published, through the house of M. Alcan, a new work, of which the title is 'La Révolution Chimique: Lavoisier.' It appears from M. Berthelot's preface, which is printed in the *Temps* of June 12, that the biographers of Lavoisier have been singularly tardy and belated in their work. No account of his life has ever, for instance, been read before the Institute. M. Dumas, who was for many years at the head of French chemistry, and who was a fervent admirer of Lavoisier, undertook early in life a biography of him, and the editorship of the official edition of his complete works. But beyond some few enthusiastic pages in his 'Leçons de Philosophie Chimique,' which besides are "more eloquent, perhaps, than exact," he did not, so far as writing the biography went, realize his intentions. It was not till 1888 that the documents relating to the life of Lavoisier were collected by M. Grimaud and published by Félix Alcan. M. Berthelot gives much praise to Grimaud's book, but says that it is essentially biographical, and so devotes but little space to the methodical exposition of Lavoisier's discoveries and to critical appreciation of their value. This lack he undertakes to supply in his own book. One feature of M. Berthelot's volume cannot fail to be of considerable interest. Lavoisier, left behind him thirteen volumes of laboratory notes, running in date from February 20, 1782, to October 23, 1788. They have never been published, but have been kept in the archives of the Academy. They contain records more or less complete of the manifold labors and researches of their author during those active years. Sometimes they are minute and precise, some-

times mere hints and jottings. Of course, no new discoveries of great value will be found in them, for Lavoisier published his discoveries in his lifetime; but they will show very clearly his methods of work, the attempts that failed as well as those that succeeded, the growth of his discoveries from their first faint conception in his mind till they came to full birth. These registers M. Berthelot has carefully gone through, and he gives a methodical analysis of them, transcribing also in full all the passages wherein Lavoisier records his personal feelings and thoughts and impressions. This part of his book will be, in fact, a history of Lavoisier's mind—the psychology of a savant.

—We have our share in the widespread regret caused by the death in Venice, on July 16, of Eugene Schuyler, Consul-General of the United States at Cairo. Mr. Schuyler began to write for the *Nation* with its ninth number, and our issue of last week contained a brief contribution from his pen, in the letter accompanying which he spoke of his impaired health, though by no means discouragingly. From 1865 to 1890 he was, amid all his changes of residence and with occasional silences, a member of the *Nation's* staff, the sum of his writing being very considerable. In 1888 and 1889 his activity redoubled, and our readers can hardly have forgotten the striking series of letters from Italy on Dickens in Genoa, Milton's Leonora, Mrs. Browning, Shelley and Byron, Smollett, Samuel Rogers, Hawthorne, George Sand, Mme. de Genlis, Mme. de Staël, Canova, Carducci and Dante—to mention no others. His diplomatic career is reflected in the articles and reviews furnished to the *Nation* during the quarter-century just elapsed. "The Progress of Russia in Asia" is the title of one printed in No. 42, not long before he was made Consul at Moscow, a post from which he soon advanced to be Secretary of Legation at St. Petersburg. There he improved his opportunities to delve among the imperial archives for a Life of Peter the Great; and, having presently a chance to travel in Central Asia where now the Czar holds undisputed sway, he produced two volumes on Turkistan, which are his most important work, and which at once made him an authority on that branch of the Eastern question most interesting to Englishmen. Subsequently he was transferred to Constantinople as Consul-General, and his reports on the Bulgarian massacres of 1876 aroused public sentiment in England, led by Gladstone, to such a pitch that Beaconsfield's Government was compelled to abstain from interfering on behalf of Turkey in the war of 1877–'78. To this period belongs an article in the *Nation* on the best works on the Eastern question, and another on Americans in Turkey. In 1878 he was transferred as Consul to Birmingham, and published in these columns an account of the nascent Birmingham caucus. His consul-generalship at Rome bore no fruit for the *Nation*, but that at Bucharest led him to write on the Rumanian language and fairy tales. His highest degree in the service was reached when he was appointed Minister Resident and Consul-General to Greece, Servia, and Rumania. No other nation but our own would have dispensed with so experienced and apt a diplomat, but Mr. Schuyler was discarded, and given leisure to write his third significant work, on 'American Diplomacy and the Furtherance of Commerce' (1876), which was made the pretext for the Senate's rejecting his nomination as Assistant Secretary to Mr. Blaine, under the present Administration, and its grudging him the appointment to Cairo in which, we think we may say, he sacrificed his health and his life.

—Mr. Schuyler chose for his European residence, while out of the service, Alassio on the Riviera, and it was clear that Italy suited him as well as any country in the world, reviving his literary interests and gratifying his tourist's instinct, so that he followed in turn "In the Footsteps of Dante," and of those other eminent personages whose names have been cited above. His versatility was remarkable, his love of language perhaps ranking first, and being accompanied by musical taste and study and a fondness for botany. He was educated at Yale and Columbia for the bar, and it was the accident of the visit of a Russian frigate to this port which determined his lot in life. He had a very genial and companionable temperament, and a great fund of anecdote, good-nature, and obligingness. He had perhaps hardly the qualities of an historian, but he was an excellent observer and a diligent explorer, and it is noticeable what sympathy he showed in his newest surroundings. His translation of 'Fathers and Sons' and of 'The Cossacks,' together with magazine articles on Turgeneff and Tolstoi, were among the earliest introductions of these great writers to the English-speaking public. In short, Mr. Schuyler's life had on the side both of letters and of world-politics a marked influence, and that, too, as a forerunner. Mr. Schuyler was born at Ithaca, N. Y., on February 26, 1840, a son of the late George W. Schuyler. He married, somewhat late in life, a daughter of the late Gov. John A. King, and sister of the wife of the French statesman, M. Waddington.

RECENT POETRY.

SEVENTY-FIVE years ago, Goethe was already anxious lest the multiplicity of poets should drive poetry out of the world:

> "Wisse dass mir sehr missfällt
> Wenn so viele singen und reden!
> Wer treibt die Dichtkunst aus der Welt?
> Die Poeten!"

The critic learns to his cost that the tuneful brethren are still at it, and, instead of growing smaller and choicer, as they reasonably should, the poetic tomes grow thicker and heavier. New lands and zones are ransacked, and a volume of more than six hundred pages comes to us, entitled 'Australian Poets, 1788–1818' (Cassell), and edited by Mr. Douglass B. W. Sladen, B.A., Oxon., B.A., LL.B., Melbourne, Australia. (Like the Vicar of Wakefield, we love to give the whole name.) Mr. Sladen says regretfully that, being editor, he "can give nothing about himself but a summary," and follows with nearly a page of autobiography in small type, this being duplicated by a page and a half of biography of him at the beginning, stating essentially the same facts from another hand. The book itself represents much labor, but not much discrimination; and its chief interest, beyond that of general human sympathy, lies in its giving us some added poems by Alfred Domett (Browning's "Waring"), whose one strong Christmas hymn, "It was the calm and silent night," stands strangely isolated among the pages of trash by men less gifted. Its dignity and music almost refute the theory that a poet should cultivate local coloring, since all Domett's other poems, as here collected, possess that attribute, and yet are all incomparably inferior to the "Hymn." Henry Kendall, on the other hand, is at his best in local coloring, and has some really noble descriptive passages, although we cannot but think him overrated by his editor. None of these poets seem to have made so much out of Australia, however, as some of the minor Irish poets—Callanan, for instance—have made out of Ireland; and Pringle wrote many years ago, in South Africa, a "Desert Ride" which far surpassed any similar description in this volume. The fairest comparison would be, perhaps, between this Australian collection and the volume just published by the Western Association of [American] Writers; and the result is unquestionably in favor of Australia.

There is an endless interest in the problem of the transplantation of fame, especially across the ocean. An American fame is easily transplanted to England by the mere fact of local residence; indeed, it is sometimes, as in "Joaquin" Miller's case, created in England by the mere fact of novelty, and afterwards very imperfectly transplanted to the poet's own land. Then there is the more striking case of Lowell, who was known in England only as the author of the "Biglow Papers," and classed habitually with Artemus Ward and Josh Billings, until the mere accident of his residence in London as American Minister made known the thinker and the scholar. But in this country the fact of personal residence makes little difference; we know Englishmen through their books, if at all, and who can tell by what law of selection? Of three men frequently named in English journals as possible candidates for the Poet Laureateship, Sir Edwin Arnold has more readers in America than in his own country, while Alfred Austin and Lewis Morris are almost completely unknown; hardly a volume of theirs has ever been reprinted, nor do their names appear in the newspaper corners. In the thick volume, 'The Works of Lewis Morris' (Longmans), one looks in vain for a solution of this mystery, nor indeed is it quite clear what is the origin of his popularity at home. Perhaps the best solution is in the fact of his prevailing commonplaceness. Like the late Dr. Holland in this country, he has the faculty of saying better than others the things which the average man thinks; and this, with a generous and hopeful spirit—for he is not, like Alfred Austin, a Tory of the Tories—gives him a hold upon the people. He goes among the dreadful sights of the London streets by night; and while he does not, like a more gifted poet of the same name, come out a Socialist, he at least remains a high-minded and sympathetic man, who closes the story of a street outcast with the terse lines—

> "Only blind me in heart and brain,
> Or ever I look on the like again." (P. 48.)

Another point of interest in Lewis Morris is that he is not, like so many of the men now prominent in London, a Scotchman; he is a Welshman, and proud of his traditions. Indeed, he gives us in "David Gwyn" a Welsh ballad that needs but a little more of fervor and dramatic power to take rank with Browning's "Hervé Riel." On the other hand, he has that drawback of tastelessness and rudeness which marks so many Englishmen; imagine, for instance, a man's ending a strain of serious and even profound feeling with an image so grotesque as that which closes the poem called "Drowned":

> "And, O Infinite Cause! didst Thou,
> When thou mad'st this hapless child,
> Dowered with passions, fierce and wild,
> See her lie as she lies now?
>
> "Filled with wild revolt and rage,
> All I feel I may not speak;
> Fate so strong and we so weak,
> Like rats in a cage—like rats in a cage."
> (P. 19.)

A similar offensive grotesqueness is found in the very first line of Mr. Wilfrid Scawen Blunt's 'A New Pilgrimage, and Other Poems'

(London: Kegan Paul; New York: Scribner & Welford). The book opens with the lines:

"Care killed a cat, and I have cares at home
Which vex me nightly and disturb my bed."

Inasmuch as the most important part of the book consists of sonnets, and he tells us in his preface that "Next to the last, the first line of each sonnet is the most important," we may assume that this image of the wailing cat is in his mind almost the high-water mark of poetry. Mr. Blunt is nothing if not whimsical, and devotes himself as eagerly to overthrowing the Petrarchan model of the sonnet as others now labor to exclude all other types; nor is he haunted by any doubts of his own ability to illustrate his own propositions, for he says of himself: "He is far from saying that the octave is not more perfect without it [a third rhyme], but he has found *by experience* that many a good sonnet cannot be written except with this indulgence" (p. xi). The italics are our own, and we should pronounce that man happy who had found "by experience" the art of writing many good sonnets on any plan conceivable.

It is doubtful whether Mr. Austin Dobson's publishers have done him a real service in issuing an edition of his 'Poems' (Dodd, Mead & Co.). The freshest and daintiest confectionery only serves as mockery of a genuine meal, and the more one sees of it beyond a certain point, the worse. A single poem by Austin Dobson, found in a newspaper corner, is delightful, and two or three might safely be carried in one's pocket, and administered without fear to admiring audiences; but a volume of them gives satiety, and two volumes an inconceivable surfeit. The very daring of his fancies, the absolute neatness and precision of his rhymes—where was there ever such a *tour de force*, for instance, in respect of rhymes, as in his "Molly Trefusis"?—these awaken at last not merely a sense of fatigue, but even a slight resentment, as when a man tries us with too many puns. And when we find him, just once in all these 500 pages, rising to the dignity of real emotion—in the oft-quoted "Once at the Angelus"—it makes the reader feel that the best thing in the book after all is the modest preliminary self-estimate, "*Majores majora canent.*" Alas, his motto has hardly been heeded, and it is the *minores* and *minora* following profusely in the wake of Mr. Dobson from whom English literature has had most to suffer.

Turning to recent American volumes, we have before now expressed with some frankness our opinion as to the exceedingly crude and imitative poetry of Mr. Madison Julius Cawein, to whom Mr. Howells has been so injudicious a friend. We have in 'Lyrics and Idyls' (Louisville, Ky.: John P. Morton & Co.) the same wearisome alternation of Poe and Swinburne as in his former volumes; he unearths dead Gloramone from the tomb, with the one, and borrows "hard kisses" and alliterative cadences from the other. One sole sign of progress is visible, that the author has added another and a better model to his list, and is now Browningesque in addition to his previous predilections. If Bayard Taylor or some clever author of imitative verse had undertaken to reproduce Browning's "The Laboratory," he could hardly have hit it off more completely than Mr. Cawein has done it in "His First Mistress—Reign of Louis XIV." The measure is the same, the compounder of subtle poisons, the glass mask, and all the rest of the properties; only that Browning's conspirator ends, "Next moment I dance at the King's," and Cawein's, "Now away to the royal levee." If the only aim for an American author is to select some older poet and serve him up with the admixture of a large dilution of *aqua fortis*, Mr. Cawein has well chosen his career. In any other point of view he has missed it, and all, perhaps—since he unquestionably has talent—for want of a little wholesome repression at the outset.

A complete edition of the 'Poems' of Harriet McEwen Kimball (A. D. F. Randolph & Co.) will be welcomed by the many readers whom the devout and modest writer has won. They will seem over-evangelical, perhaps, to those less steeped in technically Christian traditions, and there is a certain incongruity in a dedication "To my Mother, the Holy Catholic Church," preceded by a prelude addressed to John Greenleaf Whittier; but such combinations are now not infrequent, and the book may be freely commended for what it gives. We would gladly say as much, if we honestly could, for 'The New Pandora: A Drama,' by Harriet H. Robinson (Putnams). It is mentioned in some newspapers as an "epoch-making" book, but we should rather call it epoch-made, and only a rather over-ambitious expression of the thoughts and aims of the period. It is, however, unexceptionable in tone and allusion, and is therefore altogether more pleasing than such works of the femininefleshly school as 'The Fallen Pillar Saint, and Other Poems,' by Susie M. Best (Dillingham), in which "red, wet lips" and "smooth, lithe limbs" are constantly forced upon our attention, here and there tagged with the moral that all this is vanity, as thus:

"The emollient sweet of a lingering kiss
Has no power to charge the heart with bliss
When Cloyment deadens delight, I wis."
(P. 32.)

We should say that Cloyment must ensue quite rapidly on such delight as these verses give. But it must be owned that worse remains behind when we are told, in a circular by the publishers of 'Cleopatra, by J. C. J.' (San Francisco: Bancroft), that the first part of this poem was "written on a wager that the author [as a woman] could not treat the subject with the necessary warmth and color." This is certainly bidding pretty low, as regards both author and publisher, but the wager was clearly won, and the fact that the poems—which are quite worthless except in the direction here adroitly intimated—have reached their third edition, seems to imply that the author knew her San Francisco pretty well. But is not all this a curious subject of contemplation for the many who have hoped to see literature purified by feminine influence? When a mere man, like Algernon Sydney Logan, takes "Messalina" as a subject for a tragedy in five acts (Philadelphia: Lippincott), he has a theme far more repulsive than any treated by either of these ladies, and yet handles it in a much purer spirit. It would be a curious outcome of the present tendency if it should ultimately be necessary to debar carefully reared young ladies from all books written by their own sex, and limit them strictly to a literature supplied by men.

In 'Poems' by John Hay (Houghton, Mifflin & Co.) the well-known "Pike County Ballads" are put first, as if presenting their author's claim to eminence. It is already evident that he must have some higher claim, if any; they floated into popularity on the wane of Bret Harte, and must follow his ebb. Indeed, they are coarser in texture than his, and now seem even less genuine. Against them may fairly be set, by way of protest, the Deacon Brown, who is quite as fitly celebrated by Charles Henry Webb (John Paul), in 'Vagrom Verse' (Boston: Ticknor & Co.), who says of his hero:

"Ef he'd been a high-toned gamboller
Or the rough of a minin' camp,
With a bushel of sin in his kerrieter,
An' a touch of Sairey Gamp:
Or an injineer or an injin thar—
Any kind of a rum-histin' lout,
P'raps he'd a done some pretty big thing
Fur me to be splurgin' about."
(P. 23.)

But, as it was, Deacon Brown simply plodded on in "a good square way" till he was killed at Gettysburg. And so in regard to Mr. Hay, it is when he forsakes dialect and accepts the standards of civilization that he is strongest; as in his "Triumph of Order," and in this his one really profound and thoughtful poem:

THE STIRRUP CUP.

My short and happy day is done,
The long and dreary night comes on:
And at my door the Pale Horse stands
To carry me to unknown lands.

His whinny shrill, his pawing hoof,
Sound dreadful as a gathering storm;
And I must leave this sheltering roof
And joys of life so soft and warm.

Tender and warm the joys of life—
Good friends, the faithful and the true;
My rosy children and my wife,
So sweet to kiss, so fair to view,

So sweet to kiss, so fair to view—
The night comes down, the lights burn blue;
And at my door the Pale Horse stands
To bear me forth to unknown lands.
(P. 124.)

Several good volumes of selected verse have recently appeared. Mr. A. H. Bullen still continues his welcome explorations of the resources, seemingly inexhaustible, of the Elizabethan literature, and gives us 'Poems, chiefly Lyrical, from Romances and Prose-Tracts of the Elizabethan Age: with Chosen Poems of Nicholas Breton' (London: Nimmo). The selection and editing are admirable, as is customary with Mr. Bullen; and the book gives a renewed sense of the wealth and poetic range of that extraordinary period. In 'Songs of Fairy Land,' compiled by Edward T. Mason (Putnams), we have a remarkably attractive selection of poems on the theme indicated, including, we are glad to say, Hood's thoughtful and beautiful "Plea of the Midsummer Fairies."

Mr. George Johnston, whose 'Poets and Poetry of Cecil County, Maryland,' was once commended in these columns, has now followed it up by a similar work on 'The Poets and Poetry of Chester County, Pennsylvania' (Lippincott). Mr. Johnston is a literary delver so honest and industrious that it seems as if he might go into any newly settled county of South Dakota and turn up a nest of poets under every wayside stone. In Chester County he has found it easy enough, and he might almost have labelled his book 'Flora Cestrica,' after a similar work done in the department of natural history many years ago. His most notable authors are Bayard Taylor and Thomas Buchanan Read, but he has given minute biographies, with specimens, of more than eighty versifiers; and there is a pleasant Quaker flavor prevailing through the volume. Another volume which has the merit of a local coloring is 'Songs of Syracuse, and Other Poems,' by William Burt Harlow (Syracuse, N. Y.: W. B. Harlow). 'Bluebird Notes,' by Ira Billman (Funk & Wagnalls), has also a little out-door atmosphere, though scarcely enough to flavor so large a book.

'Poems of the Turf, and Other Ballads,' by Em. Peirce (Buffalo, N. Y.: The Wenborne-Sumner Co.), show nothing of the demoralization supposed to attend that "profligate animal" the horse, but they also show little of the poetic interest associated with him. The publishers of 'Helen,' by Campbell Waldo White (Chicago: Dibble), announce it as being "the American Lucile." But the first mortgage on the English work here mentioned was taken long ago by the author of 'Geraldine,' and it seems a pity that three poor books should be built upon the same model. 'Young Kon-

kaput, the King of Utes, a Legend of Twin Lakes, and Occasional Poems,' by Prof. Thomas Nelson Haskell of Colorado College (Denver: Collier & Cleveland), has a motive so generous that the reader readily ignores some grotesqueness in detail, and an evident absence of the sense of humor.

There are two really encouraging volumes in the latest American poetry. One of these is 'In the Garden of Dreams; Lyrics and Sonnets,' by Louise Chandler Moulton (Boston: Roberts Bros.); and it is encouraging because it shows a distinct advance in imagination, depth of feeling, and artistic execution, with a diminution of that over-sensibility which has threatened, in times past, to obscure this author's power. The other is 'The North Shore Watch,' by George E. Woodberry, a book which, while censured in some quarters as too cold and academic, has yet been accepted by many gratified readers as being full of promise. The influence of Matthew Arnold and Lowell is just as distinctly seen in it as are those of very different exemplars in Mr. Cawein's verse, but in a form how different! There is no direct and flagrant copying, nothing second-hand or enfeebling. As is apt to be the case with first volumes, the longer poems afford less sure indication of permanent acceptance than the shorter; but it may be safely said that the two sonnets written at Gibraltar have had but few equals in recent American or English literature, and are of themselves sufficient to make a reputation:

AT GIBRALTAR.

I.

England, I stand on thy imperial ground,
Not all a stranger; as thy buxies blow,
I feel within my blood old battles flow—
The blood whose ancient founts in thee are found.
Still surging dark against the Christian bound
Wide Islam presses; well its peoples know
Thy heights that watch them wandering below;
I think how Lucknow heard their gathering sound.
I turn, and meet the cruel, turbaned face.
England, 'tis sweet to be so much thy son!
I feel the conqueror in my blood and race;
Last night Trafalgar waked me, waits to-day
Gibraltar wakened; hark, thy evening gun
Startles the desert over Africa!

II.

Thou art the rock of empire, set mid-seas
Between the East and West, that God has built;
Advance thy Roman borders where thou wilt,
While run thy armies true with his decrees;
Law, justice, liberty—great gifts are these;
Watch that they spread where English blood is split,
Lest, mixed and sullied with his country's guilt,
The soldier's life-stream flow, and Heaven displease!
Two swords there are: one naked, apt to smite,
Thy blade of war; and, battle-storied, one
Rejoices in the sheath and hides from light.
American I am; would wars were done!
Now westward, look, my country bids good-night—
Peace to the world from ports without a gun!

PROCONSULSHIP UNDER THE BRITISH EMPIRE.—II.

Thirty Years of Colonial Government: A Selection from the Despatches and Letters of the Right. Hon. Sir George F. Bowen. Edited by Stanley Lane-Poole. 2 vols. Longmans, Green & Co. 1890.

THE three colonies which Sir George Bowen had hitherto governed all possessed representative institutions and responsible government. In such the Crown has only a veto upon legislation, and the home Government has no control over any public officer except the Governor. The general principle by which the Governor of such a colony is to be guided was laid down by the Duke of Newcastle, when Secretary for the Colonies, to be, "that when imperial interests are concerned, he is to consider himself the guardian of those interests, but in matters of purely local politics he is bound, except in extreme cases, to follow the advice of a ministry which appears to possess the confidence of the Legislature." Mauritius and Hong Kong, to which the Governor next proceeded, were both governed as Crown colonies. In such colonies the Crown has the entire control of legislation, while the administration is carried on by public officers under the control of the home Government.

From 1879 to 1883 Sir George Bowen governed Mauritius. That island, which Thiers called "the fair Malta of the Indian Ocean," is still very much of a French colony, although it is a British possession. With his knowledge of their language, and with his cosmopolitan character, the new Governor soon made himself at home with the islanders. He found, however, that as the Governor of a Crown colony he had at least three times more official work than as Governor of colonies like Victoria, Queensland, or New Zealand, where he was only a constitutional ruler. He then realized Louis XIV.'s dictum, *L'Etat c'est moi.* "You Governors of English Crown colonies are almost the only despots left in the world, and you are not even, as Voltaire said of Russia, tempered by regicide," remarked Gambetta to Sir George Bowen when the latter stopped for a while in Paris on his return to England. During his short term as Governor, Sir George gave his attention to questions of public instruction; a new labor code for the East Indian immigrants and their employers; the sanitary state and laws of the island; forest conservation and culture; irrigation and public works generally, and to numerous other questions. While he put up a monument to the memory of Paul and Virginia, he raised one to himself by the establishment of a public library and colonial institute.

The island of Hong Kong, which Sir George Bowen governed from 1883 to 1886, is the great entrepôt for European commerce with China and Japan. While Mauritius has suffered by the opening of the Suez Canal, Hong Kong has gained very much by the work of M. de Lesseps. From a pirates' stronghold Hong Kong has been transformed into a first-rate mart of commerce in the less than fifty years that it has been in the possession of Great Britain, by cession from China. The results of Sir George Bowen's rule in this colony were important. On his recommendation the Council was reconstructed so as to give the inhabitants a voice in the management of local affairs. A representative of the Chinese community, along with other unofficials, now took his seat at the board. Water supply, sanitation, and education were dealt with. The question of defence was urged upon all concerned, and, the colony being then free from debt, a loan of £200,000 was raised for fortifications. Mindful as he was of local affairs, it was, however, in his imperial capacity as Consular-Lieutenant that Sir George Bowen's tenure of office was memorable. It was while he was Governor of Hong Kong that hostilities broke out between the French and Chinese, and that war between Great Britain and Russia had nearly broken out. During these times the British Governor showed himself a wise and most capable, as well as patriotic, public servant. Had he listened to some of the people with whom he was surrounded, he could not but have embroiled Great Britain with France, China, and Russia. He maintained British rights and British neutrality, and at the same time preserved friendly relations with the belligerent Powers. Government House was made a friendly meeting-place for all comers. The Governor himself describes it as "a neutral ground on which English, French, American, German, Russian, Italian, Chinese, and Japanese Ministers, admirals, generals, and other high officers, on visiting this port, frequently met, and so learned to be in good humor with England, and, to some extent, with each other." No wonder that Lord Dufferin and other authorities congratulated the Governor upon the skill and tact with which he had preserved the peace of the world in that quarter.

The handsome hospitalities extended to strangers at Government House, Hong Kong, were as handsomely acknowledged by the neighboring governments when Sir George Bowen gave them the opportunity of doing so. The accounts which are given in the book of visits so paid are highly interesting, for the Governor saw things under every advantage. His visit to Macao, as the guest of the Portuguese Governor, gives a glimpse of that blighted colony, which, nevertheless, sends a representative to the Parliament at Lisbon. He had several interviews with Li-Hung-Chang, the Bismarck of China, and by him was entertained at a splendid banquet. Prince Kung, head of the Chinese Foreign Office, wrote to excuse himself for not asking Sir George to dinner, "because the Princess, one of my consorts, died last night," but he showed the British Governor the highest mark of Chinese respect by sending him a magnificent dinner of twelve courses, with two large *amphoræ* (just like those of ancient Rome) of Chinese wine from the imperial cellars. In Japan, the Governor was entertained as a guest of the State, in recognition of the hospitality he had shown to Japanese officials when visiting Hong Kong. Most interesting are some of the things Sir George Bowen has to tell us of the people whom he met. Thus, Li-Hung-Chang told him that he was himself in favor of external peace, and of the introduction of the railway and the telegraph, but that the country gentry and *literati* thwarted him in giving effect to his wishes. Sir George consoled the great man by remarking that the "country gentry and *literati*" of England, in the memory of men still living, were generally in favor of war with France and opposed to railways. In Japan Sir George Bowen found that some of the more advanced politicians seriously proposed to proclaim Christianity as the religion of the State, not because they believed in it themselves, but because they thought that a "heathen country would never be admitted into the full comity of nations"; such admission being, we are told, the ardent desire of every patriotic Japanese.

On the 19th of December, 1885, Sir George Bowen left Hong Kong on leave of absence. On his way to England he visited the Viceroy of India, his friend Lord Dufferin. At the close of 1886 Sir George resigned the government of Hong Kong, and, although it was again offered to him on the sudden death of his successor, Sir George Strahan, he made up his mind to retire finally from public service, with a view to entering public life in England, having some hope of a seat in Parliament. Had Sir George been a brewer, a railway director, a country solicitor, or a landowner, he might have had some ground for hoping for a seat in the House of Commons. His career as an imperial statesman would, however, have but little recommendation to constituencies whose representatives are elected upon questions affecting the parish rather than the empire. As a member for one of the universities, he may yet take his seat; but otherwise the ex-Governor must await the consummation of Imperial Federation, when he may make sure of becoming a Senator of the Empire.

The British Government having decided to

give a more liberal form of government to the colony of Malta than that dependency had hitherto enjoyed, Sir George Bowen was appointed, in 1887, one of the Royal Commissioners to visit Malta, and to report upon the electoral arrangements connected with the new Constitution. His knowledge of the Italian language now stood him in good stead. Having, among other matters, to report upon the mode of representation which should be accorded to the ancient nobility of the island, comprising twenty-eight families, the commissioners were waited upon by a deputation of the nobles. At the head of the deputation was the "Premier Noble," a charming girl of twenty-one, with a title conferred upon her ancestor by the Spanish King of Sicily in 1350, and with a pedigree of a terrible length. The recommendations of the Commissioners with regard to the political arrangements of the future were approved by the Government, and thus closes the last official act which the editor of the papers records.

To the official papers Mr. Lane-Poole has appended an address upon the subject of Imperial Federation, which was delivered before the Royal Colonial Institute in London in 1886. The consolidation of the British Empire seems to have early secured the sympathy of the ex-Governor, whose advocacy of the cause was solicited by the late Mr. W. E. Forster, himself one of its stanchest promoters. The question of Imperial Federation involves the union, in the first instance, of the outlying dependencies, as, in the case of the Dominion of Canada, has already been accomplished, and, as it would seem, will shortly be done in the case of the Australasian group. The next stage is that of the union with one another and with the parent state, under Federal conditions, of the Colonial States. Regarding the British Empire as one great commercial enterprise, the project of Imperial Federation is to raise the colonies from the position of dependents to the rank of partners in the concern. The colonies will be required to put capital into the business by bearing some share of the imperial burdens, and the parent State will share with them its present monopoly of the control of the affairs of the Empire. Something of the sort appears inevitable in the face of the vigorous growth of the Canadian, Australasian, and South African communities.

From beginning to end this book will be found of unflagging interest to those in any way concerned in affairs of state. Its pages reveal the practice of imperial sway on the justest and noblest principles. The correspondence is throughout that of men of the highest culture. The two volumes, with Walrond's 'Life of Lord Elgin,' the admirable Governor of Jamaica, Canada, and India, successively, should form part of the outfit of every Governor appointed by Queen Victoria; and the reading of them by any American statesman of the present hour must excite salutary reflections on the woful lack of administrative training and ability in this Republic.

Varieties and Synonyms of Surnames and Christian Names in Ireland. By Robert E. Matheson. Dublin: Thom & Co.

THE foregoing book was published, as the title-page informs us, for the guidance of registration officers and the public in searching the indexes of births, deaths, and marriages. It contains a list of nearly 2,000 surnames occurring in Ireland, with their variations and equivalents in common use. As many of the equivalents are to all appearance totally distinct names, it has been thought convenient to add a list of the districts where the more noteworthy occur; and the whole is supplemented by an index of the names in alphabetical order, numbered agreeably to the principal list. Variations in Christian names are also made the subject of a short chapter, the utility of which will be evident from one or two examples. Thus it appears that "Edie" occurs as the name both of a man and a woman, in the former case being a shortened form of "Adam." So, again, when we find that the same name may be written indifferently Alicia and Elisha, still more when Bridget or Delia may be the appellation of a person with *one* Christian name, the difficulties which have been encountered by the compiler of the work become apparent.

Although the nominal object of the publication is to assist persons whose business demands the easy recognition of names in their various forms, the three short preliminary chapters, touching as they do on the origin and philosophy of the changes which names in Ireland have undergone, appear to indicate that the work is, if not a labor of love, at all events something more than a register for official convenience. These chapters are in some respects the most interesting part of the book, for they deal with not the least attractive portion of the history of the loss to Ireland of her national language and literature. It is a peculiar feature, both of the Irish language and name-lore, that we are enabled to contemplate in them the actual process of change which, in the case of other peoples, is more or less conjectural. We can see how name after name has been corrupted by alien speakers, or has become unintelligible or not respectable, until finally another has been substituted. The change is of considerable antiquity, but it is probable that in former times it took place in both directions, according as the Celtic tongue, and therewith the Celtic nomenclature, forsook or reconquered the districts of plantation. But within the last hundred years Irish has given ground with unparalleled rapidity, and no doubt the name changes in that time have been all one way. Not to be overlooked as a factor in the process is the dispute into which Gaelic names have sunk through the apathy of their possessors or the prejudice of the upper classes. For it is scarcely credible that the mere desire of finding an English substitute could have dictated such changes as that of "Diarmuid" to "Jeremiah," "Murchadh" to "Mortimer," "Tadhg" to "Timothy" or "Thaddeus."

However, there can be little doubt that in many cases both caprice and accident have been at work in multiplying one name into many. A good instance is quoted by the author, of a district where the name "Markey," from Irish *marcach*, a horseman, has been replaced by the synonym "Rhyder" in certain families, both names thereafter remaining in fashion. The familiar Irish word *carraig*, a rock, has given birth to four different names, Carrick, Craig, Cregg, and Rock. *Craig*, it may be remarked, is Welsh for rock, borrowed by the Anglo-Saxon. The names "Phelan" and "Whelan" are so like each other that it seems scarcely necessary to explain that they are both from the Irish *Ui-Faolain*. A point has, however, been missed in the explanation given, for *f* before *a* in Irish has a sound nearly the same as *fw;* consequently, when the *f* is sunk by aspiration, the sound *wh* is the natural residue.

The few Gaelic words which are still the natural birthright of Irish-born persons are represented in the synonyms "White" and "Bawn," "Black" and "Duff" (*dubh*); "Waters" and "Uiske"; "Smith" and "Gow"; "Oaks" and "Darragh." Less well known are "Sheedy" (*sioda*), "Silk," "Quillan" (*cuileann*), "Holly." The common name "Whitehead" appears in its Irish form as "Canavan;" *Ceannbhan* is the Gaelic word for "Bogdown," or white, cotton-like flower of the rush.

Some of the equivalents are very puzzling. To those without experience even the more simple would present difficulties. Thus an Englishman would find it hard to see the connection between McCrory and Rogers. But strip the prefix from the former, the postfix from the latter, and we get the intelligible substitution of Roger for Ruaidhrigh or Rory. The transformation of Connor into Nober is easy to understand, bearing in mind the liability of initial *c* to degenerate into *h*. In the same way McCavish for Combes, and McTavish for Thompson, are instances of the tendency of *m* in an Irish mouth to become *v*. Keary for Carey, McGurl for McGarrell, and Rountree for Rowantree, are instances of Irish methods of pronunciation which no one with a pair of ears could fail to notice.

We cannot forbear quoting as an example of the difficulties which beset the name-fancier one that has occurred in our own experience. The name "Footwengler," which appears over a shop in one of the streets of Dublin, was for us an unsolved riddle till, passing down the Strand, London, by chance we saw a name which, while scarcely differing in sound, supplied a clue to the mystery. This name was "Furtwangler," and the corruption affords a good illustration of the facilities for deception caused by the erroneous division of compound words. In the case of Irish names the clue is often to be sought, as Joyce has pointed out, in the traditional pronunciation preserved in the locality where the name occurs.

It is somewhat ludicrous to reflect on the different fate which has befallen the seemingly French termination, "ville." This, in the names Woodville and Mandeville, is thought to mean the prince of darkness. But in Ireland, in the name Melville, it signifies his principal antagonist; for Melville is the synonym of Mulvehill, and the formula for Mulvehill is *maol-mhicill*, the slave or tonsured priest of St. Michael. The latter part of the name is correctly preserved in the more ordinary equivalent, "Mitchell." Interesting, also, are the two distinct synonyms, each with its own varieties, which we find for Johnson—McKeown and McShane. Eown (or, correctly, Eoin) is the Irish Scriptural equivalent of John. Shane, of course, owes its origin to the Gaelic mispronunciation of English *j*.

Those interested in the variation of names through illiterate spelling or obscure pronunciation should consult the list itself, which contains numerous examples of modifications arising from those sources.

A History of Philosophy. By J. E. Erdmann. English translation edited by W. S. Hough, Ph.M. 3 vols. Macmillan & Co. 1890.

ERDMANN'S 'Grundriss der Geschichte der Philosophie' has been for the last twenty-five years a standard handbook in Germany. Revised and enlarged again and again, it now, in the final form given it in 1878, offers a conspectus of human thought from the times of Thales to the present day. The learning shown in it is large, the arrangement orderly, the mental candor unusual, the point of view—that of Hegel—clear and frankly acknowledged, the style perspicuous and without affectation. These are excellences enough to make a book

of solidity and serviceableness. Erdmann's is something more: it is a book of a certain distinction. Homely as it usually is, on every page we encounter not the dryasdust compiler, but a freshly working mind, full of sympathies and beliefs, individual in its attitude, its processes, and its terms of expression. Strength and honesty of personality give a winning impress to large scholarship.

"The open, I might almost say the innocent (*unschuldigen*) character of my book would have lost its physiognomy if I had copied from others without verification. Everything I have made an author say has always been found in him with my own eyes."

This is the spirit and method of the book. A hard-working man, of no great cleverness, tells what he himself has discovered. "The gratifying consciousness that I have not deviated from this singleness of view (*i. e.*, that not chance and planlessness, but coherence, rules the history of philosophy) will be felt, if I mistake not, by the attentive reader."

In a similarly individual fashion, the bibliography makes no attempt at completeness. Titles are selected according to a "wholly subjective principle," that of naming those books which have been of value to the author himself. Humanity, frankness, and inclination to first-hand judgment stamp the entire work. In reading it one feels himself safe from the hands of the bookmaker.

Yet Erdmann's work has not the evenness of execution which the bookmaker is careful to secure. The parts are treated with widely different degrees of thoroughness. The Greek and Roman period, having been already exhaustively discussed by Zeller, is here condensed into about one-third the number of pages which the mediæval occupies. Indeed, it is scholasticism which is treated with the greatest fulness and affection. The three or four hundred pages devoted to it form the best part of Erdmann's book, and perhaps the best compendious statement of the subject now existing in English. Whether through distaste or through less ample knowledge, slighter favor is shown to the English schools, especially the Sensational. A scant hundred pages suffices for them all. With Hegel, at the conclusion of the second volume, the history ends; but a third volume is added in the form of an appendix. Here are given accounts of recent German philosophy, accounts more fragmentary, but still valuable because not easily to be obtained elsewhere. An index of proper names concludes the whole, and each of the first two volumes is also supplied with its own special index. Indeed, each volume might well stand alone as an independent work.

Among English books this translation of Erdmann will find a welcome place. It is not a philosophical dictionary like Ueberweg, nor a smart piece of newspaper writing like Lewes. It is not condensed beyond understanding like Schwegler, nor distended beyond endurance like Maurice. The stamp of the facile lecturer is not upon it, as on Bowen's 'Modern Philosophy,' nor the awkwardness of the half-informed compiler, as on Bax's 'Handbook.' No excellent history of philosophy has yet appeared in English. This cannot be called excellent. There is no mark of genius about it. Seldom is it swiftly enlightening. Weber's 'Histoire de la Philosophie Européenne' excels it in skilful neatness of exposition; Windelband's 'Geschichte der Neueren Philosophie' in weight, in breadth of view, and in power of compact statement; and of course Kuno Fischer's 'Geschichte' in scale and brilliancy. But it is a good average book, with a human being behind it; one whose honesty, patience, and learning everywhere commend him to our respect. Whether such a book may be profitably read from cover to cover, may be doubtful; but it certainly will piece together helpfully that acquaintance with individual philosophers which has been acquired elsewhere. The translators deserve the thanks of English readers for the success with which they have performed a very difficult task.

Decorative Design: An Elementary Textbook of Principles and Practice. By Frank G. Jackson, Second Master in the Birmingham Municipal School of Art. London: Chapman & Hall.

ACCORDING to the preface, this book is "based upon a course of lectures delivered at the Birmingham Municipal School of Art," and "its object is to assist young students in their early decorative attempts by showing them the constructive origin of ornamentation, and to place before them such guiding principles and orderly methods as are found to underlie all true decoration of every kind." Judging from internal evidence, its object is to enable young students, with the least possible study, to produce a merchantable article of design; and its title should be 'A Mechanical Method of Designing Wall-paper.'

A few of the more obvious "principles"—repetition, variety, contrast, symmetry, and radiation—are disposed of in the first chapter; a bald account of the symbolic origin of certain decorative forms occupies the first part of the second chapter; and then, with a sudden and irrelevant "hence," the "practice" begins:

"Hence, let the student begin his practice by drawing a few lines, at equal distances apart, and others crossing them at right angles, producing square meshes; then emphasize certain portions, after the manner of the examples shown on Plate VII.; and he will, by exercising a little ingenuity, having regard to contrast of line and varying quantity, be able to evolve various patterns, more or less pleasing."

Practically all the rest of the book is taken up with the development and enriching of the "patterns" thus "evolved" by the exercise of "a little ingenuity." The continuous diaper is almost the only form of ornament dealt with, and a rigidly mathematical symmetry is constantly insisted on, all the higher forms of decoration being entirely ignored. In the same way, all natural forms of a higher order than plant-life are left out of the count, while color is nowhere mentioned between the two covers. Such a treatment is not "elementary," it is simply one-sided. On the other hand, it is eminently "practical," and we have no doubt that Mr. Jackson's pupils learn, in a remarkably short space of time, to produce a salable commodity.

It is a vexed question whether or no design can be taught at all. Mr. Jackson says: "If by the use of the term design, pure invention is meant, then undoubtedly it cannot be taught; it is an impossibility. But if, on the other hand, simple composition or arrangement is implied, then it can be taught, for the laws that govern composition are capable of demonstration." Perhaps so; but if composition can be taught, it is not by such kindergarten methods as these. Also, it would be well that the teacher should be a man who is himself capable of producing good design, and such a man, judging from the head and tail pieces which he has furnished for this book, as well as from the examples, Mr. Jackson is not. They are altogether empty and characterless.

The only chapters of any interest are that on "brushwork," in which the author attributes the origin of the Greek "honey-suckle ornament" to a mere inventive arrangement of brush strokes rather than to a conventionalism of the lotos or any other plant form, and the final one on the development of the acanthus. The style of the book is often slovenly and confused.

The Salmon Fisher. By Charles Hallock. New York: Harris Publishing Co. 1890.

THE titles of the chapters of this excellent book give an idea of its contents, *e. g.*, "The Distribution of the Salmon," "Life History of the Salmon," "Technology of Salmon-fishing," etc. The first and second chapters named are the most valuable, and are certainly an addition to the slowly growing mass of information about this mysterious fish. Mr. Hallock says, in refutation of the commonly received opinion that the salmon of the Pacific Coast never takes the fly, that in several rivers, notably the Clackamas in Oregon, the fish rise freely, and that from one pool in this river fourteen salmon have been taken by one rod in a day. On page 19 he confirms a fact known but to few, that there is a late autumn run of salmon which remains all winter in the headwaters of various of the Laurentian tributaries. This accounts for the June kelts, so frequent in many of these rivers, which it is not reasonable to suppose come from the fish that ascended ten to twelve months previous. Two hundred of these fresh-run autumnal fish were taken last winter with nets through the ice in the River St. John, thirty miles from its mouth. We cannot agree with Mr. Hallock's belief that the winninish shares the habit of the salmon in visiting the sea, the belief being based on the fact that no observations have proved that he does not. There are many rivers accessible to the sea in which we know positively that the trout remains the year around, though in the same rivers there are migratory trout; and we further know that in some rivers a portion of the trout migrate, while others pass their lives without a smell of salt water. As regards the winninish, we think that the burden of proof rests on those who assert that they go to the sea, and until this habit is established the statement that it exists cannot stand.

Mr. Hallock devotes considerable space to the question of salmon feeding in fresh water. This would not be necessary in a book written for people who are more familiar with the subject than Americans, but the prevailing belief here is that the salmon takes his last meal for several months before entering fresh water. How this belief can maintain itself in the face of the mass of evidence to the contrary is very strange. The fact that food is very seldom found in the stomachs of ascending salmon is held to prove that they never feed, and that the flies, artificial and natural, they rise to, and the numerous baits they greedily take, are only seized in sport. That nature has given them the power of long abstinence from food in fresh water is, we think, undoubted, as well as that their appetites then become capricious and irregular. Mr. Hallock quotes from a contributor to the *Fishing Gazette* who thinks that salmon in fresh water are not only voracious, but omnivorous, and states that bait-fishing is becoming more and more in vogue in the Scotch salmon rivers.

Regarding the quantity of food consumed by ascending fish, Mr. Hallock advances the theory that they feed on the sandworms, which exist in salmon rivers, and are not seen by reason of being nocturnal in their habits at other times lying concealed in burrows under stones on the bed of the rivers. These creatures are soft and

pulpy in consistency, and rapidly dissolve in the stomach of the salmon. That a sufficient quantity, however, of these annelids exist in fresh water (for they are essentially marine forms) to assuage the appetite of so voracious a fish as the salmon, when at its full strength, may be questioned; and that other food in the shape of minnows, small trout, parr, and flies are not plentiful enough to do this in a well-stocked salmon river is certain. Salmon can and do live for months before spawning, in ponds of running water made for the purpose, without material loss of condition or failure in the development of the ova, which, with other reasons that want of space forbids our mentioning, proves their ability to subsist for months with scanty and occasional food. That they do feed, however, and at times with eagerness, in fresh water is amply established.

In the chapter on the "Technology of Salmon-fishing," Mr. Hallock says (p. 62), that "the only way is not to strike when a salmon rises, but to let him pull the point of the rod down three or four feet, and then fix the hook in his jaw by a gentle lifting of the rod," etc. While this is true of rivers where the current is uniformly strong and heavy, the angler who makes it a hard-and-fast rule will find that, in the smaller and less impetuous streams, he will get but few fish by this method, for in such rivers the salmon rise like the trout and detect the cheat quite as quickly. In several of the streams running into the Bay of Chaleurs, the salmon must be struck the instant the rise is seen, to insure hooking him, while in the larger ones Mr. Hallock's advice is perfectly good. There are various other instructions in the art of salmon fishing, and information as to the habits of the salmon, with an itinerary of salmon waters and an account of some remarkable fishing on the Godbout River, all of which are well worth reading. Mr. Hallock's little book is an important one in its subject, and will repay perusal by all interested in angling or ichthyology.

Girls and Women. By E. Chester. [The Riverside Library for Young People, No. 8.] Boston: Houghton, Mifflin & Co. 1890. Pp. 228.

It is seldom that one has occasion to praise a book of advice to women. There is no subject on which so much that is foolish and trivial has been written, and almost nothing has been written on it which any right-thinking mother would wish to put into the hands of her daughters. But this little volume, which can be had in an attractive dark-blue binding for the modest sum of seventy-five cents, is of a totally different calibre from the usual writing on the subject, and, in fact, from writing that is usual on any subject. In clearness and force, in temperance, in wisdom, and in elevation of feeling, it is not too much to say that it is a very remarkable book. If all young girls who are now growing up, and all older people who are not too old to be changed, could be got to read it and to ponder it in the quiet of their own rooms, it is not easy to say how much the world might be made the better thereby.

The most remarkable thing about this book is its real point of view. Too much that is said to women rests upon the assumed basis that, because women suffer certain evils, they are marked out by Nature for self-sacrifice, and that any movings they may feel towards a life of their own ought to be rigidly suppressed. It is true that much that is different from this is thought, but it is this wishy-washy view of the situation which most commonly gets itself expressed. Miss Chester is wholly a modern. She takes it for granted that her girls will be thoroughly educated, and that, whether they marry or not, they will readily, if not naturally, turn to some science or to some form of literary or artistic activity, as the outlet for at least a considerable portion of their energies, in all those cases in which their energies are not used up in self-support. On the other hand, if any one has supposed that the modern view, which regards women as an independent creation, is destined to rob them of the sweetness and beauty of character which have characterized them in the past, he will be reassured by the tone of this book; he will see that a profound feeling of intellectual responsibility not only is not incompatible with a high ideal of noble living, but is one of its essential elements, and that it creates a strength of character with the aid of which sweetness is a far more effective weapon for the regeneration of the world.

Miss Chester gives a large number of instances of girls, now middle-aged women, who have ordered their lives wisely, or not, under widely differing circumstances. She shows keen powers of psychological analysis in estimating the degrees and kinds of happiness and unhappiness that have attended their theories of life; but, more than that, she makes them wonderfully effective as incentives and warnings to the girls whose lives are yet to be ordered. And it is not only girls who may profit by her expositions; almost any one may learn wisdom from her in the difficult task of choosing, at every moment, the best that circumstance may offer.

The quality of Miss Chester's book is not easy to illustrate by extracts. It is chiefly a matter of tone—that is, of a higher kind of style—and only its admirable simplicity is apparent at the first glance. It is rather by contagion with a fine nature than by direct argument that books aimed at changes of character accomplish their work. In this book, however, the cogency of the presentation is no less remarkable than its persuasiveness. The reviewer has nothing to do but to wish that it may have a very wide circulation.

Views and Reviews: Essays in Appreciation. Literature. By W. E. Henley. Charles Scribner's Sons. 1890.

This collection of the more permanent portion of a journalist's literary reviews for the past fourteen years is a fair example of the minor criticism of the period, and is characterized by the best qualities for which our journeyman-work is often praised. Its range includes a considerable section of French literature, from Hugo, Dumas, and Balzac to Banville, Champfleury, and Labiche, but the English subjects are the more numerous. The novelists easily hold the leading place in the volume. Richardson, Fielding, Thackeray, Dickens, George Eliot, and George Meredith, with Tolstoi and the three great French story-tellers already named, are all critically touched upon, with intelligence and without enthusiasm; and the remainder and slighter part of the collection consists of short paragraphs upon such authors as Herrick, Gay, Byron, and others of the classical poets who have been revived by books of selections in the last decade, or upon Dobson or Tennyson's last volume. The traits of the time reflected are thus our predominant interest in the novel, the literary attention given by English writers of the new generation to poets of a rank below the first, and the very small original production of the time. The matter of the book is of a piece with its period—it is distinctly *petite*. It is very well-informed, good-tempered, restrained in both praise and blame, non-committal, modestly independent; the style is slightly artificial, full of adjectives like "plangent," of turns of phrase, of smart quotations; and the excellence of the whole is very even, neither better nor worse than the thousand similar notices of books that have appeared in reputable journals in England in the same space of time. The only unfavorable remark to be made is that there is so little original force in the volume that, when it has been read, one remembers hardly anything that the critic has said; a dislike of George Eliot and of Browning, not very openly expressed, is almost the only impression one gets of the author's personality, and that is a very trifling thing. One does not like to say that it is commonplace, and yet it is without distinction either of style or thought. It is petty criticism; but when so much else in our current literature is petty, what need to single out the fault in this instance?

Dr. Muhlenberg. By William Wilberforce Newton, D.D. [American Religious Leaders.] Boston: Houghton, Mifflin & Co. 1890.

The occurrence in the fourth line of Dr. Newton's preface of such a false note as "the brilliancy of Channing"—for he was never brilliant—may well make the reader bodeful of the book to come; but if he is so, he is disquieted in vain. It is a tribute of glowing admiration to a man deserving of it all. It has too much of the nature of a commentary on what is generally known: the author goes soaring away in his rhetorical balloon when we would fain keep him down upon the solid earth, and ask him a few simple questions as to various details of Dr. Muhlenberg's activity. But the rhetoric is always forcible, and often eloquent. It is seldom so much lacking in simplicity as in the following variation of a well-known proverb: "The electric glare of too great familiarity tends to do away with that healthful obscurity which is necessary to conserve and recruit the world's great personalities." Some of its phrases are extremely happy, as, for example, one describing a certain type of Catholic sentiment as "the fungous accretion of a cavernous antiquity." Dr. Newton's spirit, as here manifested, is exceedingly broad and kind. We are not less drawn to him than to the subject of his sketch.

The story of Dr. Muhlenberg's life is briefly told in forty pages. He was a descendant, with three intervening generations, from "Father Muhlenberg," one of the most active founders of the Lutheran Church in America. In this church William Augustus Muhlenberg was born September 16, 1796. In 1817 he took deacon's orders in the Episcopal Church, priest's orders in 1820, at which time he took charge of "a Low German society, without ideas, without refinement, almost without language," in Lancaster, Pa. There his vocation was quite as much educational as ecclesiastical, and in 1826 his desire to realize his ideas of the education of youth took him away from parish work to a school at Flushing, L. I., where he worked successfully for ten years, and was in a fair way to establish St. Paul's College on a liberal foundation when the crash of 1837 came near to spoiling all. The projected buildings were not built, but the college went into operation in quarters of a provisional character, and Dr. Muhlenberg gave himself, heart and soul, for eight years, to the spiritual leadership of the work, only ceasing when, in 1845, all could raise his flowers because all had the seed. His next enterprise was a free church

in New York, the "Church of the Holy Communion," out of which came in time St. Luke's Hospital, and a Deaconess Sisterhood to carry on its work, with much besides. Meantime Dr. Muhlenberg put much of his strength into an endeavor "to emancipate the episcopate," and "unsectarize the Church," and in 1866 was born "St. Johnland," "the child of his old age," a village community on Long Island, with special reference to the needs of old men and children of both sexes, especially cripples. What was intended more than this is left painfully obscure. Here Dr. Muhlenberg was buried, near his dear and noble friend, Dr. Washburn, April 12, 1879, his death occurring on the 8th, after a brief illness.

What we miss most in Dr. Newton's short account of Dr. Muhlenberg's life is some link between it and the contemporary world. There is not a hint that he was ever touched by any of the great events occurring in America during his later manhood. Yet he was not the conventional ecclesiastic, trying to give everything an ecclesiastical stamp. His field was the world; his ambition, to make the Church largely effective for educational, charitable, and social ends. Dr. Newton follows up his biographical summary with a chapter on "The Development of the School Idea in American Church Life," and rightly claims for Dr. Muhlenberg an important influence upon it. Those who prefer a purely secular education will think his energy so spent might have been better used. Next we have a chapter on "The Type of Churchmanship of which Muhlenberg was the Creator," the "Evangelical-Catholic" type; and, continuing the subject, one on "The History of the Memorial Movement," *i. e.*, of the Memorial to the House of Bishops by Muhlenberg and others advocating the Episcopal right to ordain those not strictly Episcopalians, and favoring a certain freedom of worship unlimited by the "Book of Common Prayer." These chapters are extremely interesting, and show Dr. Muhlenberg in a very pleasant light. His fondness for ceremonial observance brings into sharp relief his freedom from its bonds. It is evident that he was frequently and sometimes wilfully misunderstood. His multiplication of religious services in his own church did not imply a multiplication of them for the individual —to this he was opposed; but he desired frequent opportunity for all. That his beloved Episcopal Church was a church for rich men only was to him the gall of bitterness, and he did his best to take the curse away. A fifth and again very vague chapter is devoted to St. Luke's Hospital and the Deaconess Sisterhood and St. Johnland. A final chapter attempts to measure Dr. Muhlenberg's influence, and finds it considerable in all the particulars of his activity. But it must be confessed that it was least in that which was most central to his heart's desire—a closer sympathy of the different sects. Some of his hymns have had wide currency in all the churches. The best known, "I would not live alway," was written in his early manhood, and had not the approval of his maturer judgment. The changes that he made in it bettered its thought to the injury of its form, and it is not probable that they will be generally adopted. The original hymn is one that less and less expresses the consciousness of a Christianity which appreciates the meaning of this present life.

With six pictures by Garrett, is MARY E. WILKINS'S delicately humorous contribution to the (August)

MIDSUMMER

WIDE AWAKE

(*20 cents, everywhere*).

Grant Allen has a popular scientific paper about "The American Water Lily," followed by "The Queen Lily," by Miss Harris, and that by a legendary poem, "Water Lilies," by Frances L. Mace. The Amateur Photography article has some very curious and beautiful pictures. Mrs. Jessie Benton Fremont's will-and-way story,

The Hat of the Postmaster,

is notable and notably told. There are interesting instalments of the serials, "*The New Senior at Andover,*" and "*The Quest of the Whipping Boy.*" Louise Stockton has a singularly suggestive "Game of the Senses," for young and old. And there are *80 pages of Vacation Delights.*

The White Mountains

A Guide to their Interpretation.

With a Map of the Mountains and Ten Illustrations.

By Rev. JULIUS H. WARD. 12mo, cloth, gilt top, $1.25.

Mr. Ward has spent his summer vacations in the White Mountains for several years, and has entered deeply into their life and meaning. This book is both a guide to a better knowledge of the White Hills and a souvenir of what one finds in them.

D. Appleton & Co., Publishers,

1, 3, and 5 BOND STREET, NEW YORK.

For Immediate Publication:

German Composition.

By CHARLES HARRIS, Professor of German in Oberlin College.

This book consists of progressive selections, each complete in itself, accompanied by notes and vocabulary. It is intended to give abundant materials for exercise in the writing of simple German, and is compiled in the belief that the first need of the student is much practice in easy exercises, rather than the slow and laborious writing of more difficult ones.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN, for the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

To Clubs, Libraries, Colleges, Schools, etc.

The Nation.

NEW YORK, THURSDAY, JULY 31, 1890.

The Week.

A PAINFUL impression will, we think, be produced upon the country by the Bering Sea correspondence—painful because it shows that we have not advanced an inch towards a settlement of the difficulty since Mr. Bayard went out of office, but have rather receded from one which then seemed to be in sight. Another painful circumstance (although this view will not be shared by all) is that the correspondence on our side is so conspicuously Blaineish—that is, so full of twists and dodges—that the nation is bulletined before the world as a pettifogger. It is really difficult to make out from Mr. Blaine's papers what our position is. He holds in one place that seal-catching in open waters is *contra bonos mores*, by which, probably, he means that it is piracy under the law of nations. Lord Salisbury understands that this is the meaning of *contra bonos mores* as used by Mr. Blaine, since anything else that is done *contra bonos mores* on the high seas in time of peace can be punished only by the nation whose ships have been guilty. He accordingly argues against Mr. Blaine that seal-catching is not piracy under the law of nations—a point not difficult to establish. Then Mr. Blaine shifts his ground and tries to maintain that we derived from Russia by purchase exclusive jurisdiction in Bering Sea, and when Lord Salisbury points out that we denied Russia's exclusive jurisdiction before the purchase, quoting the celebrated Adams despatch, Mr. Blaine retorts, in an offensive way, that Lord Salisbury has misquoted the Adams despatch so as to make it "defective, erroneous, and misleading." How far these adjectives are justly applicable may be seen by placing the two in juxtaposition:

Lord Salisbury's quotation from Mr. Adams:

"The United States can admit no part of these claims: their right of navigation and fishing is perfect, and has been in constant exercise from the earliest times throughout the whole extent of the Southern Ocean, subject only to the ordinary exceptions and exclusions of the territorial jurisdictions."

Full text of Mr. Adams's paragraph:

"The United States can admit no part of these claims. Their right of navigation and of fishing is perfect, and has been in constant exercise from the earliest times, after the peace of 1783, throughout the whole extent of the Southern Ocean, subject only to the ordinary exceptions and exclusions of the territorial jurisdictions, which, so far as Russian rights are concerned, are confined to certain islands north of the fifty-fifth degree of latitude, and have no existence on the Continent of America."

Territorial jurisdictions confined to certain islands! What does that mean? It depends, of course, upon the meaning of territorial jurisdiction. If that is, as Lord Salisbury contends, and as Mr. Adams contended, a jurisdiction within three miles of the land, then the omission of the last few lines of the quotation was of no importance whatever. But Mr. Blaine's strong point, and the one which he insists upon to the last, and with a sort of triumph, is that the British Government suspended the negotiation for a time, while Mr. Bayard had it in charge, at the request of the Canadian Government. This would be conclusive on our side if the suspension had been continued. It was perfectly reasonable that the British Government should wait for fresh information from any source. If we had suspended negotiation for a time in order to hear what the Alaska Commercial Company might have to say, and if Great Britain had brought that up as an offence against us, we should have been very much surprised. It is extremely Blaineish, too, to make it an objection that Great Britain has "encouraged" her subjects to commit these acts *contra bonos mores* when the point in dispute is whether the acts are *contra bonos mores* or not. If they are not, then they may be lawfully encouraged, although it does not appear how Great Britain encouraged them except by letting them alone. Upon the whole, we find here much justification of the remark made a few days ago by Senator Frye to Mr. Blaine, viz.: "Your letter leaves me in some doubt as to the facts."

Mr. Blaine has written another letter to Senator Frye in defence of his project of reciprocity with Cuba and the southern portion of the American hemisphere. In reply to Mr. Frye's request for detailed information as to what we might expect from Spain, he points in a general way to the treaty of reciprocity negotiated with Spain by Minister Foster, under the Administration of President Arthur. "Your question surprises me," says Mr. Blaine, "for you cannot have forgotten that only six years ago the Prime Minister of Spain, in his anxiety to secure free admission to our markets for the sugar of Cuba and Porto Rico, agreed to a very extensive treaty with Mr. John W. Foster, then our Minister at Madrid." Leaving Mr. Frye to digest his surprise as he may, we note (and this is a very important matter) that the sugar duties were touched upon in the Senate debate on the McKinley Tariff Bill on Friday, and that Senator Aldrich, who has charge of the bill, said that, whenever the Chairman of the Committee on Appropriations had prepared his statement of the probable expenditures and of the probable receipts, the Finance Committee would take into consideration whether the Senate could afford to make such a large reduction of the duty on sugar. This was in reply to questions put by Senators Plumb and Gorman. The former complained that there had been no detailed statement of receipts and expenditures, and the latter asked Mr. Aldrich to give such a statement approximately. Mr. Aldrich said that if importations were the same as before, the revenue would be reduced about $20,000,000. Mr. McKinley himself had estimated the reduction of revenue from import duties alone at $60,936,536. A discrepancy of $41,000,000 in the two estimates is not to be accounted for by the few changes recommended by the Finance Committee. As to the expenditures Mr. Aldrich could give no information, but he said that his Committee would not create a deficit knowingly. All this tremulousness works in favor of Mr. Blaine's project. If it is ascertained, as seems now most probable, that the revenue from sugar cannot be spared, it will be the shortest way out for the Republican party to say that these duties are reserved temporarily for the purpose of securing reciprocity and a wider market for agricultural products, the real purpose being to avoid a deficit.

After weeks of silence the *Tribune* in its Sunday issue ventured to say something about Mr. Blaine and reciprocity and the sugar duties. What it says, however, is extremely murky and indecisive, as becomes a muzzled newspaper. It thinks that Mr. Blaine must have reasons for the views he has advanced, which he cannot disclose because they are of the diplomatic sort. In other words, the *Tribune* is in exactly the plight of Senator Frye. Mr. Blaine's letters have left it in some doubt as to the facts. If so, Mr. Blaine can hardly be surprised, as he was in Mr. Frye's case, because he knows that muzzled newspapers are always in doubt. On one point, however, the *Tribune* is free from doubt. It sees that the sugar duties have a close relation to the autumn elections, and that the Republican leaders are going to vote with Mr. Blaine or against him, according as they may consider their own seats in Congress affected thereby. It is thus possible that they may agree with Mr. Blaine in principle, but oppose him in practice. Finally, it says that Congress and the Administration must be brought into harmonious relations on these national and continental issues. This is a perfectly safe position for a muzzled newspaper to take. The only wonder is that the *Tribune* was so long in finding it.

Congressman Butterworth is reported to have in mind an intention to ask Congress to postpone final action on the McKinley Tariff Bill till the next session, in order that its danger of acting as a complete bar for foreign exhibitors at the Chicago World's Fair may be averted. He has been informed by the managers of the Fair that the success of it is imperilled by the fact that foreigners will not think of asking for space while they are threatened with the passage of a bill which is framed for the avowed purpose of excluding from the country the goods which they might wish to exhibit. Just how postponement will improve the outlook, Mr. Butterworth does not say. The idea that unsuspecting foreigners

could be beguiled by postponement into taking space for exhibits, and that, after we had got them pledged to show their goods, we could clap on prohibitive duties and they could not escape the obligation to display their wares in a market in which they could not hope to sell them, is too childish for any one to entertain seriously. A World's Fair which should depend for its international character upon a cheap trick like that would not rise above the level of a Wanamaker Bargain Counter.

The price of silver has receded a fraction from its highest point since the new Silver Act was signed by the President. Apparently the speculation due to the action of Congress has exhausted itself. Very likely some of the governments of Europe have availed themselves of the opportunity to "unload," but if they have done so, they would keep the matter as secret as possible. Probably the future course of the market will be downward, because the advance of 10 per cent. in the price that has taken place must stimulate the production everywhere. But it is a mistake to suppose that the "goldbugs" are dismayed or disappointed by the advance. Nothing that could happen would please them so much as to see silver advance to $1.29 per ounce, when our legal ratio of sixteen to one would be re-established. They would not be sorry to see it go even higher. Anything which should deliver us from the everlasting turmoil about silver would be eagerly welcomed.

Mr. Leech, Director of the Mint, speaking of the new Silver Act, says in the first place that the purchases of silver will be made in accordance with the letter and spirit of the bill. They will be 4,500,000 ounces per month. Of this there has never been any doubt in any rational mind, although some of the extreme silverites in the Senate pretended to doubt it when they were trying to defeat the conference report on the bill. Next Mr. Leech thinks that the new act "will expand the volume of money in circulation" more than the former law did. The reasons he gives for this belief are two in number: (1) that the new Treasury notes are full legal tender, and (2) that these notes are actually paid out for bullion, whereas under the old law the payments were made out of money in the Treasury, *i.e.*, by checks on the Sub-Treasury. Both of these reasons are, in our judgment, fallacious. The legal-tender character of the new Treasury notes gives them no advantage over the silver certificates for purposes of circulation, unless it can be shown that some people somewhere are in the habit of refusing to take silver certificates. No such instance can be found. As to the second reason, it is easy to see that the sellers of bullion will deposit their Treasury notes in the banks, and the banks will meet the Sub-Treasury the next day at the Clearing-house, and will turn in for redemption all that are not wanted for purposes of circulation—all that commerce has no demand for. Whether this latter sum will be greater or less, nobody can tell in advance of the experiment, but it is certain that the sponge when full will hold no more of one kind of currency than of the other kind when both are at par with gold.

Minnesota and Nebraska are two of the strongest Republican States in the West, which is the stronghold of the Republican party. Each of them always gives a thumping majority for the Republican candidate in every Presidential campaign. In 1888 Nebraska cast 108,425 votes for Harrison, against 80,552 for Cleveland; while in Minnesota the Republican candidate received 142,492 votes, against only 104,385 for the Democratic nominee. Republican State Conventions were held in each of these States on Thursday. The preliminary canvasses had been full of interest, and the conventions were largely attended. It was consequently assured in advance that the convention in each State would be fairly representative of party sentiment in the State, and that the platforms would correctly reflect the attitudes of Republicans in two strongly Republican States towards the issues of the day. Each convention adopted a long platform, and there is no lack of words as to the position of the party in either State towards the tariff issue, the silver question, and the matter of pensions, as well as regarding other questions which are up for public discussion. For example, each platform has a plank regarding the need of ballot reform, and calls for the adoption by the Legislature of the Australian system. But as to one issue each platform is absolutely silent, and it is what the bloody-shirt leaders have declared to be *the* issue of the day. Neither in the Minnesota platform nor in the Nebraska one is there a single word in favor of the Force Bill, which is now before the Senate.

This is a slap in the face to the bloody-shirt faction, and will do much to swell the rising tide of opposition to their policy among the Republican members of the Senate. When State conventions meet in two of the strongest Republican States in the Union, and each of them refuses to say a word in favor of the Force Bill, nobody can any longer keep up the pretence that the party demands its passage. Senator Paddock of Nebraska has already announced his opposition to the scheme, and the course of Thursday's Convention at Lincoln shows that the Republicans of his State wish both of their Senators to vote against the bill. Senator Washburn of Minnesota was quoted the other day as saying that the people in his part of the country have no interest in the Force Bill; and the action—or rather the non-action—of Thursday's Convention at St. Paul shows that he was entirely right. Moreover, the attitude of these two conventions towards this question shows that such leading Republican newspapers as the Omaha *Bee* in Nebraska and the St. Paul *Pioneer Press* in Minnesota have correctly represented the sentiments of the party in their earnest opposition to the Force Bill. In view of all this, how humiliating is the position of the muzzled organs, like the New York *Tribune* and the Philadelphia *Press*, which meekly followed the orders of Chairman Belden and called for the passage of this odious measure!

The memorial against the passage of the Force Bill which is being signed by the Republicans of Alabama, under the leadership of ex-Gov. Smith, is a document of much force. One objection to the law which is made prominent is the fact that its enforcement in any locality is made to depend upon the petition of a number of citizens, and the petitioners are "put in the position of accusing their neighbors of dishonesty and fraud, which will be resented, and, in all probability, end in strife and bloodshed, and the fault of such disgraceful scenes will be all that of this law. In our State," says the memorial, "where we have not only differences in politics, but difference in races, this law, by its means of enforcement, as described above, may lead to a race conflict, and thus imperil our present grand industrial system, which is just starting on its career of unequalled progress." The argument that, unless the law passes, the negro cannot vote and have his vote counted fairly, is thus disposed of: "In the districts in this State, such as the northern part, where the negro is in the minority, his vote is counted fairly, and hence there is no need for the law. In the districts of the middle and southern parts, where the negro is largely in the majority, if, after a quarter of a century of freedom and access to all fields of wealth and learning, he is not able to command the respect of his fellow white man, he is then practically a small element in our political fabric, and not of sufficient importance to justify a hazardous experiment in our Government."

The final objection to the bill presented in the memorial is one that ought to have great weight with the men who are pushing the Force Bill. They assert that such a measure is needed to strengthen the Republican party in the South. On the other hand, ex-Gov. Smith and his fellow-Republicans of Alabama insist that "the passage of this bill into a law, instead of strengthening the Republican party in the State, will destroy the better element of it and drive away the great independent vote that is coming out all over the State." This is the opinion also of such other authorities among the Southern Republicans as the *Valley Virginian* of Staunton, Va., Congressman Ewart of North Carolina, and Congressman Coleman of Louisiana, who certainly ought to know better what is good for them than Northern men like "Bill" Chandler and Henry Cabot Lodge.

Georgia is in a state of ferment. The farmers, under the leadership of L. F. Livingston, who has for three or four years been actively engaged in organizing "alliances," are spreading dismay among the lawyers who now represent the State in Congress. Mr. Stewart of the Atlanta district has withdrawn from the race, as the primaries disclosed the immense popularity

of Livingston, who started out as a candidate for the House, but who is now aspiring to succeed Mr. Brown in the Senate. Gov. Gordon is so anxious for this honor that he has laid himself open to the suspicion of demagogy, having subscribed to the platform of the new party and advocated the boycott silliness. Mr. Grimes of the Columbus district has been defeated by Charles L. Moses, the farmers' candidate, and all of the other members except Messrs. Turner, Candler, and Crisp are in danger of defeat. The straightforward, manly manner in which the Georgia Representatives have condemned the class legislation demanded by the farmers cannot be too highly commended. Anxious to continue in their Congressional career, they have nevertheless deliberately invited defeat by prompt and vigorous condemnation of the absurdities now so rife at home. But the severest rebuke yet given to those who are urging the advocacy of the Sub-Treasury scheme as a condition of political support has come from one of their own members—from Mr. R. E. Park of Macon. In declining the request of the Alliance to announce himself as a candidate for Congress, Mr. Park suggests that the advocates of this wild plan should be a little modest when they confront the fact that it "has been condemned by the most enlightened and purest statesmen of the whole country, and has not the sanction of a single man of eminence as a political thinker or of large experience as a legislator." The movement to exclude lawyers and other professional men from the great employments of trust and honor, he pronounces an instigation of aspirants for office whose only hope of political preferment is the supposed gullibility and prejudices of the people. Their success, he assures the farmers, will be only temporary, and their downfall complete and humiliating.

Quay's campaign in Pennsylvania this year is evidently to depend on the corrupt Senator's "smartness" in stealing and turning away votes from his opponents rather than on any open work or real discussion of questions of the day. One of his devices has already come to light in the coal regions, where he has begun to start little newspapers in the assumed interest of the labor cause, which are to advocate with loud cries the nomination of labor candidates for Congress and the Legislature in every district where the number of wage-earners is large. In this way he hopes to keep the vote of the laborers from being concentrated on the Democratic candidates. This is really encouraging news, for it confirms the reports of the friendliness of the miners towards Pattison, and indicates that Powderly's open denunciation of Quay has alarmed that demagogue. His attempt to start a "back-fire" by the use of hirelings to pose as friends of the laborers will have a very poor chance for success this year. Any device nowadays that comes from Quay bears a stamp of fraud on its face, and he will find that it is a hundred times easier to expose and checkmate him now than it was before he was held up to the country as a public thief.

In an article entitled "Summing up the Tariff Discussion" in the July number of the *North American Review* (page 55), Mr. Andrew Carnegie says:

"Mr. Blaine has shown that in the case of steamship lines she [England] will permit no foreign steamship to compete even for carrying the mails. On the contrary, when the Postmaster-General of England had closed an arrangement with the North German Lloyd which gave much better service upon more favorable terms than the English lines had it in their power to give, Parliament promptly compelled him to forego the arrangement."

Anything that Mr. Blaine has shown is probably misleading. What Mr. Carnegie has shown in this case is not true. The North German Lloyd steamers carried the British mails from Southampton to New York for ten years, as was stated in Mr. Gustav Schwab's recent pamphlet on 'Shipping and Subsidies.' Of course, the Cunard and White Star Companies were very much opposed to this, and they used all their influence to prevent the North German Lloyd from getting a new contract when the old one expired. In 1886 the British Postmaster-General awarded a contract to the latter company for three months, in pursuance of a circular calling for tenders for that period of time. Parliament never interfered or took any notice of the matter one way or the other. The Cunard and White Star Companies, however, had a "pull," which enabled them to prevent the renewal of the contract after its expiration.

The last stage of the Harrison cottage case is a very awkward one for Mr. Wanamaker and his ten or more Philadelphia friends who had the cottage built at Cape May and presented it to the President's wife. They are in the position of compelling the President to buy a house in order to get himself out of a predicament into which they had plunged him. If they should have imitators, the President might be ruined financially by being forced to buy whatever anybody might take it into his head to present to Mrs. Harrison. If they had been confidence operators, they could not have proceeded more ingeniously than they did to "unload" this cottage on the President. They kept their purpose entirely secret until the cottage was built, furnished, and stocked with provisions. Then they slipped quietly into the White House, while the President was at luncheon, and presented his wife with the deed and the keys before he had time to say Jack Robinson. Then they induced the Presidential family to go down and try the cottage, and got Mrs. Harrison to say in an interview that it was a "gift" from them to her. After that the President had nothing to do but buy the house at the Wanamaker price. It was a very sharp trick for a Presbyterian Sunday-school superintendent to practise upon an elder in his own church.

Any one who was disposed to take a humorous view of the political situation in England might find materials for a good deal of mirth in figuring to himself what the Tories would be now saying had Mr. Gladstone been retained in office in 1886, and had the London letter-carriers and police struck and the Guards mutinied in the fourth year of his Ministry. How, like Squire Smalley, they would have "covered their faces and turned away," and heaped maledictions on his head, and said they always knew he would ruin England and break up the framework of society: even the Grenadier Guards could not stand him — the crack regiment of the British Army had refused to obey orders under his debauching rule. And suppose in the midst of this disorder they had caught the old rascal ceding British territory to a foreign Power during profound peace! A more impressive illustration of the imposture of Toryism than British politics presents at this moment history does not contain.

The appointment of a new Prussian Finance Minister, Miquel, in place of Von Scholz, who had filled the place for eight years, naturally excites much discussion in the German press, and is regarded as foreboding change of some sort, but of what sort nobody seems to know. The retiring Minister, although a man of great ability, had never shown any independence, but had entirely subordinated himself to Bismarck, carrying out with great thoroughness the extreme protectionist policy of the late Chancellor; his successor has a great reputation as a parliamentarian, has been the leader of the National-Liberals, and is considered by all parties as an important factor in the near future. Dr. Barth, the editor of the Berlin *Nation*, in a recent article on Miquel, says that he must very soon become the soul of the Ministry, and will doubtless be the chief parliamentary spokesman of the Government; that he is free from prejudices, and conscious of his mission as a reform Minister, but that he is placed in a position of great difficulty, and in his endeavors, as an eclectic politician, to please all parties, will satisfy none. Dr. Barth sums up by warning his friends, the so-called *Freisinnige* party, to reduce to a modest measure their expectations of the reforms to be effected by the new Finance Minister. In regard to tariff reform in particular, he remarks that it must be carried against the opposition of powerful and strongly intrenched interests, while the classes whom reform is to benefit are pecuniarily weak. It is curious to notice, by the way, that the new Minister is of French extraction, which is also the case with the Minister of War, while the German Chancellor is of Italian. This species of cosmopolitanism is quite foreign to the German spirit, but is not without precedent in other countries. Thus, France had a Minister of English descent (Waddington), and for more than a century Irish adventurers have held high military and civil places on the continent of Europe, as witness the O'Donnells of Spain and Austria and MacMahon in France.

THE ALLIANCE MOVEMENT.

THE Farmers' Alliance, North and South, seems likely to have considerable influence in the autumn elections. Nobody can now predict how much mischief it may do to the great political parties, or how this mischief will be distributed between them. That the Alliance can have any permanent existence, or can ever accomplish what it aims at, is simply impossible. Its aims, so far as they have been formulated, include the following:

(1.) The Sub-Treasury Bill so called, being a project for the Government to take farm products on storage and advance legal-tender notes on them to the producers. This is the prevailing Alliance craze in the South.

(2.) Abolition of the Supreme Court, abolition of laws for the collection of debts, the seizure of railroad property in behalf of "the people," the revaluation of mortgages, and the defeat of Ingalls. These are among the avowed projects of the Alliance in Kansas, or in Minnesota, or in both.

It is unnecessary to say that we have no sympathy with any of these pranks, not even with the defeat of Ingalls if it is designed to bring into his place anybody representing any part of the political programme here sketched. It is a part of the tasks of journalism, however, to "keep the run" of all kinds of organized voting movements, and we have accordingly noted the following facts relating to the spread of the Alliance. It should be stated that the declarations of the Alliance are more rational in some parts of the country than those specially enumerated above.

In Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Tennessee, and Texas the farmers, under one of the several designations by which they are known, are very active. In Tennessee they have, for the first time in the history of the State, made themselves felt as a political power. Although they did not come together until August, 1888, they have made such effective use of their time and opportunities since as to have captured the Democratic State Convention at Nashville and nominated their man for Governor. In Alabama the old-line Democrats have sought self-preservation in the same way. Col. Thomas Hardman, their candidate for Governor, has withdrawn from the canvass, leaving the field clear for Col. W. J. Northern, the Alliance candidate. Judge "Jim" Brown, a brother of Senator "Joe" Brown of Georgia, who hoped to enter Congress as the regular Democratic Representative from the Ninth District, has given way to an Alliance man. Gov. Gordon, a candidate for Senator Brown's seat, sought to make his calling and election sure with the Legislature that the Alliance hopes to elect by subscribing some time ago to its numerous and whimsical articles of faith. The Democrats of Missouri have, in a measure, followed the example of their brethren in Alabama. At their recent State Convention they surrendered to the Alliance the Railroad and Warehouse Commissionership and the Superintendency of Public Instruction. In Arkansas, however, it is the Republicans who have decided to cast their fortunes with the Alliance, having endorsed Mr. Fitzer, its Gubernatorial candidate. But nowhere else, even in the West, have they followed this example.

In the Carolinas the Democrats have not been willing to give up their party identity or surrender their political principles. As a consequence, they are engaged in one of the most bitter contests ever known in those States. There being no Governor or other State officers to elect in North Carolina as in South Carolina, Alabama, and Tennessee, the battle is for the Congressional delegation, for the State Legislature, and for county and other local offices. Having refused to endorse the Sub-Treasury Bill, Senator Vance is no longer fitted, in the estimation of the Alliance men, to represent the State of North Carolina at Washington, and if they can elect enough members of the Legislature, they propose to displace him. Those members of Congress who, like Mr. Vance, refuse to sign the pledge that the Alliance has sent each one of them, will be similarly treated. The same policy is being pursued in Georgia, where it is believed that eight of the ten members of Congress from that State will be retired. But the bitterest contest anywhere waged is in South Carolina. There the Democrats are moving heaven and earth to prevent the nomination of Tillman. They are striving, too, with all their might to save as many members of Congress as possible.

The farmers of the Eastern and Middle States have not, as in other States, taken up the agitation. The Alliance has hardly obtained a foothold in New York or in Pennsylvania. The only State in New England where it has made headway is Connecticut. In the Western States, however, the movement is widespread and earnest. Here, as in the South, it was non-political at first, even the discussion of political questions having been prohibited. But this restriction has now been removed, and with it has come a contest for political supremacy.

In Michigan, Ohio, and Iowa there is still some question as to the wisdom of plunging into politics, and conventions will soon be held in each of these States to decide upon a course of action. But there is little doubt that in Michigan a State ticket will be nominated. The Alliance there is well organized, and Mr. Partridge, its President, has already announced that he is a candidate for Governor. In Ohio the farmers have been more reluctant to break away from party ties; only 300 alliances have thus far been organized, but even this small number is attracting the attention of the politicians of the old parties. Less conservative than their Ohio brethren, the Iowa farmers have organized nearly 1,700 alliances, 500 of which have come into existence within the past six months. In Illinois the Alliance has been still more active; it has been in operation for three years, and, according to the Chicago *Times*, it has a membership of 80,000, and is actively engaged in putting forward legislative and Congressional candidates. It will hold no State convention and make no State nominations. In Nebraska a State convention will soon be held in obedience to the Alliance petitions, which bore nearly 40,000 signatures, and a State ticket will be named. The Alliance ticket has already been named in South Dakota and in Minnesota, where the farmers have for the first time in the history of the State taken independent political action. This ticket is before the people, and nominations for Congress are in progress.

The situation that most resembles the campaign in South Carolina exists in Kansas. Such momentum has the movement acquired there that 2,500 sub-alliances have been organized with a reputed membership of 290,000. A State ticket has not yet been put in the field, but a convention for the purpose of naming candidates will meet next month. County, legislative, and Congressional nominations are, however, being made, the Alliance giving especial attention to the Legislature. The Alliance is determined to prevent the reëlection of Senator Ingalls if possible. It has already made twenty-three nominations for the Legislature, and in each case compelled the candidate to pledge himself to vote against Ingalls. As in North Carolina, the farmers believe that they are the salt of the earth. Lawyers they regard as one of the causes of their troubles, and they refuse to nominate any member of the profession even for a judicial position.

While in the South the Democrats most fear the Alliance, in the West the Republicans are most threatened. The single exception is Indiana, where many Democratic farmers have become imbued with the belief of their brethren in the South, that they have more to gain by independent political action than by loyalty to their old party. Although some Democrats have joined the movement in Michigan, Wisconsin, Illinois, Ohio, Iowa, Nebraska, and Kansas, by far the greater part of Alliance men in those States are Republicans.

THE SUGAR TRUST REORGANIZATION.

THE trustees of the Sugar Refineries Company, otherwise called the Sugar Trust, have issued a circular to the holders of their certificates, proposing that a plan of reorganization be formed "for the purpose of protecting the property and promoting the interests of the certificate-holders." No particular plan of reorganization is suggested. Indeed, they say that the responsibility of forming a plan does not rest with them, but that they are willing to give the certificate-holders the benefit of their experience and information, and to render all the assistance in their power. Certificate-holders who favor this proposition, and who desire to coöperate with the trustees in some plan of reorganization, may transfer their certificates to the Central Trust Company of New York, which will issue its own certificates, "which will be negotiable with the same facility as the present certificates of the Sugar Refineries Company."

This circular professes to deal with property

of the nominal value of $50,000,000, and of the selling value of more than $35,000,000. It is signed by some of the richest men and by one of the ablest lawyers in New York. It aims to find a solution of a question of vast concern, which has been passed upon by three public tribunals, including the Court of Appeals. It therefore challenges public examination.

The first thing to be noted is that the holders of this $35,000,000 worth of property are asked, or rather allowed, to put their holdings out of their own control in order that some kind of future disposition may be made of them. What that disposition may be is not stated or even remotely hinted, for the reason evidently that the signers of the circular do not know. They do not know that any plan can be formed. What position any certificate-holder would be in who had deposited his certificate and taken the Central Trust Company's receipt in place of it, if no plan should be formed, or if the plan formed were not satisfactory to him, is left to the realms of conjecture. The only thing promised in such a case is that the receipt he gets will be negotiable "with the same facility" as the certificate he now holds. Even this promise is subject to qualification, unless the Stock Exchange allows new-fangled securities to be dealt in on its floor at the option of the owner of the securities, which, we believe, is not the case. One of the "facilities" of negotiability attaching to the present certificates is that of being dealt in on the Exchange, although they are not on the regular list. Suppose that only one certificate-holder deposits his holding with the Central Trust Company, does it follow that he can, of his own motion, have the receipt that he gets for it sold and resold on the Stock Exchange? But this is a minor consideration.

The signers of the circular having left the public in the dark as to the plan of reorganization, or the possibility of one—and evidently because they are themselves in the dark—it is incumbent on the certificate-holders to investigate the important questions involved for themselves. The Trust certificates are aliquot parts of a mass of amalgamated stocks of certain incorporated companies, whose shares are bunched together and locked up in a safe. Each certificate is a claim upon all the shares of all the companies to the extent of its own nominal or face value.

Judge Barrett held that one of these amalgamated companies, the North River Sugar Refining Company, had violated the law of its being by joining in a conspiracy to create a monopoly. The General Term of the Supreme Court sustained Judge Barrett, and held further that the company had committed suicide by transferring all its powers to another company. The Court of Appeals held that the company had committed suicide as aforesaid, but declined, for the present, to say whether the monopoly feature was of itself sufficient to work a dissolution of the company, since a decision upon that point was not necessary. It follows that the decisions of the General Term and of Judge Barrett are in force, neither of them having been overruled, although taken before the court of last resort. Some words in the opinion rendered by the Court of Appeals have been considered to sustain the view that these companies might have been legally consolidated. Such words, even if they can be considered to apply to companies already wrongfully amalgamated, have not the force of law, and were not intended to have. They constitute at most a dictum, while the judgment in the lower courts is a decision in its broadest extent until overruled.

The North River Company was put in the hands of a receiver, who still holds it. Of course all the other companies are liable to the same treatment. A suit in anticipation of such treatment has been begun by the trustees of the Sugar Trust as individuals, the object being to get all the amalgamated companies put in the hands of a friendly receiver, except the one company whose case has already been adjudicated. We shall not anticipate the course of this legal proceeding, but it is plain to the common understanding that any plan, whether favored by the friendly receiver or not, which has for its aim the consolidation of these sugar-refineries so as to bring about a monopoly essentially like, or corresponding to, the Trust, will run against Judge Barrett's decision, and will be brought low by the encounter. There are other difficulties of a more technical character to be surmounted. What place, for example, will, or can, the North River Company have in the proposed consolidation? Shall the Attorney-General, after having taken this property out of the "combine," on the express ground that it had joined in a conspiracy to promote a monopoly, surrender it again to the uses of monopoly under another name? Can the certificates of the existing Trust be judicially separated from the North River Company so that all the other companies can be amalgamated without that one? Can the holders of the Trust certificates who may not assent to a plan which has not been explained to them, be restrained from appealing to the courts of law on their own account? Can the Attorney-General be restrained from going on as he has begun and putting all the companies where the North River Company now is? These are questions which will need to be answered before any reorganization can take place under the initiative of the trustees of the Sugar Trust.

INFLATION OF THE CURRENCY.

The Boston *Transcript* is of the opinion that the new Silver Act contains the elements of "inflation of the currency." It says:

> "The law explicitly provides for the issuance of Treasury notes in payment of the Government purchases of silver bullion, which notes are to be a legal tender for all public and private debts. These notes are redeemable in either gold or silver coin, at the discretion of the Secretary of the Treasury, and may, subsequent to redemption and under certain limitations, be afterwards reissued. As these Treasury notes, being a legal-tender currency, will serve all the functions of money, we are inclined to think they will be greatly preferred by the public, on account of considerations of convenience, to the coin dollars in which they are redeemable. A considerable amount, therefore, of the Treasury notes will, it is probable, remain in the hands of the people, and, to that extent, will constitute an addition to the existing volume of the currency of the country."

That the views here expressed by the *Transcript* are widely held is not to be doubted. We have received dozens of communications conveying the same ideas, and we choose the *Transcript's* article as a convenient text for stating our own. We observe, in the first place, that there is no definition, either in the *Transcript's* article or in any other article or communication that we have seen, of the phrase "inflation of the currency." Senator Sherman, in a recent speech, read a paper showing that the currency of the country had increased $600,000,000 in ten years. The same table is given on page 222 of Mr. D. A. Wells's 'Recent Economic Changes.' There can be no doubt about the facts, nor can there be any doubt that the rate of currency increase was more than double the rate of increase of population during the ten years. Probably the *Transcript*, if it had been asked at the beginning of the period whether an increase of $600,000,000 in the currency in the ensuing ten years would not be "inflation," would have said yes. We are now in a position favorable for looking backward, and we can ask whether it *was* inflation. If anybody says that it was, he is bound to tell us what are the signs, indications, and concomitants of inflation. How do we know that inflation exists at any time? What is the touchstone that enables us to distinguish inflation from non-inflation?

The most obvious token of inflation would be a rise in the prices of commodities, but Mr. Wells tells us, and indeed proves, that this ten-year period, when the currency increased $600,000,000, was a period of declining prices, perhaps the most remarkable decade in our history in that regard. So this test fails. Is there any other? And if there is no other, what evidence have we now that a farther increase of the currency would be inflation?

In our opinion there can be no such thing as inflation of a currency redeemable in gold. We are not unmindful that this is a disputed question among economists, but it is certain that a majority of them hold that inflation on a gold basis is impossible. If the question could be settled by authority, it would be settled in a sense contrary to the *Transcript's* idea. But mere authority is not generally accepted in such matters. We will, therefore, look for a moment into the reason of the thing. We are embarrassed at the outset by not knowing what the advocates of the inflation theory mean by inflation. It is, perhaps, fair to say that they mean the getting of more money of one kind and another into circulation than the people really need for the transaction of their business. If this is what they mean, it may properly be asked how they know that there is too much at any given time. This question is not to be answered by counting heads. Business requires more money at some times than at other times, population remaining the same. Thus, the year 1885 was a slack one in point of commercial activity. There was an excess of currency,

and the proof of the excess was that it went into retirement. It took refuge in the vaults of the banks until there was a surplus reserve in New York alone of about $60,000,000. By and by business revived; in the language of the Street, "money became active." The sixty millions found their way out of the bank vaults, much to the satisfaction of the bankers. If there was inflation of the currency at either of these periods, it must have been at the time the sixty millions were lying idle, since there was at that time more currency in existence than any profitable use could be found for. Yet nobody at that time would have called the stagnant period a period of inflation. Stagnation and inflation are the opposite poles of the business world. But can it be said that the second period, when the sixty millions of idle money found its way back into business channels, was a period of inflation? There was the same amount of currency in the one period as in the other, the only difference being as to the place where it was to be found.

Now, what is the operation of the new law? There is absolutely nothing in this law as to the getting of money into circulation which is different from the old law that it supersedes. Names are changed, and there are some variations in the machinery, and there is a heavier pull on the public Treasury, the latter resolving itself into more taxation than would otherwise be necessary, for if the Secretary spends more money for bullion, he will have less with which to buy and cancel interest-bearing bonds. The new Treasury notes are to be legal tender. They are to be paid out for bullion and to be redeemed on demand. There is just enough of shifting and turning of the kaleidoscope to change the aspect of things, but the essence is not changed one whit. There is a public declaration that it is the established policy of the United States to maintain gold and silver on a parity with each other at the legal ratio, but this public declaration merely confirms a preëxisting practice and does not change the practical effect of the silver comedy. To suppose that the public are going to take and *retain* more of the new Treasury notes than of the old silver certificates, both being of the same value identically and answering the same purposes, is idle in the extreme. The Chicago *Times* points out the remarkable difference between the new law and the old one, that

> "When the owners of 54,000,000 ounces of silver bullion sell it to the Government in the course of a year, they get, say, $60,000,000, and possibly $70,000,000, new notes for the bullion. That amount, whatever it may be, is so much *added to the volume of the currency.* The people do not use their own money to buy it with after it is printed. They buy it with commodities. Those who first get it buy it with the commodity silver bullion. Those who get it afterwards buy it with whatever kinds of commodities the holders of the notes buy from them. If the volume of currency is not increased in that way, how, pray, can it be increased? It is true that the new notes may displace an equal amount in gold and drive it out of the country, but that has nothing to do with the question whether the bill *will increase the circulation in the first instance.*"

Neither seventy millions nor one million will be "added to the volume of the currency" unless it is actually needed for currency purposes, and if so needed it will not be inflation. The "first instance" of an increase of the circulation beyond the actual wants of the business community will be signalled to the Secretary by the demand of the seller of the bullion for the redemption of the Treasury notes simultaneously with the delivery of the bullion. If the Secretary redeems them in silver coin, the seller will then demand the redemption of the silver coin in gold coin. And he will get the gold coin unless the new law and the whole fabric of the United States finance tumble all together.

MISSISSIPPI'S PROBLEM.

Mississippi held on Tuesday an election which was of far more than State concern. It was for the choice of delegates to a convention which is to meet in Jackson a fortnight hence to frame a new constitution for the State. A review of the situation seems peculiarly appropriate at a time when the Force Bill and the general question of Southern elections are being discussed throughout the country.

Mississippi had the most stormy experience of all the Southern States during the reconstruction period. One natural reason was the fact that the State was the home of Jefferson Davis. Another was the fact that the negroes largely outnumbered the whites, the first national census after the war showing 444,201 blacks to 382,896 whites. William L. Sharkey was appointed provisional Governor June 13, 1865, and soon issued a proclamation for a convention, which met at Jackson on the 14th of August. On the following day Gov. Sharkey received a telegram from President Johnson expressing his gratification that the Convention had been organized without difficulty, and giving this advice as to its action:

> "I hope that without delay your Convention will amend your State Constitution, abolishing slavery and denying to all future legislatures the power to legislate that there is property in man; also that they will adopt the amendment to the Constitution of the United States abolishing slavery. If you could extend the elective franchise to all persons of color who can read the Constitution of the United States in English and write their names, and to all persons of color who own real estate valued at not less than $250 and pay taxes thereon, you would completely disarm the adversary and set an example the other States will follow. This you can do with perfect safety, and you thus place the Southern States, in reference to free persons of color, upon the same basis with the free States. I hope and trust your Convention will do this."

Apropos of this telegram from Andrew Johnson in the summer of 1865, it is well to recall the letter touching upon the same question of negro suffrage which Abraham Lincoln, in the spring of 1864, sent to the Governor of Mississippi's next-door neighbor. Writing, under date of March 13, 1864, to Michael Hahn, Mr. Lincoln, after congratulating him upon having "fixed your name in history as the first free-State Governor of Louisiana," said:

> "Now you are about to have a convention, which, among other things, will probably define the elective franchise. I barely suggest, for your private consideration, whether some of the colored people may not be let in, as, for instance, the very intelligent, and especially those who have fought gallantly in our ranks. They would probably help, in some trying time to come, to keep the jewel of liberty in the family of freedom. But this is only a suggestion, not to the public, but to you alone."

Within a week after its assembling, the Convention of August, 1865, had passed an ordinance declaring that slavery should not thereafter exist in the State, and another declaring the secession ordinance null and void. An election for State and county officers and for representatives in Congress was ordered for the first Monday in October, and the Legislature then chosen met on the 16th of the latter month. The colored citizens had already taken alarm, and at a convention, October 7, adopted resolutions protesting against the reactionary policy which prevailed, and expressing the fear that the Legislature would pass such proscriptive laws as would drive the freedmen from the State, or practically reënslave them. These apprehensions were fully justified by the event, as the Legislature adopted one of the worst of the "black codes"; refused to ratify the amendment to the United States Constitution abolishing slavery; adopted memorials to Congress for the pardon of Jefferson Davis and Jacob Thompson; and did sundry other equally foolish things.

Under the State Government thus inaugurated the reactionary drift was perhaps more marked than anywhere else in the South, and when in 1867 the Republican Congress insisted upon its plan of reconstruction, it was opposed in Mississippi more bitterly than in any other State. Finally, after vicissitudes too tedious to recapitulate, a convention controlled by men loyal to the new order of things framed a constitution under which the State has lived for more than twenty years. The most important features of this constitution, so far as the present problem is concerned, are those which declare that all citizens of the United States resident within the State are citizens of the State, and that no property or educational qualifications shall ever be required for electors, and that this latter provision should not be amended before the year 1885. Lincoln had suggested to the Louisiana loyalists in 1864 the idea of allowing "the very intelligent" of the colored people to enjoy the elective franchise, and Johnson had advised the Mississippians in 1865 to extend the franchise to such of the race as could read and write and possessed a little property. The Southern whites rejected both suggestions, and finally had to accept the theory of suffrage for every negro, whether he knew anything or not, whether he owned anything or not, and in Mississippi's case with the key turned in the lock that forbade any change in the system for nearly twenty years.

We all know how different practice has been from theory. At first, indeed, the black majority, officered by white carpetbaggers, had their way, and the Republicans controlled State offices, Legislature, and Congressional districts. But the white minority steadily grew in power, and in 1875, by the adoption of what came to be known as "the Mississippi plan," carried all but one of the Congressional districts and both branches of the Legislature, and persuaded the Republican Governor to resign by threats of im-

peachment. Since then they "have had everything their own way," the present Governor having been elected without any opposition, while the Democrats have every seat in the Senate and all but seven of the 120 in the House.

As State and local officers are chosen in the odd years, the Force Bill, which applies only to the elections in even years at which Congressmen are chosen, could not help the negroes to recover their rights to a share in the government of the State and counties. The white minority have no fear lest they can continue to carry elections by the same methods as in the past, but they want to find some other way. For some years there has been a growing feeling that an earnest effort ought to be made to devise a legal and just system for getting rid of the ignorant negro vote. Thoughtful men have recognized that the present policy of bulldozing and cheating cannot be permanent, and ought not to be permanent, since it is bound to demoralize the whites as well as the blacks. The Constitutional Convention which meets next month is the outgrowth of this feeling.

Various plans for limiting the suffrage have been proposed and are now under discussion. What is desired is one which will cut off most of the negroes from the suffrage, and at the same time will not disfranchise any considerable number of whites—and this is a difficult result to secure. An educational qualification, for example, would rule out probably three-fourths of the blacks, but it would also take the ballot from one-tenth of the whites, including many ex-Confederate soldiers, and the "soldier vote" is as much a source of dread in the South as in the North. A property qualification would work in much the same way. The idea of a poll-tax was popular until it was pointed out that the Virginia Democrats had tried this device for getting rid of the negro vote, only to find that Mahone got rich Republicans up North to contribute money to pay the poll-taxes of the negroes, while many of the whites could not or would not pay their own.

The Vicksburg *Commercial Herald*, one of the leading newspapers, is urging with much force a novel plan which it has devised. The situation, it says, is this: "A large portion of the population of this State is so densely ignorant that it must be prevented from ruling by some means, or our lives, liberties, and property will not be safe, and our civilization will be blighted." The proportion of this ignorance is much greater in some counties than in others; in Issaquena, for example, with a dozen negroes to every white, the *Herald* thinks that there are twelve ignorant voters to one intelligent. These differing conditions it would meet by a constitutional provision excluding from the suffrage "persons so very ignorant as to prevent their having reasonably safe judgment of measures to be voted on, or being reasonable judges of the fitness of candidates for office"; and providing for an examination of all persons desirous of voting by three officials in each county, appointed by a board of State officers, which county boards shall decide whether applicants are qualified for the suffrage, subject to appeal to the State board and from that to the Supreme Court. "In a county where there are thirteen very ignorant voters to one reasonably intelligent voter," says the *Herald*, "the boards of examination and registration would trim the ignorance down to reasonable and perfectly safe limits, and everything would work smoothly without any illegal or violent methods." It is obvious that this would be a dangerous power to confer upon any board, and it seems hardly possible that the scheme will prove popular.

The truth is, that the problem is a most perplexing one, and the situation calls for the sympathy of outsiders. It is obvious that the negroes cannot be allowed the power in government to which their numerical preponderance would entitle them, but it is hard to see a method of restricting their votes which will not be objectionable to some element among the whites. The only hopeful feature of the situation is the evident anxiety of the best men in the State to find a solution which will be fair to all concerned.

FEMALE WRITERS OF SPAIN.

THE educational ideals and attainments of Spanish women were authoritatively sketched by one of the most noted of them, Doña Emilia Pardo Bazán, in an article in the *Fortnightly*, something more than a year ago—an article of which the Spanish original is just now appearing for the first time in *España Moderna*. Roughly speaking, she makes the present century in Spain one that marks a decided emergence for women from the profound ignorance characteristic of them in the eighteenth century, while it has not yet succeeded in equalling the achievements of the Renaissance.

"At the time of the Renaissance, Spanish women, whose learning equalled their piety, far from contenting themselves with no education, or with only a superficial one, held professorships of rhetoric and Latin, like Isabel Galindo, or widened the domain of philosophic speculation, like Oliva Sabuco. In the eighteenth century these traditions were so utterly lost that it was considered dangerous to teach girls the alphabet, on the ground that if they were able to read and write, they might correspond with their sweethearts. I have heard it told of a great-grandmother of mine, of noble family (grandees, in fact), that she was obliged to learn to write by herself, copying the letters from a printed book, with a pointed stick for pen, and mulberry-juice for ink."

In good keeping with this is what Valera writes in his 'El Comendador Mendoza' (a novel laid in the last of the eighteenth century):

"I suspect that our grandfathers, weary of the female bachelors of arts, and the Latin-speaking, pedantic ladies painted for us by Quevedo, Tirso, and Calderón, had fallen into the opposite extreme of taking pains that their women should learn nothing. Learning in a woman was to be considered a spring of evil. Thus it happened that in the provinces well-to-do and noble families educated their girls simply to be very active and systematic housekeepers. They learned to sew, to embroider, and to knit; many were good cooks; not a few ironed beautifully; but almost always care was taken that they should not learn to write, and they were taught little more than to read fairly well in 'The Christian Year' or some other pious book."

This reference of the trouble to the preferences of the men is abundantly supported by Señora Bazán, who says: "For the Spaniard, I do not hesitate to say, however liberal and advanced his ideas may be, the ideal of woman is not in the future, but in the past. . . . Men have gained rights and privileges in which women have no share." Nevertheless, the prospect is brightening: "Although there still exist men who commend absolute ignorance in women, the majority are beginning to prefer, at least in practical life, a wife who, without being ambitious of solid and serious instruction, has a shadow, veneer, or varnish of schooling which makes her presentable." "Few indeed are the avocations which are open to women in Spain, but fewer still are the women of the middle class who can make up their minds to exercise them. A few years ago, a lady, Martina Castells, graduated in medicine. The illustrated papers published her portrait as that of a remarkable and singular female."

A very striking and practical contribution to the question of the education of Spanish women, which reveals as clearly as anything could the partial recovery of the old ideals, is the series of articles published in several numbers of *España Moderna* within the past year, written by Don M. Ossorio y Bernard, and entitled "Notes for a Dictionary of Female Spanish Writers of the Nineteenth Century." Taking in all of Spain and her colonial possessions, the compiler presents a list of some 443 names. A large number of these—perhaps 50—can be at once dismissed as of slight significance, their literary activity being confined to having competed once or twice in the poetical contests so common in Spain, or to having contributed a poem to one of the yearly "albums" presented to the Queen. Among the rest figure many whose chief work in literature has been in the humble guise of translators, and not a few whose writings have seen the light only in the columns of newspapers. There remains, however, a goodly array of poets, dramatists, novelists, writers on pedagogy and elementary science, together with a half-dozen names whose eminence fairly calls for a distinct place in the history of modern Spanish literature.

Of the whole catalogue, a prodigious proportion—certainly one-half—is credited to poetry. The traditional facility with which Spanish verse can be written is thus exemplified afresh in the results of the new education of Spanish women. As a distinguished Spanish critic, Fray Benito Jerónimo Feijóo, has ventured to say of the men who write poetry, "The number of those who make couplets is infinite, but nowhere is there a poet," it may not be too ungallant to suppose that the women who are here set down as the authors of "poesías," cannot all be poets. Cuba naturally stands first among the colonies, having eighteen writers in the "Notes," almost all of them poets, while Porto Rico and the Canaries have each two.

Singling out a few of the names whose work has been most characteristic and noteworthy, in one way and another, we may take Doña Faustina Sáez de Melgar as a leading type of the fecund and versatile writers of her day. Born in 1834, she has been on the editorial staff of eighteen different periodicals, of one sort and another. She has published sixteen volumes, comprising novels, stories, legends, one or two serious treatises, and two dramas. In 1889 she became the Spanish translator of Carmen Silva, the Rumanian Queen. Worthy to be named with her is Doña María del Pilar Sinués de Marco, wife of the dramatist José Marco. She has been a life-long contributor to the leading papers of Spain, and Señor Ossorrio y Bernard enumerates sixty volumes published by her, adding that he is not at all sure that his list is complete.

Doña Concepción Arenal has a place all her own. She is a prolific writer on all topics connected with the administration of penal and benevolent institutions, on public charities and social reform. With great intelligence and persistence, she has examined in person penal colonies, penitentiaries, and the like, and has written on her subject with a courage and thoroughness that have fairly won for her the name of the Mary Carpenter of Spain. The union of a literary gift with the zeal of a philanthropist and a reformer is so unprecedented in a Spanish woman that Señora Arenal has no rival for the honors she has won in her peculiar field. Doña Emilia Serrano de Wilson, the Baroness de Wilson, enjoys a fame in South America probably greater than that of any Spanish woman of the day. This is due to her frequent visits to Spanish America, to her occasional periods of residence in Spain's lost possessions, and to the fact that more than one of her books of travel narrate her journeys and experiences in South America. Her very last volume, 'Americanos Ilustres,' 1889, is an instance of the main drift of her writing. In 1881 she was the recipient of a poetic crown from the Society of Writers of Colombia.

One famous name stands out among the poets—that of Doña Gertrudis Gómez de Avellaneda. Born in Puerto Príncipe, Cuba, March 24, 1814, she published her first volume of poems when scarcely more than a child. Her genius was not prolific—it was too rare—and her collected works, of the edition of 1869, number but five volumes; they do not include, however, several dramas and some devotional writings of hers. She died in Madrid, February 1, 1873. A memorial tablet was erected in 1876 in the wall of the house where she was born. The genuineness of her lyric gift appears to be beyond all question. We may well believe Don Juan Nicasio Gallego when he gives her "the primacy among all the members of her sex who have struck the Spanish lyre in this or any age," even if we are not prepared to go along with Don Nicomedes Pastor Diaz in declaring her "the greatest among the poetesses of all times."

A woman's name, too, is one of the most conspicuous in the history of the development of the modern Spanish novel. Doña Cecilia Bohl de Faber made her pseudonym, Fernan Caballero, known throughout Spain as being that of the first writer to break away from the extravagance of the Romantic school, and to find her inspiration and her themes in the common life of the common people. Her many volumes of "Tales" undoubtedly led the way to the realistic Spanish novel of to-day, and though long since surpassed even in her own field by Trueba, and, of course, knowing nothing of the high art and range of her greater successors, she stands as the initiator of a healthier and more natural movement in the Spanish fiction of the century. Her contributions to Spanish folk-lore were also considerable. She was born in Morges, Switzerland, December 25, 1796, and died at Seville, April 7, 1877.

We close with the name with which we began. Doña Emilia Pardo Bazán is undoubtedly the foremost living woman of letters in Spain. Indeed, it would be hard to name a man more eagerly sought after by editors than she, or more frequently a contributor to the leading periodicals of Spain. She herself was the founder, and is now, we believe, the editor, of the *Revista de Galicia*. Of a noble family, she early gave indications of her extraordinary literary faculty. Famous now as a novelist, she is something more than that, as may be inferred from these two titles, 'The Epic Christian Poets, Dante, Milton, and Tasso,' and 'A Critical Essay on Darwinism.' In 1889 a popular movement sprang up to secure her a vacant seat in the Academy. She so far yielded to the solicitations of her friends as to announce her willingness to be a candidate, though she would adopt none of the usual means to secure an election. This she failed of, owing to the prejudice of the respectable Academicians against so startling an innovation as the admission of a woman into their honorable ranks.

ON THE EVE OF THE ELECTIONS IN JAPAN.

TOKIO, June 28, 1890.

As the day of the elections for the House of Representatives draws near, the interest of the Japanese in politics becomes keener. On all sides are rumors of combinations and party changes. In a few days (July 1) the elections will take place, and the Japanese will then be committed to all the privileges and duties of representative government. The political and economic problems which have hitherto been deferred will then again press for a definite solution. The policy of hesitation and delay in the more important issues of state will have to be abandoned. The new experiment in government must justify some of the aspirations of its friends, or the experiment will prove a failure. It may perhaps interest the readers of the *Nation* to get an outline of the actual political condition of Japan.

The present Cabinet is confessedly a makeshift. The circumstances that gave it life are briefly these. Count Okuma, Minister of Foreign Affairs, and a man of first-rate diplomatic ability, concluded a treaty, last October, for the complete opening up of Japan to foreigners. The Japanese had long wished a change in their treaty relations; but a provision in the treaty that foreigners in this country were to be under the jurisdiction of their own courts, and under no restraints whatever in business transactions, soon produced a revulsion in the feelings of the Japanese. They were galled by the former provision, for the very natural reason that it placed them on a level with Turkey, Egypt, and other fourth-rate Powers. It clearly involved the premise that their courts could not be trusted to dispense even-handed justice. The second provision aroused opposition because the Japanese feared that foreigners would overreach them in industrial enterprises. The huge capital in the hands of the English, directed by that tremendous energy and ruthlessness which characterize all English mercantile ventures in the East, might easily, under equal conditions, wrest from the Japanese their more profitable industries. The feeling of hostility became more and more bitter, until finally the Minister of Foreign Affairs resigned his portfolio, not, however, before one of a certain class of irresponsible political characters called *soshi* threw a bomb at him which was nearly fatal.

A new Cabinet was formed in which neither Count Okuma nor his political followers had a seat. No political issues of any importance have since disturbed the country, though politics in a sense has been eagerly discussed in every nook and corner of the nation. And there is an uneasy feeling in the air, as if no one were quite sure of his ground. The reason for this uncertainty is due partly to the unstable economic conditions of the country, and partly to the failure of the Japanese to get their party organizations into working order.

Japan is at present suffering from a partial failure of last year's rice crop. The price of rice has been very high, averaging two or two and a half times its normal price. Such a rise in the price of an absolute necessary of life causes much more difficulty in a country like Japan than in any country of Europe or America. Rice in Japan occupies a more important place as food than wheat does in America. There are no substitutes for rice, as there are for wheat in America or Europe, and, what is worse, the Japanese in case of a short crop take to foreign rice with the greatest reluctance. A Japanese will eat Chinese or India rice only under the spur of absolute hunger. The Chinese rice seems to them inferior in every respect, and, so far as Americans can discriminate in these matters, there is much to be said in favor of Japanese taste. The result of this fastidiousness, however, is that there is scarcely an assignable limit to the price of Japanese rice in case of a short crop. With very little importation, and with every one striving to get his daily share of domestic rice, it is hardly to be wondered at that a shortage of a few million *koku*, say one-eighth of the crop, may readily result in a doubling or even trebling of the price. The present high price of rice has caused discontent and even incipient riots in certain districts; and in a country like Japan, where the paternal form of government is established, there is a widespread disposition to throw the burden of public distresses on the shoulders of the Government.

The position of various political parties has added to the feeling of uncertainty and discontent. The essential peculiarity of old Japan was loyalty to men instead of adhesion to principles. Each man must be faithful to his lord or master through life and death. This state of things continues still to be the actuating motive of political parties. One hears very little of parties distinguished by opposition of principles or ideas, but much of parties headed by Count Okuma or Count Goto or Itagaki and others. The result is, that thus far it has been next to impossible to get parties formed which stand for different principles or policies of action.

Parties there are in abundance, and they have even announced programmes, which to a degree are discriminating. There is the *Kaishin-to*, or Progressive party, undeniably the strongest and best organized party in Japan. It has had a brilliant history in many ways. It was the party to champion the cause of a constitutional parliament and local self-government. It led in the reforms of the currency and finance, and tried to take the lead in establishing new treaties with foreign countries; but the latter feat proved too great, on account of the combined opposition of other parties, and it fell from its commanding position. There is the *Jiyu-to*, or Radical party, which stands for more vigorous reforms; it wishes to introduce trial by jury, more diffused franchise, to abolish Government interference with industry, and restrict the powers of the Government in as many ways as possible. There is the *Aikoku Ko-to*, or Patriotic party, which likewise stands for the extension of political rights. All of these parties, however, are divided into sections, which are likely to oppose the general programme of the leaders. Besides these parties are the *Daido Danketsu*, or Combination party, whose motto is, "United on great questions, differing on small"; and *Chiusei-ha*, or Conservative party, whose principle is the vague one of preserving Japanese from foreign customs and influences. All these parties, as stated before, have political platforms, but in most cases there is neither a sufficient amount of union nor difference to make them distinctive. Nor is the opposition greatest between the parties whose principles

differ most widely. Frequently, as in the case of the *Daido Danketsu* some years ago, Radicals and Conservatives were seen in the same camp. The real effective influence in the formation of parties is personal popularity, or at best a temporary enthusiasm, created by some fleeting public question. As soon as the leader is under a cloud, or the issue settled, parties disintegrate and lose their character.

The result is, there is little more than confusion as yet in Japanese party politics. Many of the most sensible persons, among whom are candidates for the House of Representatives, stand entirely aloof from party organization. The hope of the most advanced opinion is that, after the opening of the House of Representatives, public questions will arise to coalesce the numerous parties into two, and that these will be distinguished by opposition of well-defined political purposes, as are the parties of England and the United States. That this "consummation devoutly to be wished" will be brought about before the meeting of the Representatives is scarcely likely. Even the approach of the elections, which it was hoped might bring about party amalgamation, has accomplished nothing. There has been talk of a union between the Liberal, Radical, and Patriotic parties, but thus far no successful union has resulted.

It is probable, therefore, that many Independents will be elected to the House of Representatives. In Tokio, where there are twelve electoral districts, there is an independent candidate in nearly every district, and, if the signs are to be trusted, a fair number of them will be elected. In all this uncertainty there is at least one great advantage. The enemies of popular government, both Japanese and foreigners, have predicted violence and riots; but, from the very diffusion of power and absence of party lines, it is likely that the election will go off very quietly. There are charges of corruption and bribery which in some cases recall the corrupt practices of American politics, but these charges have led to no Government interference. As a whole, for a people so liable to sudden enthusiasms as the Japanese, the country takes the advent of its first national election in undisturbed tranquillity.

G. D.

THE TUSCAN MAREMME.

ROME, July 1, 1890.

THE tenacity of the superstitions concerning the sanitary condition of Rome is a never-ending surprise to me. Not a year passes that I do not receive many inquiries as to the possibility of coming safely to Rome in June, sometimes even in May, or how long one may stay in Rome without danger. The climate is not an exhilarating one even in winter, and the summer life is too much like existence in a Turkish bath; but, for a brief experience, Rome in July is not without its peculiar pleasures if one has little or no work to do. But I was not prepared to find myself laboring under the same mistaken idea of the Italian climate which I have so often tried to dispel with regard to that of Rome, as I discover myself to have been by a run through the Tuscan Maremme, or sea provinces, late in June.

I confess that I had been a little nervous before leaving, and made my first stage to Orbetello by the early train so as to have time to get away by the second if I found the place untenable. Murray describes the town as situated in the great salt lake, "the cause of the malaria in the surrounding country during the summer," which is as curious a misstatement of the actual status as it was possible to make; for the town, as I found on investigation, is one of remarkable sanitary qualities, and is frequented as a summer bathing-place even by the Romans. When I want to obtain a rapid judgment of the intensity of malaria in a place, I study the faces of the children in the streets, and I was reassured before reaching the inn, and asked for a room without hesitation, for a more rosy and robust lot of urchins than those of Orbetello I have not seen in Italy. I found, on further investigation, that in a prison of some importance containing 300 to 400 prisoners, and a barrack giving quarters to a battalion of soldiers, there was not a single case of malarial fever, and none of the inhabitants take refuge in the mountains during the summer. In fact, I have rarely been in an Italian town where the population has in a more marked degree that alertness and energetic deportment which is a certificate of freedom from malarial influences.

It stands on the point of a long peninsula which projects into the shallow lake formed by the enclosure of the sea by two dunes, which have been thrown up by the surf from the two extremities of the island of Monte Argentaro, lying about two miles off from the mainland, and stands as nearly as may be in the middle of this sheet of salt water, in which the tide (such as the Mediterranean furnishes) flows and ebbs through great fishing weirs set in the dunes. The low lands along the shore and for a distance of half a mile back are no doubt malarious from the stagnation and drying up of the streams that come from the hills behind; but even there the terrors of malaria are enormously exaggerated, for the population, as we saw in driving through the district, show very few cases of the characteristic fever prostration. They were making their hay and hoeing their maize, and a large gang of men was at work cutting a new passage for the sea through the base of one of the dunes where the old one had become choked from the wash of the surf. Malaria there certainly is in that strip of land which is under the influence of the exhalations of the marshes formed along the shore; but when we note the extreme recklessness of the laborers in the fields, throwing themselves down to sleep out their siesta in any shade which is available after their dinners, utterly indifferent to all the precautions which are indicated by the simplest prudence, we are only surprised that there is a population there. The railway station was, they told me, at one time very unhealthy from the fevers, but when the Orbetellians made their aqueduct from the hills of Argentaro, and carried a main on to the station, so that pure drinking-water became obtainable, the sanitary condition improved at once and greatly.

When Garibaldi went to Marsala, he sailed from Talamone, just beyond the dune which forms the northern limit of the Lake of Orbetello, and the fishermen of the latter place furnished him with a considerable contingent of volunteers; and he is to-day the popular idol. All the streets are named after the battles of the Italian emancipation, and, what generally goes with a healthy political tendency, clean streets and good school-houses distinguish the town. In the four days I passed there I did not see a beggar or a cripple from disease. A large machine shop seems to be suffering from the prevailing stagnation in Italy, but beside it a branch for the manufacture of ice is doing a driving business. It supplies the ice for the fishermen of the fishing ports of San Stefano and Port Ercole, situated at the outer ends of the two dunes, of which that of San Stefano is being strongly fortified in conjunction with Talamone on the main land, forming the only important naval position between Spezzia and Naples. The population of all these places is a hardy fisherman stock, whose robustness is proof enough that the sea air and malaria cannot coexist.

The surroundings of Orbetello are of peculiar interest for the archæologist, and the polygonal walls of the city are of unique importance from their showing the only instance (so far as I am aware) of a Pelasgic city built out into the sea. It suggests the occupation of a lacustrine predecessor. On three sides of the irregular quadrilateral of the present fortification the wall remains, and, except where the rubbish heap of the moderns has covered the base of it, it rises out of the water. It is of the good period, well-worked with the hammer and faced with great precision, apparently belonging to the epoch of Alatri and Circeo. The employment of it as the substructure of the Spanish fortifications of the seventeenth century which now cover the isthmus with an intricate mass of works in the best style of that epoch, indicates the importance the site had in the contests between the Siennese, the French, and Philip II., as well as the solidity of the ancient work. Constructed of a hard limestone, though of extremely unequal texture, the drip and spray of incalculable centuries has left the surface so carious that I was at first sight disposed to regard it as a shell limestone of marine deposit and friable, and the work of a comparatively modern date; but when I found means to examine the stone closely, I found it of almost flinty hardness and containing no shells or other fossils, and that the carious condition was simply the work of time. The stones, some of them of approximately sixty cubic feet in size, were, as I found in subsequent researches, brought from the hills of the main land, and none of them from less than three or four miles away, as little or no loose stone occurs nearer.

Far more imposing, though presenting no feature of distinguishing novelty, are the Pelasgic ruins of Cosa, or Ansedonia, on a bold bluff a few miles to the south and looking down on the sea. The ruins of a double gate, of larger proportions than is usual, and grooved for a portcullis apparently, are of architectural interest, and the height of the wall in some places is remarkable as well as its preservation; but as a whole it is only another item in the great body of evidence of the power and prosperity of a civilization whose name has disappeared from history. Within a day's drive of this point are the ruins of what must have been great cities to the number of more than a dozen, some of which have even lost their names, and have not been inhabited since the formation of our oldest traditions. A magnificent piece of engineering work is to be seen below Cosa, and one which shows a knowledge of hydraulics equal to that of to-day. It is a drain made to carry off the water from the low lands between the hill of Cosa and the main range, whose sea end terminates in a tunnel cut through the solid rock, with a cross-channel cut in the rock also, so that the drain cannot be silted up by the wash of the sea, the two forming a T cut in the bluff with a wall defending the tunnel from the direct attacks of the waves. It is not, however, of the period of the construction of Cosa, for the workmanship is distinctly chisel-work, the mark of the chisel being everywhere visible; but it must be prior to the Roman conquest. It is a work well worth a visit from any one who is interested in the arts of the ancients. It contains the history of a long struggle with the elements, for it is clear that the drainage had been carried first through the low land close by, directly into the

sea, just as the people of Orbetello tried a few years ago to do a similar work; and that the engineers then found, as now, that the drain could not be kept from silting up, and that it had been seen, as later it is seen, that the drain must discharge into the deep sea; but the device of leaving a wall of the natural rock masking the mouth of the drain is one I have never seen elsewhere. The moderns, finding the drain necessary, had reopened it, but as the ancients did at first, through the beach, and had soon to accept the antique lesson and clear out the tunnel. W. J. S.

THE CORRESPONDENCE OF THE DUCHESS OF ORLEANS.

PARIS, July 9, 1890.

OUR time is not fond of historical generalities and condensations. History has adopted the scientific method: it studies facts, it prefers what we call documents—that is to say, original letters, papers, memoirs. The 'Siècle de Louis XIV.' is still read, because it is Voltaire's—with a perfection of clearness, simplicity, rapidity, which has seldom been attained by any writer. But how many people read it twice? while you may read a hundred times, in a fragmentary manner, the Memoirs of Saint-Simon and the correspondence of Madame the Duchess of Orleans, the mother of the Regent.

Madame and Saint-Simon will always remain the permanent witnesses and, on many points, the permanent judges of the actors of the second half of the reign of Louis XIV. They will always be consulted; their judgments on men and things are invaluable. Of course they must be read with a critical spirit, as they had both strong prejudices; but their natures were fundamentally honest, they loved truth and righteousness, or what seemed to them righteousness. Their ideal was not the ideal of our time; but, such as it was, it stood well by them. It has always seemed extraordinary to me that Madame and Saint-Simon, who will be read in future ages when hundreds of other historians of the seventeenth century are forgotten, had both the most intense passion for rank; they never forgot for a moment what was due to a royal highness or to a duke and peer; but let us add at once that if they insisted on their rights, they did not ignore their duties: royal and aristocratic pride became for them a sort of virtue; it made them hate and despise what was low and ignoble. They both lived in the region of the mind where pride becomes dignity, truthfulness, and real excellence. Aristocracy ceases to be the characteristic of court life; it assumes its true character, it is the rule of the *best*. In this respect both Madame and Saint-Simon were eminently different from those who expected everything from the royal favor; they had not the spirit of Versailles, and they were thus able to judge Versailles, as it were, from the outside, though they were an integral part of it.

Madame had, besides, the advantage (I speak from the historical point of view) of being a foreigner; she was not blinded by the natural prejudices which inspire us with regard to those who belong to our race or family. She was the daughter of the Elector Palatine and of the Landgravine Charlotte of Hesse-Cassel, a thorough German, and a German of her time—a time when Germany had a number of small courts and of intellectual centres, with their independent and I might almost say their domestic life. Her father had suffered defeat at the battle of the White Mountains, and lost at the same moment the crown of Bohemia and his electorate. He spent some years in Holland and in England, with his uncle Charles I., and returned to Germany after the Peace of Westphalia (1648). Madame was born in 1652; her father and mother did not live well together, and Madame was really educated by her aunt, Sophia of Hanover. She remained with her from 1659 till 1663, at which time she returned to Heidelberg. She left Heidelberg in 1671, at the age of nineteen, to go to France, where she became the wife of Monsieur the brother of the King.

The two persons who really formed her mind were her father and her aunt Sophia. Her father contracted a morganatic marriage with the Baroness Louise of Degenfeld. He was of a gay and lively disposition, economical, a good father, very tolerant in religious matters, fond of the theatre, especially of the English theatre; he knew well the English, Italian, and French languages. He was much attached to his sister Sophia, who is well known by her Memoirs. I have had occasion to speak of her at some length in my review of a good book by M. Horric de Beaucaire, 'Éléonore Desmier d'Olbreuse, Duchesse de Zell.' The Duchess Sophia appears in her relations with Éleonore d'Olbreuse as very vindictive, aristocratic in the extreme, yet fond of jokes, even of coarse jokes.

The principal correspondent of Madame was her aunt Sophia. Leopold Ranke was the first to draw attention to these letters, and gave some extracts from them in his 'Französische Geschichte.' In a new edition of Madame's correspondence, just edited in three volumes by M. Ernest Jaeglé, professor of German at the military college of Saint-Cyr, we have now for the first time the whole of this correspondence. M. Jaeglé visited for this object the archives of Hanover, where these letters form twenty-four bundles. One hundred and fifty inedited letters have been translated from the original. To these are added a few which are in the royal library of Hanover (*fonds* Leibnitz). M. Bodeman had already used this *fonds* in his 'Briefwechsel zwischen Leibnitz und der Herzogin Elisabeth Charlotte von Orleans in den Jahren 1715 und 1716.'

The letters written by Madame to her half-sisters and brothers the Palatine Raugrafen have been published by M. Holland. Prof. Varrentrap of Marburg searched for the letters which she wrote to her father and mother; he supposes that the letters to the Electress Charlotte were burned, as well as those which were written to her father; one only of these last has been found. Among the regular correspondents of Madame was the eldest of the daughters of Monsieur, by his first marriage, the Queen of Spain, first wife of Charles II., and afterwards first wife of Philip V. None of these letters have been found in the Spanish archives; we may also consider as lost the letters of Madame to the second wife of Charles II., the Marie of Victor Hugo's 'Ruy Blas,' and to the Duchess of Este, her sister.

In the archives of Hanover are fortunately preserved, in a magnificent folio, many extracts of the letters which Madame, after the death of Louis XIV., wrote to the Princess of Wales, between 1715 and 1720 ('Auszug aus Madame, Duchesse d'Orléans, an ihre königliche Hoheit die Prinzessin von Wallis in den Jahren 1715 bis 1720 abgelassenen Schreiben,' etc.). Geheimrath von Praun published these extracts in Strasbourg in 1789, under the title of 'Anekdoten vom französischen Hofe, vorzüglich aus den Zeiten Ludwigs XIV. und des Duc Regent, aus Briefen der Mad. d'Orléans.' A year before this publication, a French translation, which is now rather rare, appeared, under the title 'Fragments de lettres originales de Madame Charlotte Élisabeth de Bavière, veuve de Monsieur, frère unique de Louis XIV.' (Paris, 1788).

Madame had a second correspondent in Hanover in the person of Herr von Harling, who had become the husband of her former governess, Fräulein von Offeln. In 1791, the letters to Harling appeared at Danzig with this title: 'Bekenntnisse der Prinzessin Elisabeth Charlotte, aus ihren Original-Briefen.' In 1820, there appeared in Leipzig a life of Madame with extracts of her letters, and in 1823 we note in Paris the 'Mémoires extraits de la correspondance allemande de la Duchesse d'Orléans.' Several editions of these Memoirs appeared in succession. The correspondence with the Raugrafen, which was kept in the archives of the Counts of Degenfeld, at Eybach in Würtemberg, was only brought to light in 1843 by Wolfgang Menzel, in the *Bibliothek* of the Literary Union at Stuttgart. Brunet gave a French translation of it in 1853, and in 1855 he published a more complete edition.

We must consider the edition which has now appeared as far superior to all the incomplete editions which we have mentioned in detail. We doubt if much more can be found in the archives of the various countries where Madame had correspondents. The letters have been arranged in their chronological order; an excellent index makes research easy. If there is anything to criticise, it is the translation itself. It seems to me that M. Jaeglé has been a little too careful to keep the Germanisms of Madame intact. There is a sort of affectation in saying, for instance, "Sa Dilection" (a translation of the German *Durchlaucht*), where he could easily have said Son Altesse, especially when the persons in question are princes of the royal family of France. The notes are exact and numerous, but they are too meagre; perhaps the publisher was afraid of augmenting the dimensions of his volume.

Such as it is, this publication will remain, we are inclined to believe, for a long time the standard edition of Madame's correspondence. Though I have read it over and over again in Brunet's edition, I have gone through these volumes with as much pleasure as if all its matter was new to me. There is a freshness in Madame's sensations and emotions which gives the reader a perpetual pleasure. Her powers of indignation are inexhaustible. She is all the time like a bird in a strange nest. She is touching at times—when she speaks, for instance, of the hours which she passed, in the early morning, on the hills of Heidelberg, eating cherries and dry bread. She loves her dear Palatinate; how could she like and admire those who devastated it? The glories of Versailles do not blind her. She hates the Jesuits, and hypocrites of all sorts. She remains a Protestant at heart; she falls asleep during the sermons she is made to hear. She is a German also, but she can admire, she even loves, Louis XIV., the most courteous of kings, who never fails to treat her with due regard and with kindliness. She is passionately fond of her son, but she never forgives him his mésalliance, his marriage with a natural daughter of the King. She sees in this unfortunate union the cause of all the disorders, not only of the Regent, but of the Regent's daughters. She hates Mme. de Maintenon, and speaks of her sometimes in the coarsest manner. Dress the *Misanthrope* of Molière in woman's clothes, place him in the French Court of the seventeenth century, among all the *Philintes* who are content to float with the tide of immorality and of corruption, and you have Madame. She is as eloquent, as unreasonable, as arbitrary, as unteachable as Molière's *Misanthrope*, as misera-

ble also, and incapable of putting her own mind and her own heart at rest; she is at the same time comical and tragical, almost ridiculous and almost sublime. Her tough and robust nature resists all the soft and enervating influences of the most refined Court. Her notion of duty is simple, even narrow, but no woman ever had it and preserved it so entire, and under so many difficulties.

Correspondence.

THE SEX OF SILVER.

To the Editor of The Nation:

Sir: Apropos of your editorial on "The Mythology of Silver," in your issue of July 17, 1890, and as throwing light on the vexed question of the sex of this deity of the American people, I send you the enclosed cartoon, reprinted in the *Kansas City Times* from the *Rocky Mountain News*. Coming as it does from the very heart of the silver region, and prepared presumably by an earnest devotee of the deity in question, it would seem to be very persuasive authority in favor of the opinion that silver is of the female sex.

It also, though most probably without having been so intended by the draughtsman, gives a clear idea of the effect of the adoption of the free-coinage policy, had the Senate Silver Bill become a law. "Mr. Gold Dollar" would undoubtedly have been "off his feet" in a short time after the inauguration of such a policy. Very truly,

A. R. Strother.

Kansas City, Mo., July 20, 1890.

Notes.

Macmillan & Co. will reprint from the Collected Works of Edward Fitzgerald, published last year, the 'Rubáiyát' of Omar Khayyám; and the first volume of 'Principles of Economics,' by Prof. Alfred Marshall.

'The White Mountains,' by the Rev. Julius H. Ward, will be issued at once by D. Appleton & Co.

Harper & Bros. will add to their series of translations from foreign authors Giovanni Verga's 'The House by the Medlar-Tree,' Englished by Mary A. Craig, with an introduction by Mr. Howells.

Mr. Frank Dempster Sherman will publish, through Houghton, Mifflin & Co., in the autumn, a new volume of poems entitled 'Lyrics for a Lute.'

Mr. Herbert Ward's 'Five Years with the Congo Cannibals' will be held back by the publishers, Robert Bonner's Sons, till October 15.

Mr. Frank Vincent's 'In and Out of Central America' (Appletons) is a little book in the author's now well-marked style—that of a hurried though sharp-eyed traveller, who gives his note-books in full, without troubling himself over native authorities or thinking the peoples he writes about worth careful study. The "out" part of the book—nearly one-half—ranges from Cambodia and Siam to Brazil and the Antilles.

The sixth volume of Mr. Worthington C. Ford's edition of the 'Writings of Washington' (Putnams) covers the period August 1, 1777–April 30, 1778, with the capture of Burgoyne, the loss of Philadelphia, and the rigors of Valley Forge, where, it is well to be reminded, on December 23, 1777, "we had in camp not less than 2,898 men unfit for duty by reason of their being barefoot and otherwise naked." Add to this distress the Gates-Conway cabal, and the trouble with foreign adventurers seeking commands in the army (there was even some friction over Lafayette); on the other hand, the invaluable accession of Kalb, Steuben, Pulaski, and Kosciuszko. The most important piece in the volume is a complete copy of Washington's paper to a Committee of Congress touching the reorganization of the army. On p. 347 there is an interesting foot-note on the employment of colored troops in Rhode Island, and Col. John Laurens's proposal to try the same thing in Virginia, as it would "advance those who are unjustly deprived of the rights of mankind to a state which would be a proper gradation between abject slavery and perfect liberty."

Mr. Andrew Clark's edition of Anthony Wood's 'Survey of the Antiquities of the City of Oxford' (1661-66) deals in the second volume, just issued from the Clarendon Press, with churches and religious houses. Comparatively little labor had to be expended upon the original chapters for this reprint. A map expressly compiled for the volume shows the academical and ecclesiastical buildings definitely stated to have been in Oxford in 1440. There is a selective index, which the general index in the concluding volume will supplant.

'Au Sud & au Nord,' by Xavier Marmier (Paris: Hachette et Cie.; New York: F. W. Christern), is a hodge-podge of scraps from all sources on a great variety of topics which have no relation to each other or to the title of the book. It resembles nothing so much as an old-fashioned magazine or school-reader; indeed, the only use which it is fit to serve is as a reader for young people learning French, to whom one can safely give it, as it is quite harmless, although without any literary value. As a repertory of useful information it is not entirely reliable, for in reproducing Sydney Smith's celebrated passage concerning the taxes an Englishman has to pay, it conveys no hint that the conditions therein described have been entirely done away with.

'Die Achten-Lini' is a slight musical novelette by J. Dedekind (Brunswick: B. Goeritz; New York: Westermann), having a strong family resemblance to all musical stories, from 'Consuelo' down. It is marked by the same lachrymose sentimentality and the same excessive idolatry of the musical gift that make books of this class almost ludicrous to readers who are not ready to throw overboard all sense of proportion in judging of human life and human capacities. It is intended as a memorial of a German prima donna, Caroline Fischer-Achten, whose portrait (given as a frontispiece), though interesting, hardly justifies the glowing terms in which the author celebrates her beauty.

'Experimental Science,' by George M. Hopkins (Munn & Co.), is a book which will attract all who are in any way interested in physical experimentation. The author is a well-known writer for the *Scientific American*, and much of the material of this volume has appeared from time to time in the columns of that paper. In bringing together and arranging his articles in a connected and systematic form, Mr. Hopkins has rendered a valuable service to experimental physics; for not only does his book offer an excellent means for becoming practically acquainted with the most important facts and principles of natural philosophy, but the ingenuity and effectiveness of the experiments which it describes, and the simplicity of much of the apparatus employed in their performance, must incite the interest of many who find the usual text-book description forbidding and its experiments impossible. Moreover, the book is full of suggestiveness to teachers of physics in their preparation for class-room demonstration. The author took the precaution to perform nearly all the experiments at the time of writing, so that the reader may depend upon that accuracy of detail which will insure success in their repetition. The 600 or 700 engravings, most of which were made expressly for the text, form a special feature and cannot be too highly praised. All the usual subjects of natural philosophy are fully treated, and there are also excellent chapters on microscopy, lantern projection, and on mechanical operations—the last containing many helpful directions for working in glass, soldering, moulding, and other matters of practical manipulation.

Mr. P. Vanderbilt Spader of New Brunswick, N. J., has printed his weather record for the interval 1847 to 1890, for private circulation. It is less full in the earlier years, but from 1857 the maximum and minimum temperatures and the precipitation are complete. The monthly totals of rainfall and the extremes of temperature are tabulated at the end of the volume. Mr. Spader has now discontinued his observations, owing to failing sight; but his record will be kept up by a young friend, Mr. C. V. Meyers, to whom the instruments are given. The mean annual precipitation is 46.82 inches; but for the last three years the total has been excessive: 51.84, 59.00, and 61.30. The mean temperatures are not deduced; the extremes are —12° for January, 1873, and 98° in July, 1866, giving an absolute range of 110° in thirty-three years.

'The Fossil Butterflies of Florissant' is an interesting paper on the Lepidoptera of the tertiary formations by Samuel H. Scudder, of thirty-five pages and two plates, from the eighth annual report of the Director of the United States Geological Survey. To the ten known from elsewhere seven species, representing six new genera, are added. These Colorado butterflies are all of extinct genera with nearest living affinities among tropical forms, which is in accord with other evidence of subtropical conditions during the tertiary much nearer the poles than at present. The fact that these fossil species possess a characteristic feature of the family ranking highest among the living—atrophy of the front legs in one or both sexes—moves the author to say: "We must therefore look for the proofs either of great acceleration in development when butterflies first appeared, or of the existence of butterflies at a far earlier period than we yet know them." In the absence of any proof that such acceleration occurs or has occurred, we should choose the latter alternative, and search for butterflies in much lower formations.

Part 8 of the 'Handwörterbuch der Staatswissenschaften' (Westermann) is mostly taken up with the last part of the long article on banking, and with articles relating to the peasant class, embracing rural economy generally, and more especially the history of the emancipation of agricultural laborers from serfdom and other forms of bondage in various countries. Among the countries embraced in the list is Japan, which is treated by Dr. Inazo Ota-Nitobe, who writes German very well, and is the author of a work, published in Berlin, on Japanese land tenure. He describes the changes brought about by the abolition of the feudal system in 1871, the chief among them being that the tillers of the soil, instead of paying a tribute in kind to the feudal lord, now pay a money tax to the State, and are at liberty to sell or mortgage their holdings. The effects of the reform have not been altogether beneficial, many of the farmers being hopeless-

ly in debt, while the rice crop, being no longer under inspection, has deteriorated in quality, in the anxiety to increase its quantity.

Maps of the South Pole, of the western half of Polynesia and the Pacific Ocean, and of Eastern China, Corea, and Japan, make up Part 23 of the new edition of 'Stieler's Hand-Atlas' (Gotha: Perthes; New York: Westermann). Each plate comprises several side-maps.

The 'Contributions to American Educational History,' edited for the Bureau at Washington by Dr. Herbert B. Adams, have just been extended by a monograph on the History of Education in Alabama, by Willis G. Clark of Mobile. As this State had in its present territory only 3,481 white inhabitants in 1810, it may be supposed that Mr. Clark's tale is somewhat meagre. He fills, however, nearly 300 pages, with the usual illustrations.

The latest of the Publications of the American Economic Association, Baltimore, is a double number, consisting of (1) "The Canal and the Railway," with a note on the development of railway passenger traffic, by Prof. E. J. James; and (2) "Canals and their Economic Relation to Transportation," by Prof. Lewis M. Haupt.

The late Gen. Frémont was engaged at the time of his death on a paper for the *Century Magazine's* forthcoming series on the California Gold-Hunters. It will be completed by Mrs. Frémont. A portrait of the Pathfinder, after an early daguerreotype, will appear in the September issue.

In the July number of the *Library Journal* attention is called to the endeavor of the New York Library Club to compile a Library Manual of New York city and vicinity which, for the first time, will reveal the extent and characteristic collections of the upwards of 125 libraries hereabouts, with their upwards of two million volumes. The fifth inquiry of the Club's circular reads: "General character of the Library"; and the seventeenth: "Specify field in which the Library is strong: specialties if any, and character and extent of any special collections." These are of the first importance to students. Other inquiries relate to conditions of use, catalogues, rate of growth, etc., etc.

We read in the *Bollettino* of the National Central Library at Florence of the publication of vol. i. of the national edition of Galileo's Works from the MSS. preserved in that library. Only five hundred copies are printed, and none are for sale, distribution to learned societies the world over being confided to the Minister of Education. A smaller and less costly edition, however, will eventually be brought out for the public at large. The same library has just acquired a remarkable collection of notices concerning persons, families, districts, and events in Tuscany, gathered from printed books, codices, and MSS. in the Florentine libraries and archives by the late Gargano Gargani, who died last year at the age of sixty-nine. It is styled 'Il Poligrafo Toscano,' and is extremely voluminous. Finally, we are told of two bibliographies—one tentative, of arts and trade corporations, by G. Gonetta, in his forthcoming 'Storia delle Associazioni di previdenza in Italia'; the other, very copious, of Italian helminthology, in three parts, viz., an author-catalogue, a systematic catalogue of worms, and a chronologic history of the science in the peninsula.

The Secretary of the Treasury has decided that the blocks of Mr. Cole's woodcuts for the *Century* are not works of art, and are therefore subject to a duty of 35 per cent. ad valorem, which amounts to nearly $100 on each block. It would be interesting to have the definition of art which expresses the conception of it by the Secretary. A copy of any work of art is not a work of art, clearly, for the engraving of Mr. Cole is only a copy on wood capable of being multiplied; but if it is not art, then all the academies of the Old World are ignorant of art, for the engraver is recognized as one of the artists who may even be accorded the *Grand prix de Rome* with the painters, the sculptors, the architects, and the musicians; and certainly no school of art in the world would agree with the Secretary in his decision that Cole's engravings are not art. It is said of a foolish French King that he once declared himself independent of the grammar of his language, but it is reserved for an American Secretary of the Treasury to declare his independence of the dictionary and the opinions of the experts in art. Seriously, this is getting funny; the Secretary probably does not know the difference between a process block and an engraving. The photographers have been discussing the question whether photography is art or not, but the doubt is solved for them, since if Cole's work is not art, no form of reproduction can be.

—On the title-page of the twenty-second volume of the 'Dictionary of National Biography' (Macmillan), the name of Sidney Lee appears for the first time in conjunction with that of Leslie Stephen. Mr. Lee's name is less well known than his chief's; it is not, for example, included (as yet—there will be a supplement) in Gubernatis's 'Dictionnaire International des Écrivains du Jour,' now in the letter P. His contributions, many of them important, show his field to be the sixteenth and seventeenth centuries, with a preference for the poets. Mr. Stephen's principal article in vol. xxiii. is on Thomas Gray, whose other talents than the poetic are so little appreciated. We do not allude to his letters, of which Mr. Stephen says that they are "all but the best in the best age of letter-writing." The historian Grote, we believe, receives in nine pages more attention than any other personage in this volume, and it is recorded that the weight of his brain (49.75 oz.) "was surprisingly small for a man of his stature and size of head." John Richard Green is the most eminent of those whose death occurred on this side of the imaginary line (1880) at which the Dictionary halts. Another exception is Thomas Hill Green (briefly sketched by Mr. Stephen); a third, that energetic Lord Mayor of Dublin, journalist and M.P., Edward Dwyer Gray; a fourth, Edmund Gurney, the light of the Psychical Research Society; a fifth, W. R. Greg, and a sixth, his son, Percy Greg, whose inherited pessimism was concentrated upon the United States, of which he attempted to write the history from the Confederate point of view. He is well styled an "embittered adversary of the American Union," in spite of a "tender vein of lyrical poetry." An odd American connection is furnished by James Pierrepont Greaves, an English mystic, who died in 1842 "at Alcott House, Ham, so named after Amos Bronson Alcott, the American transcendentalist, with whom he had a long correspondence." Other names possessing a cisatlantic interest are Grenville, to whom we were indebted for the Stamp Act, and to that extent for independence; Gen. Charles Grey, who routed Gen. Anthony Wayne; John Greenwood, a Bostonian, who became in Europe a distinguished portrait-painter; and the Quaker philanthropist, Joseph John Gurney, whose visit to this country in 1840 was an event in his own denomination, and was attended with some honors from statesmen at Washington not averse to attracting the Quaker vote. The volume opens with the Gray tribe, embraces the Greens in their diverse spellings, and ends with Haighton, and we may be pretty sure that it marks the middle term of the great series in which it belongs, and whose execution is truly beyond praise, as the labor spent upon it is, we fear, at the best, beyond any adequate reward.

—Two publications of unusual interest are added to the "Tudor Library" (London: David Nutt). The first is a reprint of Sir Thomas More's translation and paraphrases from Giovanni Pico della Mirandola. It includes his nephew's biography of the philosopher, three of his letters, his interpretation of Psalm xvi., his twelve rules of a Christian Life, his twelve points of a Perfect Lover, and his deprecatory hymn to God. An admirable introduction, describing the career and the character of the thought of Pico, together with ample notes, is furnished by the editor, Mr. J. M. Rigg. The selections made by Sir Thomas More give mainly the spirit of piety which governed Pico's Christian life, and in the prose portion there is much fine sincerity expressed with the ancient dignity and largeness of the English tongue. In the poems, which are expanded, for the most part, from Pico's prose, there is more crudeness, with only an occasional good line, but the same pious feeling controls all of them, the "twelve points of a Perfect Lover" being applied solely to the love of God. The edition, which is very handsomely printed and made, is limited to 500 copies. The second publication is of very different and much greater interest. It is a reprint of Angel Day's version, through Amyot's French translation of the old Greek romance of 'Daphnis and Chloe,' from the unique original in the Huth Library. From Amyot the Elizabethans also took Heliodorus and North's Plutarch, but the popularity of pastorals rather than of Amyot probably accounts for Angel Day's attempt to English the idyllic romance in 1587. He interpolated into it a "Shephard's Holiday," in which the swains sing in succession the praises of "Our Eliza," with much better good-will than poetry. The prose of the book, however, though often complicated and long-drawn-out, is constantly visited by the Elizabethan felicity, and sufficiently ornamented besides with Arcadian phrase, to make the work a treasure-trove. Of the well-known story, so long classical in the French of Amyot, but never naturalized in English, it is superfluous to speak. It belongs with the true pastoral, with the naïveté of the primitive love tale, with 'Aucassin and Nicolette.' Many passages of charming feeling, of pretty orchard and fountain scenes, of true romantic adventure, of the wanton naked child in the Greek idyls, and the cave of the nymphs that is almost Renaissance in flavor, of strange battle, shipwreck, and rustic humor, could be cited to tempt the reader, with their original beauty and the sweetness of the phrase, often struggling with the awkward vehicle of Angel Day's language, but also often shining out clear and pure. The volume will find great favor with lovers of Elizabethan literature, and the editor, Joseph Jacob, has given a sufficient account of the history of the romance in his Introduction. This edition is also of 500 copies.

—A second edition of Dr. Otto Schrader's 'Sprachvergleichung und Urgeschichte,' revised and enlarged, has been made accessible to the English public through an excellent translation by Mr. F. B. Jevons, under the title of 'Pre-

historic Antiquities of the Aryan Peoples' (Scribner & Welford). As we have just given at some length an account of the present state of the Aryan question in a notice of Canon Taylor's 'Origin of the Aryans,' we have only space now to call attention to the merits of this learned treatise, which approaches the subject by a combination of philological and archæological investigation. The work is divided into four parts. The first two are purely philological, and are devoted to the history of linguistic philology, and to an explanation of the method and the principles of criticism of research by means of language and history. The last two are archæological, and treat of the first appearance of the metals, especially among the Indo-Germanic peoples, and of the Primeval Period, considered under the several headings of animals and plants, agriculture, computation of time, food and drink, clothing, dwellings, traffic and trade, culture, including the prehistoric monuments, and especially the Swiss lake-dwellings, the family and the state, and religion. The concluding chapter is devoted to the question of the original home of the Aryans, in which the author finds the prehistoric place of union between the Eastern and Western Indo-Europeans in the South Russian steppes, about half-way up the Volga. An index of authors quoted, and complete indexes, by different languages, of all the various works cited, add greatly to the utility of this valuable and scholarly work.

—M. Édouard Rod began in the *Revue Bleue* of June 14 what promises to be a series of distinctly interesting articles under the title of "Les Idées Morales du Temps Présent." These articles will appear not consecutively, but at irregular intervals, and will be devoted to the opinions in regard to some great moral questions of several writers who, though their works may differ widely in respect of form, may be held to be in one way or another guides of modern thought. M. Rod seeks to find what solution such writers have given to moral problems like these: Do men depend on a supernatural power? Do they pursue an end, and, if so, what end? What is *le bien?* To what rule of conduct is one bound to submit his life? All these are questions which, he thinks, are coming back again more and more every year into the foreground of literature. There is one obvious danger that attends a task such as that which M. Rod attempts, and that is the risk of piecing together bit by bit a moral system out of passages gathered here and there from an author's work, and so furnishing him with a body of doctrine, a hard-and-fast morality, which he would not recognize as his own when he saw it. M. Rod, one is glad to see, perceives this danger clearly, and does his best to lessen it by a note of warning at the bottom of his first page. He will avoid as much as possible, he says, introducing any factitious cohesion between the ideas, often fragmentary and sometimes contradictory, of his authors. "Not one of them has a *morale* in the systematic sense of the word; what we must look for are opinions—sometimes even less than that, simple indications, uncertain *données*. Taken out of the body of his work, these indications and these *données* may perhaps take on a signification more doctrinal and more absolute than they really have in the author's thought." Whatever may be the measure of success that M. Rod attains in avoiding the risk that he points out, at the least he has treated his readers very fairly in apprising them of it and running up a danger signal.

BROWN'S BEGINNINGS OF KENTUCKY.

The Political Beginnings of Kentucky: A Narrative of Public Events bearing on the History of that State up to the Time of its Admission into the American Union. By John Mason Brown. Louisville: John P. Morton & Co., 1889.

In this monograph, published under the auspices of the Filson Club, the main thesis expounded by Littell in his 'Political Transactions in and concerning Kentucky, from the first settlement thereof until it became an independent State,' is reaffirmed, with the addition of new and valuable materials drawn from before unpublished letters, from the archives of the Spanish Government, from the colonial records of Canada, and from many other original sources. The tract of Littell, we learn, has become rare, and it was well to reëxamine its political point of view in a purely historical spirit. Instructive as it may be for the documents it preserves, and interesting as it certainly is for the cross-light it sheds on a critical period in our Western annals, it must yet take rank, in point of form, as a purely polemical pamphlet, compiled under the fervors of the controversy which came to a white heat at the West during the year 1806, when the manœuvres of Aaron Burr and the counter-irritants of his Federalist foes had stirred up afresh the live coals deposited at an early date in the ashes of Kentucky politics.

The elements of political history in Kentucky are vivid and picturesque beyond those of any other Western State, compounded as those elements are from heroic adventures peculiar to its early settlers, from wild forays and Indian raids on the border, from secret intrigues of Spanish and British emissaries, from popular discontents arising between the trans-Alleghany district and the parent State of Virginia, from factional fights in its home politics, from radical agitations nourished by its "Democratic Societies," and especially from that long struggle for the rights of independent Statehood which, in one phase or another, extended from 1782 to 1792, and which led to the formal assemblage of eight separate conventions. The traces of this chronic political unrest may be discerned in the overready sympathy that was given by certain of the Kentucky "patriots" to the Gallican propagandism of Genêt, to the nullifying "Resolutions of '98 and '99," and, at a later date, to the covert schemes of Aaron Burr, when, in 1806, that wily adventurer broke through all the toils that were set for him by Joseph Hamilton Daveiss, his Federalist prosecutor. And the traces of this same political unrest have been permanently preserved for us in the fierce polemic of Humphrey Marshall's 'History of Kentucky,' which, as published in 1812, did but give literary form and plausible logic to the extreme Federalist view of the transactions that marked the political beginnings of Kentucky.

It was contended by Marshall that the Republican founders of Kentucky were involved for years in some sort of guilty confederacy with the Spanish authorities at New Orleans or with the Spanish Minister at New York; that in pursuit of this confederacy, beginning, it may be, with temporary commercial arrangements, inspired by private gain, they had not scrupled, in the end, to plot with Spanish agents for the permanent political severance of the Western country from the States of the Atlantic border; that these disloyal plots were nurtured and sustained by Spanish bribes, and that their disastrous issue was defeated only by the resolute antagonism of a few faithful citizens who dragged the meditated treason into the light of day.

It is the aim of Col. John Mason Brown to show that these inculpations of Marshall are utterly without foundation. To this defensive purpose he is animated alike by a personal and by a patriotic motive. His distinguished ancestor, John Brown, was not only the honored friend of Jefferson and Madison, but was also called to play the foremost part in the political beginnings of Kentucky. He was Kentucky's representative in the Legislature of Virginia, her district delegate in the Continental Congress, her favorite counsellor in the primary assemblies of the people, and her chosen Senator for the first twelve years after the admission of Kentucky into the Union. The author of this monograph maintains that no man among the contemporaries who acted with John Brown in the early political transactions of Kentucky "ever knew or believed or suspected" that Brown or Innes, or any of those who followed their lead, "had ever entertained a thought other than that of entering the Union as a sovereign State, or a plan inconsistent with that thought." It is admitted that Brown, while a member of the Continental Congress, frequently had interviews with Gardoqui, the Spanish Minister, on the commercial and political relations of Kentucky with the Mississippi River; that Gardoqui offered alluring terms to Kentucky in case she would secede from Virginia and from the Federal Union; that Brown communicated these terms to confidential friends in Kentucky who were laboring to effect the separation from Virginia, and that some of those who engaged in this work of separation, such as Judge Sebastian and Gen. Wilkinson, were found to have been, at a later date, the stipendiaries of Spain. But it is maintained by the author that John Brown during all this time was friendly to the Union, as well in heart as in specific purpose, and that, if he forbore to publish and expose the enticements of Gardoqui, it was because of a reason approved by Madison, who feared that the premature publication of such seductive proposals from Spain might have a disturbing influence on the councils of the Kentucky people at a time when, more than ever, it was desirable to secure their allegiance to the new form of government which it was hoped to establish on the basis of the plan concerted by the Federal Convention of 1787. It is certain that Brown did confide the revelations of Gardoqui to Madison.

It seems to us that, without default to his defensive purpose, the author might have made his argument still more effective if he had not tried to prove too much with regard to the secret motives and ultimate aims of Brown and of those who acted with him in the political beginnings of Kentucky. The picture of the times here given is perhaps somewhat deficient in point of historical background and of historical perspective. It lacks what the artists of the brush technically call "atmosphere." The motives and aims of the men who founded Kentucky are put in the foreground, with too much of definition drawn from the light of a later period. The motives and aims which were proper enough in 1786 do not need for their justification to be squared at all points with the motives and aims which came to be of bounden obligation after our Federal Government was in the "full tide of successful experiment." In the year 1786, for instance, we find Madison writing that it had become a question whether it were "possible or worth while to preserve the Union of the States." A few months later, in view of the then menaced surrender of the right to navigate the Mississippi River, he

asked whether it would be "an unnatural consequence" if the Western people, from interests of their own, "should consider themselves absolved from every Federal tie." Early in 1787 he thought there was much ground to apprehend that the ambition of individuals, mixing itself with the impulses of resentment and interest, would lead the inhabitants of the West to "set up for themselves." In the month of August, 1787, he wrote to Jefferson that there was good ground to believe that Spain was taking advantage of the disgust created in Kentucky by the proposed surrender of the Mississippi, and was endeavoring to seduce her people from the Union "by holding out a darling object which will never be obtained by them as a part of the Union." He added that this "is a fact as certain as it is important," though it was one which he could only hint "in strict confidence." So late as the month of March, 1789, he refers to Col. Morgan's colonizing scheme at "New Madrid" as being only a sequel of the Spanish plan "of making the Mississippi the bait for a defection of the Western people," and under the same date he expressly states that "some of the leaders in Kentucky are known to favor the idea of connection with Spain."

It is plain, then, that from 1786 to 1789 there was a Spanish plot in the air for the separation of Kentucky from the Union; that this plot was well known to Brown; that he communicated it to two of his confidential associates in Kentucky for their information and guidance; that Madison was well aware of it, not only from the communications of Brown, but also from the revelations made by Gardoqui to the other members from Virginia in the Continental Congress. Madison records that these delegates held "a free conversation" with the Spanish Minister in the month of March, 1787, on the relations of the Western Territory to the Mississippi River. The delegation informed Gardoqui that a "concerted occlusion" of the river, such as he demanded, would produce an unfriendly temper in the Western people "against both Spain and the United States," with the probable result of throwing the whole western country into the arms of Great Britain. The Spanish diplomatist, on his part, intimated to the Virginians, "with a jocular air," that the Western people might become "good Spanish subjects" for the advantages attached to that character; and, "with a serious air," that such an idea "had been brought forward to the King *by some person connected with the Western country*" (Madison Papers, vol. ii., pp. 599-601). It further appears from the correspondence of Madison at this epoch that the delegates from Virginia "entered into very confidential interviews" with Otto and De la Forest (the representatives of France near our Government), on the relations of the Mississippi to the Western people.

It will thus be seen that the head and front of Brown's alleged offending in this matter was merely part and parcel of a general agitation prevailing at that time in the councils of all who were interested in the navigation of the Mississippi River. No secret was made in any quarter concerning the possible issues that were dependent on the settlement of the question raised by Spain against the natural rights of the United States. When Brown communicated to his political friends the nature and purport of Gardoqui's overtures offering to the Kentuckians favorable terms of commercial intercourse in case Kentucky should secede from the Union, it is not clear, as Marshall inferred, that Brown favored the acceptance of the offer. Neither is it clear that he spurned the suggestion with indignation. It is probable that he preferred to practise in the premises a "masterly inactivity," and that he held the matter under advisement while waiting and watching the drift of events. In the very act of communicating the tempting offer of the Spanish Minister he made it plain to his correspondents that, for himself, he had "sanguine hopes" that the new Government about to be framed under the Constitution of 1787 "would answer the expectations of its friends." This certainly is not the language of a man who was in haste to sell out his country to Spain.

At the same time he did not allow his zeal for the Union to eat him up, or to eat up the offer of Gardoqui. He seems to have thought that a prudent *ménagement* was, for the time, a dictate of sound policy. In order to justify this cautious reserve, in the full light of all the surroundings in which he was placed, it does not seem necessary to blink any of the facts which may have put a stress on his prudence without putting a stress on his patriotism. It may even be contended that his political wisdom would rather gain than lose by crediting him with that large discourse of reason which looked before and after in the darkness and confusion of a troubled epoch. It is not clear to us that he was rather cunning than wise in all his dealings with Gardoqui. Yet the author prefers to believe that the contest between Gardoqui and Brown was a contest of wits; that Gardoqui was "deficient in perspicacity," and that, therefore, when called to confront new and complicated issues, he was "completely read and understood by the men whom he thought he was manipulating." This seems to us a little like forcing a verdict in favor of the defendant, when an honorable verdict might rather be claimed on a prima-facie view of the facts in the case, without resorting to any supposed ingenuity of Brown in "escaping the trap and fathoming the plan of Spain." The world is not so much governed by individual finesse as partial biographers are fain to assume. A natural political selection plays much the largest part in determining the logic of all great public events.

Very interesting in this treatise is the honorable place assigned by the author to the zealous efforts put forth by the primitive clergy of Kentucky to protect the State from a recognition of slavery in its organic polity. The Baptist preachers of this early period, for the most part illiterate men, are represented to have taken the lead in opposition to slavery, though they were ably reinforced by the learned David Rice, "the father of Presbyterianism in the West." So strong was the anti-slavery sentiment in the Constitutional Convention that it required all the persuasive eloquence and all the personal popularity of George Nicholas to outweigh the force of the moral objections urged by the minority against any toleration of the curse in the organic law. The slavery article was carried by a vote of twenty-six against sixteen, but in this minority "the religious opinion of the delegates," says the author, "was unanimous for abolition." Religious societies for the abolition of slavery continued to be formed in Kentucky as late as the year 1807. One of the Baptist societies, more happy in its object than in its choice of a name, was known as "The Baptized Licking-Locust Association, Friends of Humanity." In the end, however, as we know, a pro-slavery sentiment became dominant in the social institutes and political counsels of the State. It was not least among the evils of slavery that it tended to create a moral cowardice, if not a moral hypocrisy, in the presence of a system which was secretly felt to be wrong. A proof of the fact may be seen in the quick moral rebound of conscience, now that the weight of the system has been lifted from the South. A similar proof may also be found in the praise now so generously awarded to the early Abolitionists.

But for the untimely death of the respected author of this treatise, we might have ventured to hope that in a future edition he would not have been unwilling to set his story in that larger historical framework which seems to us more in keeping with his subject and with the spirit of his chosen epoch. Certain statements, too, call for some modification. It is not quite accurate to say that the Continental Congress "acquiesced" in Virginia's claim to her "back lands." A reference to the 'Thomson Papers,' as published by the New York Historical Society in its collections of 1878, would have checked the generality of this statement, and would have placed the early agitation of Kentucky for Statehood in a fierce light that has escaped the notice of the writer. The defence of the Kentucky worthies on the ground of contemporary public opinion would seem also to call for a more discriminating discussion in view of certain allegations found in such a familiar work as Clark's 'Proofs' of Gen. Wilkinson's "guilt," containing as that work does a letter from Joseph Hamilton Daveiss to President Jefferson, in which, under date of March 28, 1806, it is charged that Brown could not be damaged by the imputation of undue sympathy for Spain, because such a sympathy was universal in his party. In a second edition it would seem desirable that the Spanish originals of Gardoqui's letters should be published in the Appendix, and certainly it should not have been hinted that some of these letters contain insinuations against the political constancy of Richard Henry Lee and of Col. Henry Lee without giving more at length the exact text of the documents. We regret to say that this instructive monograph abounds with misprints "too tedious to enumerate," due, doubtless, to the fact that the learned author did not survive to read the proofs; but surely the "Printers to the Filson Club" should have taken enough care of the curious French original published in the Appendix to prevent it from reading, in spots, like a piece of typographical "pi," or like some uncouth variety of the Welsh tongue mitigated by a few stray vowels.

TWO BOOKS ON PALESTINE.

Palestine under the Moslems: A Description of Syria and the Holy Land from A. D. 650 to 1500. Translated from the Works of the Mediæval Arab Geographers by Guy Le Strange. Boston: Houghton, Mifflin & Co. 1890. 12mo, xxii, 604.

Palestine. By Maj. C. R. Conder, D.C.L., R.E. ["The World's Great Explorers."] Dodd, Mead & Co.

In the first 378 pages of 'Palestine under the Moslems,' the history and topography of Syria and Palestine in general, and of the cities of Jerusalem and Damascus in particular, are treated in a connected form, though a great part of the matter is a pretty faithful translation (to judge by the style) of the Arabic writers. Twenty-two of these and two writers in the Persian tongue are named in the introduction, beginning with Ibn Khurdâdbîh in 864, and closing with Mujîr ad Dîn in 1496. The second part (pp. 378-557) is an alphabetic list of places, with descriptions, references to the geographers, and the compiler's own surmises and those of other modern scholars as to identification. The last forty-six pages

are an index of names, in which the Arabic spelling (in letters without vowel points) is added to many of the transliterated forms.

The author has adopted a plan of writing Arabic words and names, not uncommon among English Orientalists, which in a book not necessarily as dry as this might be denounced as pedantic; that is, he uses only the three vowels *a*, *i*, *u*, and, when lengthened, *â*, *î*, *û*, for the Arabic Fet'ha, Kesra, and Dhamma; thus presenting to us the now not quite unfamiliar *Muhammad*, *Makkah*, *Madinah*, always spelling the article *Al* for *El*, etc. If the book was written for Arabic scholars, Mr. Le Strange might have gone a step further, and distinguished the energetic consonants for *h*, *t*, *z*, *s*, *d*, and *k* from those representing the ordinary sounds, by a diacritical dot, as is often done even in popular works dealing with Arabdom. However, the equivalent in Arabic letters is given in the appendix for almost every geographic name found in the volume. The importance of the distinction lies in this, that the "energetic" *h*, *ṭ*, *z*, *ṣ*, *ḍ*, and *ḳ* represent quite different Hebrew letters from those represented by the non-energetic sound; for which reason, among others, Major Conder, himself a novice in Arabic, took good care to have every local name written out for him by a scholarly native.

The many versions of local legends, among which that of the Seven Sleepers is very fully treated, form the most readable part of the book. There are seventeen illustrations, mostly ground-plans of sacred buildings; a map of Palestine, on the authority of the Arab geographers; and a map of Jerusalem and its environs, referred to 985–1052. The plans are all drawn to a scale. Altogether, the aim of the writer seems to have been to exhibit his *Gründlichkeit*, a quality for which there ought to be a good English word, as Englishmen nowadays rival in this respect their German cousins.

Captain, now Major, Conder began his work under the auspices of the Palestine Exploration Fund in 1877, and was engaged upon it, with some intermissions, for no less than six years, taking in Judea, Samaria, Galilee, and the adjoining parts of Phœnicia and Syria, Moab and Gilead. His name has long been familiar to those interested in Biblical antiquities from the several reports, books, and magazine articles in which he from time to time gave the result of his observations and his opinions on controverted historic points. In the present volume the thread of the story follows his wanderings and adventures, as he leads his band of surveyors, with their theodolites and levels and chains, from town to town, and through desert and mountain defile, but is intermingled with a short account of all noteworthy monuments, from those set up by his fancied "Mongolian" rulers of the land in the days of Abraham to the last fastnesses and chapels of the crusaders. It is, moreover, adorned with discussions on history, ethnology, language, and what not. Maj. Conder came to Palestine without knowing a word of either Arabic or Hebrew. He learned both to qualify himself for his work, and acquired the spoken Arabic of to-day, as well as the literary tongue—the former well enough to lead his party without any interpreter into the desert of Moab and to work his way safely and peacefully, without passport or escort, among warring Bedouin tribes. Like all who have lived in Palestine long enough to put off the tourist, to feel at home among the unwonted scenes, and to converse with the natives in their own tongue, Maj. Conder affirms that no one who has not been on the spot can feel the full import of Bible story or of Bible poetry. Nor has he any confidence in the Bible criticism of men, like Kuenen or Wellhausen, who draw their conclusions only from printed books, or at best from old manuscripts and inscriptions; and he holds, as against the destructive views of their inharmonious school, a strong faith in the substantial truth of the Scriptural narrative. The principal result of his labors is summed up in two appendices, one of which gives the longitude and latitude, in degrees and minutes, of four hundred and forty places named in the Old Testament (towns, mountains, fords, springs, wells, etc.); the other fixing in like manner the position of fifty-five names of New Testament geography. Maj. Conder claims that one hundred and forty of these places were first discovered and identified by himself, and the positions of many others corrected.

West of the Jordan, with a Turkish escort, and with the protection of the British Government to back him, the work went on well enough; but when he crossed into Moab in 1881, the conditions were greatly changed. The Sultan no longer looked upon the British as his friends, his firman was withdrawn, and the British Government notified Capt. Conder that it would no longer answer for his safety. With great risk to his own life and the lives of his followers, he nevertheless persisted, till he had triangulated about one-eighth of the territory of Moab. From his researches as a surveyor and his careful comparison of Hebrew and of modern Arabic names, correctly spelled, he concludes that the topography of the Old Testament is genuine—that is, that the writers were acquainted with the places which they speak of, which, he says, is not the case with the author of the apocryphal Book of Tobit.

He professes, however, to be somewhat more than a surveyor: "I was taught the elements of geology by more than one specialist well known by name in England, and . . . I always felt the necessity of studying the structure and the mineralogy of every district which we visited." These studies led to the conclusion that the soil and climate of Palestine have not changed since the days of the Hebrew Commonwealth, except so far as the soil may have deteriorated by the neglect of man. In the Fellahin or peasants of western Palestine, he finds the descendants of the old Canaanites, and detected Hebrew words in their daily speech (of which he instances *goren*, the threshing floor, and *moraj*, threshing sledge), which are not given in any Arabic dictionary. He speaks of these Fellahin as lower in both mind and morals than the true Arabs, though he ascribes no very high character to the latter. He attests the well-known fact that there is very little of Islam in the men of the desert, and adds that the religion of the peasants also is but slightly removed from paganism, and blames the leading men of Mohammedan countries for their neglect of home missions. He also tells us, what is not generally known, that a nomad tribe near Beersheba, in the desert of Judah, goes by the name of *Jahalîn* (the "Ignorant") for its utter disuse of any Mohammedan rites or customs.

Maj. Conder's favorite theory is that of the Turanian kinship of the Hittites (*Kheta* or *Khatu*), in which he is supported by Prof. Sayce. He regards it as an odd coincidence that the Turanian Turk should now rule over the land as the Turanian Hittite did in the days of Abraham. He states in a note to p. 241 that Hittite names of men and of places and words in a short bilingual inscription agree best with "a Turkic or Mongolic" dialect; and throughout his book he identifies Turanian and Mongolian with the utmost naïveté.

Among monuments none have interested him so much as the dolmens, of which he found and enumerates several hundred. He ascribes their origin both in Britain and in Palestine, at Stonehenge or on Mount Nebo, to the old Turanian inhabitants, and seeks to identify them with the *bamoth*, or high places, so often denounced by the prophets; and through these with the Greek βωμός (the Hebrew *bamah* is *bomoh* in Phœnician). Some of these dolmens, still standing on the hills of Moab, he thinks, might have been the altars set up by King Balak at the command of Balaam.

Major Conder has no patience with those who, like our own Col. Mallery, try to import savage superstitions, like the totem, into any age of Palestinian history. Major Conder tells us that he was in Bechuanaland between his first and his second sojourns in the Holy land; he knows what a totem looks like, and he found no trace of one in all Syria. We cannot agree with Major Conder's wholly unsupported assertion that the Hebrews of the First Commonwealth were not peasant proprietors, but held their lands as village communities, after the manner of Russia or India. Almost every book of the Bible bears testimony against this theory; and if we consider that among the crops of Palestine the date, the grape, and the olive are almost as important as wheat and barley, we see at once why individual ownership of land was a necessity. Even now, in many parts of Asiatic Turkey, it is common for a peasant to own a small clump or group of fruit trees with the ground on which they stand as the most valuable possession which he can hand down to his children. It was in the defence of his vineyard that Naboth lost his life, not of his wheat-field.

The book contains maps of Palestine, ancient, middle-age, and modern, physical and geological, but few other illustrations.

THE FABLES OF ÆSOP.

The Fables of Æsop, as first printed by William Caxton in 1484, with those of Avian, Alfonso, and Poggio, now again edited and induced by Joseph Jacobs. I. History of the Æsopic Fable; II. Text and Glossary. With full-page illustration by H. Ryland, and facsimiles of woodcuts in the original Caxton and from the Bayeux Tapestry. London: D. Nutt. [Bibliothèque de Carabas.] Two vols., 8vo, pp. xix, 283, 322.

ONLY a few months ago we reviewed at length Mr. Jacobs's valuable edition of Sir Thomas North's 'Fables of Bidpai,' in which he displayed remarkable ability in dealing with the complicated questions involved in the relation of Oriental to Occidental fables. We have now to notice another work in the same field by Mr. Jacobs, but of much wider range and more general interest.

It is seldom that so many important discoveries in any literary field have been made or suggested within the same space as in Mr. Jacobs's "History of the Æsopic Fable," prefixed to his reprint of the Caxton version of 1484. Although the Æsopic fable has been extensively discussed of late, no study of the entire field had been made before Mr. Jacobs's essay, and he has been able to gather up all the loose threads of his predecessors' work and weave them into a compact and brilliant web. The subject of fables has always been an attractive one to scholars, resting as it does almost entirely upon written literature, and thus differing essentially from the other related branches of folk-lore. The

earliest European collection of fairy tales, for example, is not older than 1550, and the connection between this and earlier Oriental collections is purely a matter of theory. On the other hand, from their semi-popular nature, fables have closely preserved the first literary form which they received, and also the form of the collections into which they were early gathered. This renders the tracking of a given fable in modern European literature to its original Greek or Indian home, through intermediate mediæval collections, a task usually of no great difficulty, and one which has recently become a fashion in literary history.

Nevertheless, there still remained unsolved problems enough to attract the attention of scholars. Some of these were: the relation between Greek and Indian fables, the composition and relation of the early collections, and the mode of their diffusion during post-classical times and the Middle Ages. Besides these general questions there was a multitude of particular ones, such as the age and authorship of certain collections and the relation of some famous mediæval collections to each other. All these points have engaged Mr. Jacobs's attention, and it may be well to pass briefly in review the most important results of his labors, and then to add a few remarks of our own.

Mr. Jacobs considers that the fable was developed independently in two countries alone, Greece and India, and only a few of the oldest Greek fables which we possess show signs of Indian influence. Originally a part of folk-lore, the fable became literature in Greece because it was made the medium of conveying political lessons at a time when, under the Tyrants, free speech was dangerous. In India the same result was produced by the use of fables by the founder of Buddhism to impart moral lessons. In Greece this use is connected with the name of Æsop, about whom so little is known that it has been suggested that he is himself a fable. All we know of him is contained in a passage of Herodotus (II., 134), from which we gather that he flourished about 550 B. C., was a slave at Samos, and was killed, probably by a decree of the Delphic oracle, and that compensation for his death was claimed by the grandson of his master. The various fables afloat under his name were collected, to the number of about two hundred, by Demetrius Phalereus (300 B. C.), and this collection, with interpolations and revisions of the Alexandrine grammarians, was turned into Latin iambics by Phædrus, a Greek freedman of Augustus, in the early years of the Christian era.

The Indian fables appropriated by the early Buddhists were also associated with the name of a mythical sage, Kâsyapa, and were probably carried over to Ceylon in 241 B. C. along with the Jâtakas. Some hundred of these were brought by a Cingalese embassy to Alexandria about 50 A. D., translated under the title of 'Lybian Fables,' and attributed to Kybises. This collection, Mr. Jacobs says, seems to have introduced the habit of summing up the teaching of a fable in the moral, corresponding to the gâtha of the Jâtaka.

In the Roman world, to quote Mr. Jacobs, the two collections of Demetrius and "Kybises" were brought together by Nicostratus, a rhetor attached to the court of Marcus Aurelius. In the earlier part of the next century (about 230 A. D.), this *corpus* of the ancient fable, Æsopic and Lybian, amounting in all to some 300 members, was done into Greek verse with Latin accentuation (choliambics) by Valerius Babrius, tutor to the young son of Alexander Severus. Still later, towards the end of the fourth century, forty-two of these, mainly of the Lybian section, were translated into Latin by one Avian, with whom the ancient history of the fable ends.

During the Middle Ages some eighty of Phædrus's fables were turned into prose and attributed to a fictitious Romulus. Other collections based on Phædrus were made in Normandy and England, one of which, by Walter the Englishman, was metrical, and became, as Mr. Jacobs says, the standard Æsop of mediæval Christendom. The fables of Avian had a similar fate, the prose version being turned into Latin, and sent forth through Europe from England.

A new Oriental element was added to mediæval fables about 1220 by Marie de France, who attributed the new fables she translated to King Alfred. These really consisted of a selection from Babrius turned into Greek prose, with the addition of some 60 from the Oriental Bidpai and other sources, but still passing under the name of Æsop. Mr. Jacobs shows how this collection, containing 164 fables, was brought to England after the Third Crusade of Richard I., and translated into Latin by an Englishman named Alfred, with the aid of an Oxford Jew. Part of Alfred's Æsop was translated into English alliterative verse, and this was translated about 1220 into French by Marie de France, with the attribution just noted.

The subsequent fate of the Æsopic fable may best be told in Mr. Jacobs's own words (p. 217):

"With the invention of printing, the European book of Æsop was compiled by Heinrich Stainhöwel, who put together the Romulus with selections from Avian, some of the Greek prose versions from Ranuzio's translation, and a few from Alfred's Æsop. To these he added the legendary life of Æsop and a selection of somewhat loose tales from Petrus Alphonsus and Poggio Bracciolini, corresponding to the Milesian and Sybaritic tales which were associated with the fable in antiquity. Stainhöwel translated all this into German, and within twenty years his collection had been turned into French, English (by Caxton, the book before us), Italian, Dutch, and Spanish. Additions were made to it by Brandt and Waldis in Germany, by L'Estrange in England, and by Lafontaine in France; these were chiefly from the larger Greek collections published after Stainhöwel's day, and, in the case of Lafontaine, from Bidpai and other Oriental sources. But these additions have rarely taken hold, and the Æsop of modern Europe is in a large measure Stainhöwel's, even to the present day. Selections from it passed into spelling and reading-books, and made the fables part of modern European folk-lore."

Such is a mere outline of the results of Mr. Jacobs's investigation into the history of the Æsopic fable, and he is frank enough to warn his reader that about two-thirds of this short history of the fable consist of discoveries or hypotheses of his own which have not yet gone through the ordeal of specialist criticism. Whatever may be the result of this ordeal, it is likely that enough will stand to entitle Mr. Jacobs to an honorable rank among Æsopic investigators.

We have space to examine but a few points of Mr. Jacobs's introduction. On p. 162, note, he cites among English forms in Marie de France's French the word "*hus*, our 'house,' for 'door.'" This is surely the good old French word for 'door,' spelled variously *huis, uis, ois, hues, huix, hus, us*, from the Latin *ostium*, and in nowise connected with the English "house." On p. 184, Mr. Jacobs cites as a proof of the popularity of the fable in England its extensive employment in the popular literature of anecdote and sermon. The list which he gives might easily be enlarged by the addition of such names as John Felton (flourished about 1430), whose inedited sermons contain many fables. It is, however, to be borne in mind that the use of stories in sermons was universal from the thirteenth century on, and fables were largely employed by preachers in all countries. On page 194 reference is made to the paucity of Æsopic fables in modern collections of folk-tales, and it is suggested that collectors have neglected them as something of comparatively little interest. We are inclined to think that, in fact, fables are of rather rare occurrence among the people. In Italy, for example, only about a dozen have thus far been collected (Mr. Jacobs does not refer to these, although a number of Æsopic fables are among them; see Crane's 'Italian Popular Tales,' pp. 150, 353), and by persons not ignorant of the value of fables when found. On page 199 the 'Disciplina Clericalis' of Petrus Alphonsus (it should be Petrus Alphonsi, or better, Alfonsi, the name of the royal sponsor being assumed in the genitive to mark the spiritual relationship of the godchild) is mentioned as a collection of tales intended for seasoning to sermons, hence the name. The 'Disciplina Clericalis' was written at the end of the eleventh or the beginning of the twelfth century. Now, the use of stories in sermons was introduced by Jacques de Vitry (who died in 1240), and we are not aware of any collections of stories designed expressly for use in sermons before the end of the thirteenth century. There were, of course, earlier collections of moral tales, like Gregory's 'Dialogues' (written in 593–4), but not intended expressly for the use of preachers. In this connection should have been mentioned the moralization of fables introduced by Odo de Ceritona (Eude de Cheriton), and continued by Cyril and Nicholas of Pergamos in the 'Speculum Sapientiæ' and the 'Dialogus Creaturarum.'

Mr. Jacobs has some interesting pages (204 *et seq.*) upon the subject of the fable in general, its origin and diffusion. The history of the fable is followed by a synopsis of parallels, and only those who have done similar work can appreciate the enormous labor condensed into thirty-eight pages of fine print and rendered accessible by two indexes, one of fables and the other of the authors cited in the synopsis. Practically this part of Mr. Jacobs's work is a supplement to the invaluable notes of Oesterley to Pauli's 'Schimpf und Ernst' and Kirchhof's 'Wendunmuth,' works now exceedingly scarce. It would not be impossible to make numerous additions to the references in the synopsis; but Mr. Jacobs has done enough to entitle him to the gratitude of all his fellow-students. The Caxton reprint is provided with a convenient glossary, and the book is published, in a limited edition, in the same dainty style as the others of the series, and adorned with a charming etching by Mr. Ryland. Last, but not least, Andrew Lang tells in a prefatory poem how Æsop missed his great opportunity.

Tennis, Lawn-Tennis, Rackets, Fives. [Badminton Library.] Boston: Little, Brown & Co.

THE four divisions of this volume are edited by Messrs. J. M. Heathcote, C. G. Heathcote, E. O. P.-Bouverie, and A. C. Ainger—names well known in the different "courts" in which they practise—and they have called in to their assistance several other players, male and female, English and American, in order to make a symposium, after the fashion of the day, and give the public the benefit of their combined knowledge and experience,

Although ball games are not referred to in the Scriptures, recent excavations in the neighborhood of Cairo have brought to light wooden and leather balls, evidently used in such games, which are believed to be 4,000 years old. In later times the Greeks and Romans played games of ball, but we are without any definite information as to the nature of these games. The early middle ages were enlivened by the French *jeu de paume* and the Italian *pallone*, so called because the ball was struck with the palms of the hands. Then, as society became more luxurious, gloves were used to protect the hands, and afterwards came the first rude form of racquet—a spoon-shaped basket, such as is still used in the game of *pelote* played in the Basque provinces. In the fifteenth century it occurred to some inventive genius to substitute for this basket, strapped to the arm, a "battoir," or battledore, made of parchment, with a wooden handle, and it is recorded that when these battoirs became fashionable, and the supply of parchment ran short, the makers—instigated thereto, no doubt, by the school-boy of the period—used precious classical manuscripts, obtained from persons ignorant of their value! Such is believed to have been the ignominious fate of the lost books of Livy.

From this time on, the game of tennis, still called in France *jeu de paume*, and in Italy *la palla*, was the favorite game in all the courts of Europe, and the "battoir" was succeeded by a racquet resembling that now in use. By the time Henry VIII. built the tennis court at Hampton Court, about the year 1530, tennis had become the game of kings, if not the king of games, as its advocates love to describe it. Before this time, too, the various rules and customs of the game had become assimilated in different countries. In 1555 Messer Antonio Scaino, a priest and doctor of theology, published the 'Trattato della Palla,' giving the laws of the game as played in Italy, together with a history of *chases*, and in this book are found the terms "a due" and "vantaggio," which still survive in the modern "deuce" and "vantage." Shakspere often refers to tennis, making *Henry V.* say:

"When we have matched our rackets to these balls,
We will in France, by God's grace, play a set."

And Charles II. played tennis in the old Haymarket Court in London, which was still in use up to 1866. The game seems to have languished during the latter part of the last and the beginning of this century, perhaps because the young men were too busy fighting; but of late years it has taken a new lease of life, owing to the attention directed to it by the popularity of its offspring, lawn-tennis.

There are plenty of good reasons for the fascination which this venerable game exercises over the minds of its admirers. The exercise is not so severe as in racquets or lawn-tennis, and the game can be played at almost any age, while the *accuracy* of stroke, which is perhaps the most important element of success, is largely the result of practice, and can be attained by any one with unimpaired eyesight and a fairly strong wrist. When once the beginner has penetrated the mysteries of *chases*, which are simply lines marked on the floor of the court within one or other of which he must make the ball fall, and has learned how to *cut* the ball (Messer Scaino calls it *tagliare*) in order to make it difficult of return, he is well advanced on the road to success. Then he must cultivate a *cut* or *twisted* service, of which there are a good many varieties—indeed, a celebrated French player claimed that he possessed forty-two different ones, but so extensive a repertory is unnecessary; and, having reached this point, he will realize that the game is full of interesting possibilities.

He will find Mr. Heathcote an excellent adviser on all technical points, and if he follows his advice intelligently, he will go on improving until he exemplifies the truth of the old tennis adage: "A good player can generally get to the ball, and to a first-rate player the ball always comes." Before long the completion of the new court in Forty-third Street will give New Yorkers an opportunity of seeing the game played, of which they will doubtless avail themselves, for, as Mr. Heathcote remarks, "the Americans have recently taken up tennis with characteristic enterprise and spirit." This remark is fully justified by the fact that the tennis championship of the world has been held for the past five years by a citizen of Boston; and, to judge from the way in which Pettit defeated Saunders, the English champion, the other day, there is no immediate prospect of our being deprived of this honor. Mr. Heathcote finds fault with our players for having adopted a ball which is slightly slower than the English ball, and straightway recommends a ball made by one of the English makers, which is of less diameter than that called for by the rules given at page 62—an inconsistency which needs explanation.

In illustration of the natural blunders of the non-sporting part of the community, Mr. Heathcote says: "Most ladies believe that a ball struck horizontally over a net will bound off the ground vertically, while many statesmen and almost all lawyers shoot not in front of but straight at a bird flying across their line of vision." This sounds harsh, especially in view of Miss Dod's chapter on "Ladies' Lawn-Tennis" in the present volume; but, allowing for the usual exceptions, it must be admitted that the charge is not without justification. A certain Mlle. Margot is said to have played tennis in the fifteenth century in Paris, but, in spite of this historical precedent, and of Miss Dod's chapter aforesaid, it is the firm belief of most people who have had occasion to consider the matter, that the fair sex will never appear to great advantage in the lawn-tennis court. Ladies are badly handicapped in the matter of dress, and the increased exertion made necessary by this difficulty has, in many cases, done serious and permanent injury. Some exceptional young women may become senior wranglers and others may play excellent lawn-tennis, but they are more likely to succeed in the former direction than in the latter, and with less probability of suffering from the mental than from the physical strain. In 1888 Mr. Renshaw gave one of the English lady champion players the odds of 30 and another half 40, and he won on each occasion, showing how wide a difference exists between the best players of each sex.

The literature of lawn-tennis has become so extensive of late years that it is hardly possible to say anything new as to the origin, development, or best methods of playing the game. There is, therefore, very little in the lawn-tennis section of the present volume that calls for special mention except the excellent illustrations, many of which are from instantaneous photographs of well-known players, and the chapter giving useful information as to the best way of making the different kinds of courts. The game seems to hold its own all over the world, if the number of players is a fair test, and there is no doubt that the general standard of play is an improving one, even if that of the champion players is no higher than it was a few years ago. And yet the most enthusiastic lovers of the sport must admit that, by comparison with real tennis, the game of lawn-tennis is decidedly tame, lacking both variety and interest.

No historical or princely associations surround the origin of the game of racquets—or rackets, as it may also be spelled. On the contrary, it seems to have been first played in the Fleet prison at the beginning of this century, and was already an old game in that locality at the time of Mr. Pickwick's incarceration. It was afterwards played elsewhere, but always in open courts—that is, courts with only one wall; and it was after it had ceased to be played at the debtors' prison that the building of Prince's Courts, in 1853, introduced the modern game which is played in a four-walled court. It is a much faster game than either tennis or lawn-tennis, and for that reason can rarely be very well played by those who have lost the elasticity of youth; nevertheless, the connoisseurs who watched the games played in the New York court a few years ago will recall the successful efforts of at least one gentleman who had long passed the "mezzo del cammin di nostra vita." It is certainly a less interesting game than tennis, while on the other hand those who play both games will invariably prefer it to lawn-tennis, partly because it admits of harder hitting, and partly because of the difficulty of judging the angles made by the ball in the corners of the court.

The English game of fives, so called because the ball is hit with the hand or "bunch of fives," resembles the Irish game of hand-ball, and is no doubt the lineal descendent of the old "jeu de paume." The Eton game, which alone Mr. Ainger describes, is very complicated, and has no sufficient advantage over the plain-wall game to compensate for its needless detail. The simpler game is coming into vogue in our schools, and is an admirable exercise, as well as a good introduction to the more difficult court-games. It has, moreover, the great advantage of necessitating a comparatively small outlay in the construction of the court.

Lois françaises et étrangères sur la propriété littéraire et artistique, suivies des conventions internationales conclues par la France pour la protection des œuvres de littérature et d'art. Recueillies par Ch. Lyon-Cean et Paul Delalain. Paris. 1889. 2 vols., 8vo, lxvii, 568 pp.; xiv, 426 pp.

THE full title of this book, as set out above, will of itself indicate that it is an important work, while the names of the two editors—the one of wide experience in the study of comparative jurisprudence, and the other well known in the literature of literary property—are a sufficient guarantee that it has been compiled with accuracy and intelligence. The names of several of the collaborators, also, have already been included in the bibliography of copyright. That the work is a timely one, no one at all familiar with the growth of interest in this kind of legislation since the International Copyright Congress at Brussels in 1858 will doubt, and that it is now published under the auspices of the "Comité de Législation Étrangère" of the Société de Législation Comparée of Paris is, perhaps, but another proof that the French are not inclined to surrender their lead in the study of comparative legislation. A striking illustration of the more recent advance of interest in literary property is the fact that, of the thirty-three countries included in this work which have passed distinct statutes for the protection of literary and artistic productions, ten, or nearly one-third of them, have enacted such laws within

the past four years, nineteen since 1879, and twenty-two, or two-thirds of the whole number, since 1876.

The introduction, by M. Lyon-Cean, is a thorough piece of work, giving (1) a brief history of the growth of copyright legislation, and (2) a careful analysis of the statutes actually included in this collection, in such wise that under any particular topic, such as "The Duration of Copyright," "Formalities Required," "Protection Accorded to Musical Compositions," "Translations," etc., there may be found a statement of the actual statutory provisions of each country relating thereto, showing where they correspond or in what particulars they differ. Besides the introduction, the first and bulkiest volume contains the laws of the various States of Europe. Of these, three alone—France, Germany, and Great Britain—fill 234 pages, or a little more than 40 per cent. of the whole volume, Great Britain occupying 117 pages, or exactly the same space as France and Germany together. In the case of this last country, it is not the multiplicity of her laws, but their length, which has called for space. The German statutes are but three in number, viz., the law of June 11, 1870, concerning literary works, and the laws of January 9 and 10, 1876, the first protecting works of the fine arts and the second photographs. Under France, on the contrary, no less than twenty-six laws, ordinances, and decrees, dating from 1791 to 1887, are set out as being now in force, while the British statutes are nineteen in number, covering even a more extended period, namely, from 1734 to 1888. Certainly the proposals, urged in both countries, to codify these laws recommend themselves. In some other countries the laws were enacted so long ago that revisions are very desirable and even imperative. Thus, Greece has still to depend upon the provisions of her penal code of 1833; but in 1880 efforts were made to enact a new, codified copyright law, and a bill for that purpose was drawn up. Rumania has no provision for the protection of literary works other than a chapter in her statute of 1862 controlling the press, and Portugal has no enactment since the civil code of 1867; while the law of Austria, which dates back to 1846, although a liberal law for that time, would now bear revision. Servia and Turkey, and the diminutive republic of San Marino, are as yet without copyright legislation.

The second volume contains the copyright statutes of the remaining countries of the world, Japan, with its law of 1887, representing Asia, while three African States are included—Tunis, the Republic of South Africa, and Egypt. The last-named country has no statutory enactment upon the subject of literary property, but, according to one of the articles of the regulations governing the mixed courts, to the effect that in case of the silence or insufficiency or obscurity of the law, judgments are to conform to the principles of natural right and equity, the Court of Appeals of Alexandria has rendered four decisions, which are included in the volume as precedents virtually governing literary and artistic property in the absence of a statute. Besides the United States, the Western Hemisphere is represented by the Central and South American States, and Hayti and Oceanica by the Hawaiian Islands, the latter having passed a copyright law on June 23, 1888. In addition, the volume contains the text of the Berne International Copyright Convention, with an introductory sketch by M. Louis Renault; all the copyright treaties to which France has been a party; and, as an appendix, a French translation of the South American International Copyright Treaty. Finally, there is an excellent index.

The work is not an absolutely complete collection of the copyright legislation of the world. The British colonial laws are entirely excluded (except that the Canada Act of 1875 is entered under Great Britain), and in the case of some countries statutes are omitted which may still have some force of law; for example, under Denmark, in which country at least eight enactments previous to that of December 29, 1857 (the first one included in the book), are still partly in force. For the sake of completeness, also, the special Danish laws relating to Iceland should have been printed, as well as the sections relating to literary property of the Swedish law of 1812, on the freedom of the press, while for the sake of historical completeness the famous "Konkordat" of 1857, between the different Swiss cantons, might well have been included in the chapter devoted to Switzerland. Perhaps the International Copyright Bureau at Berne may at some future time see its way clear to prepare and print a work which shall include all the copyright legislation, past as well as present, of the whole world, a production which would be fully justified by the present intelligent interest in literary and artistic property.

The inclusion of copyright in the subjects for discussion by the Pan-American Conference, and the recommendation of the Copyright Committee of that body that the United States should join the Montevideo treaty, adds special interest at this time to that part of the work which relates to the Central and South American States. Of these countries the following have passed codified copyright statutes: Chili, July 24, 1834; Peru, November 3, 1849; Mexico, 1871, as a chapter in its civil code; Bolivia, August 13, 1879; Guatemala, October 29, 1879; Colombia, October 26, 1886; Venezuela, May 12, 1887; Ecuador, August 3, 1887; while the civil and penal codes of the Argentine Republic and Brazil provide, though not very adequately, against piracy. The civil codes of Honduras (1880), Salvador (1880), and Uruguay (1868) contain exactly similar provisions, to the effect that intellectual productions are the property of their authors, and that this property is to be regulated by special laws; but neither country seems to have passed such special laws. The Peruvian Constitution of 1860 declares intellectual property to be inviolable, and Paraguay, in its Constitution of 1870, gives every author an exclusive property in his productions "during the period fixed by law," but has, apparently, never passed any law fixing the duration of the property right. Costa Rica and Nicaragua seem to be entirely without legislation upon this subject, but the island of Hayti passed a favorable copyright act on October 8, 1885. The five republics of Central America joined, on February 17, 1887, in a treaty of peace and commerce, of which one article guarantees the protection of literary property, but this convention seems never to have come into force. From August 25, 1888, to February 18, 1889, a South American Congress of private international law held thirty-five sessions at Montevideo, and discussed among other things a project for a convention for the protection of works of literature and art, and this was signed on January 11, 1889, by the Argentine Republic, Bolivia, Brazil, Chili, Paraguay, Peru, and Uruguay. It is this convention which the Pan-American Congress recommended the United States to enter.

Briefe und Erklärungen von I. von Döllinger über die Vaticanischen Decrete 1869-1887. Munich: C. H. Beck. 1890. Pp. v., 163.

Leo XIII., soon after his accession to the seat of St. Peter, endeavored to make good the mistake of his predecessor, and invited the excommunicated Döllinger to visit him in the Vatican, intimating that a new and more liberal spirit would be found prevailing there. Döllinger respectfully declined the friendly overture, with the remark that a mere change of persons in the Pontificate could hardly be expected to produce a change of principles. Repeated efforts were made to force him back into the fold by a Jesuitical *coup de main*—that is, by circulating reports of his contemplated or secretly consummated submission. In 1886 Döllinger expressed his intention of publishing a pamphlet reaffirming his views concerning Papal infallibility, and arraying against it a serried phalanx of facts and arguments—*aciem argumentorum et factorum instructam* — such as had hitherto not been brought into the field of controversy in a compact body. The title of this pamphlet was to be 'The Vatican Decrees in the Light of History.' It was to contain, among other things, a survey of the dogmatic history of the Papal See from its origin until the present day, in which all important *decreta fidei et morum* issued by the Popes were to be adduced and critically discussed.

This work, which was to have been written in the form of letters to a prelate, was never executed. Only a few preliminary notes bearing upon it were found among the posthumous papers of the deceased. The present volume is an attempt to carry out, so far as it is now possible, the original purpose of Dr. Döllinger, and may, therefore, be regarded as a substitute, however imperfect, for the book which, in the last years of his life, he had so much at heart, but unfortunately never found time to put on paper. It consists of twenty-eight letters in all, most of which have appeared at various dates in different periodicals; others, such as those to and from the Papal nuncio, Ruffo Scilla, the Archbishop Antonius von Steichele, and "a lady of high rank," are now printed for the first time. Very earnest and very naïve are the two letters in which the lady aforesaid entreats the illustrious scholar to put aside his pride of learning and save his soul from "an eternity of indescribable torment" by a penitential return to the bosom of the Church. With admirable delicacy and tact, Dr. Döllinger lets himself down to the intellectual level of his correspondent, and makes his standpoint so clear that one would think even the rather limited and religiously fanaticized intelligence of her Royal Highness might recognize the impossibility of a recantation. Peculiarly interesting is the letter of the nuncio, who took occasion of the Pope's jubilee to express the joy it would excite in the heart of the Holy Father to be able to celebrate the solemn feast "with the well-beloved son at his side." In his reply to this letter Döllinger says that the prelates all agreed in excusing themselves for submitting to the decision of the Council on the ground that they did not wish to produce a schism. "I, too," he adds, "am not willing to be a member of a schismatic society; I am isolated. Persuaded that the sentence hurled against me is unjust and legally null and void, I persist in regarding myself as a member of the great Catholic Church, and it is the Church itself which tells me, through the mouth of the holy fathers, that such an excommunication cannot harm my soul."

In a letter addressed to Pastor Widmann,

and dated October 18, 1874, Döllinger states that he belongs from conviction to the Old Catholic communion, which he must, therefore, have held to be a body not separated from the Catholic Church. But it is not easy to see how this connection can be harmonized with the confession of his isolation. Indeed, he seems to have been, to a certain degree, in the difficult and quite untenable position of a Mugwump who claims to belong still to the Republican party, although temporarily semi-detached in consequence of excessive corruption in the main body. The following incisive paragraph in the letter to the nuncio deserves to be quoted:

"And here, Monseigneur, I permit myself to cite a characteristic fact. When the Archbishop, obeying, as he said, the orders of the Pope, communicated to me the sentence pronounced against me, he announced that I was subject to all the pains and penalties heaped upon the excommunicated by canonical law. The first and most important of these penalties is contained in the famous bull of Pope Urban II., which decides that any one may justly kill an excommunicate, provided he does it through zeal for the Church. At the same time, he caused sermons to be preached against me in all the pulpits of Munich, and the effect which these declamations produced was such that the Chief of Police warned me that assaults upon my person were being plotted, and that I should do well not to go out unattended. Might I venture to raise the question, Monseigneur, whether, in case of my submission, I should be obliged to declare to the world that I deem this decision of an infallible Pope to be in perfect conformity with the morality of the Gospel?"

The value of this little volume consists chiefly in the fact that it furnishes a complete refutation of the doctrine of Papal infallibility, not from a rationalistic, but from a strictly orthodox-Catholic point of view. It shows conclusively that the Vatican decrees, when tested by the principle *quod semper, quod ubique, quod ab omnibus*, which the Romish Church has made the criterion of dogma, have not the slightest foundation to rest upon. The topics here discussed may seem somewhat antiquated, but in Bavaria, and indeed in all Germany, they still belong to the vital questions of the day, and possess something more than an academical or purely historical interest. The Vatican decrees of 1870 are the fundamental planks in the political platform of the Ultramontane party of 1890; and Prof. Reusch, in collecting and publishing these 'Letters and Declarations' of his deceased friend and fellow-laborer, has done an excellent work and most opportune to the needs of his countrymen.

Outlines of Jewish History, from B. C. 586 to C. E. 1890. With three maps. By Lady Magnus. Revised by M. Friedländer. Philadelphia: The Jewish Publication Society of America. 1890. 8vo, pp. xxi, 388.

THE first volume issued by the Jewish Publication Society of America is a revised edition of Lady Magnus's 'Outlines of Jewish History.' The new matter consists of three chapters on the Jews of North America and South America, Theodore Reinach's chronological tables of Jewish history, and a frontispiece representing the Temple of Jerusalem as reconstructed by Herod.

We doubt whether there is in the English language a better sketch of Jewish history than the one before us. Though evidently intended primarily for the young, the book contains much that will interest older readers. This is particularly true of the closing chapters, which, notwithstanding their brevity, contain the best and fullest account of the Jews in America that has ever been published. The mistakes pointed out by Dr. Neubauer, in the *English Historical Review* (January, 1887), ought to have been corrected in this edition. There are several other minor errors not noticed by Dr. Neubauer. It is wrong to say that the Jews are mentioned in the Saxon Chronicles (p. 165); and it is misleading to state that the Jews summoned to Parliament in 1240 were M. P.'s (p. 175). The massacre of the Jews of York took place in 1190, not 1189 (p. 170). The account of the mediæval Jews of England should have contained at least a few words concerning one of their most important institutions, namely, their Exchequer.

But in passing judgment on this book, we feel more inclined to commend than to condemn. The Jewish Publication Society is to be congratulated on the successful opening of its career. The society intends to publish a great variety of books for the purpose of elevating the intellectual condition of the Jews in America. Such a movement, so auspiciously begun, deserves the hearty support of the public.

Warpath and Bivouac, or the Conquest of the Sioux. By John F. Finerty. Chicago. 1890.

To write an unsensational but truthful and spirited account of savage campaigns is no light achievement, but it has been done by the author, who represented the Chicago *Times* in the Indian field in 1876 and 1879. If this stirring narrative is read as it deserves, the people will learn of hardships and peril encountered by their military forces that not one in a hundred thousand ever dreams of. The historian accompanied Crook on his Big Horn expedition, and, as there is no rear in an Indian fight, was in the thick of it on the Rosebud when Crook and the Sioux mutually recoiled. Within the next ten days the same savage foe overwhelmed Custer not more than twenty miles away. What is known as the Sibley scout, a reconnoissance of about thirty men that fell in with an overwhelming war party in the Tongue River country, is perhaps the most thrilling episode described.

Mr. Finerty writes clearly, and evidently has an ancestral love of fighting from the facility with which he takes his place in the ranks. But he never boasts. The wider lesson of the book is the part played by the army in opening for settlement, and what subsequently became civilization, the vast ranges of the Northwest. There are many excellent illustrations of general and other officers.

NEWEST BOOKS.

The White Mountains

A Guide to their Interpretation.

With a Map of the Mountains and Ten Illustrations.

By JULIUS H. WARD. 12mo, cloth, gilt top. $1.25.

Mr. Ward has spent his summer vacations in the White Mountains for several years, and has entered deeply into their life and meaning. This book is both a guide to a better knowledge of the White Hills and a souvenir of what one finds in them.

AN UNCONVENTIONAL TRAVEL-BOOK.

With 112 Illustrations. 12mo, cloth. Price, $1.50.

A Social Departure:

How Orthodocia and I went Round the World by Ourselves.

By SARA JEANNETTE DUNCAN.

The New York Herald says: "This is one of the brightest stories of travel that ever came from a feminine pen. . . . It is a cheery, witty, decorous, charming book—one which should amuse some men and delight many women."

The Detroit Free Press says: "One of the most charming books of travel of the year. . . . It tells how two girls made the journey around the world without escort or chaperon, and does this in a most charmingly graceful way, the story being full of the picturesque, very vivid in its descriptions, having many dashes of wit, and, strange as it may seem, coming from a woman, being full of humor."

In the Town and Country Library.

EXPATRIATION.

A Tale of Anglomaniacs.

BY THE AUTHOR OF 'ARISTOCRACY.'

12mo, Paper, 50 cents; special cloth binding, $1.00.

THROCKMORTON.

By MOLLY ELLIOT SEAWELL. Paper cover, 50 cents. Specially bound in cloth, price, $1.00.

"The plot of the story is excellent—full of quick turns and surprises. . . . The way in which Judith falls in love with the hero, notwithstanding the uncanny barrier that lies between the two, and the way that barrier disintegrates and fades away in the end, is well worked out, and in a fashion to charm all who believe that the course of true love ought, at least, to run smooth."—*Commercial Advertiser.*

JOOST AVELINGH.

By MAARTEN MAARTENS. Paper cover, 50 cents.

". . . Maarten Maartens is a new name to us. His novel of 'Joost Avelingh' (now published in Appletons' Town and Country Library) displays such marked ability as to command for him instant admiration, as well as affords an exceedingly interesting study of Dutch life and customs."—*Springfield Republican.*

"No novel superior to this has appeared in the Town and Country Library, of which it is No. 53. . . . The story surprises the fiction readers of the world. . . . The story at times rises into the intense, and descends at last into the 'vale of peace.' . . . The story is realistic in a very high degree, and is beautiful as a picture of Holland, with its life and politics. . . . To read the story is like passing through all kinds of dangerous roads, with storms, precipices, and raging streams, to come out at last upon a high, central table-land where the sun shines in beauty, the air is full of charm, and the soul dwells in safety and high endeavor for evermore."—*Public Opinion.*

D. Appleton & Co., Publishers,

1, 3, AND 5 BOND STREET, NEW YORK.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

The Story of the Jews Under ROME. By the Rev. W. DOUGLAS MORRISON. (No. XXIX in The Story of the Nations Series.) 12mo, illustrated, $1.50.

"Presented with singular lucidity, and with an admirable combination of brevity in style with completeness of matter. . . . This work is a worthy addition to this admirable series of historical volumes."—*Scotsman.*

Astoria. By WASHINGTON IRVING. Tacoma Edition. Large 12mo, paper, 60 cents.

The publishers of Irving's Works have felt that a new and attractive edition of the 'Astoria' would find many readers among those interested in the building up of the Great Northwest. Irving's picturesque and dramatic descriptions of the experiences and trials of the pioneers of 1810 are certainly in marked contrast with the state of the country as it appears in 1890, and the narrative possesses a lasting value for all interested in the history of our country.

Want and Wealth. A Discussion of Certain Economic Dangers of the Day. An Essay. By EDWARD J. SHRIVER, Secretary N. Y. Metal Exchange. (No. LXIII in the Questions of the Day Series.) 8vo, paper, 25 cents.

Helena, and Occasional Poems. By PAUL ELMER MORE. 12mo, cloth, gilt top, $1.00.

TESTA: A BOOK FOR BOYS.

"Uncle Baciccia reminds us strongly of Sam Johnson and of Ben Franklin. He combines the severe morals and explosive temper of the one with the general serenity, candor, and practical shrewdness of the other. But we must do Baciccia the justice to say that he seems quite free from the gulie which helped to make the American sage great in diplomacy, and that he has a sweetness and idealism entirely his own."—*The Nation.*

Climate exceptionally healthy about same as Ohio. Comfortable buildings, beautifully situated in **150 ACRES** of land. On Through Route between East and West. Passenger Elevator. Gymnasium; Riding School. Students from all parts of America. The number received limited. Charges moderate.

Illustrated Circulars sent on Application. | **Rev. E. N. ENGLISH, M. A., Principal.**

LONDON, ONTARIO, CANADA.

UNIVERSITY OF VIRGINIA,
CHARLOTTESVILLE, VA.

Sixty-seventh session begins Oct. 1. Courses in Letters and Science, Law, Medicine, and Pharmacy. Civil, Sanitary, Mining, and Mechanical Engineering. Laboratory work in Chemistry, Physics, Biology, Anatomy, Histology, Pathology, Mechanics, Engineering, and Assaying. For catalogues, address, as above,
WM. M. THORNTON, Chairman of Faculty.

University of the City of New York

LAW SCHOOL.

The thirty-second session begins October 1, 1890. For Catalogues, etc., apply to
Prof. I. F. RUSSELL,
Equitable Building, 120 Broadway, New York.

DICKINSON SEMINARY,
WILLIAMSPORT, PA.

A thoroughly equipped Classical and Scientific School for both sexes. 16 teachers. Regular and elective courses. Degrees conferred. Rare facilities in Music, Art, and Modern Languages. Steam heat; electric light; all modern appliances. $225.40 pays all charges in a regular course for one year. Discounts to preachers, teachers, and two from same family. Year begins Sept. 1. Catalogue free.
E. J. GRAY, D.D., President.

NORFOLK COLLEGE FOR YOUNG LADIES.
NEAR OLD POINT COMFORT.

Largest, cheapest, and best equipped school in Virginia. 290 students; 22 teachers—graduates of Smith College, Boston Univ., Wesleyan, Stuttgart, etc. Arts of self-support a specialty. Home life, board, tuition, $42.50 a quarter. Fine climate for delicate girls. For Catalogue, address J. A. I. CASSEDY, Prin., Norfolk, Va.

[*Other School Advertisements will be found on last page.*]

KNABE

PIANOFORTES.

UNEQUALLED IN
TONE, TOUCH, WORKMANSHIP, AND DURABILITY.

WILLIAM KNABE & CO.,
Baltimore, 22 and 24 E. Baltimore St. New York, 148 5th Ave., near 20th St
Washington, 817 Market Space.

IDLE

Invested to yield a present income of from **6 per cent to 8 per cent** with one **half the profits.**

Send for circulars to WM. H. PARMENTER, General Agent of the WINDSOR INVESTMENT CO., 50 State Street, Boston, Mass.

MONEY

9% What is better than a first Mortgage on improved property in a growing city. Loans placed at nine per cent., having for security property that is worth at least three times the amount loaned. Large business in this line, with years of experience gives my clients best advantages. Correspondence solicited. Best references furnished.

J. C. BROCKENBROUGH, Jr., Tacoma, Washington.

PERSONS INTERESTED IN EGYP- TOLOGY, Assyriology, and Biblical Research—the work of the Egypt and Palestine Exploration Funds, etc.—are requested to send their address to

The Nation.

NEW YORK, THURSDAY, AUGUST 7, 1890.

The Week.

On Saturday last the two Kansas Senators (Ingalls and Plumb) and one Nebraska Senator (Paddock) voted in favor of Senator Vest's amendment to reduce duties on plain and decorated china and crockeryware by 10 per cent., *i. e.*, from 50 and 60 per cent. to 40 and 50 per cent. ad valorem. The vote stood yeas 17, nays 20, all the yeas being Democrats except the three Senators named, and all the nays being Republicans. This was the first break in the Republican column in the Senate on the McKinley Bill. Although there have been premonitions of revolt in Kansas before, this is the only real outbreak. It is all the more significant since Senator Ingalls's term is about to expire, the Legislature elected this fall choosing his successor. Simultaneously with this "kick" the news comes that the Seventh District Republican Convention of Kansas has adopted a platform endorsing Mr. Blaine's reciprocity views, favoring such *reduction* (not revision) of the tariff as shall "cheapen the products of the factory and shop in ratio with cheapened farm products," and congratulating the Kansas Senators on the bold and patriotic stand they have taken upon financial and other questions of special importance to the West. Still more significant was a resolution absolving the nominee of the Convention "from dictation of the party caucus *upon all economic issues.*" "We bid him," says the resolution, "enter the halls of Congress *a free man*, to battle for the material and business interests as well as the moral and political welfare of this great State." This is, perhaps, the most wholesome send-off that any nominee for Congress has had since the close of the war. We recall nothing so refreshing in the annals of either party. We set it down to the credit of the Republicans of the Seventh Kansas District that if they have not made an epoch in our political life, they have at least shown how one ought to be made by emancipating the Congressman from the dictation of the party caucus as to measures of policy—a dictation crushing and stifling to individuality, and therefore deadening to all political progress.

Equally decisive is the change of base which the Atchison *Champion* announces in its issue of July 31. The *Champion* is an old and stanch Republican paper, founded by John A. Martin, one of the "wheel horses" of the party in Kansas. The *Champion* says that for thirty years it has advocated and defended the protective-tariff policy, but that it has found that the practical effects of that policy have been disastrous to the West and to the agricultural communities. It has at last discovered that the tariff is an invention for making the cultivators of the soil pay tribute to the manufacturers, increasing the profits of the latter and lessening the earnings of the former. "These facts," it says, "have induced the *Champion* at this time to make public its conviction that a protective tariff is one of the many things the West does not want and cannot afford to sustain. The Western farmer has no interest whatever in a protective tariff. His interest rather lies in the direction of free trade—of access to all markets—wherever his products may be in demand."

Senator Plumb came very near letting the cat out of the bag when, in discussing the McKinley Tariff Bill, he said:

"It looks to me a good deal as though some persons interested in the rate of duties had said: 'We do not care what the effect is upon the revenues—that is not our concern, nor our responsibility; some Congress has got to meet that, and in the meantime we want the pound of flesh.' *I will not say the pound of flesh nominated in the bond, because there was no bond;* but they want the benefit of the opportunity to be created, and they have succeeded in getting it, whereby their profits will be enhanced—I will not say anything now about the resulting benefit to the country—but whereby their profits will be enhanced; and it is a very awkward condition of things, a very injurious condition of things, that has been brought about to the country."

What kind of a bond did the Senator have in his mind when he said that the pound of flesh was not nominated in it? He meant the kind of bond that *Shylock* exhibited to the judge when he demanded the pound of flesh, a bond that could be enforced by law, a bond with a seal on it that could not be railed off by any amount of talk. Barring these external formalities, what the Senator meant to say was that certain persons and corporations put up a definite sum of money to elect Harrison, on the promise of Quay and Wanamaker that they should have an indefinite number of pounds of flesh out of the American people, and that it makes no difference to them whether the result is a deficit in the National Treasury or not. Probably the only man in public life who does not know this is Senator Morrill of Vermont. It is always well to have a deacon in the partnership for any occasion of prime rascality.

The speech of Senator Teller of Colorado on Monday settles in the negative the question as to whether "Tom" Reed can make the Senate change its rules in order to rush through the McKinley Bill and the Force Bill. Mr. Blair having read an editorial article of the muzzled New York *Tribune* protesting against the discussion of the Tariff Bill, Mr. Teller declared that he did not share in the view that there had been any unnecessary delay in the discussion of the bill, or that the Senate was recreant because it did not proceed more rapidly. He said that he "did not propose to be frightened into any haste or expedition in the discharge of his duty on the bill," and gave these unanswerable reasons for his position: "He had learned that hasty legislation was bad legislation, and he had learned that any bill which deserved to become a law would stand the test of discussion and examination. The impatience, the impetuosity with which the Senate was asked to take hold of the bill and pass it was, to him, somewhat disgusting. He was in full sympathy with the purpose of the bill, which he understood to be to raise duties wherever they were found to be too low, and to lower them wherever they were found to be too high. He wished to say that, so far as he (Teller) was concerned, the present rules of the Senate had been sufficient for the discharge of the duties of the Senate in an orderly and decent manner, and he was prepared to resist vigorously and as efficiently as he could any change of the rules for the purpose of hastening the passage of the Tariff Bill or any other bill." Mr. Plumb announced his adhesion to these views, and Mr. Edmunds and a number of other Republican Senators are known to share them, so that it may now be accepted as settled that the rules will not be changed and that the Senate will remain a deliberative body. When the "Tom" Reed balloon has collapsed, as it is already evident will happen before long, the public will look back with amazement upon the impudence of his now happily defeated attempt to suppress free discussion in the Congress of the United States.

There was an interesting debate in the Senate on Monday on the St. Mary's Ship Canal, and some uncomplimentary remarks were made about the failure of the House to pass the bill for making a new canal at that place. Such remarks were, indeed, unparliamentary, as Senator Ingalls and Senator Edmunds said, but no regret need be felt on that account. The House, under the despotism of Speaker Reed, has given its energies to the passage of a tariff bill to transfer the earnings of the people from A to B and from B to C in such a way as Mr. Wm. McKinley, jr., thinks they ought to be divided, and a bill to distribute seats in Congress in the way that Mr. H. C. Lodge thinks that they ought to be distributed. Consequently, it has had no time to think about the St. Mary's Canal or a good many other things of real public concern. The fact that this waterway passes more tonnage during the months that it is free from ice than the Suez Canal, and that this tremendous traffic depends upon a single lift lock, which is overworked and liable to get out of order at any time, has been lost sight of in the scramble for private pelf and in settling such questions as whether the Borax Company shall have the right to tax the public 3 cents per pound or only 2¾ cents. In the midst of this interesting wrangle comes the news that the St. Mary's lock has given way, and that the resulting loss to commerce is $100,000 per day. Then there is a mighty stir, and it is suddenly remembered that a bill to provide a new canal has been slumbering on the Speaker's table several months. Of course this bill could

not meet the present exigency, but it serves to point a moral and adorn one day's debate in the Senate.

Mr. Halstead, viewing the political field from the lofty point of Brooklyn, says that in the Republican family quarrel over the McKinley Bill, "public opinion is with Mr. Blaine, and the public admiration for him never was so great as now." This being the case, how does it happen that the McKinley Bill has any chance of becoming a law? Why does not public opinion have any effect upon the Republican majority in Congress? Furthermore, if Mr. Blaine has "public opinion" and "public admiration" on his side, what will be the result in the Congressional elections of November if the party in Congress refuses to follow Mr. Blaine's lead? We sincerely hope that Mr. Halstead is sound in his estimate of Mr. Blaine's party strength, for the greater his following now, the larger will be his influence for good upon the country. He never was in a better position for usefulness than he is at present, and he has seldom, during his long career, held a position more completely in the public interest.

The leaders of the Republican party in Tennessee were confronted at their Convention last week with the question as to what attitude the party should take towards the Force Bill. The success of the Farmers' Alliance in capturing control of the recent Democratic Convention had disgusted many members of this party and inclined them to support the Republicans if the Convention of the latter party should not repel them. Lewis T. Baxter, who was the unopposed choice of the delegates as a candidate for Governor, and who is an excellent type of the progressive business men whom the party needs in order to win, had announced his firm opposition to any endorsement of the Force Bill, as he maintained that he could not hope to carry the State if such legislation should be favored. The question was, then, whether to ignore the matter entirely, as the Republican State Conventions in Minnesota and Nebraska did, or to insert a perfunctory and deprecatory reference to the subject. The latter course was finally chosen by the Platform Committee, whose resolution characterized the Lodge Bill as "a law that would unsettle the business interests," and expressed confidence that the Republican party has wisdom and patriotism enough not to pass such a law.

Two hopeful signs as to the treatment of the negro question by the Constitutional Convention soon to assemble in Mississippi are found in recent utterances by two prominent representatives of the race. G. H. Oliver, a colored Republican member of the last Legislature, delivered a speech at Jonestown a few days ago, in which he said that his legislative experience had taught him that the white Democrats are the true friends of the negro, and that, if the Constitutional Convention should be composed of the same material as the last Legislature, the interests of the colored people would be respected and protected. Isaiah T. Montgomery, a leading negro of Mound Bayou, Miss., has just written an interesting and intelligent letter to a North Carolina correspondent as to the condition of his race in the Delta region, whither so many have gone from North Carolina. In conclusion he refers to the Constitutional Convention, and draws this encouraging picture of the situation: "There has been considerable apprehension on the part of our people that changes will be effected in the organic law of the State dangerous to their rights and liberties. Until very recently I have shared largely in that apprehension. Constant discussion through the press has to some extent aroused the people to the importance of the weighty matters to be considered and adjusted, which must be done under the restrictions or guarantees of the Constitution of the United States, and the guarantees subscribed to by this State upon her readmission to the Union, all of which combine to form a hedge of protection to citizenship which cannot be easily invaded. The delegates to the Convention will generally be of the ablest and most practical class, and, judging from the most available information, I have now reached the conclusion that the approaching assembly will endeavor to promote the general interests of the State, and honestly begin a solution of the difficulties which have so long hindered her progress. In this settlement I hope for a better understanding between the races; there will certainly be a strong element in the Convention anxious to promote that end and fully restore political liberty to all classes."

Another hopeful sign is to be found in the report of a mass-meeting by the Republicans of Issaquena County just before the election for members of the Convention to decide upon their action. Issaquena is a county where the blacks outnumber the whites about twelve to one, the census of 1880 showing 9,174 negroes to only 826 whites, and the preponderance of the colored race being even greater now. The Democrats had nominated Capt. W. S. Farish for member of the Convention, and the question was whether the Republicans should put up a candidate against him. S. B. Blackwell, a former member of the Legislature, and W. E. Mallison, another prominent Republican, both made speeches advising no party nomination. Mr. Mallison declared his belief that "it would be better to allow white men to make unmolested the Constitution which is to take the place of the one which it is claimed was framed by alien hands, and then, if failure and mortification result, they would have themselves to blame." Moreover, so far as the Republicans of Issaquena County were concerned, Capt. Farish, the Democratic candidate, "entertained views which were acceptable to nearly every one, and possessed the ability to see that his views are presented with eloquence and force." Capt. Farish was called on for an expression of his views, and responded in a conservative, able speech, promising that his efforts should be directed towards the betterment of the condition of all his constituents, white and black. He was warmly applauded, and at the conclusion of his speech a resolution was adopted declaring it the sense of the meeting that no Republican nomination be made, and expressing confidence in the ability and integrity of Capt. Farish as the delegate.

At the very time that the Philadelphia *Press* is publishing the protests of colored Republicans in the South against the passage of the Force Bill, the colored Republicans of its own city are taking organized action in the same direction. The Matthew Stanley Quay Club, composed entirely of colored men, with a prominent local politician as President, held a largely attended meeting on Sunday, and passed unanimously resolutions to the effect that the pending Federal Election Bill is not practical and will not help the political condition of the colored men in the South, but will rather have a tendency to keep alive race prejudices, and therefore expressing the hope that the bill will not become a law. In view of such developments it is not strange that the advocates of the Force Bill should be losing confidence in its passage.

In the course of surplus-smashing at Washington nearly everybody has forgotten the Direct Tax Refunding Bill, which caused such fury in the House two years ago. The bill appropriates about $20,000,000 to the States for the direct war tax of 1861-2. In the last Congress it was passed by the Senate. When it reached the House a few men filibustered against it in a desperate way. There was a large majority in favor of passing it, but Speaker Reed's new rules had not been adopted. So it became necessary to effect a compromise with the filibusters, by the terms of which the measure went over to the December session. The December session came and went without action on the bill, and at the end of the session, which was the end of the Fiftieth Congress, the bill died. Early in the present session the bill was again passed by the Senate. It went to the House, where Speaker Reed's new rules are ample to prevent filibustering. Why has it not been passed? Are the surplus-killers satisfied that they can get rid of all the money in the Treasury without shovelling out $20,000,000 at one scoop? It would seem so. It would seem also that there are some reasons (in this case not less than twenty millions) for allowing the minority some freedom of resistance to unjust measures.

In the discussions of the public finances, both in Congress and in the press, nothing is more common than the suggestion that the sinking fund can be suspended at any time in case there should be a prospect of a deficit; but nobody except the late Senator Beck has had the courage to introduce a bill to suspend it. It has

been said, with entire truth, that the retirement of the public debt has overpassed the requirements of the sinking fund by some $700,000,000. It has been argued with much force that the reason for the sinking fund has ceased to exist. That reason was in the nature of an assurance to the public creditors that the Government would steadily reduce the principal of the debt, and thus give greater confidence to capitalists that the whole would be paid. If there ever was any doubt on this score in the circles of finance, the doubt was long since removed. But nobody seems to be ambitious of the distinction of repealing the sinking fund. Why there should be so much encouragement to our neighbors to take the glorious step, and so little eagerness to take it ourselves, is, however, easily explained. For some years the public mind has been filled with distressing tales of the surplus. How to get rid of the everlasting surplus has been the problem of one administration after another, and all eyes have been turned with a sense of relief to the $109,000,000 of 4½ per cent. bonds that mature on the first of September, 1891. Here, we have said to each other, is our great opportunity. If we can only screw along till September, 1891, we can put this whole odious surplus where it will do the most good. But if we now repeal the sinking fund we acknowledge not only that the surplus has vanished, but that we shall not be able to meet the bagatelle of 4½ per cents when they fall due. It is not a very proud distinction to any public man to be the first in making such an avowal.

The Georgia farmers seem to have gone daft on the subject of public schools, and at present refuse any just appropriation to their State University, utterly oblivious of the fact that they are thus cutting themselves off from any but miserably inefficient teachers for their public schools. The work of the University of Georgia has been about on a par with that of other State universities of the South, barring Virginia. The best citizens of Georgia, however, have recently waked up to the absolute necessity of a finer quality of higher education, and the result has been a reorganization of the University on thoroughly progressive principles, with the view of doing true university work just as soon as there is any demand for it in Georgia, and with the view, meanwhile, of striving energetically to create the demand. The right spirit undoubtedly prevails at the University, and there are many encouraging signs of a strong foundation throughout the State for the aspirations of the new school. For the present, however, the professors and fellows must largely work out their own destiny in the midst of discouraging but far from hopeless ignorance.

What is perhaps the first official characterization of the Pan-American Congress by a foreign nation participating in it is found in the message of President Balmaceda to the Chilian Congress, at the opening of its sessions on June 1. He said that the invitation to send delegates to the Congress had been accepted by Chili "more out of polite regard for a friendly Government than in the hope of obtaining immediate and positive advantages for both Americas." Of the practical matters before the International Conference, the one in which Chili had the deepest interest, namely, the question of a common silver coin, was left with nothing done, says the President, coolly ignoring, as he well may, the recommendation for a new gathering, next year, to attack the hopeless problem. The steps taken to secure better communication by land and water President Balmaceda regards as only provisional, and as leaving wholly unsettled some of the most difficult and puzzling questions connected with the subject. The attitude of Chili towards the famous arbitration project is thus set forth: "We did not give in our adherence to it, both because we believed it without efficacy, and because Chili does not need for the exercise of her sovereignty in the civilized world any other law than the general law of nations. Peoples like ourselves, who live by their industry, and faithfully live up to their international agreements and obligations, will have occasion to resort to arbitration in the particular and concrete cases in which such a course is suggested by public justice, prudence, and the reciprocal regard of sovereign States. But I deem it unlawful for us to limit the liberty of action of coming generations in vindicating their rights by the means authorized by international law, in emergencies in which it is for them alone to decide upon the proper course." After this, it will hardly be considered feasible to secure Chili's acceptance of Pan-American arbitration.

The commercial relations of Austria-Hungary with the United States are both relatively and absolutely unimportant: of a total of $745,000,000 of imports in 1889, only $7,642,297, or but a trifle over 1 per cent., came from Austria, while of $730,000,000 of exports, that country received only $720,815, one-tenth of 1 per cent. In the import list Austria stands No. 19, being outstripped by such countries as the Sandwich Islands, the Philippine Islands, Mexico, and Venezuela, to say nothing of Switzerland, China, and Japan; in the export list she ranks No. 33, or next to the lowest. A careful review of the conditions indicated by these statistics is found in the last annual report of the Austrian Consulate-General at New York, which points out that there are a few articles in which Austria takes the lead, the chief of them being pearl and other buttons, with which she supplied us last year to the amount of $1,352,241, or 43 per cent. of our total importation, against 23 per cent. from Germany, 25 per cent. from France, and 7 per cent. from England. In hollow and crystal glassware she was also ahead of all competing nations, the business amounting to $719,000, 31 per cent. of the total. Two articles of commerce which are popularly supposed to come here in large quantities are imported to an amount which bears a small proportion to the actual sales of them in our markets. The class of small leather wares technically known as "Vienna articles" really consists of poor American imitations of imported samples, and the Consul warns his countrymen against filling small sample orders from unknown importers. Then, again, much of the so-called Tokay sold here is of California manufacture, and it is stated that a self-styled importing house, widely known through its profuse advertising, and mentioned by name in the report, sold 1,200 dozen bottles of "Tokay" in 1887 without passing a single invoice through the Custom-house during the year.

The statistics of the tonnage of foreign merchant navies for 1888, which have only recently been gathered and published by the British Board of Trade, do not afford much encouragement to the ship-subsidy hunters either in this country or in Europe; for they prove that during the year in question—the returns for 1889 not being yet accessible—there were only three countries which did not show a decrease in their ocean mercantile tonnage, and these were the United Kingdom, Norway, and Denmark—the three countries which do not pay bounties to their shipping. Thus, in the case of the German Empire, the total shows a decline of fully 15,000 tons, and in the case of France of 10,500 tons, while for Great Britain the increase for the same period was 131,462 tons.

Mr. Goschen, the Chancellor of the English Exchequer, informed Parliament a few days ago that three celebrated pictures, one by Holbein, one by Velasquez, and one by Moroni, the property of Lord Radnor, had been purchased for the nation for the sum of £55,000, of which £30,000 had been furnished by private subscription and the balance by the Government. The pictures, if not so purchased, would have been taken to the Continent and lost to the United Kingdom. Now, suppose that $150,000 had been subscribed by private persons for the purpose of bringing these works of art to the United States, and that the Government had been asked to furnish the remainder, what would the answer have been? It would have been, first, in the negative, and here nobody could have rightly complained. But that would not have been the whole answer. It would have been replied, "If you gentlemen raise $150,000 for this purpose, we (the Government of the United States) will tax you $45,000 for the privilege of bringing the pictures into the country, and at the same rate for any larger sum you may raise. If you put up the whole amount, we will tax you $79,500, so that what costs any foreign country $265,000 for purposes of embellishment and education shall cost this country $344,500." This would be the enlightened answer that the public-spirited citizens would receive at the hands of the Senate Committee on Finance, which is now paying its campaign debts in pounds of flesh taken indiscriminately from the American people.

THE FOLLY OF THE FORCE BILL.

THE Philadelphia *Press* has done a service to the public by sending a correspondent on a tour of the South to interview prominent men of both parties as to the Force Bill. Several of his letters have already been published, and the objections to the policy which he quotes from the lips of leading Republicans, both white and black, are conclusive as to the folly of the scheme. Some of these deliverances are so striking that they deserve a wide circulation.

Beginning with Virginia, the *Press* correspondent talked with United States District-Attorney Bristow of the Danville District, who pointed out two fatal objections to the Lodge Bill. One is the fact that the law can be called into operation in any district only by the petition of certain voters, and that, in any district where Democrats hold a large share of the power, these petitioners "will be ostracized and boycotted, socially and in business. If they are negroes working for Democratic employers, they will be discharged." The second objection is the fact that the success of the law will depend on the character of the men who are selected to enforce it in the voting precincts. Mr. Bristow says that "they must possess discretion, coolness, courage, and intelligence," and then adds: "I regret to say it, but there is a lack of men of this character in the Republican party in the South who would be willing to sacrifice themselves as inspectors." Moreover, as to the chief supervisors and the district supervisors, Mr. Bristow declares that "if they are men of intelligence and standing, they will be wined and dined and patronized for the purpose of influencing them until it will be almost impossible for them to withstand the pressure."

W. H. Pleasants of Danville, who is described as "a very intelligent and conservative colored man, and the recognized leader of his people in Pittsylvania County," and who is also Chairman of the Republican Committee, presents a most cogent argument against the Force Bill, considered from the way in which it would affect his race. "The present law," he says, "is a farce, and it will be far better for my race to go on under the existing law, though it is a dead letter, than to have a new one enacted which will become only partially operative after it has cost innocent lives and disturbed all our social conditions." That such would be the inevitable effect of the Lodge Bill he proceeds to show as follows: "There are very few white men of prominence in this State belonging to the Republican party who would care to have it known that they asked, in accordance with the provisions of the Lodge Bill, to have the law enforced. Who, then, must compose the fifty or one hundred men who will petition for its enforcement? My people, the negroes; and with what result? Every man of them, the instant he makes that demand, might just as well pack up his little worldly all and leave the district, never to return. His employment would be taken from him and his personal safety menaced. Ever after every one of the fifty would be a marked man. I see another perplexing problem that will operate against my people. Nine-tenths of the employers of colored labor are white Democrats. If the colored men declined to vote as they directed, they would be deprived of work."

Going on to Raleigh, the *Press* correspondent found leading Republicans of North Carolina equally clear and emphatic in showing the hopelessness of expecting any good result from the Lodge Bill. Thomas R. Purnell of Raleigh, an ex-Confederate, who has supported the Republican party since the war, and who has been repeatedly a candidate on its State ticket, says flatly that "the trouble with the proposed law is that it cannot be enforced." The following forcible statement is quoted as being made by "a business man of Raleigh who declined to permit the use of his name," but whose first vote was cast for Abraham Lincoln in Philadelphia, and who is still a Republican: "I don't believe the Lodge Bill could be enforced here. We've got enough Federal law now to compel honest elections if it was enforced, but it is not, and the same will be true of the new election law."

A. W. Shaffer, for many years Chief Supervisor of Elections under the present Federal law, after showing that the existing law cannot be enforced because public sentiment does not sustain it, declares without reservation that the proposed law would only make things worse. "The Lodge Bill, with its supervisory machinery," he says, "offers no possible remedy or mitigation of the evils of such a condition. Such laws are injurious, because (1) they are totally inadequate to remedy the evil complained of; (2) they embitter its adversaries and make more intolerable the bitter life of its helpless victims; (3) they put afar off the possibility of any effective legislation while the silly experiment is undergoing trial."

Daniel L. Russell is one of the most prominent Republicans in North Carolina. He has supported the party ever since the war and has been elected by it to a seat in the Legislature, a judgeship of the Superior Court, and a place in the House of Representatives at Washington. He says of himself that he was born on a plantation and is identified in interest and blood with the South. "We know," he says, "that the pending Election Bill cannot be enforced generally in the South," and he adds: "The bill invites, indeed creates, dangerous friction between Federal and State authority. Conflicts will arise at every turn in registration, casting, counting, and certification of votes. If the bill could be so enforced as to give the right of suffrage to Southern Republicans in Congressional elections, the result would be that they would also vote and their votes be counted in State elections held at the same time and place and by the same officers. Democrats say this would be 'negro rule,' and as to the cotton States such is the truth. Such a result, as every body ought to know, cannot be accomplished by anything short of an army with martial law and some battles, and this men call war."

It is to be hoped that the *Press* will send its correspondent throughout the South, because nothing can do so much to weaken the Force Bill as the unanswerable arguments against its passage which he is drawing forth from the most prominent Southern Republicans of both races. All of these deliverances only lend weight to the cogent argument against the whole Force Bill policy which President Harrison presented in his Senate speech of March 3, 1886, regarding the condition of the Southern negroes, and which cannot be too frequently quoted:

> "I have looked hopefully in the old times to the forcible intervention of the General Government in their defence. I have thought that it might be possible, under that stringent legislation which Congress adopted, by the forcible intervention of the Federal authority, to protect them in those rights of which they were so cruelly deprived. But I have ceased to have faith in the possibility of that intervention in their behalf, constituted as this Government is, with its complex organization of Federal and State governments, independent within certain limitations. In the States, and in the tribunals which they establish, and in the venue where the offences are committed, crimes against the colored people must be tried. Of necessity the successful vindication of the rights of these people fails unless there is a sentiment in the locality where the offences are to be examined into and punished that reprobates and condemns them."

Just as in the President's own State there is law enough to prevent White Cap outrages, and yet White Cap outrages occur, and the Attorney-General declares that "before there can be a successful prosecution there must be a considerable change in public sentiment," so in the South, as one of the Raleigh Republicans puts it, "we've got enough Federal Law now to compel honest elections if it was enforced"; but it is not enforced, and no law will be enforced until, in Mr. Harrison's words, "there is a sentiment in the locality where the offences are to be examined into and punished that reprobates and condemns them." Instead of developing such a public sentiment, the Force Bill, as Southern Republicans themselves testify, would only increase the bitterness of the whites against the blacks.

SPEAKER REED'S REPLY.

THE reply of Speaker Reed to X. M. C. in the *North American Review* for August is comprised in nine pages, which seem to be inadequate space for an answer to the twenty-two pages of pretty solid matter of the article entitled "Speaker Reed's Error" in the July number. But if he had nothing better to say than appears in the nine pages, certainly more space would have been superfluous. The principal point made by X. M. C. was that the Constitution requires a two-thirds majority to overcome a Presidential veto, and also requires that the vote shall be by yeas and nays. The same instrument says that a majority of members of either house shall constitute a quorum. The President is a part of the law-making power and the whole of the law-executing power. He must know what laws are in force. As to all that are signed by him the evidence of his own signature is sufficient. As to all that have become laws by remaining in his hands ten days, Congress

being then in continuous session, the fact that they have been in his hands during that time is something within his own knowledge. As to those that he has vetoed, how is he to know whether they have become laws or not? The contention of X. M. C. is that under the Constitution the only evidence he can *be obliged to accept* is a list of yeas and nays, which when taken together amount to a quorum, *i. e.*, a majority of each house. If he chooses to accept anything else, as, for example, the certificate of the Clerk of the House that there was a quorum present, although none was shown by the yeas and nays—that is one thing. But if he happens to feel considerable interest in the matter pending, as he usually does when he vetoes a bill, and if he says that no constitutional evidence has been shown to him of the presence of a quorum, where do we stand? Has the bill become a law or not? This is the principal point that Mr. Reed was concerned to answer. His answer is in these words:

"The author says the President's veto cannot be overruled except by a quorum actually voting. Why? Because, he says, 'the votes of both houses shall be determined by yeas and nays.' Yeas and nays must certainly show each vote of each member. Each member's vote must be determined by yeas and nays. But there is no applicability of this provision to that entirely different question whether either house is in condition for doing business by having a quorum present. What the House votes is one thing, what it is is another. The Constitution prescribes how the vote shall be determined; the rules made under the Constitution prescribe how the presence of a quorum shall be determined. Whatever business is done is done by a competent body; and if that body, properly constituted, acquiesces in the result arrived at by its members who do vote, what shock is there either to common sense, business sense, or constitutional law?"

Then he refers to certain decisions of the courts of Maine and New Hampshire touching quorums in State Legislatures and in boards of aldermen, and to a precedent made by Gov. Hill in New York, all of which would require a more precise and extended statement of facts than is here given to establish a condition of parallelism.

It is to be observed that Mr. Reed does not here touch the point made by X. M. C., which was that the President, being a co-ordinate branch of Government, could not be bound by the rules of the House. To say that "whatever business is done is done by a competent body" is irrelevant, because the House cannot enforce its competency beyond its own doors. The Constitution can enforce the competency of the House anywhere within the limits of the United States, and of course upon the President. According to Mr. Reed's argument, if the President should veto a bill and it should come back to him showing that upon reconsideration two members had voted to pass it and one member had voted not to pass it, but with a certificate from the clerk that a quorum was present when the vote was taken, not only does the bill become a law, but the President is bound to think so. We have supposed in this case that three members have actually voted, but that is a superfluity under the Reed conception. Two members would be quite sufficient if both voted in the affirmative. Indeed, why would not one suffice if his vote were in the affirmative? Is not a unanimous vote stronger than a two-thirds vote? The Constitution says: "If, after reconsideration, *two-thirds of that House* shall agree to pass the bill," etc. Is it possible to conceive that two members voting to pass the bill, and not more than one member voting the other way, should fill the constitutional requirement of "two-thirds of that House" provided only that a clerk's certificate is appended that a quorum was present when the vote was taken? If two votes would not answer the purpose, why should any less number than a quorum suffice?

The conclusion of the Speaker's reply is a trifle hysterical. He says that the "error" imputed to him by X. M. C., and which he is asked to correct,

"was the error of the Speaker just twenty-six hours. Then it became the error of the House of Representatives. *It has since become the error of the Republican party and of the people of the United States.* It had previously been the 'error' of the State Supreme Courts. Whatever may be the strength, wisdom, or bravery of the Speaker, he has never thought himself strong enough, wise enough, or brave enough to correct an 'error' of that kind and of those dimensions."

Such loose talk does not belong to the realm of sober discussion. It is pure rant and blather. The people of the United States have taken no action upon the subject: they have had no opportunity to do so. The Republican party has taken no action upon it, and cannot do so until the next National Convention meets. All that can be said about the House of Representatives is that the majority, having elected Mr. Reed for Speaker, followed his lead in the adoption of the new rule for counting a quorum. The next House may discard it—most probably will. The designation of the rule by X. M. C. as "Speaker Reed's error" was therefore entirely justified.

THE PENNSYLVANIA CAMPAIGN.

THE unique character of the political campaign in Pennsylvania this year attracts the attention of the whole country to the contest in that State. It is unique because its main object, on the Republican side, is to provide a vindication for one of the United States Senators from Pennsylvania against the charge that he is a public thief—the charge that, when holding an important State office, he robbed the State Treasury to further his private speculations. While he allowed that charge to remain unanswered, the Republican State Convention permitted him to dictate the State ticket, and gave him a personal certificate of confidence in its platform, putting up, moreover, as its candidate for Governor a man accused, by a fellow-Republican of responsibility and character, of grievous political crimes. It is natural, therefore, that people in all parts of the country and of all party affiliations should take great interest in the question, Will Quay get a vindication at the polls?

There would be little risk in answering this question in the negative if the answer were to be given in any other State but Pennsylvania under the same circumstances. American citizens are very careful about the personal honesty of their rulers. Nothing causes greater apprehension to the managers of political campaigns than the possibility of the springing of some charge against a candidate late in the canvass, when there is not time to give the reply an equal circulation. Such a charge as has for months been standing against Quay would defeat any Presidential candidate, and, we think, a State candidate almost anywhere in this country, if it was not fully met before election day. We find, however, that there is a general impression that the Pennsylvania conscience is of a different make. Quay's supreme audacity in dictating the ticket and the platform seems to many persons to indicate that he is so sure of his control of the political machinery of his State and of the fidelity of the Republican voters there to their party name that he counts with reason on a victory. It is interesting to look over the ground and see how the chances at this date lie.

The first reason that a Quay man will give for his confidence this year is the fact that the Republicans have the majority of about 80,000 given to Harrison to rely on. It is easy to show that this is not a safe reliance even in Pennsylvania. In the first place, the shape given to the campaign of 1888 by President Cleveland's tariff-reform message was especially calculated to strengthen the Republicans in Pennsylvania, the nerve-centre of protection, where even the Democratic leader, Mr. Randall, was a tariff man. The majority of 1888 must be, therefore, considered larger than would have been secured under ordinary circumstances. In 1872, when Grant ran against Greeley, the Republican majority went up to 137,548. In 1882, when Pattison (Dem.) was elected Governor, there was a Republican split, resulting in two Republican candidates. But Pattison, who had a plurality of 40,202, lacked only 3,541 of a majority over both the Republicans, and, had the Greenback-Labor vote of 23,996 been added to his count (and the majority of that vote was drawn from the Democratic side), he would have had over 20,000 majority. In 1883 the Republican candidate for Attorney-General was elected by only 17,075 majority, and in 1886 the majority against Black (Dem.) was only 42,651, with no Republican scandals to assist him. Looking at figures alone, there is, therefore, no impossibility in defeating Quay this year. In any other State but Pennsylvania it would be safe to count on his defeat by the apathy of disgusted Republicans who would not vote at all, combined with the votes of those who would condemn Quayism in the most emphatic manner by voting squarely for Pattison. In this State the 53,451 majority for Gov. Dix in 1872 was changed to a majority of 50,317 for his opponent two years later, through the influence of the hard times. The intelligence of Pennsylvania ought to be influenced as much by a question of political morals as New York was by a question of profits and wages.

There are two powerful influences working against Quay this year, the result of which cannot yet be foreseen, viz.: the po-

sition against his ticket taken by the labor leaders and the farmers' organization. Men like Powderly have come out openly for Pattison, and it is known that the great body of miners look on the Democratic candidate as a protector of their interests. That Quay knows this and fears its effect, is shown by his haste to devise means to split the labor vote from the Democrats. Moreover, the Philadelphia *Record* says that there is evidence of a serious change of feeling on the part of the farmers of Pennsylvania in regard to the tariff; that the McKinley Bill, following the Cleveland message, has opened their eyes, and that a revolt against McKinleyism is to be expected, aside from any question of Quayism.

If Quay can count as surely on the fidelity of the Republican voters of Pennsylvania as he can on the servility of the Republican press of the State, he need worry very little about the result. With one or two exceptions, even journals which denounced Quay in advance of the Convention, journals which fearlessly point out errors of their party and of its representatives at Washington, conceal the crime of Quay from their readers, and urge the election of his ticket. One of these, the Philadelphia *Ledger*, thus lightly dismissed the possible Republican opposition to Quayism in a political article the other day:

"It is known to every one familiar with political contests that those leaders who are disaffected immediately following a nomination they opposed, almost invariably fall into line and support it throughout the active part of the campaign and at the polls. As for the independent vote, it is said that its opposition to Mr. Delamater is not to be feared, and it is notable that the larger part of those who were prominent leaders of the independent movement of 1882, which swept Mr. Pattison into the Governor's chair, are now among the heartiest sustainers of the Republican candidate. Among men of business in this city and throughout the State, to whom he is known as an enterprising man of business, Mr. Delamater is highly respected, esteemed, and trusted. All indications are that the party will not be greatly divided upon his candidacy."

The Philadelphia *Evening Telegraph*, another Republican journal of the class indicated, says:

"These early efforts to make it appear that there is going to be a landslide of workingmen and agriculturists in favor of Pennsylvania Democracy this year, will fall to the ground and be forgotten before the real battle begins. The people of Pennsylvania know what the real issues of the hour are, and they will not be turned aside by appeals to their passions or prejudices. Here and there will be found a man of more or less prominence, like Mr. Marshall of Pittsburgh, over whose defection there will be much noise made by the enemy; but throughout the length and breadth of the State, a full month after the nominations have been made, there are no signs whatever of any serious break in the Republican lines; no sign that the Democratic party will be able to do more than march up the hill next November and then march down again."

We make these quotations, not to accept the views expressed as a correct statement of the present political situation in Pennsylvania, but to show the apathy of public conscience there which certainly does exist. It is yet too early to form an opinion of the result in November. If the vote were to be cast now, it is more than probable that Delamater would be beaten, notwithstanding the apparent apathy and the dereliction of certain respectable newspapers.

SHORTENING THE COLLEGE COURSE.

In the *Atlantic Monthly* for August Prof. Shaler grapples with a problem as difficult as it is important. Should his solution of it be adopted, he will have surpassed the desert of the traditional man who made two blades of grass grow where but one grew before, for he will have added a year to the productive life of our educated men. While this may not seem high praise to the believer in culture in and for itself, even he would perhaps not regard it as an unworthy result when attained without diminution of the learning that is not directly profitable, and this result Prof. Shaler considers attainable. Those who do not regard the acquisition of knowledge, however delightful it may be, as intrinsically the highest of ends, will certainly rejoice to learn that there is a prospect of extending the period of its application.

For, as Prof. Shaler very frankly admits, the schools of the American people, the recipients of money and devotion in a measure never known before, "have failed to serve the needs of the communities which so carefully cherished them." Their teachers "have made little effort to accommodate the training they give the youth to the requirements of the world." The graduate, while not quite so helpless as the newspapers represent him, is yet ill-prepared for active life, and, after he has fairly engaged in it, retains at best only the general enlargement which his scholastic career has impressed upon him. The perception of this truth has brought our colleges into a certain disfavor. They are, Prof. Shaler declares, less and less resorted to by our youth, who tend to seek entrance to the professions and other educated callings through schools of a lower grade. The testimony of parents who have selected these byways is, in brief, that a college education costs too much, that it takes too long, and that in most occupations it does not aid a student.

It does not follow, if we concede that there is an element of truth in these objections, that the technical or professional school is a proper substitute for the college. It is a duty that each generation owes to its successor to pass on the store of knowledge accumulated by the race, and "the first object of all true culture is to enfranchise the youth by showing him all that we can concerning the lofty thought and action of his predecessors, as well as the nature of the universe, which has been revealed by their labors." Upon the whole, it seems that this work can only be done in the university. An atmosphere exists there that exists nowhere else, and Prof. Shaler's deliberate testimony as to the visible, the "singular," enlargement produced by the communal life of students at Harvard carries with it great weight. "If it were possible to set before the reader a series of pictures which should show the usual stages of intellectual development of youths in their four years' life in this university, and against them to place a similar series depicting the history of their playmates who had been nurtured on the scantier fare of real bread-winning life, we should have no farther need to debate the value of academic training."

This training, therefore, let every one get who can, but let it be remembered that the college is made for man, and not man for the college. If the training is so desirable, it ought to be furnished in such a way that a student might begin his active life before reaching the age of twenty-six or twenty-seven years. Within a generation Harvard College has required at least one year more of work preparatory to admission, under the expectation that the fitting schools would manage to send pupils with this additional preparation at the same age as before. This expectation having been disappointed, it remains to be seen whether time can be spared at the other end of the course; for it cannot be taken from the professional side of the student's work.

This could be done very simply by making the academic period three years instead of four. But it would be better, in Prof. Shaler's opinion, to give degrees to those who have rapidly attained the end of the prescribed culture after three years, while others should continue their studies for a year longer. Or, the student who is sufficiently developed might begin his professional studies in his Sophomore or Junior year, and complete the first year of them before going into the professional school. Prof. Shaler considers either of these methods as practicable, and in the light of his experience desirable. Contrary to his original prejudices, he now believes that it would favorably affect the development of most students to have a distinct professional motive soon after entering college. There would be the incidental advantages of rendering it possible to recognize the claims of general culture in the professional school, and of combining the interests of the several faculties of the university. There are now injurious gaps and clefts between stages of education, whereas the lifework should be merged in the general culture for the advantage of both teachers and pupils.

As to the cost of education, this shortening of the course would reduce it *pro tanto*; but otherwise Prof. Shaler is rather vague in his observations. If the tuition fee at Harvard could be reduced from $150 to $50 per annum, of course more students could pay it, but such a reduction would equal the interest on about $2,500,000. He does not refer to the loss of revenue that would result from a shortening of the course. He thinks it "doubtful if the interests of the higher education would be served by over-much diminution in the sacrifices which parents now have to make to procure it for their children," and maintains that this education should be open only to those who have some natural fitness for it and are willing to strive for it. Still, he concludes that its cost is far too high for the public good.

What is most striking in this article is the glimmering of a truth which professional educators have been singularly slow to apprehend—the inequality of minds and of mental development. Our theory of education resembles the present socialistic theory in providing that all scholars must proceed

pari passu; that none shall get on any faster than the rest; and, as a necessary consequence, that the course of study shall be limited by the abilities of the slower minds. But the enormous differences in capacity which the active life of the world discloses in men exist most palpably among children. On Prof. Shaler's showing, the first fourteen years of life are, so far as the scholastic education of boys is concerned, practically a blank, and where this is not so, parents find themselves with their boys on their hands ready for college a year or two before the customary period. Where the development has been injudiciously managed, some "keeping back" may be necessary, but in many cases it is a sheer waste of the boy's life, so far as his future success is concerned. We have little doubt that most intelligent teachers would undertake to fit bright boys for college at sixteen if not at fourteen, provided they could get hold of them early enough. We fear that the trouble lies back of the training schools, in the family; and that it will continue so long as mothers prefer to intrust the care of their children at the most plastic age to ignorant nurses, rather than devote their own time to so laborious and exacting a task.

In this view it is encouraging to hear Prof. Shaler denouncing "the injurious and dangerous notion that there is a definite term of years required to attain the culture represented by the bachelor's degree." He finds the variation in the development of students at the beginning of their Junior year very great, and this variation, we apprehend, may be detected at an earlier age. He finds, too, "that the ablest students, after a time in college, have satisfied their possibilities of culture for its own sake, and can no longer find comfort in endeavors which are not related to deeds they desire to accomplish in active life." This concession will awaken a melancholy echo in the breasts of many men now past the hope of farther development, a bitter regret for those high days of buoyant, all-conquering enthusiasm when so much might have been done, but when dry husks were all that was granted to those who thirsted for the living water.

Should a change of the character suggested by Prof. Shaler be made, it might lead to the farther inquiry whether the length of college vacations is not excessive. Perhaps eight hours in the day is enough for work, but eight months in the year certainly seems a moderate allowance for study. Men who are seriously at work in the world take such vacations only exceptionally. It would bore them to death if they had to stop work for a third of the year. It may be said that studies may be prosecuted in vacation, but this can seldom be done to advantage in the absence of the accustomed conveniences and stimuli. Most college students, unless they have pecuniary or social opportunities for having a good time, find the long vacation irksome and unnecessary. Certainly, no one who beholds the college student of to-day as he appears at the watering-place will find it easy to believe that his system demands the cessation of intellectual application during the entire summer. Unfortunately, the witnesses best qualified by knowledge to testify on this subject, the professors themselves, are disqualified by interest.

JEFFERSON'S CONSTITUTION FOR VIRGINIA.

WASHINGTON, July 28, 1890.

EARLY in May, 1776, a convention of "delegates from the counties and corporations in the Colony of Virginia" assembled at Williamsburgh—the legislative and administrative body that was to bridge the passage from a government under the King to a government of the people, republican in form and spirit. For more than a year the nominal head of the colony, Lord Dunmore, had been powerless except for mischief, winning for himself, by his injudicious efforts to enforce the rule of his royal master, the enmity, and even hatred, of the "good people" of the colony. For more than a year local committees, self-constituted, acting as revolutionary bodies, and therefore under no laws or general system, had exercised what functions of defence, and too often of offence, were deemed necessary by a majority of their members, governed only by the rules of self-preservation. From these local committees grew the Colonial Convention, convening without definite aim or purpose, and containing within itself a difference of opinion that promised a protracted contest on every question that involved a change in the social order of the colony. The general constitution and characteristics of the leaders of this Convention have been often described, and in a very satisfactory manner, by a Virginian, Hugh Blair Grigsby, whose sympathies and historical instinct were admirably adapted to sketch in broad outlines the personality of the session.

One circumstance, however, escaped his notice, as, indeed, it has that of every historian of Virginia, a circumstance at once interesting and picturesque—the fact that Jefferson prepared a constitution for the State and submitted it to the Convention. Having instructed its delegates to the Continental Congress to vote for independence of the Crown of Great Britain, the question of self-government naturally presented itself, for the Convention had expressly reserved to itself the "power of forming government for and the regulations of the internal concerns of each colony." The resolution for instructing the delegates on independence had resulted in a compromise, not being pointed enough for such as the Lees and Henry, and being too advanced for the Conservatives, who gave it their vote "for the sake of unanimity." The question of framing a new government awakened a difference of opinion on more than one point. Would it not be well, asked Ludwell Lee, to have the Continental Congress prepare a uniform plan for governing America, to be approved by the colonies? Jefferson wrote to Edmund Randolph to oppose the formation of a permanent constitution for Virginia until a convention could be chosen by the people for that special purpose. "He denied the power of the body, elected (as he conceived them) to be the agents for the management of the war, to exceed some temporary regimen." But Randolph and the gentlemen to whom he showed this letter—Pendleton, Nelson, and Mason—could not accept such a position. They, to use Randolph's words, "saw no distinction between the conceded power to declare independence and its necessary consequence, the fencing of society by the institution of government. Nor were they sure that to be backward in this act of sovereignty might not imply distrust whether the rule had been wrested from the King."

This opinion carried the day, and the Colonial Convention at once set to work to "prepare a declaration of rights, and such a plan of government as will be most likely to maintain peace and order in this colony, and secure substantial and equal liberty to the people." From the 15th of May to the 24th of June a large and able committee was engaged in carrying these instructions into effect, and, after some amendments, on the 28th the first constitution or form of government for Virginia was unanimously adopted. It is known that the chief labor of framing the Constitution had fallen to George Mason, certainly one of the most competent members of the body. Col. Landon Carter, to whose opinion the greatest deference was shown, thought that "ambition had visibly seized so much ignorance all over the colony,' and as a result the Convention abounded "with too many of the inexperienced creatures to navigate our bark on this dangerous coast." On the other hand, Patrick Henry, the leader of the popular element in the assemblage, complained of a want of associates of ability on his side of the question.

This complaint conveyed much meaning, for the social condition of the colony had given rise to two quite distinct factions, apart from the political difference that the Revolution had produced. Whigs and Tories were known; but the "good people"—that is, those who were opposed to the government of Parliament and the British Ministry—were divided among themselves quite as sharply as were ever the Whigs from the Tories. The large land-owners formed an aristocracy, of great influence and of conservative views, while opposed to them were the so-called radicals and reformers, who, of more ardent nature, were intent upon introducing as great a revolution in the form of government for the colony as had been implied by the separation from English control. Henry complained that the aristocrats were strong in the committee appointed to frame a constitution, and that "my most esteemed republican form has many and powerful enemies." Each party had its printed argument: the one supported an anonymous tract sent to the Convention from Philadelphia with a strong endorsement from Carter Braxton; the other read with approval the 'Thoughts on Government' written by John Adams.

Adams had addressed his pamphlet to George Wythe. It was Wythe who carried to the convention a sketch or outline of a constitution which Jefferson, then in Congress, prepared. This, wrote Jefferson in 1825,

"I sent to Mr. Pendleton, President of the Convention, on the mere possibility that it might suggest something worth incorporating into that before the Convention. He informed me afterwards by letter that he received it on the day on which the Committee of the Whole had reported to the House the plan they had agreed to; that that had been so long in hand, so disputed inch by inch, and the subject of so much altercation and debate, that they were worried with the contentions it produced, and could not, from mere lassitude, have been induced to open the instrument again; but that, being pleased with the Preamble to mine, they adopted it in the House by way of amendment to the Report of the Committee; and thus my preamble became tacked to the work of George Mason."

It is not a little curious that Jefferson did not retain among his papers a copy of this attempt of his at constitution-making, or that he should not have had enough pride in his bantling to make some reference to its nature. He was, as a rule, careful in such matters. Of the composition that made his reputation as a

writer before he entered Congress—the 'Summary View'—he wrote out two copies, one of which was sent to Patrick Henry. Of the Declaration of Independence he made a number of manuscript copies and distributed them among his intimates. In 1783 he prepared a draft of a constitution for the State, and so proud of it was he, as "reaching all the great objects of public liberty," that he printed it. His indifference to his earlier sketch is all the more noticeable as it allowed John Adams to pose as the mainstay of the Virginia Convention; for he claimed that it was his little pamphlet that influenced the Convention, and, while "amazed to find an inclination so prevalent throughout all the Southern colonies to adopt plans so nearly resembling that in the 'Thoughts on Government,'" he was not a little elated that the "pride of the haughty must, I see, come down a little in the South." He had felt not a little the arrogance of the Southern members in the first and second Congresses, but he knew well how essential it was to keep with them. The fact remains that for more than a century Jefferson's draft has been lost, and it has only recently been discovered near Lexington—two copies of it, both in Jefferson's MS., one with and the other wanting the preamble. Is it too great a stretch to conjecture that one, at least, was the identical manuscript that Wythe carried to Pendleton?

It would naturally be expected that Jefferson would favor a democratic constitution—one, that is, which embodied the idea that all powers rested with the people; yet his plan was less democratic than the instrument adopted by the Convention, for he would allow the people to participate directly only in the election of the lower house of the Assembly. All else was based upon a narrow foundation. The Senate was to be "appointed" by the House, and his first idea contemplated an appointment for life; but a second thought led him to make a term of service three years. The judges of the General Court and of the High Court of Chancery were to sit in the Senate, and be allowed to speak to a question, but they could not vote. The Executive, called "Administrator," a Deputy, a Privy Council, and a Treasurer were all to hold their offices of the House of Representatives; but all other officers, civil and military, with two exceptions, were to be appointed by the Administrator, such appointment being subject to the negative of the Privy Council. The people (that is, the freeholders) were to elect annually the high sheriffs and coroners of counties.

The lower house of the Legislature in this way received all the privileges of appointment the King and Parliament possessed in the colonial system. All offices were then held at the gift of the King, and the Council was of royal appointment. The House of Burgesses alone was chosen by popular election, and its powers, save for annoyance and obstruction, were limited by the King's instructions to the Governor—instructions that could not be enforced by the Governor without the tedious, uncertain, and often dangerous appeal to the King to interpose his veto to a measure contrary to his wishes. The fear of a strong executive of the royal order led Jefferson to deny to the Governor any veto on the acts of the Legislature, and it was due to Patrick Henry that the power to negative was granted by the Convention, as he very properly proved that the want of it would tend to make the Governor an independent and not a coördinate branch of power. Jefferson himself may have seen the danger of this centralization of power in the hands of a single house, the members of which were to be chosen annually, but, once chosen, possessed the power to sit "so long as they should think the publick service requires"; for he appears to have had some doubt on the manner of appointing the Administrator and his deputy, naming the House of Representatives tentatively, for the words are enclosed in brackets. Even he provided that the "legislative, executive, and judicial offices shall be kept for ever separate." The actual constitution as adopted provided for a Senate composed of members elected once in four years from Senatorial districts; a House, chosen annually from each county; and with the two combined lay the appointment of Governor and Council, the judges of the Superior Courts, Auditors, Attorney-General, Treasurer, Register of the Land Office, and Delegates to Congress. That was more democratic than Jefferson's idea.

The manner of electing Jefferson's House—the body of kingly powers—is worthy of notice. In the session of 1769 the qualifications of a voter were a freehold estate, or fifty acres of unsettled land, or twenty-five acres where there was a house, or a city lot improved—provisions liberal enough to include nearly the entire manhood of the colony, where land was to be had almost for the asking. Jefferson wished to require "full age and sane mind," a freehold estate in land, that for the country being decreased to twenty-five acres; and he also gave the suffrage to "all persons resident in the colony who shall have paid scot and lot to Government the last two years." Not content with this, he would make every man in the colony a qualified voter. "Every person of full age, neither owning nor having owned [50] acres of land shall be entitled to an appropriation of [50] or to so much as shall make up what he owns or has owned to [50] acres, in full and absolute dominion, and no other person shall be capable of taking an appropriation."

Having thus turned every man of full age and sane mind in the colony into a landholder and a voter, Jefferson passed to the question of representation, and here offered a distinct improvement upon the plan of the Convention. Among the complaints brought against the English Constitution (and its faults attracted at that time more attention than its virtues) was the inequality of representation in the British House of Commons. Yet the Convention provided for a representation of the counties in the lower house of Assembly quite as unequal as the British examples, for each county was to send two members without respect to the population it contained. Randolph explained the acceptance of this provision by saying "that the counties to the eastward of the Blue Ridge, in which the inequality was most glaring, were too numerous to be irritated, and it was tacitly understood that every body and individual came into the revolution with their rights, and was to continue to enjoy them as they existed under the former government." Jefferson, on the other hand, would give a representative for every 400 freeholders, thus basing it upon population. The result of the retention of the old provision was that "nineteen thousand, living in one part of the country, give law to upwards of thirty thousand living in another, and appoint all their chief officers, executive and judiciary."

Two-thirds of either house constituted a quorum, and there was little limit to the powers or functions of the Assembly. Capital punishment was abolished save in cases of murder and of offences against military discipline; and a law for levying money could not remain in force longer than ten years from the time of its commencement. Beyond this the Assembly could legislate on any subject, for it was the executive that was the object of Jefferson's jealousy, and round which he sought to throw prohibitions and restrictions. The Administrator "shall possess the powers formerly held by the King," save only that he could not dissolve, prorogue, or adjourn either house; he could not declare war or make peace, issue letters of marque or reprisal, raise or introduce armed forces, build armed vessels, forts, or strongholds; he could not coin money or regulate its value, or regulate weights and measures, or erect courts, offices, boroughs, corporations, fairs, markets, ports, beacons, light-houses, or sea marks; nor could he lay an embargo, nor prohibit the exportation of any commodity for a longer space than forty days; nor could he make denizens, pardon crimes, or remit fines or punishments, or create dignities or grant rights of precedence. All these powers or functions could be exercised by the Legislature alone. The Administrator was liable to action, though not to personal restraint, for private duties or wrongs, and all his acts were to be controlled by law. The want of a veto on the acts of the Assembly made him powerless to oppose what he might deem a dangerous policy, and would have rendered supreme what does in fact tend to become the most powerful element in a republican government, the Legislature.

There is much in this draft that does not properly belong to a constitution, much that was later the subject of special legislation in Virginia under Jefferson's own direction. He would have abolished slavery to this extent: "No person hereafter coming into this country shall be held in slavery under any pretext whatever." He would have abolished entails, and made all descents go "according to the laws of Gavelkind, save only that females shall have equal rights with males." Seven years' residence, or a declaration of an intention to such a residence, and a subscription to the fundamental laws of the commonwealth, would entitle a person to "all the rights of persons natural born." Religious liberty was provided for; printing-presses should be free, "except so far as by commission of private injury they may give cause for private action." There should be no standing army except in time of war, but the freeman was not to be debarred the use of arms "within his own lands or tenements." Royal claims to wrecks, waifs, strays, treasure trove, mines, royal fish and royal birds were declared to be "usurpations on common right" and abolished. The judiciary system of the State was elaborately provided for, but the details of that branch need not be described. Finally, "no salaries shall be given to the Administrator, members of the legislative houses, judicial officers, privy councillors, or delegates to the American Congress"; but, should the Legislature so direct, the "reasonable expences" of these officers "for subsistence while acting in the duties of their office" might be borne by the public.

Such were the main features of the instrument which Jefferson devised for the government of Virginia. The details are of interest not only in themselves, but to an even greater degree for the light they throw upon a contemporary document, the authorship of which is still one of the unsolved problems. I have already mentioned a tract which appeared during the sessions of the Convention, and which had been sent from Philadelphia about the same time as Adams's 'Thoughts on Government.' Little was known of its origin, but as it bore a strong recommendation from Carter Braxton, he was suspected of being its author, and came in for the blame that his ex-

pressions of doubtful Whiggism aroused. Yet this pamphlet embodied in its proposed constitution many of the features that Jefferson inserted in his draft. A lower house elected for three years, a Senate chosen for life by the House, a Governor, Treasurer, Secretary, and "other great officers of the State" elected by the lower house, judges to be appointed by the Governor, with the advice of his privy council, and all military and inferior civil officers to hold their appointments of the Governor—this was as narrow a system as that of Jefferson's, and as open to the objection of centralization. The one, however, was regarded by the Convention as an "aristocratic" programme, and Braxton received some pretty hard knocks for recommending it; yet Jefferson's was quite as aristocratic.

By comparing his Constitution of 1783 with that of 1776, it may easily be seen how great a stride Jefferson had taken in democracy. As the proposition of 1783 is included in his published works, it may be referred to and need not detain me here. A later proposition, a suggestion for a change in the State Constitution, appears never to have been noticed. It is without date, and Jefferson's hand-writing changed so little in the active years of his life as to furnish no clue to the period at which a memorandum may have been made. The paper on which this note was written is watermarked 1794, so it may be attributed to that period of leisure which followed his retirement from Washington's Cabinet, while he was nursing his sore grief over the monarchical tendencies of the Administration, and the growth of centralization that threatened to swallow up the individual States and erect an engine of oppression such as the world had never seen. With such an incubus resting upon him, it is not to be wondered at that he should have developed an almost extreme democratic remedy. I doubt if the like proposition has ever been seriously broached in a community that claims to be self-governed, or that is capable of exercising due judgment in matters of government. After providing for the election of a legislature, to consist of not less than 150 or more than 300 members, Jefferson makes this original proposition:

"The Legislature shall form one house only for the verification of their credentials, or for what relates to their privileges. For all other business they shall be separated by lot into two chambers, which shall be called [α and ω], on the first day of their session in every week; which separation shall be effected by presenting to the representatives from each county separately a number of lots equal to their own number, if it be an even one, or to the next even number above, if their number be odd, one-half of which lots shall be distinctly marked for the one chamber, and the other half for the other; and each member shall be, for that week, of the chamber whose lot he draws. . . .

"Each chamber shall appoint a Speaker for the session, and it shall be weekly decided by lot between the two Speakers of which chamber each shall be for the ensuing week."

It is unfortunate for us that merely the bald proposition is made, without the interesting explanation of the reasons for the proposed change that Jefferson might have recorded. In the absence of such an explanation, it is difficult to conjecture his purpose, for this weekly shifting of members and speakers of two houses, elected by the same constituencies, would have introduced as great a novelty into the political system of Virginia as did Jefferson's famous *pêle-mêle* into the social system of Washington. The latter almost produced a diplomatic complication that war alone could solve; the former would have produced legislative anarchy that nothing but a reversion to the earlier Constitution could have cured. That he had some purpose must be conceded, for during his Presidency he generally sought to cover his policy by special amendments to the Constitution, as in the case of the Louisiana purchase, internal improvements by the national Government, and a national university. Yet there is nothing in the political condition of Virginia between 1794 and 1801 that could call for such a remarkable experiment in government, nor does the proposition appear to have been submitted to his friends. None the less, it was a genuine product of Jefferson's mind, and as such is essential to understand the progression of his political ideas.

WORTHINGTON C. FORD.

FURTHER IMPRESSIONS OF THE HOUSE OF COMMONS.

LONDON, July 23, 1890.

THE session of Parliament draws near its close. It has been in the main, and considering possibilities, a wasted session. That contempt or regardlessness of public opinion which disgraces the policy of the Government towards Ireland has infected their handling of British questions, and brought humiliation and lessened majorities. The really fine and well-intentioned men who back the Government, entangled in mazes of their leaders' devising, are often to be pitied. What may befall the other side of the House when (in the ascendant) their errors and shortcomings are exposed and followed up with the merciless and unpitying hostility that has been meted out to the present Government?

I do not propose, however, now considering general politics, but rather desire to take up the thread of previous remarks upon the life and constitution of the House of Commons. Subsequent experiences have only deepened my interest in the study. It is a democratic assembly in the best sense, often reminding me of the Society of Friends. In the long run a man takes his place according to his abilities and honesty of purpose, irrespective of his station or means. The size of London and the consequent freedom of London life doubtless contribute to this result. There is not much opportunity of comparing men except as they appear in the House. Moreover, the House is a sort of school of manners. Rude language or ungentlemanly demeanor is rare, the arrangements and the general bearing of its members are in accordance with the usages of good society, and yet the manners and customs in some respects, before they are understood, may appear brusque and cold. Your nearest friend there will brush past you in silence, the leader of your party will meet you without a look. You may sit down to write at a table next a man whom you have entertained at your home and not receive the slightest recognition. The speedy retirement of an old politician after a short trial of Parliamentary life, which once puzzled me, has lately been explained as having arisen from his inability to comprehend this usage and his resentment of it. It may be termed essentially English. It shocks at first. But you soon perceive that it really contributes towards members leading their own lives, as well as their political lives, in the House, and you find that, at meals, in the tea-room, the smoking-room, or on the terrace, and always if there is real occasion for intercourse, the old human nature is there.

Many a man who has been perhaps a life-long advocate of a cause may have to guard himself against pique when he becomes aware that he is now nowhere in comparison with others who have recently brought higher abilities than his to the conflict. And, perhaps more difficult still, he may have to be satisfied with but scant intercourse with some who sought information from him when they were first awakening to a great subject, and who, having accepted the light, now, in the course of the struggle, naturally and properly associate with those of their own intellectual calibre. The instances are few, and I believe will long continue so, in which any but men of university training can attain great permanent eminence in the government of the British Empire.

Whatever a man may have been in his own district or circle, on first entering the House he probably feels himself rather like a puppy thrown into water. He has to find his own level anew, to sink or swim almost without pity and without help. One wisely conscious of really great abilities will recognize an unequalled opportunity for their use. The vain or self-sufficient, who have perhaps bartered means or principles for seats, will before long recognize that as vestrymen or guardians of the poor at home they were of more account; it must often be a rude awakening. To attain first place, power of common-sense debate, not necessarily of oratory, is essential. Nevertheless, the mediocre man who has offered his services or accepted service on principle, who has no desire to appear anything he is not, and who is more anxious for the triumph of right than for personal success, will perhaps, after experiencing a certain sense of humiliation, and after sounding the depths, eventually feel the ground under him and come to be satisfied with his own position as part of the great whole. Most men of feeling will have to acknowledge that in the first few months of their novitiate, seasons of discouragement alternate with periods of elation.

I have closely watched the Speaker and Mr. Courtney, the Chairman of Committees, and both win my admiration. Their position often requires the patience of Job, and that they generally show. The occasions upon which I have been struck with their forbearance have outnumbered those upon which they appear hasty or unfair; the guillotine of "order" comes down as mercilessly on the Cabinet Minister as on the unwary and inexperienced neophyte. If the one is excused, owing to the importance of the subject that has diverted him from the strict lines of debate, with the other the rules are stretched because of his inexperience. Opponents on both sides are keener than the occupant of the chair in checking a speaker. Apart from the action of the Government in their policy towards Ireland, I perceive no difference between the treatment of Irish members and that of members of the great British parties. The Irish whips, one of whom has, as Mr. Balfour's criminal, spent a considerable time in prison, are accorded their own convenient, handsomely furnished room. Whenever the Irish party meets in secret conclave, a large, well-appointed apartment is at its service. A presentation to Mr. and Mrs. O'Brien took place the other day in one of the grand committee-rooms. If Mr. Parnell desired to give a dinner in the House, the suite of refreshment-rooms would, on an "off evening," doubtless be placed at his disposal, as they were upon a late occasion relegated to Mr. Matthews, the Home Secretary. It is, indeed, a remarkable illustration of the force of justice and persistence, and of the sense of fair play and respect for vigorous opponents innate in the English character, that the Irish party should attain their present position in the House. That position belies the assumption that they are a pack of unreliable scoundrels,

bent upon the destruction of the British Empire.

It may not be generally known that a member of Parliament does not as such receive one penny of remuneration or reimbursement for travelling, living, or otherwise. He is allowed a limited number of copies of each bill, and one each of other documents. Beyond this he must pay like any one else. I have been curious to inquire regarding privileges accorded to members out of the House; so far, all I have been able to discover are the right, which I have not availed myself of, to sit in a particular pew at St. Margaret's, Westminster, and that of procuring a reading order at the British Museum without the signature of a London householder—an immunity not extended to the member's wife. True, there is the chance of splendid prizes to the members of the British parties. They must, however, increasingly be reserved for the especially capable. It is a remarkable manifestation of the love of work and desire to serve others, more or less mixed with perhaps the love of influence and importance, extant in humanity, that so many should toil in committee and otherwise, day after day, session after session, without fee or reward, in a manner that can never be fully appreciated by the outside public.

The arrangements to prevent "lobbying" are perfect. The House can be entered by members in half-a-dozen ways. The public, except reporters and private secretaries who have permanent orders, are admitted by only one entrance to the outer lobby on satisfying the police that they have some business. Members have no occasion to be in this lobby. Cards are carried in by attendants, and there are always sufficient good reasons for a member not to respond unless so inclined.

The enormous salaries, the overgrown pensions, the extent to which the aristocracy manages to provide for itself out of the public purse, the immense expense of establishments, are striking characteristics of the British system. Take the Speaker, who never serves very many years, whose duties occupy him only seven months of the twelve and five days of the week. He has £5,000 a year for life, a palatial residence, patronage and privileges of all kinds, and is generally accorded a peerage, while a life pension of £4,000 a year is continued to his son and grandson. This whole system is, however, honest and above-board. There it is in black and white. The English people can alter it whenever they wish. Not only are all the accounts and payments raked over in Committee of the House, but there is a highly paid Auditor-General, who at present happens to be an Irishman. He presents a voluminous annual report upon the payments of each previous year, and there is an Accounts Committee, before which he and the accountants of the different departments appear. His criticisms are fully inquired into, the accountants examined, the evidence printed, and a report drawn up which influences the estimates for the succeeding year. Under these arrangements, honestly carried out, as I believe them to be, it would be difficult for serious malversation to occur. The case that excited most comment and occupied most time in the Accounts Committee this year was one in which some material paid for but not immediately required by Government had been handed over to a private customer, who wanted it at once, by the contractor, before he had replaced it for the Government service.

My Parliamentary experience deepens day by day my conviction of the impossibility of a long continuance of the effort to govern Ireland by coercion, against the wishes of its people and their representatives. Residence in this great free country, especially in this great free metropolis, only accentuates the difference that separates British and Irish methods of government. My respect for the character and personnel of the Irish Parliamentary party has been increased by closer contact. It is in some of its parts a rough instrument, but it was the only instrument available under the circumstances, and never was it more powerful and effectual than it now is. There is no sense of servitude in being a constituent member. The party is consolidated by common conviction and the necessities of the situation. The leaders are less exacting than are the members towards each other. The higher tendencies of the movement assert themselves. There remain many difficulties to overcome and dangers to avoid. There will at first be bitter disappointment in Ireland among certain classes at the results of success. More and more, however, is it becoming evident that we are on the threshold of the accomplishment of one of the most desirable and unexpected consummations in British history—the heart union of Great Britain and Ireland; and an individual who in his lifetime had seen that and the abolition of American slavery would have more than his own share of good. D. B.

Correspondence.

"*HAPPIFY.*"

To the Editor of The Nation:

Sir: As I remember it, American pulpit-oratory of half a century ago was occasionally marked by peculiarities indicating no very refined taste. Frequent, among such of these as did not originate on our soil, were the ancient *agone*, the lumbering *renewedly*, and the unlovely *happify*. The first, it hardly need be said, was long current in literature. On the contrary, the second, though it occurs in Samuel Richardson's *Clarissa Harlowe*, was never an item of the accepted vocabulary of England. Nor, most probably, has *happify* often found its way into books. Yet it has not been wholly confined to the spoken language. On its recent appearance in an English periodical, inquiry was made for quotations determining its use. Two I am able to give. Joshua Sylvester writes: "One short Mis-hap for-euer *Happifies*." Thus ends his "Tropheis of the life and tragedie of the death of Henry the Great," appended to Edward Grimston's "Heroyk Life and deplorable Death of the most Christian King Henry the fourth" (1612), translated from the French of Pierre Matthieu. The verse, as here cited, is at p. 1090 of Sylvester's *Works*, ed. 1621. My other quotation is from Samuel Holland: "A Merchant . . . will think himself *happyfy'd* in having the honour to transport your self and Soto, your Squire." *Zara* (1656), p. 88 (ed. 1719).

Happify, exhibiting the Latinistic *-fy* suffixed to an English adjectival base, has never been recognized as reputable; and formations classifiable with it, as *fiftify* (*i. e.* 50fy, with playful reference to *fortyfy*=40fy), *filthify*, *fustify*, *gladify*, *muddify*, *prettify*, *sleepify*, *tipsify*, *turpify*, *uglify*, etc., are, all, unless one is to except *cockneyfy*, debarred from formal discourse.

As to verbs like *speechify*, few of them have gained admission into serious writing. Yet Bp. Aylmer (1559) has *doltify*; *foolify* enjoys the sanction of the Rev. Dr. Meredith Hanmer (1581), Dr. Philemon Holland (1609), and Bp. Richard Mountagu (1621); and numerous authors have patronized *ladify*.

Among old and new verbs in *-fy*, miscellaneous, lingually and in other respects, as regards their first element, some of the rarer for which I have collected quotations are *assify*, *bodify*, *boundify*, *caprify*, *citify*, *clerify*, *constellify*, *daintify*, *dandify*, *deathify*, *dedify*, *donkeyfy*, *duncify*, *erectify*, *fancify*, *finify*, *fishify*, *fussify*, *gummify*, *hindrify*, *hominify*, *idolify*, *jellify*, *laurify*, *mountaineerify*, *mynheerify*, *nettlefy*, *nigrify*, *nugify*, *ornify*, *oxify*, *paucify*, *prosify*, *pulchrify*, *punchify*, *puppify*, *quizzify*, *tawdrify*, *tourify*, *twistify*, *unclify*, *unegofy*, *ungentlefy*, *unipsefy*, *Vauxhallify*, and *vestrify*, with a considerable group of oddities from Sir Thomas Urquhart's translation of Rabelais.

Otherwise than in humorous or familiar composition, we meet with few of the coinages just instanced. The oldest of them seems to be the ridiculous *dedify*, "dedicate," which was in print before 1500. In *ornify*, used by the Rev. Dr. John Donne and Richard Brathwait, since its leading member is *ournen*, *ourne*, *aourn*, *anorn*, "adorn," we have a compound not very much better than Samuel Holland's *hindrify* (1656), and the more modern *argufy*. *Fancify* and *finify*, instead of being recent inventions, were, both of them, ventured by Henry, Earl of Monmouth—the first in 1656, and the other in 1650.

Your obedient servant,
F. H.

Marlesford, England, July 4, 1890.

Notes.

It is proposed to publish a memorial volume containing selections from the works of the late William Francis Allen, Professor of History in the University of Wisconsin. Besides an introductory memoir and a complete bibliography of all his writings, including review articles, it will contain papers representative of his work in English social and economic history, mediæval history, Roman history, Western history, United States history and politics, and the classics, as well as essays upon educational and religious topics. A few of these articles will be monographs selected from the proceedings of various learned societies with which he was associated, showing his scholarly treatment of special topics; but for the most part they will consist of reprints of magazine articles and pamphlets which exhibit his skill in uniting scientific with popular treatment, and which in their present form are in danger of being lost in the mass of periodical literature. A carefully prepared index will be added. The edition will be for advance subscribers only, and will be printed from the type, each copy being numbered. Subscriptions, at $2 a copy, payable upon receipt of the volume, should be sent without delay to Prof. David B. Frankenburger, University of Wisconsin.

Dr. Joseph M. Toner has in press the well-known journals kept by Washington when on a surveying expedition for Lord Fairfax (1748), when conveying a letter from Gov. Dinwiddie to the commandant of the French forces at Fort Le Boeuf, near Lake Erie (1753), and while on a visit to Barbados (1751). They have been very carefully edited, annotated, and indexed.

John Wiley's Sons announce 'Practical Seamanship,' for use in the merchant service, by John Todd and W. B. Whall; and Ruskin's 'Seven Lamps of Architecture' and 'Præterita.'

Dodd, Mead & Co.'s autumn list of publications includes a new edition of Fergusson's 'History of Modern Architecture,' revised and brought down to date by Prof. Robert Kerr, with a supplementary volume on Modern Architecture in America, by Montgomery Schuyler; a limited *édition de luxe* of a new 'Memoir of Horace Walpole,' by Austin Dobson; a similar edition of the same author's poem, "A Sun-Dial"; 'The Devil's Picture Books: A History of Playing Cards,' by M. K. Van Rensselaer; six volumes in the new series, "Makers of America," beginning with 'Alexander Hamilton,' by Prof. W. G. Sumner; 'Mungo Park and the Niger,' by Joseph Thomson, in the series called "Great Explorers and Explorations"; a "Giunta Series" "intended to include the classics of literature in every department"; 'Our Mother Tongue,' by Theodore H. Mead; 'Ardis Claverden,' a novel, by Frank R. Stockton; 'Wanneta the Sioux,' by Warren K. Moorhead; 'The Delight Makers, a Novel of Pueblo Indian Life,' by Adolf F. Bandelier; 'The Silver Caves,' by Ernest Ingersoll; 'My Study Fire,' essays by Hamilton Wright Mabie; 'Désirée, Queen of Sweden and Norway,' from the French of Baron Hochschild by Mrs. M. Carey; and 'The Jew,' a novel from the Polish of J. I. Kraszewski.

J. B. Lippincott Co. publish directly 'In and Out of Book and Journal,' selections by Dr. A. Sydney Roberts, with illustrations by Van Schaick; 'Gleanings for the Curious from the Harvest-fields of Literature,' by Dr. C. C. Bombaugh; 'European Days and Ways,' by Alfred E. Lee; 'Two Modern Women,' by Mrs. Kate Gannett Wells; 'An Elementary History of the United States,' by Charles Morris; and 'Sewage Disposal Works,' by W. S. Crimp.

The J. G. Cupples Co., Boston, will publish a fully illustrated life of Paul Revere by Elbridge H. Goss.

Ginn & Co. announce 'A Synopsis of English and American Literature,' by G. J. Smith of the Washington (D. C.) High School.

The ninth volume of Prof. Masson's 'Collected Writings of Thomas De Quincey' (Macmillan) appropriately bears on its title-page a vignette portrait of Ricardo, whose writings stimulated De Quincey to produce the papers which form the bulk of this collection entitled "Political Economy and Politics." The latter rubric covers De Quincey's denunciation of the clerical blight on true historic study of the Puritan Revolution. The essay on "California and the Gold-Digging Mania" is an alarm to those not busy in saving mankind from the influx of the yellow metal, which might be expected to lower the ratio to silver to eight to one. "So wide a desolation could not by any device of man reach so vast a body of helpless interests." De Quincey recommended as the first bulwark the repeal of the statute making gold a legal tender for sums above forty shillings. Our silver saviours of society will find much profit in his vaticinations, which are less than forty years old.

Those travellers who are fortunate enough to visit Greece next winter will be glad to have with them, as a supplement to Baedeker, Ch. Diehl's 'Excursions Archéologiques en Grèce' (Paris: Armand Colin & Cie.); and those to whom this good fortune is denied will enjoy making these excursions in their libraries, under M. Diehl's guidance. He takes us to Mycenæ, Delos, Athens, Olympia, Eleusis, Epidauros, Dodona, Tiryns, Tanagra, and Mt. Ptoïon, and describes the results of the recent investigations at each of these sites in a language easily understanded of the people. His aim is to do for Greece what Gaston Boissier has done for Rome and Pompeii, in presenting the scholars' work to the unscholarly in such matters; and, except for an occasional tendency to become too discursive, which is especially noticeable in the chapter on Delos, he has succeeded admirably. He confines himself to the excavations of the last fifteen years, and his book is the first attempt to summarize, in a popular form, the acquisitions made to our knowledge of life in ancient Greece by the work done at all the sites named, in this remarkably active period.

It is not too late for tourists to slip into their satchels the Rev. Julius H. Ward's 'The White Mountains: A Guide to their Interpretation' (Appletons). It is fairly to be called a pocket volume, but is liberally printed and is embellished with well-chosen views, and has a map of the region, which is intended rather to give a general idea than to serve the explorer. Mr. Ward has called to his aid a well-versed member of the Appalachian Club, who lays out a number of routes for pedestrians; and he appends a list of White Mountain papers in *Appalachia*, and of books, from Crawford to Starr King. Mr. Ward's aim is not that of the veteran climber who knows every foot of the mountains, like Mr. W. M. Conway in his guide to the Pennine Alps. He writes from sufficiently extensive acquaintance with the principal peaks, but his "personally conducted" readers are to share particularly his reverent and mystical feelings at the proper time and place. His own preference is to be alone on his excursions, which he takes very solemnly. A gossiping woman on a bridle-path is to him an even more distressing creature than one who does not know "how to take care of herself." Such as approach the mountains in his spirit will no doubt like to compare their sensations with Mr. Ward's. Others may pass lightly over his interpretations to possess themselves of his practical indications.

Those whose summer recreation takes them to New Jersey will find gentler and safer mountain-climbing than in New Hampshire, and will probably overlook the geologic interest of a State whose surface has been thoroughly mapped. Prof. W. M. Davis of Harvard College has lately issued two pamphlets in pursuance of studies which he has made distinctively his own, namely, among the small-sized rivers of the Atlantic slope, whose genesis he seeks to explain. One is a paper from the Proceedings of the Boston Society of Natural History, on "The Geographic Development of Northern New Jersey"; the other is a lecture before the National Geographic Society on "The Rivers of Northern New Jersey," with notes on the classification of rivers in general. Both are lucid in description, and accompanied by excellent diagrams, and are well calculated to promote that home study which can be made the basis of the soundest scientific observation.

Dr. R. Mahrenholtz, a well-known student of seventeenth and eighteenth-century French, writing in No. 29 of the *Magazin für die Litteratur*, has some interesting remarks on the prevailing confusion in the language of to-day, owing to the invasions of argot, the inventions of the Naturalists, the influence of the southern provinces, etc. His text is Prof. Césaire Villatte's 'Parisismen,' a slang dictionary which has just reached a third edition in Berlin. He instances numerous mutilated forms, of which "photo" for photograph in English is an example; the poetic figurative designations, as *balayeuse*, for a lady whose skirts sweep the streets; the building upon imported words in accordance with French analogy, as lunch, *luncher* (to lunch), *luncheur;* the tendency of the accent to abandon the last syllable (in words of three syllables to seek the middle), and, again, on the one hand, to sound final mute e as in poetry (*favorable* in four syllables), on the other in good circles to drop the final syllable in *quatre, votre*, etc.; the upsetting of the old rules about the subjunctive, etc. On the whole, though Dr. Mahrenholtz looks with some distrust upon the revolution, he is inclined to see in it a salutary effort to shake off the yoke of the Academy and give the language its free development.

— The August *Harper's* contains several articles of widely differing interest, from Dr. Parkman's experimental retreat to a Roman convent in the days of his youth to an account of the geology of Chicago and an admirable narrative of Custer's last fight, the details of which are pieced together as they have been recovered from many sources, so that we seem to have the story of an eye-witness of a conflict from which no white man escaped alive. Berlin, Magellan, and the streets of India are also promising and noteworthy subjects. We leave these one side, however, to attend to the attack which Mr. Howells makes in "The Study" upon anonymous criticism. For five years now he has had his say upon literature past, present, and to come, and others have criticised what he has pronounced upon Cervantes and Cawein, Thackeray and Ironquill, Scott and Mr. T. S. Perry; and he, displeased, as he acknowledges, at the treatment accorded him, now has his say also upon the pack that worries him. He uses none of those purring adjectives with which he makes a pleasant sound when some votary of "lyrism" draws nigh him from the wild Southwest or the Arcady that neighbors on Toronto. He conceives the profession of criticism as follows: "It is hard enough to treat a fellow-author with respect even when one has to address him, name to name, upon the same level in the open; swooping down upon him in the dark, panoplied in the authority of a great journal, it is impossible. One must then treat him as prey, and strike him into the mire, preparatory to tearing him limb from limb." He speaks of "the constant spectacle" of the "ferocity, incompetence, and dishonesty" of our literary criticism; compares it to the "torture of witnesses"; and, coming to the person of the anonymous critic, says that "he wears a mask chiefly that he may more securely give pain and more of it," calls him "the arrogant, bullying, blundering pedant," refers to his "almost inevitable savagery and dishonesty," and "the sins of pride, of prejudice, and of cruelty which he may safely indulge in the dark," and likens the review which employs him to "the gentleman" who "keeps a masked bravo in his pay." Now, that Mr. Howells most potently believes all this we have no question; but some of these expressions suggest to our minds a doubt whether something more than the habit of signing the name is not needful to the making of that "able, modest, and courteous critic" whose coming Mr. Howells so much desires. So much vituperation is not often to be found in the anonymous criticism of a "great journal," at least in our experience. And, if we may make the old appeal to Philip sober, a glance at the *Atlantic Index* shows no inconsiderable amount of anonymous criticism from his own pen; did he then find it impossible to do aught, "panoplied in the authority" of a greater than a "great journal," except to "swoop down," to "strike into the mire," to "tear limb from limb"? Was it his editorial responsibility that restrained him? Or does he think others incapable of behavior like his own before he emerged from among

the irresistible temptations of "in the dark"?

—The fact is that Mr. Howells, in nearly all his criticisms during the past five years, has illustrated, by his lack of it, one great advantage of anonymous criticism, when weighted with the authority of a "great journal" or review. He has expressed his personal opinions without let or hindrance; and the result has been a mass of judgments upon great and petty authors which is remarkable for eccentricity, dogmatism, and the spirit of faction. Writing anonymously in a "great journal" checks such idiosyncrasies by virtue of what is known as the traditions of the paper or the review, and this set of traditions is a large element in its authority. A paper, having won its reputation by employing trustworthy writers, carries a presumption that its articles are trustworthy, and is fairly entitled to the favorable disposition of its readers; its tradition is a valuable safeguard for its contributors, and must ordinarily be observed by its staff. Just as the editor is incessantly hedged about, guided, and guarded, in forming his personal judgment, by a sense of public opinion inevitably modifying and entering into his decision, and thus really represents more than by himself alone he would ever have attained to, so, though in a very modest way, the critic of a "great journal" is restricted and limited more or less consciously by the sense of the standards of his paper. It is one of the great benefits of culture, the sure mark of a really educated mind, that the scholar feels more and more the long tradition of literature, the authority of the past resulting from the thought of innumerable minds; he learns to distrust a first and personal impression, and to realize that his danger of error increases in proportion as he departs from the judgments of many others embedded in that tradition and relies upon himself. Mr. Howells's shortcoming as a critic is largely due to his lack of this sense. We have space only to suggest this advantage of responsible anonymous criticism, due to its limitation of the personal element. It falls in with this that criticism is a conservative force, which is one reason why Mr. Howells abominates it; and yet opinion in literature is not a whit more conservative than in religion, politics, or science, and the Keats or Wordsworth of the time has no more difficulty than the Darwin, the Phillips, or the Emerson. It is no hardship that the reformer should justify himself before he is accepted. But apart from such regards as these, the practical and immediate benefits of anonymity are too plain to be mistaken. The signed article can speak frankly only of the dead. We observe that Mr. Howells seldom assails the living, unless it be so impersonal and, in his judgment, mortuary a thing as the *Saturday Review*. The signed article, also, is under the strongest temptation to favor without sincerity, and sometimes to curry favor, for the sake of friendship, real or prospective, with authors and publishers. The signed article handicaps the obscure writer, and too often releases the famous writer from really doing the work, for it is his name, not his examination of the book, that is wanted. And so we could make a catalogue, quite as dreary if not so ferocious as Mr. Howells's, of the disadvantage of signed criticism as a rule. As to the "masked bravo," etc., there is much exaggeration in it. The critic, in our experience, rarely has any intention to inflict "pain and more of it" in our reputable journals; and what truth there is in these fierce charges of the "Study" is no more than that, in all walks of life, there are mean men, and occasionally a fool, and there are blows to give and take from erring and quite honest men. Mr. Howells will find many an example in literary history of how to bear with the insects of the hour, and even the giants of the reviews, without resorting to harsh language.

—The remaining magazines may be briefly dismissed. The *Century* is most notable for an account of the New England community of the town of Mount Desert, by President Eliot, in which he explains in detail the social life and institutions of the typical unit of our people, and reminds socialists, nationalists, anarchists, etc., that with these institutions and this life some forty millions at least of the nation are well content. This is no reason, of course, why the one lost sheep should be suffered to wander, but it suggests that there is no need for entirely reconstructing the fold and inflicting a new brand on the whole flock. The usual serials of travel, fiction, the war, together with an interesting paper on whaling and another on the Yosemite, of great descriptive power, occupy the number. The *Atlantic*, sharing the sudden interest in the women of the French Salon which seems to have attacked all the great monthlies at once like an epidemic, has a paper upon "Madame Cornuel and Madame de Coulanges," of a readable quality; one upon the changes in the college course at Harvard, with general remarks on education, by Prof. Shaler; a discussion of copyright by Mr. Lodge, and poems by Whittier and Holmes. *Scribner's* is confined to a rather poor run of fiction and a gossipy article about Stanley's composition of his book, and with these a description of Paris streets and costumes in the time of the "Three Musketeers" which is capitally done and illustrated. Mr. Aldrich's poem, "The Sister's Tragedy," is the most important contribution from a literary standpoint.

—Prof. Heilprin has transmitted to the Academy of Natural Sciences of Philadelphia the results of his barometric measurements of the four highest peaks of the Mexican Republic—namely, Orizaba, Popocatepetl, Ixtaccihuatl, and the Nevado de Toluca. These summits have at various times been measured since the days of Alexander von Humboldt (1804), but the results obtained have in some instances been so broadly divergent as to leave considerable doubt as to the positions which the mountains occupied in the scale of elevation. It is the popular supposition that the loftiest of the remarkable volcances which have helped to build up the Mexican plateau is Popocatepetl, the giant cone the vision of whose snow-cap has attracted so many tourists to the City of Mexico. Humboldt, by means of angles taken from the side of Pueblo, determined the height of this mountain to be 17,674 feet, or, allowing for the corrections pointed out by his friend Oltmanns, 17,713 feet; and this figure has very generally been adopted by geographers to the present time. Professor Heilprin's barometric readings, computed from data obtained at the Central Meteorological Observatory of the City of Mexico and from simultaneous sea-level observations made at Vera Cruz, indicate elevations respectively of 17,513 and 17,533 feet, or a deficiency, as compared with Humboldt's figures, of some 150 to 200 feet. But the interesting fact is pointed out that while geographers and cartographers, even those of Mexican nationality, almost unreservedly accept Humboldt's determinations and figures, they have failed to make the correction which the levelling of the Mexican Railroad necessitates. The height of the plain of Tetimba (1,234 *toises*), which formed the base of Humboldt's measurements, was obtained barometrically, as was likewise that of the City of Mexico; and for the latter Humboldt found a value of 7,470 feet, instead of 7,347, or an excess of 123 feet. With the reduction of this amount, the commonly accepted figures show a marked correspondence with those determined in the spring of this year by Prof. Heilprin.

—As regards the height of the supposed "second" mountain of the Republic, Citlaltepetl, the "star mountain," or, as it is generally known, the Peak of Orizaba, a much greater discrepancy between earlier and later measurements exists. Ferrer, in 1796, determined trigonometrically the height of this almost perfect cone to be 17,879 feet, but Humboldt, from a low-angle measurement taken from near the town of Jalapa, obtained only 17,375 feet. It is this measurement, and a subsequent one (1877) made by Plowes, Rodriguez, and Vigil, representing an official Mexican commission, which have been considered sufficient to relegate Orizaba to the second place among Mexican mountains. The later measurement allows for the height of the mountain 17,664 feet. Humboldt, with characteristic caution, however, rejects his own measurement in favor of the earlier one of Ferrer, believing Orizaba to be the peer of Popocatepetl, and his view has been impressed upon the charts of German geographers generally. Prof. Heilprin and his associates made the fatiguing ascent of the mountain on the 6th and 7th of April, ten days before the ascent of Popocatepetl, and determined the crest to be nearly 700 feet higher than that of the supposed loftiest mountain of Mexico, or 18,205 feet above the level of the Gulf of Mexico. This result agrees closely with one obtained a few years since by Dr. Kaska, by means of a mercurial barometer, whose value is given in 'Meyer's Konversations-Lexikon' as 5,500 metres (18,045 feet).

—The restoration of the Peak of Orizaba to the first place among Mexican volcanoes, and its increased altitude, open up the interesting question as to what constitutes the culminating point of the North American Continent. The only other mountain that need be considered in this connection is St. Elias, situated approximately on the 141st parallel of west longitude, whose summit is claimed for the possessions of both Great Britain and the United States (Alaska). Measurements of this peak vary to an extent of 6,000 feet or more, or between limits of some 13,000 and 19,000 feet. It appears on the British Admiralty charts with 14,970 feet, whereas in the reports of the United States Coast Survey for 1875 the mountain is credited with 19,464 feet, in accordance with a vertical-circle determination made the year previous by Assistant W. H. Dall. Other measurements by the same investigator gave 19,956 and 18,033 feet, thus allowing for an extreme error of upwards of 1,900 feet; all earlier measurements give less than 18,000 feet. It is difficult to explain the broad range of these determinations except on the assumption that the angles of measurement were in most cases too small to permit of accurate values being drawn from them, or that the position of the mountain has not yet been correctly plotted. Several of the early charts place the summit considerably to the east of the 141st parallel, or within what is now British territory, and two or more miles either to the north or to the south of the position given to it by the United States surveyors. The expedition which has been recently organized under the auspices of the United States Topographical Department, with

a view to determining the topography of the region about Mount St. Elias, will probably resolve the question of position and height. For the present it looks as if the mountain were to take second place among the giants of the North American Continent, falling probably but little behind the lofty beacon of the Gulf of Mexico, the Peak of Orizaba.

STANLEY AFTER EMIN.—I.

In Darkest Africa, or the Quest, Rescue, and Retreat of Emin, Governor of Equatoria. By Henry M. Stanley. Charles Scribner's Sons. 1890. Two vols., 8vo.

MR. STANLEY'S book is in some respects as remarkable as the undertaking of which it is the record. It is not what would ordinarily be termed an entertaining work, and if the reader expects to find in it a constant succession of thrilling incidents and vivid pictures of strange life and scenery, he will be disappointed. It is, for the most part, a plain, straightforward official report of the manner in which an expedition was conducted to its successful issue. Numerous details are accordingly to be found in it, proper enough in a report, but likely to prove wearisome to the general reader. There are, it is true, some digressions, and not a few places in which Mr. Stanley seems to be thinking aloud, as it were, and long descriptive passages, notably of the great forest and the snow-clad mountain range; but he is generally too intent on telling his story to turn aside often to seek for dramatic incidents or curious accounts of native customs, just as in the forest his one purpose was, not to explore nor to collect specimens, but to press forward to the lake.

His work also suffers, from a purely literary point of view, in having been written with almost unprecedented rapidity and at a white heat. In his characteristic and touching closing passages he tells us that it took him but fifty days to write these thousand pages—a feat so well-nigh inconceivable to the German mind that a prominent member of the General Staff has recently publicly charged him with having written the account of his travels beforehand. Naturally one sees numerous signs of haste, in harsh and unfinished sentences, in confused statements, and occasionally in errors. Some things are said which had better have been left unsaid, and certain bombastic and overstrained passages, doubtless, would have been cancelled had there been time for revision.

On the other hand, we have never read a book more thoroughly pervaded with the personality of the author. He does not offensively obtrude himself, but he is first, the one in whom all action and interest centres, because it is impossible that it should be otherwise. At times he writes with singular clearness and force, the conversations being especially well reported, and although he now and then expresses himself with almost brutal frankness, yet the unprejudiced reader cannot but feel that he is striving to be scrupulously fair in his judgments. There is also at times a true dignity in his language, when there comes over him a sense of the importance of his mission and the weight of the responsibilities laid upon him. The reader recognizes then that he has no longer to do with a paid newspaper correspondent in search of adventures, but with one who has been nominated by the world to do a certain work, and who is conscious of the power and the will to do it. One scarcely knows which to admire most, the skill with which the expedition was led, and the persistent determination with which all obstacles to its success were overcome, or the extraordinary influence which the leader had over his native followers, the patience and tact with which he treated them, and his deep sympathy for them in their sufferings. Mr. Stanley's weakness, however, as well as his strength, is reflected in his book as in a mirror. He makes far too little allowance for the inexperience of his officers, in criticising their failures to carry out his commands. His frequent sarcastic references to the ideal Pasha are not in good taste, and are unworthy of him, while one is tempted to believe, from the repeated allusions to it, that he regards as the most extraordinary single event of the expedition the sending back his personal baggage.

The opening chapters, treating of the organization of the expedition and its transport from Zanzibar to the head of steam navigation on the Aruwimi, contain little that is worthy of note. In order to understand clearly the reasons for Mr. Stanley's course from this point, it is necessary to keep in mind that the immediate object of the expedition was to carry ammunition to Emin Pasha, who was supposed to be in imminent danger of capture by the Mahdists. The delay of a single day in bringing relief, accordingly, was to be avoided, if possible, and no small part of his trials during the next ten months was the torturing anxiety lest he should be too late. The boats on the Congo not being sufficient to take the whole expedition at once to Yambuya, he determined to divide it, marching himself directly with a picked force, and leaving the remainder under the command of Maj. Barttelot, to follow as soon as all had been brought up the river and the carriers promised by Tippu Tib, the noted Arab freebooter, had arrived. On June 28, 1887, this advance body, consisting of 389 men, including six Europeans, began its march through the absolutely unknown region which lay between them and the lake, five hundred miles distant. Judging from his previous experience in Africa, he believed that the journey would take eighty days. He prefaces his account of the forest in which for one hundred and sixty days they marched, "without ever having seen a bit of greensward of the size of a cottage chamber floor," with these quaint words: "Beseeching the reader's patience, I promise to be as little tedious as possible, though there is no other manuscript or missal, printed book or pamphlet, this spring of the year of our Lord 1890, that contains any account of this region of horrors other than this book of mine." Mr. Stanley writes in such a sophomoric style when he deliberately sets himself to describe this forest that he is only indifferently successful in conveying the impression which it made upon him to his readers. As a matter of fact, it does not appear to have differed from all other tropical and primeval forests. Many travellers have given similar descriptions of the infinite variety of trees, some standing, some fallen, all "lashed together by millions of vines, creepers, and giant convolvuli, until a perfect tangle has been formed and sunshine quite shut out, except a little flickering dust of light here and there to tell you that the sun is out in the sky"; of the birds in the tree-tops, unseen, "though their whistlings, warblings, screamings, and hootings were heard everywhere," and the "countless armies" of insects, and of the sudden rustle in the jungle as some animal, an elephant or a buffalo, hastens away from the approaching caravan. With all this we are familiar. But the unexpected vastness of this Congo forest, which occupies, conjecturally, a "compact square area of 321,057 square miles," very nearly the area of Great Britain, Ireland, and France; its constant gloom and the ignorance of the natives of any other conditions ("Do they not all say that all the world is covered with trees and thick bush?" exclaimed the Zanzibari porters in their despair, as if their memory even of grass and sunshine was but a delusion); the ceaseless danger from foes lurking behind every tree, from cunningly contrived pitfalls, poisoned skewers in the paths, and, above all, the ever-threatening famine—as we read of all this it is impossible to wonder at the profound impression made upon Mr. Stanley, who three times in eighteen months passed through this "region of horrors." It was so sparsely habited by "numberless fragments of tribes, who are at war with each other and who live apart from ten to fifty miles," that there are few paths, sometimes none, leading towards the east. In this case a way had to be cut by the advance guard, fifty picked men armed with bill-hook and axe. They had to

"find a path, or, if none can be found, to choose the thinnest portions of the jungle and tunnel through without delay, for it is most fatiguing to stand in a heated atmosphere with a weighty load on the head. If no thinner jungle can be found, then through anything, however impenetrable it may appear; they must be brisk—'chap-chap,' as we say—or an ominous murmur will rise from the impatient carriers behind. . . . Scores of voices would cry out: 'Wherein lies this fellow's merit? Is it all in his stomach? Nay, it is in his wooden back—tut—his head is too big for a scout. He has clearly been used to hoeing. What does the field hand want on the continent? You may see he is only a Banian slave! Nay, he is only a Consul's freed man! Bosh! He is a mission boy!' Their bitter tongues pierce like swords through the armor of stupidity, and the bill-hooks with trenchant edges are wielded most manfully, and the bright, keen axes flash and sever the saplings, or slice a broad strip of bark from a tree, and the bush is pierced, and the jungle gapes open, and fast on their heels continuously close presses the mile-long caravan."

The difficulties of the march were greatly aggravated by the fact that the slave-hunters had eight months before raided the forest settlements. They had not only burned the villages, but

"their rage for destruction had even been vented on the plaintain groves, every canoe on the rivers had been split into pieces, every island had been searched, and into the darkest recesses, whither a slight track could be traced, they had penetrated with only one dominating passion, which was to kill as many of the men and capture as many of the women and children as craft and cruelty would enable them. . . . What these destroyers had left of groves and plantations, of plaintain and bananas, manioc and corn-fields, the elephant, chimpanzee, and monkeys had trampled and crushed into decaying and putrid muck."

From this wanton destruction the whole expedition was more than once in danger of perishing from starvation; wood-beans, berries, and fungi being their only food for many days at a time. They passed through two camps of these "enemies of the human race," leaving in each case many who were too feeble to proceed. Even these the Arabs treated with such inhuman cruelty that Mr. Stanley with difficulty restrained himself from exterminating them on his return.

In the eastern part of the forest the villages were placed in the centre of clearings, sometimes a mile and a half in diameter, in which the fallen trees formed an almost impregnable abatis. The path goes now upon the ground, now upon a giant trunk and along a branch, until the heavily laden carrier is twenty feet above the ground. He

"descends cautiously along the steep slope until he is six feet from the ground from which he must jump on to another tapering branch, and follow that to another height of twenty

feet, then along the monster tree, then down to the ground; and so on for hours, the hot, burning sun, and the close, steamy atmosphere of the clearing forcing the perspiration in streams from his body. I have narrowly escaped death three times during these frightful gymnastic exercises. One man died where he fell. Several men were frightfully bruised. . . . All this, however, is made much harder and more dangerous when, from a hundred points, the deadly arrows are flying from concealed natives, which, thank Heaven, were not common."

It was in this part of the forest and not far from these clearings that the villages of the pygmies were found.

At length, on December 4, the wearied men came out of the forest into the sunshine and the green grass, which was greeted with a rapturous joy not to be expressed in words. As we read Mr. Stanley's account of this scene and of the enthusiastic shouts which, a few days after, the first view of the lake awakened in his followers, we are reminded of the joyous "Thalatta! Thalatta!" with which the Ten Thousand hailed the Euxine. The goal was reached, but not the end of their toils, for nothing could be learned from the natives of the man whom they had come to rescue. Their boat had been left with the Arabs five weeks' journey back in the forest. There was no canoe upon the lake nor a tree upon the shore out of which one could be made. To wait where they were was out of the question. To attempt to march overland to Wadelai, twenty-five days' journey distant, every mile of which might be contested by hostile natives, was equally futile. Evidently there was nothing to be done but to return to a fertile spot just within the forest, to build a fort, to send a force for their boat and then return with it to the lake. Of this cruel disappointment Mr. Stanley writes in a simple and dignified manner which wins our respect and heightens our appreciation of his character. It was cruel because it was wholly unnecessary; for had Emin sent one of his steamers but a nine hours' sail from his southernmost station on the day on which he writes he expects Stanley, he would have found him on the lake shore. His inexplicable remissness, moreover, was the direct occasion of "five days' fighting, a four months' loss of time," and, indirectly, of most of the disasters to the rear guard, including the deaths of Barttelot and Jameson. Not one word of explanation, however, so far as we know, has he yet given.

Obedient to their leader's command, then, the brave band shouldered their burdens again and turned their backs on the lake to reach which they had endured so much. In three weeks they are once more encamped in the corn-fields and banana-groves of Fort Bodo, or the "Peaceful Fort." On April 18 they are again at the lake, Mr. Stanley meantime having had a severe attack of illness. The boat is launched and sent to the nearest station to announce their arrival, and on the 29th they are at length joined by Emin Pasha.

HOGARTH'S ARCHÆOLOGY OF CYPRUS.

Devia Cypria: Notes of an Archæological Journey in Cyprus in 1888. By D. G. Hogarth, M.A., Fellow of Magdalen College, Late Craven Fellow in the University of Oxford. With Map and Illustrations. London: Henry Frowde; New York: Macmillan. 1889.

STUDENTS of to-day are more than ready to accord a hearty welcome to works on any of the various branches of archæological research, and the greeting is sure to be all the more hearty if the book come from the pen of a competent scholar. Concerning Mr. Hogarth's competency for the work of exploration there can be no doubt. He served his apprenticeship in practical field-archæology under Mr. Ramsay in Asia Minor, and was then transferred to Cyprus, where for several years he has been engaged in the excavation of various sites in the island. During his leisure moments he has made journeys to the remotest, and hence least known, corners of the island. The results of these journeys are given to the world in the handsome, but costly, little volume which bears the title given above. While these results are not such as to startle the world, yet they are worth the imparting, even though they be negative in character in the main. A negative result is, after all, a result!

As we should expect, the order of the narrative is geographical, treating first of the Paphos District, then of the Carpass, the long *ox-tail* which gets its name from the city of Carpasia, situate on the northeastern sea-front. Lastly, the author gives us a few miscellaneous odds and ends from Central Cyprus.

We have read Mr. Hogarth's book far from our home and study, and we have been much annoyed by his shortcomings in regard to maps. Books of this character should always be accompanied by maps, embodying all the results laid down in the text. Now, nearly half of the book is taken up with a discussion of the Paphos district, and yet we are vouchsafed no map. We are given a map of the Carpass, but it is very unsatisfactory and inaccurate; it omits sites (Vlakhou, p. 93), villages, and mountains, which the author speaks of in the text (on p. 79 there are no less than seven instances of this neglect, viz, Sykadhes, Mesovouni, Aphendrika, Chelones, Agia Pappou [church or village ?] Ἄσπρο νησί and Klouria in the margin); it frequently gives as a dead level districts which the author tells us are mountainous (pp. 68, 69, 72, *scæpe*); it does not hesitate to locate a site on the wrong side of a stream (Nitoviklia, p. 78); we are often at a loss to know whether the author is speaking of village, mountain, or river (Sykadhes, p. 79; Tsambres, pp. 91, 92); lastly, on the map we read "Apostolos Andreas," whereas the author speaks constantly of Cape St. Andreas. Of course every one will understand this last, but then consistency is really a jewel. We wonder at this faulty map, because, as we have said, Mr. Hogarth learned his trade of travelling archæologist in the field in Asia Minor under the tutelage of a painstaking explorer. The world of to-day demands that the travelling archæologist be able to make, and do make, an accurate route survey of the country traversed by him. If we may judge by the map of the Carpass, we feel safe in assuming that Mr. Hogarth has not made a route survey, and we hope that better things may be reported of him in regard to the journey to Asia Minor, upon which, as we understand, he is at this moment absent. His other work Mr. Hogarth has done well.

The kingdom of Paphos was second in importance only to that of Salamis; its boundaries are well defined by nature. The five rivers of the kingdom have cut up the country into as many great cañons, which make travel in the interior difficult, and account for the fact that few travellers have left the coast road. The uplands are fertile and abound in flocks, while the lowlands are easily irrigated. The poverty of the natives is due not to poor soil, but to lack of roads connecting Paphos with the present centres of commerce; but in ancient times, when the port was one of the best in the island, there was not the same need for radiating roads. The extensive ruins of Paphos speak of its former greatness; the temple of Aphrodite was very wealthy and attracted visitors from all the Greek world. The ruins of many other places—Arsinoe, Letymbou, Polemi, Limni, etc.—show that the kingdom was wealthy and populous. Mr. Hogarth speaks of acres of ruins in now uninhabited forest regions. Under the independent kings, when strength of position was desired, Old Paphos, situated ten miles inland, was the capital, but when the island had been united under the Ptolemys, New Paphos gained in importance.

The history of Old Paphos is really the history of the shrine of the Paphian Aphrodite, whose high priests were the kings, as in the Cappadocian Comana, the Golden. The dignity of the shrine and its priesthood continued unimpaired down to Roman times, for the priesthood was conferred upon the last Ptolemy in lieu of royal power. From this time on, New Paphos usurped the political headship, becoming successively the seat of the first bishop of Paphos, the capital of the Lusignans, and later the residence of the Greek prelate. New Paphos in turn fell into decay in Venetian times, and the present town arose nearly a mile inland. In the allusions of the ancient authors to Paphos, there is frequent uncertainty as to which town is meant.

Only five new inscriptions were found at Paphos. Two are in Greek, one of which is very valuable, as it adds a new proconsular governor to Cyprus; two in French, dating from the time of the Latin Kingdom; one in Cypriote on a scarab of the fourth century B. C. The scarab is beautifully engraved, and represents Herakles wrestling with a lion. The Fontana Amorosa of Ariosto, and the fountain at which Aphrodite married Akamas, are to be located at the βρύσις τῶν ἐρωτων, a spot of ideal beauty.

Throughout the book Mr. Hogarth has fault to find with the queer methods of Gen. di Cesnola.

"So much," says he, "has been written and said since the publication of Gen. di Cesnola's book as to numerous inaccuracies and misstatements contained therein, that I almost owe an apology for flogging a dead horse; but several conversations with those who had worked for him shed a (to me) new light on the subject, and showed me the genesis of much that seems mythical in the book. The truth of the matter seems to be that the General seldom directed his excavations in person, and was not present when the treasures were found; he undertook some rapid tours about the island, stopping, for instance, *one day only* at Old Paphos (*cf.* his book, p. 206, 'I superintended excavations there in 1869 for *several months*'), but his collection was amassed by the labors of his dragoman Beshbesh, both by excavation and by purchase in the villages and in the bazaars of the towns, etc."

At Marathounda Mr. Hogarth found a Greek inscription dedicating some ex-voto offering to Apollo Μυρτάτης; previously he had found at Amargetti and published in the *Journal of Hellenic Studies* an inscription in honor of Apollo Μελάνθιος. To this latter epithet he gave a local signification, and argued that it was an ethnic for a village Melantha, or something of the sort. He now retracts this conjecture, and substitutes therefor the theory that μυρτάτης and μελάνθιος are epithets of Apollo as the Healer by the virtues of herbs, the former meaning Apollo "of the myrtle," and the latter "of the poppy," just as other epithets of Apollo have reference to the vegetable kingdom. So the Cyprian ὑλάτης is Apollo "of the grove," the Lesbian μυρικαῖος "of the tamarisk." Analogous is the Cyprian Aphrodite μυκηρόδις, "of the almond tree." Dioscorides dwells upon the medicinal virtues of

the melanthium and the myrtle, both of which are effective in disorders of the urinary organs. Now it is noteworthy that at Amargetti, the seat of Apollo Μελάνθιος, phalli, both on statuettes and cones, were found, which no doubt were votive offerings dedicated as tokens of gratitude for cures effected. Mr. Hogarth's theory is thus made very plausible.

There is reason to doubt the genuineness of the Cypriote inscriptions from Drimu published by Beaudouin and Pottier in the *Bulletin de Correspondance Hellénique*, 1879, p. 347. By means of a Cypriote inscription, a temple of Hera is located at the church of Agia Moni. A bad copy of this inscription by Vondiziano was published by Deecke (in *Beiträge*, etc., xi), but he could not be certain of the last two lines. From Hogarth's copy, impression, and photograph it becomes quite clear that the last words are :

ta · i · te · o · i · ta · e · ra · i · =

τᾶ θεῶ τᾶ Ἥρᾳ,

It is interesting to find a temple dedicated to Hera in a part of the island sacred to Aphrodite; moreover, the ruins prove that the shrine was one of importance. This inscription is valuable from another point of view, since it contains a new symbol, for which, on not very good grounds, the value *jo* is suggested.

The mediæval settlement of Aschelia is in the centre of the sugar-growing plain of Cyprus; it formed part of the Domain Royal, and was assigned to the Hospitallers, who established a commandery there. The large church of the wretched hamlet of to-day contained, at the time of Mr. Hogarth's visit, a pulpit and baldachino of wood, elaborately carved and decorated. They are both Renaissance in character, with marked signs of Gothic influence, and must be assigned to the beginning of the sixteenth century, since the Hospitallers were expelled by the Turkish invaders about the middle of that century. A Mr. Williamson has purchased and brought to England all these carvings, but their ultimate destination is not known.

Monoliths, commonly called πέτραι τρυπημέναι, have been explained by most travellers as in some way connected with a phallic worship. The stones are conical in shape, and vary much in size ; the colossal ones at Paphos are eleven feet high, while the smallest at Agios Photios is only four feet high. Mr. Hogarth knows of no less than fifty such stones. He follows Dr. Guillemard in the view that they have nothing whatever to do with religion, but are the remains of ancient presses. The usual adjuncts of many of these monoliths bear out this view, as does also Conder's ('Heth and Moab,' pp. 253-4) description of the menhirs of Moab. Mr. Hogarth found that mysterious virtues, phallic or otherwise, were rarely attributed to these stones by the peasants, and when such belief did exist, it was found to be so weak that he argues that the belief is of modern origin and has not yet crystallized into an article of universal faith.

The name Carpass is ancient, but of obscure origin. The Carpass has wonderfully varied scenery. The climate is un-Cyprian, for the cool air from two seas sweeps over it to temper the heat. The peasants themselves are un-Cypriote in appearance, and may be descendants of the Veneziani bianchi who settled in Cyprus after the first crusade. They are distinguished for industry and thrift, and, as their country is inaccessible, they have escaped the direst oppression; the traveller is consequently impressed with their prosperity, good government, good order, and native civilization. Mr. Hogarth gives a short outline of the history of the Carpass, borrowing his facts from the 'Histoire de l'Île de Chypre' by De la Mas Latrie.

The ruins of Salamis are chaotic. What is above ground is mostly late, but excavations might bring to light the foundations of the temples of Zeus Salaminius and of Athena Pronoia. Χρεοφύλαξ (p. 64) is not a new word.

Inscription No. 18, p. 65, locates the Cyprian Cnidus, the birthplace of the historian Ctesias. It is now a wilderness of formless heaps. Excavation would not be profitable, save only in the tombs, because the rock lies near the surface. The great stone enclosure with upright menhir, or emblem of fertility, is a Phœnician relic, and "must depend for its explanation on that assigned to its fellows all over the world" (*cf.* Conder: 'Syrian Stone Lore,' p. 43 ff., and 'Heth and Moab,' p. 237).

The ruins of Mazaraes are large in area and are probably, though not certainly, of early origin, but the name and history of the town which once stood there are no doubt for ever lost. At Peristefani, a site small in area, but strong in position, Mr. Hogarth found a number of torsos and legs of statues of a very early period that recalled the more archaic Dali figurines.

The great rock-cut tombs of Elisis and Galinoporni are remarkable both for size and position, the former being high up on a sheer bluff, and excavated out of the solid rock for eighty-seven feet of horizontal depth, besides numerous sides chambers. Both tombs served as the final resting-places for the royal family that reigned at the ancient site at Agia Varvara and Nitoviklia. Both of these sites probably represent one and the same city, Nitoviklia being the more ancient.

At the Carpasian Islands there is a slip for launching ships; no doubt there was a corresponding slip at Carpasia, on the northern coast, though no traces of it are visible to-day. Mr. Hogarth suggests that the ancient mariners drew their vessels across this neck of land to avoid the dangers attendant upon the passage round the Cape.

Nothing worthy of mention was found at the site of the Temple of Aphrodite Acraea or at the Kleides Islands. Both Urania and Carpasia are located tentatively, though the site of Carpasia seems to be plain enough, a square mile being strewn with remains of a late period; the tombs alone bear evidence of a greater antiquity. Aphrodisium is located by inference, no doubt correctly, at Iastrika. A sumptuous royal tomb was discovered at Davlos, with colonnades of the pure Doric order.

The views from both Buffavento and Troodos are famed, but, in Mr. Hogarth's opinion, they cannot compare in this respect with Kantara Castle, which dominates the northeastern end of Cyprus and sweeps two seas.

Makaria is a mere wilderness of rubble, but with many graves still unrifled. Here Mr. Hogarth noted a kind of sarcophagus common in some parts of Asia Minor, viz., the grave sunk into the living rock, and covered with the ordinary sarcophagus lid.

The third division of Mr. Hogarth's book relates to central Cyprus; it covers only a few pages, but it is valuable. We see no reason for his extreme diffidence in suggesting that modern Mari is the site of ancient Marium. At Larnaca-tis-Lapithou Mr. Hogarth copied inscription No. 2779 of Le Bas-Waddington, and assured himself that the stone has τοῦ Ναρν[α]κίου, *not* Λαρν[α]κίου. From this fact he argues that Larnaca is not an ancient name. We do not agree with him; the change of *n* to *l* is by no means an unknown phenomenon. Even granting this change, the name would still be ancient. To deny antiquity to a name so slightly corrupted would be to rob the geographer of a fruitful means of identifying and locating ancient towns. We might multiply instances *ad infinitum*, but we take at random Sagalassus and Aghlasun; Konana and Guïnen; Anabura and Enevre. These pairs of names do not look much alike, it is true, but the geographer who fails to read the ancient name out of its modern corruption is not fit for his work.

One of the most interesting of the thirty-six inscriptions is that of Sergius Paulus at Soli, already published, but badly, by Gen. Cesnola. The date of the inscription seems to be 55 A. D., or, in other words, ten years after St. Paul's visit to the island (see Acts of the Apostles xiii., 4-13).

The book closes with a list of proconsular governors of Cyprus.

WHISTLER'S OWN.

The Gentle Art of Making Enemies : As pleasingly exemplified in many instances, wherein the serious ones of this earth, carefully exasperated, have been prettily spurred on to unseemliness and indiscretion, while overcome by an undue sense of right. New York: John W. Lovell Co. 1890.

Mr. Whistler's own edition of 'The Gentle Art of Making Enemies' is at last before us. It is a much larger book than Mr. Sheridan Ford's "spurious and garbled version," but the difference in size is largely a matter of paper and type, for, although it contains considerable matter not given by Mr. Ford, it omits a good deal given by him. In what is common to the two volumes the variations are slight and, for the most part, unimportant; and, judging from internal evidence, one would be inclined to think that what "garbling" has been done is rather Mr. Whistler's work than Mr. Ford's. In the affair of the "Claimant of Lemon Yellow," for instance, all mention of the names of either Mr. Mortimer Menpes himself or of Mr. Ford is carefully suppressed. Mr. Ford's name, indeed, is nowhere mentioned in the volume, and the impression is attempted to be given that his edition of Mr. Whistler's writings was not only published without the author's consent, but prepared without his knowledge. Mr. Ford's real crime would seem to be, not the alteration of what Mr. Whistler had written, but the republication of certain things that the writer has the grace to be a little ashamed of. The book certainly gains in dignity by the omission of the controversy with Theodore Child, in which the bludgeon rather than the rapier was the weapon employed, and of the unsavory squabble with Mr. Stott of Oldham, while it loses little in brilliancy. Enough remains to show clearly the undeniable wit, the amazing impudence, the boundless vanity, the skilful irrelevance, and the ingenuity in putting an antagonist in the wrong which make Mr. Whistler's letters such amusing reading, and render them so annoying to their victims. The volume closes with a delicious piece of bouffe—Whistler burlesqued by himself ! He had written a letter to the *Scots Observer* which contained a "regret that the ridiculous Romeike has not hitherto sent me your agreeable literature." This called out an angry letter from Romeike & Curtice, demanding an apology under threat of prosecution, to which Mr. Whistler thus responds :

"Sir—If it be not actionable, permit me to say that you *really are delightful ! !*

"*Naïveté*, like yours, I have never met—even in my long experience with all those, some of whose 'agreeable literature' may be, I suppose, in the 807 cuttings you charge me for.

"Who, in Heaven's name, ever dreamed of

you as an actual person?—or one whom one would mean to insult?

"My good Sir, no such intention—believe me—did I, in my wildest moments, ever entertain.

"*Your* scalp—if you have such a thing—is safe enough!—and I even think—however great my willingness to assist you—could not possibly appear in the forthcoming Edition."

So impertinent in his vanity as to doubt of the existence of that "scalp" which, yet, he is so vain of his impertinence as duly to ticket in his collection—the combination is almost sublime!

The book, however, contains other and more important additions than this, or than the famous and amusing "Catalogue of Etchings and Dry-points," otherwise it would hardly be worth a separate review. These additions are the pamphlet on the Whistler-Ruskin trial called "Art and Art Critics," the "Ten o'Clock," and several shorter papers—"Propositions," etc.—which, collectively, may be assumed to contain Mr. Whistler's serious ideas on art and criticism; and the printing of them here lends a certain respectability—an air of reasoned intention—even to his Indian warfare upon his critics. Mr. Whistler is an artist of great talents and considerable achievement. Whatever one may think of the slighter productions which he occasionally exhibits, one must admit the universally recognized merit of his better work. He has, moreover, a following of enthusiastic disciples. His serious opinions upon art and criticism are therefore worth notice. The artist who boasts that he "never explains" has a somewhat oracular and mysterious style, and it is not always easy to be sure that one knows what he means, but we will do our best.

The best known of his opinions is that of the uselessness of critics. "Harm they do, and not good," he says, and again: "Let work, then, be received in silence, as it was in the days to which the penmen still point as an era when Art was at its apogee." He ridicules the pretensions of the critic to "do good to Art," and tells him that as "the best work was done when he was not there to help it," so art can get on without him in the future. Here, we think, though it would make him smile to tell him so, Mr. Whistler takes the critics altogether too seriously. Are there any of the breed yet extant who think they can "do good to art"? Do any of them still imagine that they can either correct the artist's faults or aid him to attain to merits yet unaccomplished? It is not so that we understand our humble office. Has not Mr. Howells assured us, in the last *Harper's Monthly*, that "journalism is criticism, the criticism of life"? Just so the art critic is the reporter of art. His mission is not to the artist, but to the public. His function is to write of what the public cares to read about. All he gives the artist is publicity, and most artists understand this so well that his silence they resent more than his bitterest attacks. Mr. Whistler asks that his work "be received in silence," but probably no living man would less like to be taken at his word. This is an age of printing; and what the people are interested in, that they will read about. By all means let us ask for good criticism rather than bad; by all means let us condemn ignorance and assumption, but to wish for the extinction of all criticism is to wish for the cessation of all popular interest in art.

This step, also, Mr. Whistler is apparently ready to take. He assures the people that they need not trouble themselves about art, that they have "nothing to say in the matter," and never had. "Art happens." "The master stands in no relation to the moment at which he occurs." "There never was an artistic period. There never was an Art-loving nation." Therefore he would "lift from their shoulders this incubus of Art." But if it is unimportant that the people should know anything of art, why deliver "ten o'clocks" and write pamphlets to instruct them therein? If the people need take no interest in art, who is to buy the pictures and how is the artist to live?

These are the greatest of Mr. Whistler's paradoxes, and the only ones in which he is wholly wrong; but even when he is partly right he is full of paradox and over-statement. In his preaching of "art for art's sake," as opposed to subject-painting or mere imitation, there is much that is true; but he carries it to extremes. "Take the picture of my mother," he says, "exhibited at the Royal Academy as an 'Arrangement in Gray and Black.' Now that is what it is." Surely not. That the "arrangement" of color is a great and important element in the art no one can deny, but if there were no more than that, why paint a portrait at all? It may be true that the public ought not to "care about the identity of the portrait"; but it *does* care about the rendering of human character and always will, which is why we care more for a portrait by Titian than for a handsome rug. Let Mr. Whistler say what he will, the *musical* element in painting, though a great one, is *only* an element, and painting does aim not only to please, but to *represent*.

We have tried to treat these opinions seriously, but, after all, are they the serious opinions of an artist upon art? Or are they only a part of that ingenious self-advertisement of which Mr. Whistler is past-master, intended not to instruct, but to draw attention? One has an uneasy suspicion that to take him in earnest is "to consider too curiously," and that perhaps the best answer to him would be, "*Blagueur, va!*"

THE KOREAN LANGUAGE.

I. *An Introduction to the Korean Spoken Language.* II. *A Concise Dictionary of the Korean Language.* Korean-English and English-Korean. By Horace Grant Underwood. New York: A. D. F. Randolph & Co. 2 vols., pp. 939.

THE three great divisions in which all the languages may be classified according to their expression in written symbol are the ideographic, the syllabic, and the alphabetic. The Chinese written character is a logogram, or, less properly, an ideogram, like that of the Egyptian, Hittite, or Aztec. The Japanese and Cherokee tables of letters are syllabaries. In order to express to the Chinese eyes foreign names, such, for instance, as Blaine and Cleveland, the scholar in Peking selects a certain number of characters, and, writing them in vertical line, makes approach to the true sound, very much as the diagram of a cat, an ass, and a trophy could be read "catastrophe." When the Japanese editors wished to inform their readers of the results of the nominating conventions of 1884, they published the names of *Boo-rā-n* and *Kee ree-boo-ran-do*. The Japanese table of letters is a syllabary like the Cherokee.

The Koreans possess a true alphabet, one of the simplest, easiest, and, for its purpose, probably the best in the world. As the Phœnician, or modified Egyptian, was probably the mother of the alphabets of the western world, so from the Sanskrit writing, carried by the Buddhist missionaries all over that part of Asia dominated by Chinese culture, have sprung alphabets or syllabaries in which literature for the common people could be written. Both by the evidence of parallel columns and by the statement of a Korean author, the native alphabet is based on the Sanskrit forms. Eight initial, eight final, and eleven middle characters comprise the alphabet of twenty-five letters, eleven vowels and fourteen consonants. Simple as is this alphabet, we doubt the statement of Mr. John Ross, that "half an hour's study is sufficient to master it"—unless one is a born linguist—and we prefer Mr. Underwood's direction to give at least a day to it. In his two volumes he very properly does not transliterate, but expects the student to master the sounds and proceed at once to use the vocabulary as written in Korean, for the work is an introduction to the *spoken* language only.

Spelling in Korea is purely phonetic, but the spelling-reformers of our own country who would find there the realization of their hopes, will be sadly disappointed. For even with an alphabet as faithful to the spoken word as Pitman's phonography, Korea is an awful example of license. The orthography, or rather cacography, in the native books is simply anarchy; for each man is a law unto himself. No two men spell alike, nor are two pages of the same author always uniform. This, however, may arise from the fact that native scholars utterly neglect the literary culture of Korean, and compose only in Chinese or Asiatic Latin. Even the Japanese, with only a syllabary, possess order and beauty of spelling unknown in Chō-sen. In addition to these difficulties besetting the learner, euphony plays curious tricks, changing the initial consonants of postpositions and suffixes. This phenomenon is so marked as to lead the French missionaries to arrange for nouns, which in reality have no inflections, five distinct declensions with eleven cases each.

Mr. Underwood has lived in Séoul, the Korean capital, since 1883, and has learned the language by close personal contact with all classes, from Cabinet Minister to street laborer. He disclaims having written a systematic grammar, but in reality he has produced one of the best specimens of the exposition of an Asiatic language according to the best modern methods. It is the height of absurdity to make Latin the norm of comparison and procedure, as do the scholars of southern Europe, or to take up space in pointing out the contrasts or resemblances to Hebrew, as the northern European of theological training is so apt to do. Wisely Mr. Underwood examines the Korean first by entering within and making plain its main points and lines; then, approaching it from the English idiom and structure, he shows how the foreigner can make use of it in conversation. His work is really a neat, clear, and simple grammar, with a concise dictionary of the most needful words. While to students who expect to really master the tongue of Chō-sen, the larger grammar and bulkier dictionary of the French missionaries published at Yokohama in 1881 are indispensable, the present pair of volumes is extremely serviceable for counter, desk, pocket, and library. The print is large, clear, and neat, the press-work well done, the paper good, and the binding excellent. The Seishi Bunsha of Yokohama, Japan, has turned out no better mechanical work, and the proof-reading, having been done on the spot by the author and his assistant, Mr. A. Stewart Annand, the pages are notably free from those misprints which so afflict the beginner. A small list of errata is inserted in each volume.

Structurally, Korean is as unlike Chinese as Hebrew is unlike English. Even the avalanches of Chinese words and phrases which have at various epochs rolled into the Korean, have swollen its vocabulary, but left only su-

perficial traces upon its syntax. Just as Latin has at different times entered and reëntered English in original and in mediate or modified forms, so has the Asiatic Latin influenced the speech of the peninsula. To-day the talk of the official class, the educated man, the student, consists so largely of Chinese terms that to the ear of the commercial foreigner there seem to be two languages. Beeween the "official" and the "coolie" of whom Mr. Underwood speaks, there is even more difference of understanding than between the "low" and "high" German of the raw recruit and the Prussian officer. Yet during all the two thousand years or so of Chinese culture in Chŏ-sen, the native syntax has retained its integrity. It may be noted, however, that, as in Japan, most of the Chinese terms borrowed have been taken from the books. Hence even the speech of the Koreans has been influenced by the terse written language of China, so that usually the Korean speaks with laconic conciseness. Nor can a Chinese and Korean speak together in conversation unaided by pencil and paper; for, in addition to the Korean's retaining his idiom, his Chinese vocabulary, like that of the Japanese, is, from a modern standard, mispronounced Chinese. The pronunciation of Chinese in China fluctuates from age to age, since no syllabary, alphabet, or trustworthy apparatus of rhymes has fixed the ancient sounds; while in Korea and Japan such a phonograph or registry has existed. As to sound, it is probable that more ancient Chinese or Asiatic Latin is heard in the neighbor countries than in the Middle Kingdom.

When, however, the Japanese wishes to learn Korean, his work is almost exclusively one of pronunciation and vocabulary, for the structure and idiom of both languages are almost the same as peas inside the same pod. Not only do the Japanese interpreters write interlinear translations of Korean sentences, proclamations, and books, word for word, and particle for particle, but to the foreigner familiar with Japanese the close resemblance in structure is almost ludicrous. The Catholic priests in Japan in the sixteenth century were able in a few weeks to understand at the confessional the talk of the converted Korean captives who, on the string of their vernacular syntax, soon threaded a new rosary of words. In the northwest provinces this close resemblance may be less manifest.

Like the languages of northeastern Asia, the Korean is poverty-stricken in imagination and the faculty of personification. Each word is a stamped coin worth only its face value, not a counter covering a wealth of thought beyond what meets the ear. Those vital ornaments which are to language what the traits of genius are to men and women—gender, number, person, and case—are, broadly speaking, absent. The native grammarians seem quite right in naming but three parts of speech — nouns, verbs, and particles. There are no true pronouns nor any real adjectives. Our prepositions are postpositions, and our conjunctions are rendered into Korean by particles, nouns, verbal moods, and the participial forms of adjectives and verbs. Nouns are made to do duty as pronouns and verbs as adjectives. He would be a courageous Korean who should try to translate Shakspere into his vernacular. To render Shelley into Korean would be a task to which the hunting of their own tigers must be remunerative and highly successful sport.

In this first fruit of American scholarship in the Land of Morning Calm, Mr. Underwood has made a contribution of the first order of value in the acquisition of the spoken language. He has been assisted by Prof. Homer B. Hulbert of the Royal Korean University, another fellow-American, by James S. Gale, A.B., and by Son Soun Yong, a cultivated native. The work fitly crowns the labors of scholarship in which Klaproth, Medhurst, Siebold, Ross, Aston, and the French missionaries have borne a share, and in the acquisition of which not only the brave soldiers of the cross from France, but also Thomas of Scotland and Mayers of England have perished as martyrs. The day of the complete Bible in idiomatic Korean should not now be far distant.

THE LATEST YEAR BOOKS.

Year Books of the Reign of King Edward the Third. Years xiv and xv. Edited and Translated by Luke Owen Pike. [Rolls Series.] London. 1889. Pp. lxxv, 424.

THE filling of the gaps in our black-letter Year Books goes on slowly. The present volume was, indeed, published seven or eight months ago, but the interval between this and the last preceding one was over a year. Mr. Pike's editing continues to be marked by a sort of research and accuracy which classical scholars have long expected and exhibited in their work, but which lawyers have known little of until recent years. Whatever there is in Fitzherbert or the Book of Assises that may illustrate these reports, now for the first time printed, has been consulted; the original records of the cases here given have been searched, wherever they could be found; and the text of the reports has been settled upon a study of several of the best manuscripts. The editor remarks upon the fact that there are sometimes many independent manuscript reports of the same case, and adds an important observation:

"Some of the cases . . . in the present volume appear in Fitzherbert's Abridgment in a form differing considerably from that in which they occur in any of the MSS. above mentioned. This fact is a confirmation of the suggestion previously made that there was not any reporter whose authority was generally recognized, or that if there was, he had many rivals who were not without patrons in the legal profession. It seems that reporting was an open profession, and that some judges and counsel possessed reports in one form, others in other forms."

The cases in this volume seem to be mostly of small importance. Of most interest is the one which recites the proceedings upon the arraignment of Willoughby, a late Chief-Justice, one of the numerous officials who were brought up before the special commissions to which the anger and jealousy of Edward gave rise upon his return from France in 1340. Willoughby was charged, merely upon "the clamor of the people," with maladministration of various sorts. It may gratify the reader's curiosity, and it will serve to show the style of these reports, to quote a part of this case in the original French:

"R. Wilby fust arene devant PARN. SAD. et SCOT. [Parning, Sadington, and Scot,] Justices a ceo faire, qe vient en garde de macers.—PARN. lui dit coment le Roy, affiaunt soveraynement en sa leaute et sen, lui fist son lieutenant en sa place demene, quant il passa la mier, et coment puis il avoit bestourne et vendi les leys com boefe ou vache, dount par clamour de poeple pardecea et de la chose est moustre a Roi. Par quei vous orrez nostre commission et ceo qe homme vous dirra.—Et la commission lieu doier et terminer, etc. *Wilby* dit qil fust mestre en la pluis haut place de la terre, par quei de trespas fait illoeques en place pluis bas il ne deivent conustre.—PARN. Derrour en tiele chose vous dites verite; mes si vous eiez trespase au Roi vous respondrez ou lui plerra.—*Wilby.* Le Roi ne voet estre resceu sans [estre] apris par enditement ou par suyte de partie atache par plegge.—PARN. Il est apris par clamour de poeple.—*Wilby* ad conseil par livere de COURT."

Several "bills" (*plusours billes*) were then read, not "affirmed by pledges" and without "suit," two from the commonalties of the counties of Nottingham and of Lancaster, and another from a certain Knight, to which, as they were read, Willoughby is reported as answering briefly. He was charged with taking gifts, which he denied. He was also charged with allowing a petit jury to sit in a criminal case without having any of the indictors on it. That, he answered, was the Sheriff's fault. Farning replied, "Certes, si enditours ne y soient, il nest bien pur le Roi." (This practice of placing or retaining some of the Grand Jury upon the petit jury was not abolished until about ten years later, by 25 Ed. 3., Stat. 5, c. 3.) A little further on, Willoughby remarks: "It is the custom for the justice to go to the indictors de les conforter et enformer." At the end, "Willoughby threw himself on the King's mercy, because he would not plead with his liege lord. The Lord of Wake [one of the Commission] said to him that this was the wisest plea that Willoughby ever pleaded. . . . And afterwards the King caused him to be led from one county to another," etc.

The editor's "Introduction" is mainly taken up with instructive comments upon the legal and constitutional situation in England during the period covered by these reports. The key to this situation lay in the pressure to get money from an unwilling people, to carry on the King's wars. The King traded off the old Presentment of Englishry for other sources of revenue, and made other concessions to his subjects. But still money was lacking, and he was unsuccessful abroad; he returned in November, 1340, angry and suspicious, and proceeded to issue a quantity of commissions to overhaul "almost the whole field of the English body politic and social." As to the nature of these commissions the editor has a learned consideration. The King also got into a lively quarrel with the ecclesiastics. But the storm soon blew over, and the judges, including Willoughby, were restored to their places. "It is by no means impossible that the somewhat abortive ending of all the commissions which had issued may have been to a very considerable extent due to clerical influence."

This "Introduction" is well worthy the attention of students of constitutional history. Peculiarly interesting is the account of the proceedings relating to the making and the repeal of the ordinance of Northampton. "The Chancellor, however, and Treasurer and some of the justices protested that they did not assent to the making or to the form of the statutes, and that they could not observe the statutes if contrary to the laws and usages of the realm which they were sworn to keep." Within a year the King, in "Letters Close" to the sheriffs of all the counties in England, repudiated the statute, reciting these protests and that he agreed to the statute only for fear Parliament would break up without doing anything, wherefore "we . . . did dissemble, as beseemed us," etc. Parliament afterwards agreed to this, but even in this agreement, as Mr. Pike remarks, "there appears a recognition of the right of the justices to pronounce whether a proposed statute was in accordance with the laws and usages of the realm, and, consequently, whether it ought to become operative as a statute. . . . The persons who had to administer the law were supposed to be entitled to a real, and not merely a nominal, hearing in the making of laws." It will be remembered by stu-

dents of our American law that ideas of this sort found expression in some of our early constitutional conventions, and were actually embodied in some of the early constitutions.

It is greatly to be wished that this excellent enterprise, so honorable to the British Government, of completing the early reports, should be more rapidly pushed forward. If the gratitude of legal scholars for what they have already had in this kind, a hearty appreciation of the method and thoroughness with which the work is done, and an eager desire for more, might avail to induce the British Treasury to give these much-needed volumes to the world considerably faster, then we might confidently expect that result. As it is we can only wish and beg for it.

The Village Community. By George Laurence Gomme. [The Contemporary Science Series.] Scribner & Welford. 1890.

THE aim of this essay is so exclusively controversial as to make it an improper selection for a series presumably intended to be of a popular character. It is a scientific treatise in so far as it illustrates the methods by which the advances of science are made, but not in the sense of containing a body of established truths. The author himself, with all his enthusiasm, would not claim that his theories were demonstrated, and they will certainly be opposed by men as competent as he to form a judgment.

The first proposition which Mr. Gomme endeavors to establish is that the village community is not an institution peculiar to the Aryan race. He begins with an examination of the communities of the Fijians, the Basutos, and the Dyaks. Among the Fijians there are villages where theoretically all the people are of common descent, and where every family group has its own town lot, subdivided until every household has a lot of its own, which is to be built upon so as to leave a pathway between it and the adjoining lot, and which is sacred against all encroachments. The lands of the village are of three kinds: the town lots, the arable land, and the forest. The arable land is sometimes apportioned in correspondence with the town lots, sometimes occupied indiscriminately, and the forest is used as common property. The Dyaks inhabit communal houses. The Basutos own their lands in common, shares being assigned by the chiefs to the fathers of families to be held by them so long as they occupy them, but to return to the community when that condition is violated. The tribal territory is divided into homestead, arable, and pasture. From these and other considerations he reaches the conclusion that the village community is characteristic of the backward races of the world; that its appearance among the more advanced institutions of civilization is due to survival, not to creation; and that its widespread existence indicates a phase of development through which all progressive races must have passed.

Turning to India, Mr. Gomme points out features in the customs of the non-Aryan hill tribes that appear in the Aryan communities. He then brings to our attention some very important evidence tending to show that the Aryan village community of India was really formed by the intrusion of the pastoral Aryans into existing agricultural communities of different race, the Aryans forming a superior caste supported by the labor of those whom they had conquered, but whose system of economics they did not materially disturb. As it is put by Mr. J. F. Hewitt, a settlement officer who speaks from actual observation, "not only Aryan and semi-Aryan tribes divided the country into townships, peopled and cultivated by associated villagers, but such townships exist also among those, like the Kols and Ooraons of Chota Nagpore, in Western Bengal, who have always hated the Aryans and have never been conquered by them, or subjected to their influence"; and it appears from the example of other communities "in which Dravidians and Aryans confessedly live together, [that] the Aryan village is formed on the lines laid down by Kolarians and Dravidians, and it is only altered in certain details to make it suit with the Aryan ideas of the sanctity and continuity of the family, and of the equal rights of all holding land in the village." As to the particular customs prevailing in these villages, we have space only to say that Mr. Gomme is able to point out similarities to the customs of certain English communities that are almost startling.

The second position maintained by Mr. Gomme is that Mr. Seebohm is not "correct in his opinion that the English village community was reared on the undestroyed and living Romanized land system." The fact that there is much which is not Teutonic or Celtic in the village community as it is found in Britain does not compel us to resort to Roman institutions in explanation, ignoring the possible results of the Aryan conquest of an extensive Iberian population. Certainly the commercialism of Rome seems to have made no enduring impression upon those self-contained villages, the inhabitants of which, in some instances as late as the present century, looked upon all outside of their own boundaries as foreigners. The treatment of the towns by the Anglo-Saxon invaders shows that they did not understand their use, and Mr. Gomme thinks that agricultural settlements were formed in the very outskirts of London. It has been proved that Wales was more thoroughly Romanized than other parts of Britain, and yet it is in Wales that we have the most remarkable evidence of the existence of the tribal community. In fact, Mr. Gomme would maintain that the village communities of Britain were no more affected by Roman influence than those of India have been affected by the rule of the English.

The greater part of the book is devoted to collecting the evidence of comparative custom bearing upon the existence of non-Aryan elements in the English village, the main position of the author being that the institution is a survival from prehistoric times. He considers that the Aryan conquerors of Britain, like the Aryan conquerors of India, met a people whom they did not exterminate, but subjugated, and that there resulted communities exhibiting the customs of both peoples. The pre-Celtic inhabitants were hill-men, and the instances of terrace cultivation and hill-top fortresses are carefully marshalled. It must be said, however, that the argument, so far as it depends upon the evidences of the terraces in England, limps painfully, and that it is saved only by resort to the existing practices of the hill tribes of India. It is strengthened by reference to some archaic customs which, in view of parallels to be found in India, lend support to the theory that two races were represented in the village community. We may instance the many examples of the election of a "mock-Mayor," which Mr. Gomme explains by comparison with similar ceremonies in India, where the non-Aryan castes of the village meet and elect their own leader, with the tolerance for the time of their superiors.

The traces of the existence of the tribal community in Britain, and the surviving examples of the transition to the village community, furnish some evidence confirmatory of Mr. Gomme's theory. Turning to the final type of the village community, of which the manor of Aston and Cote is a remarkable example, Mr. Gomme observes that there is no evidence of Roman occupation, while the successful resistance of the tenants to the claims of the lord of the manor has preserved for us an invaluable illustration of the customs of the archaic community. Here, as in India, we find that some of the villagers were set apart as village servants, and paid out of the village lands, and it had been already noticed by Sir Henry Maine that in some English parishes there are lots in the common field known from time immemorial by the name of a particular trade, and believed to be capable of being owned only by those following that trade. This instance is certainly favorable to the contention that the manor is a comparatively late development, imposed upon a foundation of earlier communal institutions. It seems to be almost unique as evidence, but it is difficult to resist the conclusion that we have here the explanation of the method by which, in thousands of instances, village rights were converted into lord's rights. The bearing of this upon the question of the origin of the manorial courts is obvious.

Upon the whole, Mr. Gomme makes out a case that has strong points, but that is by no means complete. Many of his arguments would apply to the phenomena resulting from a mingling of Teutons with Britons as well as to a mingling of Britons with a preceding race. But we cannot but sympathize with him in his reluctance to adopt Mr. Seebohm's view that the Roman villa is the key with which these chambers of the past are to be unlocked. It seems incredible that the advanced political organization of the Roman Empire should have materially affected villages unreached by roads and buried in forests; and the permanency of traditional customs is to be considered when we find so large a proportion of archaic elements. Mr. Gomme's book suffers a little in its arrangement from his proneness to grasp at arguments as they suggest themselves to his mind, without much regard for continuity. Further study will doubtless enable him not only to strengthen his reasoning, but also to develop his theory in a more orderly fashion.

Fundamental Problems: The Method of Philosophy as a Systematic Arrangement of Knowledge. By Dr. Paul Carus. Chicago: The *Open Court* Publishing Company.

A BOOK of newspaper articles on metaphysics, extracted from Chicago's weekly journal of philosophy, the *Open Court*, seems to a New Yorker something singular. But, granted that there is a public with aspirations to understand fundamental problems, the way in which Dr. Carus treats them is not without skill. The questions touched upon are all those which a young person should have turned over in his mind before beginning the serious study of philosophy. The views adopted are, as nearly as possible, the average opinions of thoughtful men to-day—good, ripe doctrines, some of them possibly a little *passées*, but of the fashionable complexion. They are stated with uncompromising vigor; the argumentation does not transcend the capacity of him who runs; and if there be here and there an inconsistency, it only renders the book more suggestive, and adapts it all the better to the need of the public.

The philosophy it advocates is superscientific. "There is no chaos, and never has been a chaos," exclaims the author, although of this no scientific evidence is possible. The doctrine

of "the rigidity of natural laws . . . is a κτῆμα ἐς ἀεί." Such expressions are natural to Chicago journalists, yet, emphatic as this is, we soon find the κτῆμα ἐς ἀεί is nothing but a regulative principle, or "plan for a system." When we afterwards read that, "in our opinion, atoms possess spontaneity, or self-motion," we wonder how, if this is anything more than an empty phrase, it comports with rigid regularity of motion.

Like a stanch Lockian, Dr. Carus declares that "the facts of nature are specie, and our abstract thoughts are bills which serve to economize the process of exchange of thought." Yet these bills form so sound a currency that "the highest laws of nature and the formal laws of thought are identical." Nay, "the doctrine of the conservation of matter and energy, although discovered with the assistance of experience, can be proved in its full scope by the pure reason alone." When abstract reason performs such a feat as that, is it only economizing the interchange of thought? There is no tincture of Locke here.

Mathematics is highly commended as a "reliable and well established" science. Riemann's stupendous memoir on the hypotheses of geometry is a "meritorious essay." Newton is "a distinguished scientist." At the same time, the views of modern geometers are correctly rendered: "Space is not a non-entity, but a real property of things."

The profession of the *Open Court* is to make an "effort to conciliate religion with science." Is this wise? Is it not an endeavor to reach a foredetermined conclusion? And is not *that* an anti-scientific, anti-philosophical aim? Does not such a struggle imply a defect of intellectual integrity and tend to undermine the whole moral health? Surely, religion is apt to be compromised by attempts at conciliation. Tell the Czar of all the Russias you will conciliate autocracy with individualism; but do not insult religion by offering to conciliate it with any other impulse or development of human nature whatever. Religion, to be true to itself, should demand the unconditional surrender of free-thinking. Science, true to itself, cannot listen to such a demand for an instant. There may be some possible reconciliation between the religious impulse and the scientific impulse; and no fault can be found with a man for believing himself to be in possession of the solution of the difficulty (except that his reasoning may be inconclusive), or for having faith that such a solution will in time be discovered. But to go about to search out that solution, thereby dragging religion before the tribunal of free thought, and committing philosophy to finding a given proposition true—is this a wise or necessary proceeding? Why should not religion and science seek each a self-development in its own interest, and then if, as they approach completion, they are found to come more and more into accord, will not that be a more satisfactory result than forcibly bending them together now in a way which can only disfigure both? For the present, a religion which believes in itself should not mind what science says; and science is long past caring one fig for the thunder of the theologians.

However, these objections apply mainly to the *Open Court's* profession, scarcely at all to its practice; for a journal cannot be said to wrench philosophy into a forced assent to religion which pronounces that "it is undeniable that immaterial realities cannot exist," and that "the appearance of the phenomena of sensation will be found to depend upon a special form in which the molecules of protoplasma combine and disintegrate," and that "the activity called life is a special kind of energy" (a doctrine whose attractiveness is inversely as one's knowledge of dynamics).

Dr. Carus writes an English style several degrees less unpleasant than that of many of our young compatriots who have imbibed the German taste by some years' or months' residence in Berlin or Heidelberg. And as to consistency, whatever may be its importance in a systematic work, in a series of brief articles designed chiefly to stimulate thought, strictly carried out, it would be no virtue, but rather a fault. On the whole, the *Open Court* is marked by sound and enlightened ideas, and the fact that it can by any means find support does honor to Chicago.

A Dictionary of Applied Chemistry. By T. E. Thorpe, Professor of Chemistry in the Normal School of Science and Royal School of Mines, South Kensington, assisted by eminent contributors. Vol. I. Longmans, Green & Co. 1890.

When, in 1888, the first volume of the revised edition of Watt's 'Dictionary of Chemistry' appeared, under the editorship of Profs. Morley and Muir, it was announced that matters of chemical technology which had occupied considerable space in the former edition would be omitted and form the material of a companion volume to be edited by Prof. Thorpe. The original plan of confining the treatment of technical chemistry to the limits of a single volume has suffered a wise modification, and we are now promised a dictionary of applied chemistry in three volumes. The first of these lies before us. In size, typography, and general appearance it is uniform with the new edition of Watt's Dictionary, making a handsome book of about 700 pages. The text is illustrated by some 230 well-chosen cuts, the most fully illustrated subjects being Analysis, Aspirators, Assaying, Balance, Bleaching, Brewing, Candles, Carbon, Cements, Chlorine, Dextrin, and Distillation. As stated in the preface, the work is designed to be essentially a dictionary of chemistry in its applications to the arts and manufactures. Although in a general sense complementary to Watt's Dictionary, certain titles are of necessity common to both works: thus, such subjects as Atmosphere, Water, Fermentation, Chemistry of the Hydrocarbons, Vegeto-Alkaloids, Glucosides, etc., etc., are included in the plan of this dictionary by reason of their relations to technology or to medicine and sanitation; but in all cases these subjects are treated from the standpoint of practical application.

We are glad to see this separation of subject-matter and treatment. The bounds of chemical knowledge and its application to practical and industrial problems have been, in the last quarter of a century, so extended that the dictionary-makers must divide the field if they are to reach the last of the alphabet before the first volumes of their work become antiquated. And on the same account, in the interest of freshness and timeliness, the plan of succinct treatment adopted in these two dictionaries is to be commended. Concise outlines, if accurate, well up to date, and supplemented by good bibliographies, are worth infinitely more than the distant hope of future voluminously complete discussions. In completeness and thoroughness these dictionaries are not to be compared with the 'Neues Handwörterbuch der Chemie' or the 'Encyklopädisches Handbuch der Technischen Chemie.' But the former, whose first volume bears on its title-page the date 1871, has this year only just completed R; and the latter, in its fourth edition, is engaged with "Fette und Oele" on the 4,585th page from its start with "Aether."

This first volume of the 'Dictionary of Applied Chemistry' closes on the 715th page with Dysodil. Prof. Thorpe has certainly been fortunate in the contributors he has secured for the undertaking. Their names are a sufficient guarantee for the accuracy and value of the work. No one is better fitted to write on ammonia, chlorine, and bromine than Prof. Lunge of Zürich. Prof. Meldola is an unquestioned authority on azo-coloring matters, and Dr. Witt on the azines; and, in general, the thirty whose names appear as contributors to this volume are men specially fitted to write on the subjects assigned to them. No American names are in the list, but the preface leads us to expect contributions from some of our chemists in the succeeding volumes. Some of the most important articles, with the number of pages occupied by each, are: Disinfectants (18) by A. H. Allen; Analysis (57) by C. H. Bothamley; Cellulose (12) by C. F. Cross; Balance (14) and Cyanides (18) by W. Dittmar; Candles (5) by Leopold Field; Cements (27) by W. N. Hartley; Bleaching (13) and Dyeing (13) by J. J. Hummel; Brewing (29) by John Heron; Ammonia (17) and Chlorine (40) by G. Lunge; Azo-Coloring Matters (28) by Raphael Meldola; Alizarin (10) by W. H. Perkin; Albuminoids (7) by H. H. Robinson; Dextrose (8) by Cornelius O'Sullivan; Alcohol and Alcoholometry (11) by G. N. Stoker; Azines (10) by Otto N. Witt; Distillation (9) by Sydney Young.

One could wish that the bibliography of the subjects, so important a matter where the treatment is so condensed, had received closer supervision; for while on the whole the literature is pretty fully given, in a few cases of importance the authors have almost entirely or quite omitted their lists of references. Attention to another point involving little additional labor would have added materially to the completeness of the work and the satisfaction of its users: we refer to the giving of derivations, synonyms, and French and German equivalents of the words which serve as titles. This matter has evidently been left to the discretion of the various contributors, and has led to an annoying lack of uniformity.

But, aside from such comparatively slight blemishes, the work is a model of its kind. It will prove invaluable to the chemist, and to the technologist it will afford exact and useful information in regard to allied industries. To whatever subject the reader may turn, he will find description and statement always clear, well-arranged, fresh, and reliable.

Sketches of War History, 1861–1865. Papers prepared for the Ohio Commandery of the Military Order of the Loyal Legion of the United States. 1888–1890. Cincinnati: Robert Clarke & Co. 8vo, pp. 471.

This substantial and attractive volume is the third which has been published by the Ohio Commandery of the Loyal Legion, and is good proof of the interest in historical matters maintained by the organization. Each volume has been an improvement on its predecessor, showing a growing appreciation of the proper character and the true value of personal reminiscences of the civil war. Under the intelligent editing of Capt. Hunter, the Recorder of the Commandery, the present collection is wholly free from padding, every paper being a genuine record of personal knowledge by men who were part of what they relate. Their experiences, as here narrated, range from the battle of Shiloh to Sailor's Creek and Bentonville, and include an interesting account of the politico-military condition of things at

Washington in the first weeks after the beginning of hostilities, by Mr. A. F. Perry.

Twenty chapters of personal reminiscences of the war are thus added to the valuable material for history which the Loyal Legion has before given to the country. The variety of topics, the vigor of the narratives, and (what might not be looked for) the general excellence of the style of the several writers, combine to make this a book not only of value to the future historian, but of present and often thrilling interest to the general reader.

BOOKS OF THE WEEK.

Adams, Sir F. O. La Confédération Suisse. Édition française par Henry G. Loumyer. Basle: H. Georg.
Adams, W. J. L. The Photographic Instructor. The Scovill & Adams Co.
Arnold, Sir E. The Light of Asia. Chicago: Rand, McNally & Co.
Bunyan, J. The Pilgrim's Progress. Boston: Ginn & Co. 35 cents.
Carus, P. The Ethical Problem. Chicago: The *Open Court* Publishing Co.
Chisholm, G. G. Longmans' School Geography for North America. Longmans, Green & Co. $1.25.
Classic Gems of English Literature. 2 vols. Thomas Nelson & Sons. $1.

COWLES *New Studio Building,* 145 Dartmouth St., Boston.
ART SCHOOL

INSTRUCTORS.
ERNEST L. MAJOR, HENRY H. KRITSON,
ABBOTT GRAVES, ANNIE E. RIDDELL,
MERCY A. BAILEY.

The eighth year of a well-established school opens October 1. Superior in equipment and in arrangement for convenience and comfort; modelled after the Parisian Schools. Full Courses in Drawing and Painting, including Still Life and Water Colors. Special attention to Life Studies, Portraiture, and Illustrating. Class in Modelling and Interior Decoration. Begin at any time. For circulars address as above.

F. M. COWLES.

The Pennsylvania Museum and School of Industrial Art.

CLASS-ROOMS:

1336 Spring Garden Street, Philadelphia.

Thorough instruction in Drawing, Painting, and Modelling, with especial reference to the application of artistic training to practical industrial aims; to Textiles, Pottery, Carving, Moulding, etc.

For circulars and all particulars, address

L. W. MILLER, Principal, at the School.

Virginia Military Institute,
LEXINGTON, VA.

52d Year. State Military, Scientific, and Technical School. Thorough courses in general and applied Chemistry and in Engineering. Confers degree of graduate in Academic Course, also degrees of Bachelor of Science and Civil Engineer in Technical Courses. All expenses, including clothing and incidentals, provided at a rate of $36.00 per month, in an average for the four years, exclusive of outfit. Gen. SCOTT SHIPP, Superintendent.

JUST PUBLISHED.

DIRECTIONAL CALCULUS. Based upon the Methods of Hermann Grassman. By E. W. HYDE, Professor of Mathematics in the University of Cincinnati. 8vo, xii+248 pp. Cloth. By mail, $2.15. Price to Professors and for introduction, $2.00.

DIFFERENTIAL AND INTEGRAL CALCULUS. Method of Rates. By ARTHUR GRANBURE HARDY, Ph.D., Professor of Mathematics in Dartmouth College. 8vo, xi+239 pp. Cloth. By mail, $1.65. To Professors and for introduction, $1.50.

GINN & COMPANY, Publishers,
BOSTON, NEW YORK, AND CHICAGO.

TO A WRITER COMPETENT TO handle manufacturing, financial, and general statistics for a Southern Manufacturing, Trade and Industrial Journal, a permanent position is offered. Must be a ready writer, and able to rewrite and shape facts, data, etc., which may come to hand. His duties will be those of a general Collaborator and Editor, and if able will be expected finally to go South and take complete control of the make-up of the reading department of the paper. Must be well connected, of medium age, with modern ideas. Address F. EWEIN,
Grand Central Hotel, New York City.

THE NATION.—A BOUND SET. also an unbound set; various vols, both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES } Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 196 W. 10th St., N. Y.

Letters of Credit. We buy and sell Bills of Exchange on and make available transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 5 WALL STREET, NEW YORK.

A NOVEL OF OUTDOOR LIFE
In Town and Country Library.
Geoffrey Hampstead.
BY A NEW CANADIAN WRITER,
THOMAS STINSON JARVIS.
12mo. Paper cover, 50 cents.

A novel with a plot which holds the reader's interest. Every lover of outdoor life will welcome the graphic sketches of games at Toronto and yachting adventures on Lake Ontario and the St. Lawrence.

D. Appleton & Co., Publishers,
1, 3, AND 5 BOND STREET, NEW YORK.

Jarvis-Conklin
MORTGAGE TRUST CO.
Capital paid up, - $1,500,000.
Only Western mortgage company reporting to and examined by New York State Banking Department.
INVESTMENT SECURITIES.
6% DEBENTURE BONDS,
GUARANTEED MORTGAGES.
MUNICIPAL AND CORPORATION BONDS.
INTEREST ON TIME DEPOSITS.
239 Broadway, - - New York.

LOANS FOR CORPORATIONS AND INDIVIDUAL INVESTORS MADE, BEARING 6% 7% and 8%. We deal in MORTGAGE LOANS, COMMERCIAL PAPERS, BANK STOCKS, and MUNICIPAL BONDS. References: National Bank of Kansas City, First National Bank of New York, First National Bank of Chicago, Maverick National Bank of Boston.

MERCANTILE LOAN AND TRUST CO.,
501-503 Delaware St., KANSAS CITY, MO.

CAREFUL INVESTORS,
before placing permanently their funds, will write for
"A FIVE MINUTES' TALK ABOUT RELIABLE INVESTMENT SECURITIES,"
to
HERBERT B. CHURCH, Banker and Broker,
53 Congress St., Boston, Mass.

SPOKANE FALLS.—The most rapidly growing young city in America; railway centre and metropolis of a territory containing 200,000 square miles of mineral, agricultural, and timber resources. Finest water-power in the world. For particulars, including book "Spokane Falls Illustrated," send to CLOUGH & GRAVES, Fin. Agts., Spokane Falls, Wash.

STATE OF WASHINGTON.
That FAIRHAVEN will be the greatest city on Puget Sound is assured. Substantial improvements and unlimited resources. Fortunes made by investing now. For any information, address GAMWELL & WARNER, Investment Bankers, Fairhaven, Wash.

PORTLAND, OREGON.—Thriftiest City in the United States. Real estate investments giving large returns. Building lots $100, $200, and $300, payable in cash or monthly instalments of $10. Lots are rapidly advancing in value. Send for maps, circulars, and references. T. A. WOOD,
Portland, Oregon.

GREAT FALLS, MONTANA.—CITY of wonderful resources, immense water power, gold, silver, copper, lead, lumber, coal, iron, cattle, horses, wool, and agriculture. Phenomenal growth. For full particulars address
SECRETARY BOARD OF TRADE,
Great Falls, Mont.

OFFICE OF THE

Atlantic Mutual

INSURANCE COMPANY,

NEW YORK, January 24, 1890.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st of December, 1889:

Premiums on Marine Risks from 1st January, 1889, to 31st December, 1889.....	$4,116,629 40
Premiums on Policies not marked off 1st January, 1889.....	1,386,134 87
Total Marine Premiums.....	$5,502,764 27
Premiums marked off from 1st January, 1889, to 31st December, 1889.....	$4,144,943 13
Losses paid during the same period.....	$2,553,606 44
Returns of Premiums and Expenses.....	$705,937 75

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks....	$7,274,315 00
Loans, secured by Stocks and otherwise..	2,084,400 00
Real Estate and Claims due the Company, estimated at.....	1,024,000 00
Premium Notes and Bills Receivable....	1,452,990 24
Cash in Bank.....	271,871 00
Amount.....	$12,107,576 24

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof or their legal representatives on and after Tuesday, the fourth of February next.

The outstanding certificates of the issue of 1885 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the fourth of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of FORTY PER CENT. is declared on the net earned premiums of the Company for the year ending 31st December, 1889, for which certificates will be issued on and after Tuesday, the 6th of May next.

By order of the Board,
J. H. CHAPMAN, Secretary.

MILWAUKEE COLLEGE.—FOR Young Women. Beautiful location, modern conveniences. Special advantages in modern languages, music, and art. Collegiate and Preparatory courses of study. For catalog address C. R. KINGSLEY, Ph.D., President.

WISCONSIN, Racine.

RACINE COLLEGE.—FALL TERM OF Grammar School begins September 11, 1890. Rev. ARTHUR PIPER, S.T.D., Warden.

NEUILLY, près Paris, 22 Avenue de Neuilly.

MR. A. RENACK RECEIVES IN HIS house and prepares with marked success a limited number of students for the Sorbonne, the military and scientific schools. Special courses in modern languages for Americans.

Diplomatic references at Washington and Paris.

HAVERFORD COLLEGE GRAMMAR School.—Reopens Sept. 24, 1890. Boys thoroughly prepared for the best colleges and technical schools. Ample grounds; large gymnasium; healthful country location. A few pupils taken as boarders into the families of the Head Masters and teachers, for special care and instruction. For circulars address

CHARLES S. CROSSMAN, } Head Masters.
HENRY N. HOXIE, }
Haverford College P. O., Pa.

Teachers, etc.

A LADY TEACHER, WHO WILL spend next winter in Europe, desires to chaperone a young lady, or accompany a lady going alone. Highest references. Address EUROPE, 111 Summer Street, Boston.

A GRADUATE OF STATE NORMAL School, advanced course, desires position in a High School as Assistant. New England preferred. Address Miss G., Lock Box 4, Framingham, Mass.

HARVARD GRADUATE, FIVE years' experience, desires position as teacher in New York city. Classics and English. Address X., Box 208, Cape May, N. J.

HOLMES HINKLEY, A.M., 11 EVERETT St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

SCHOOL FOR SALE OR TO LET—The Maryland Military and Naval Academy, Oxford, Md.—Ample accommodations for 300 cadets and their officers, with drill-grounds, assembly-rooms, and gymnasium. Fine boating and bathing. Everything perfect. House steam-heated and gas. For Catalogue, address P. O. Box 41, Oxford, Md., or S. F. NICHOLS, 295 7th Ave., N. Y.

School Agencies.

AMERICAN AND FOREIGN TEACHERS' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 1203½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. French, German, and Spanish spoken. MIRIAM COYRIERE, 150 5th Av., cor. 20th St.

AN EXPERIENCED TEACHER (WOman), who is a doctor of medicine and who has studied abroad, desires a position to teach chemistry, physics, and physiology. N. H., care of *Nation*.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

University of the City of New York

LAW SCHOOL.

The thirty-second session begins October 1, 1890. For Catalogues, etc., apply to Prof. I. F. RUSSELL, Equitable Building, 120 Broadway, New York.

DICKINSON SEMINARY,

WILLIAMSPORT, PA.

A thoroughly equipped Classical and Scientific School for both sexes. 15 teachers. Regular and elective courses. Degrees conferred. Rare facilities in Music, Art, and Modern Languages. Steam heat; electric light; all modern appliances. $225.40 pays all charges in a regular course for one year. Discounts to preachers, teachers, and two from same family. Year begins Sept. 1. Catalogue free.

E. J. GRAY, D.D., President.

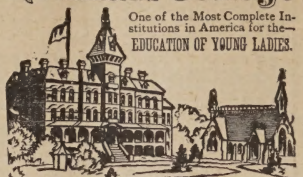
Lake Erie Seminary, *Painesville, O.*

—Location pleasant and healthful. Course of study liberal and thorough. Thirty second year begins September 10, 1890.

MISS MARY EVANS, PRINCIPAL.

Schools.

Hellmuth College



One of the Most Complete Institutions in America for the EDUCATION OF YOUNG LADIES.

Twenty-second year begins Sept. 10th, 1890. Literature, Languages, Mathematics, Science, Music, Painting, Elocution, Business Course, etc. Diplomas and certificates granted. Climate exceptionally healthy about same as Ohio. Comfortable buildings, beautifully situated in 150 ACRES of land. On Through Route between East and West. Passenger Elevator. Gymnasium; Riding School. Students from all parts of America. The number received limited. Charges moderate. Illustrated Circulars sent on Application. Rev. E. N. ENGLISH, M.A., Principal.

LONDON, ONTARIO, CANADA.

COWLES ART SCHOOL

New Studio Building, 145 Dartmouth St., Boston.

INSTRUCTORS.
ERNEST L. MAJOR, HENRY H. KRITSON,
ABBOTT GRAVES, ANNIE E. RIDDELL,
MERCY A. BAILEY.

The eighth year of a well-established school opens October 1. Superior in equipment and in arrangement for convenience and comfort; modelled after the Parisian Schools. Full Courses in Drawing and Painting, including still Life and Water Colors. Special attention to Life Studies, Portraiture, and Illustrating. Class in Modelling and Interior Decoration. Begin at any time. For circulars address as above.

F. M. COWLES.

The Pennsylvania Museum and School of Industrial Art.

CLASS-ROOMS:

1336 Spring Garden Street, Philadelphia.

Thorough instruction in Drawing, Painting, and Modelling with especial reference to the application of artistic training to practical industrial aims; to Textiles, Pottery, Carving, Moulding, etc.

For circulars and all particulars, address L. W. MILLER, Principal, at the School.

Virginia Military Institute,

LEXINGTON, VA.

52d Year. State Military, Scientific, and Technical School. Thorough courses in general and applied Chemistry and in Engineering. Confers degree of graduate in Academic Course, also degrees of Bachelor of Science and Civil Engineer in Technical Courses. All expenses, including clothing and incidentals, provided at a rate of $36.00 per month, as an average for the four years, exclusive of outfit. Gen. SCOTT SHIPP, Superintendent.

NORFOLK COLLEGE FOR YOUNG LADIES,

NEAR OLD POINT COMFORT.

Largest, cheapest, and best equipped school in Virginia. 290 students; 23 teachers—graduates of Smith College, Boston Univ., Wesleyan, Stuttgart, etc. Arts of self-support a specialty. Home life, board, tuition, $42.50 a quarter. Fine climate for delicate girls. For Catalogue, address J. A. I. CASSEDY, Prin., Norfolk, Va.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 195 W. 10th St., N. Y.

"I advise all parents to have their boys and girls taught short-hand writing and typewriting. A stenographer who can typewrite his notes would be safer from poverty than a great Greek scholar."—*Charles Reade on "The Coming Man."*

Remington Standard Typewriter.

For Fifteen Years the Standard, and to-day the most perfect development of the writing machine, embodying the latest and highest achievements of inventive and mechanical skill. We add to the Remington every improvement that study and capital can secure.

Wyckoff, Seamans & Benedict,
NEW YORK.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

WHAT UNCLE SAM AND AUNT Columbia think, etc., of Washington and Seattle, its metropolis. Address ESHELMAN, LLEWELLYN & Co., Seattle, Wash.

GLADSTONE

writes: "My interest in the work is not only lively, but profound. . . . The exhibition of one of the very noblest of human characters."—Hawarden Castle, Oct. 12, 1889.

A Southern Planter.

By Susan Dabney Smedes.

4th Edition. 12mo, cloth. 341 pp. Price, $1.50.

The fourth thousand, now ready, contains a facsimile of Hon. W. E. Gladstone's letter of enthusiastic praise to the author, dated October 12, 1889.

"The most interesting book that has ever been written about the South."—*Joel Chandler Harris.*

"The writer leads us into a new field—the daily life and experiences of a Southern Gentleman living with his large family of sons and daughters in the midst of his slaves. Such a character as Thackeray loved."—*St. Louis Republican.*

"My interest in the work is not only lively, but profound. . . . The exhibition of one of the very noblest of human characters."—*Gladstone, Hawarden Castle.*

"Fresh, vivid, and unpretentious picture of the home-life of a planter during the critical struggle between North and South."—*Saturday Review, London.*

"'A Southern Planter' is a highly interesting narrative. . . . It gives a vivid picture of a Southern planter. . . . The volume is well worth reading."—*Athenæum, London.*

"This volume is full of profound, interesting, and touching details of domestic life in the South. Mr. Dabney's relations to his family and to his servants . . . make one of the most interesting pictures that have ever been given to the world."—*Spectator, London.*

JAMES POTT & CO.,

14 and 16 Astor Place, N. Y.

HOSSFELD'S METHODS FOR THE *Study of Modern Languages:* A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 300 pages, $1.25). Especially adapted to the needs of those contemplating European travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

A STOCK COMPANY NOW BEING formed to raise Percheron draught-horses on a very favorably located ranch in Montana. wish to find a young man to locate with the owner of the ranch as assistant. Must take $3,000 stock and work for a small salary.

The business promises large returns, and is managed by a young married man of experience and the highest references. Address MONTANA, care of *Nation* Office.

IDLE

Invested to yield a present income of from **6 per cent to 8 per cent** with one **half the profits.**

The Nation.

NEW YORK, THURSDAY, AUGUST 14, 1890.

The Week.

WHEN the historical record is made up of the first use of electricity in the execution of criminals, it will be necessary to divide it into two parts. One of these will have to be devoted to the execution as it actually occurred, and the other to the execution as it was recorded in the "great newspapers" of the period. With the exception of the *Evening Post*, the *Commercial Advertiser*, and the *Tribune*, every newspaper in this city has published a purely imaginative account of Kemmler's execution, written by persons who were not present, and who were in no manner restrained by the statements of persons who were witnesses of it. The cheap evening papers did this because they wished to sell their "extras"; but why should the morning papers have done it? They had ample opportunity to secure accurate and truthful accounts. Without an exception, every physician declares that Kemmler's death was instantaneous and painless, and that the convulsive movements and breathing were merely natural reaction. Yet, with the honorable exception of the *Tribune*, every morning newspaper gave up its first page to arrant deception of its readers by publishing an account which it knew to be sensational and false.

The comparative ease with which the New York Central Railway has overcome the strike which paralyzed its traffic on Friday evening is as much of a surprise to the general public as it is a relief. Few people were prepared to believe, what is now apparent, that the strikers showed their full strength at the outset. It seemed incredible that, with a few hundred out of 22,000 employees pledged to their support, the leaders in the strike could have had even a glimmering hope of success; and for this reason most people were inclined to place confidence in the assertions of the Knights of Labor concerning the existence of vast "sympathetic" movements, not only among the employees of the Central Road, but on the other great lines of the country. Even on Monday morning, when the company seemed to have the upper hand, the threats of the Knights to tie up nearly all the great railway lines of the country were so positive that the general public was made more or less uneasy by them. Men said to each other that unless there were some great labor movement held in reserve to back the demands of the strikers, they could not understand why the strike was undertaken. The outcome furnishes the explanation. The strike was a weak one because it was the last desperate effort in a failing cause. The leaders in it were able to see that delay would make them weaker rather than stronger, and that if they did not make their effort at once, they would never make it at all. They made the most impressive demonstration of their power possible, by striking at an unexpected moment, and at a time which would be especially annoying both to the company and the public. Undoubtedly they hoped for "sympathetic" aid after the strike was on, but it is very clear that they had no definite promise of any. The fact that they received practically none is the most significant development of the brief struggle.

Eastern Republican editors who are loudly demanding the passage of the Force Bill and the McKinley Bill have been repeatedly warned that they entirely misapprehend the temper of the Western Republicans. We are glad to observe that the readers of the New York *Tribune* have at last been permitted to get a hint of the truth, through a letter embodying "what a wide-awake Republican observed in the West." Elijah R. Kennedy, the writer of this letter, is one of the most prominent Republicans among the business men resident in Brooklyn, and he has just returned from Wisconsin, where he "had excellent opportunities for conversing with representative Republicans." The result of his inquiries as to the Force Bill is thus stated: "There is not a very deep interest in the Lodge Bill. If it were now dropped, nobody would be disgusted, except such zealous partisans as will remain Republicans in any event. Much more might be said, but I content myself with stating a fact which, I judge, may be news in the East." As to the Tariff Bill, Mr. Kennedy explains that he went West with the impression that the Republicans in Congress were quite content to concede New York State to the Democrats, as a consequence of the enactment of the bill in the shape in which it passed the House, but that "the bill was immensely popular in the agricultural States, and would confirm our hold on those States." He frankly confesses that he was the victim of a delusion. "Well," he says, "I have talked with the best judges of the political situation in Wisconsin, men also peculiarly well informed on affairs in the other Northwestern States, and I deem it a duty to declare that the final enactment of the McKinley Bill, in anything like the shape in which it now stands, will lose us the next Congress, and will render it next to impossible for the Democrats to bungle and blunder sufficiently to enable us to elect a successor to President Harrison."

The effect of the Force Bill agitation upon the two political parties is plainly visible in the recent State election in Kentucky. There was much dissatisfaction among the Democrats at the action of their State Convention, and two or three months ago the party was so disorganized that the Republicans hoped to make an excellent showing. But the returns show a large vote and Democratic gains all over the State, and the result is plainly due to the injection of the Force Bill issue. On the morning of election day the Louisville *Courier-Journal* thus foreshadowed and explained what was to happen: "The Force Bill will play a great part in the general election which takes place in Kentucky to-day. For more than two weeks the Democratic orators and the Democratic press have been arousing Democratic voters all over the State by constant reference to this Congressional iniquity. Such stump-speakers as John Young Brown, P. W. Hardin, John Rhea, and others have found in the Lodge scheme material for some of the most impassioned and powerful political speeches that have been delivered in the State in many days, and the Democratic editors on all occasions kept the fact prominently before their readers that an expression of Democratic opinion was never more desirable or more necessary than at this juncture. Thanks to the general desire to express a strong denunciation of the Lodge bill, the spirit of disorganization which threatened trouble to some of the local Democratic tickets a few weeks ago, has given way in most counties to a determination to keep the party lines drawn taut."

Detailed reports of the Alabama election show clearly the effect of the Force Bill agitation in reducing the Republican vote. Not only in Birmingham, but in Sheffield, Florence, Decatur, Fort Payne, and other places where Northern Republicans have settled and invested money of late years, there was a large increase of the Democratic vote. The county in which Sheffield is situated went Democratic for the first time since the war, and the reason given was that "the Force Bill changed white votes, and most of the Northern white men voted the Democratic ticket." Many of these Republicans from the North do not content themselves with voting against their party, but openly declare their opposition to the Force Bill. After the meeting of the Buckeye Club in Birmingham on Tuesday week the subject was taken up, and a number of men from Ohio placed themselves on record against the scheme. United States Commissioner W. H. Hunter, a life-long Republican, when pressed for his views on the Force Bill, said: "I think that it is a remedy worse than the disease it seeks to cure, and I am not in favor of its passage." The sentiment of the entire Club was against the measure, and it is probable that they will send a petition to the Senate asking that it be not passed. Maj. George A. Clark, an old officer of the Union Army, who now lives in Florence, Ala., recently formulated a petition which has also been signed by a number of men who, like him, formerly lived in Minnesota, protesting against the passage of the Force Bill, and urging the Senators from Minnesota to vote against the bill, alleging that in the event of its passage it would be detrimental

to their best interests and the interests of those of their friends in Minnesota whom they have induced to make large investments in the South.

The irritation shown by Senator Edmunds and other supporters of the McKinley Tariff Bill at the slow progress of the measure is quite natural to those who look upon a tariff bill that has been reported by the Finance Committee as necessarily the right thing to be enacted into law. Such persons cannot understand why such stubborn opposition should be made on small things, or what seem to them to be small things. We think that an easy answer can be found to this seeming mystery. Each of these small things involves the bread and butter of a greater or less number of voters and their families. The Democrats, as Senator Plumb has wisely discerned, do not want to eliminate from the bill all the thorns and stings that are producing riots in the Republican camp. Their idea is that protection has exhausted itself as a battle-cry, and that from this time forward the details of the tariff are the chief concern of the voters—that the difference between one cent and two cents in the duty on tin plate, for example, is the point of interest, instead of the general question of pauper labor and the Cobden Club. For this reason they are giving close attention to details, and in this they are right, both as a matter of party policy and as a matter of public interest. To hold up the five minutes' rule *in terrorem* will not move them a hair. It will merely put a fresh obstacle in the way of business. It is not for the interest of the Democrats to defeat the McKinley Bill (Senator Plumb is quite right on that point). It is for their interest, however, to expose all of its iniquities, and to do so in such a thorough way that the people shall be supplied with facts and arguments in the ensuing campaign.

Senator Dawes on Monday contradicted the statement of W. C. Cronemeyer, the head of the Pittsburgh tin-plate syndicate, that he (Cronemeyer) could make tin plate *at a profit* under the present duty of one cent per pound. Cronemeyer's Association issued a circular on the 26th of September last which embraced the following paragraphs:

"To counteract and offset the selfish greed of these importers *is the aim of the American Tinned Plate Association*, and for that purpose it has erected this plant, to awaken the interest of the public, and to demonstrate that tin plates can be made here as well as anywhere in the world.

"*And it is a fact, and we can prove it by figures, that they can be made here and sold with profit at present selling prices;* but if any one should attempt the manufacture now, he would share the same fate as those who, tempted by the enormous prices which have, at times, been charged to the consumers by the importers' monopoly, built works and at first made money, but soon found that they could not withstand the pressure of the monopolists who had temporarily, but long enough, reduced the price so low that competition meant ruin."

Yet Senator Dawes said that the duty was not sufficiently high to induce the manufacture of the article in this country, and he went on to make a speech in favor of what he called emancipation—the emancipation of the country from dependence on foreigners for tin plate. It is very strange that the country never discovered the condition of servitude under which it groans until Cronemeyer came forward and offered to emancipate it. But it is stranger still that when Cronemeyer said he could do the emancipation under a tax of one cent per pound, Dawes should come forward and say, "No, my dear fellow, you can't do it, you must have two and two-tenths."

It is rather pitiable that Senator Sherman should be supporting an increase of duty on rough building-stone—an increase from 20 per cent. to 30 per cent. according to his own admission, but a much greater increase according to the computations of other Senators. The present duty is $1 per ton. The duty proposed in the McKinley Bill is 11 cents per cubic foot. When a change is made in the mode of assessing the duty, it is usually for the purpose of covering up a fraud. Senator McPherson said that the increase was equal to 65 per cent., and he read a letter from an importer of building-stone saying that any increase upon the present rate would be prohibitory. The very idea of a duty on stone in the rough is a travesty upon common sense. But the Hon. John Sherman, Senator from Ohio, thought that the proposed duty was very moderate. Perhaps it is as compared with other things in the bill, but how does it comport with Mr. Sherman's solemn admonitions on the subject of the tariff a few years ago? In his speech on the Tariff Bill of 1872—the McKinley Bill of that period—he said:

"It must be remembered that the present duties, taken together, are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill Tariff Act of 1861. . . . The result of such duties is to secure to mechanical industries higher wages than can be earned in other kindred employments. Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed."

How Mr. Sherman must suffer under the ox-whip that McKinley flourishes.

It makes very little difference whether Mr. Blaine has converted the President to his reciprocity views or the President has induced Mr. Blaine to dilute the same in the interest of party harmony; the fact remains that, by giving his views utterance, Mr. Blaine has made it impossible for the Republican party ever to become a unit again in favor of higher protective duties. He has given vent to a great volume of smouldering discontent with the programme of his party in Congress, and has prompted the expression by Republican leaders and newspapers of opinions of the most revolutionary character. Throughout New England and the Northwest there have been deliverances of this kind which will be of incalculable service to the cause of tariff reform, for they will set thousands of people to thinking and doubting, with the inevitable result of ultimate injury to the high-tariff cause. In fact, since President Cleveland issued his famous message, there has been no single contribution to the work of educating the American people to a proper realization of the burdens and hardships of our protective system equal in effectiveness to this outbreak by Mr. Blaine. He has put a knife straight into the vitals of the protective system, and the wound will never heal.

We have already called attention to the fact that the Republican Convention in the Seventh Congressional District of Kansas adopted a platform which endorsed Mr. Blaine's reciprocity views, favored reduction of the tariff, and absolved the nominee of the Convention "from dictation of the party caucus upon all economic issues." Equally significant as to the drift of party sentiment on this question among Western Republicans was the action of the Convention in the Second Congressional District of Nebraska. The Convention adopted a resolution declaring "that we heartily endorse the Hale amendment to the McKinley Bill embodying the idea of Hon. James G. Blaine as to reciprocity among the American nations," and nominated a candidate who in his speech of acceptance said: "If I should be elected, I will do all I can do to represent the people of Nebraska, and especially the people of the Second District. On the question of the tariff I believe I am in accord with the people of the West. In the McKinley Bill there are things I would not vote for." In view of such manifestoes it is no wonder that both of the Republican Senators from Nebraska have been found voting for lower tariff rates than those of the McKinley Bill.

The protest against the high-tariff craze which finds such bold expression in the Republican newspapers of Nebraska, Kansas, and Minnesota, is coming to be heard in Iowa also. The Keokuk *Gate City* is one of the oldest and most influential journals of the party in the latter State. In commenting upon the action of the Kansas and Nebraska Senators in voting with the Democrats for lower duties, the *Gate City* says: "This shows that Kansas and Nebraska have been taken out of the high-protection list by the people, and the Republican Senators simply carry out their wish. Messrs. Ingalls and Plumb of Kansas, and Manderson and Paddock of Nebraska, do not pretend to have any personal desires about the subject save to do what the people they represent want." Like the *Pioneer Press*, the Keokuk newspaper attributes the change in popular feeling to the awakening among the farmers.

The leading Republican newspapers of the West do not mean to leave their Senators in any doubt as to their attitude towards the

pending Tariff Bill. The St. Paul *Pioneer Press* begins a vigorous editorial article, entitled "Full of Faults," in this way: "While the concentration of attention upon the free-sugar section of the McKinley Tariff Bill is a good thing, in that it promises to secure a modification of it in the direction suggested by Mr. Blaine, it is not a good thing in as far as it causes less study to be given to other and no less objectionable portions of the bill." It proceeds to consider two features "which are most of all obnoxious to the interests of the people, to the progress of our industries, and to a sound revenue system." One of these is the changes in the tobacco schedule, by which "it is proposed to increase so enormously the duties on imported Havana and Sumatra tobaccos that not only the price of smokers' goods must go up tremendously, but the great cigar-manufacturing industry of the country will fairly be driven out of existence." The other is what the *Pioneer Press* styles "the tin-plate enormity," and "this most monstrous feature of the bill." Of the proposition to increase by more than 100 per cent. the duty on tin plate, it says: "Not even the project to impose a duty on hides was a madder one, from the economic standpoint. It is a purely gratuitous exaction. It is not even demanded by any existing industry. All that we are told, when the wisdom of this policy is questioned, is that certain Pittsburgh capitalists will put half-a-million dollars into a plant for making tin plate if the new duty is allowed to stand. We have no reason to suppose that they will succeed. We have every reason to feel sure that they will not; for the experiment has already been tried and failed, not because of lack of duty, but because the processes of making tin plate are not so understood in this country as to enable the home to compete with the foreign product on any terms. And for the sake of this mere abstraction the people of the United States are to be taxed from $7,000,000 to $8,000,000 annually, for an indefinite term, and the canning and other industries that employ tin plate are to be thrown into confusion and possible ruin." The article concludes with these plain words: "The McKinley Bill is full of faults, from beginning to end. What it needs is not a revision by the Senate Committee, but such an entire reconstruction as was accomplished in 1883 by the substitution of a Senate bill for that which had passed the House." In considering such deliverances as this, it is to be remembered not only that the *Pioneer Press* is the most prominent Republican newspaper in Minnesota, but that its position is sustained by the lesser party organs throughout the State.

It is worth saying and repeating that the editors of the Force Bill and McKinley Bill organs in the East would have no excuse for their ignorance as to Republican sentiment in the West if they would only read their exchanges from that part of the country. Take, for example, Wednesday week's issue of the Omaha *Bee*, the most prominent Republican newspaper in Nebraska. Its leading editorial article is entitled "The Revolt against Higher Duties," and begins with the declaration that the four Republican Senators from Nebraska and Kansas who voted the other day, against the majority of their party colleagues, in favor of reducing duties provided for in the pending Tariff Bill on certain articles in common use, "represent Western constituencies almost wholly composed of agricultural producers, and they have ample assurance of the opposition of these people to the higher duties which the new Tariff Bill proposes to place on many manufactured articles which are absolutely necessary in every home." The *Bee* holds that "this revolt against increasing the burden of tariff taxation did not begin a day too soon," and hopes that "the Republican Senators who have inaugurated it will manfully hold their position in defence of the interests and welfare of their constituents, which are in common with those of the great majority of the people of the entire country." It points out that the Nebraska Republicans at their recent State Convention declared for "a revision of the tariff in the interest of the producer and laborer," and says that "the Republicans who gave their approval to this resolution do not believe that an increase of the average percentage of duties from 43 to 55 per cent. on nearly everything in common use is in the interest of the producer and laborer." It recalls the fact that the Republicans of Minnesota, at their recent State Convention, declared their opposition to the McKinley Bill, and says that "wherever Western Republicans have given expression to their views on the tariff they have distinctly indicated their hostility to higher duties," like those provided for in the McKinley Bill. In short, says the *Bee*, "the West has demanded, and still demands, a revision of the tariff, and it insists that it shall be downward and not upward," and it concludes with this earnest warning: "In this Western country Republicans are in harmony with the only rational and logical interpretation of the pledges of the party to the country, and urge the only policy which will not be a menace to the stability and potency of the party."

One of the coolest assumptions that ever found lodgment in Wall Street is that which supports the "reorganizers" of the Sugar Trust. This concern has been adjudicated a conspiracy to produce a monopoly. All the sugar-refining companies that went into it have been adjudged to have committed suicide, and the joint concern has been declared to be an illegal and usurping body. But some people have got it into their heads that if the name of it is changed, and if it is anointed by somebody or other who was not in the original deal, it will become a legal and reputable sort of thing, although its character as a conspiracy to produce a monopoly remains unchanged. This droll conceit has gained headway because reorganizations are very common in Wall Street, and because speculators do not commonly discriminate between different kinds of reorganizations. A shock was given to them last week by the simple appearance of the receiver of the North River Refinery as a defendant in the Brooklyn suit begun by the trustees of the old Trust in order to "reorganize." How the receiver could avoid appearing as a defendant, even if he were so inclined, does not appear. The shares of the North River Refinery are an integral part of the material out of which all the Trust certificates have been manufactured. Apparently, the receiver of the North River Company has some interest in the "reorganization," and could not get rid of it if he wanted to. His appearance as a defendant makes it necessary for the court to adjudicate the status of that company in the reorganization, or to take it out of the snarl, or do something which shall show up the whole concern in its true light. Hence these tears. Probably the reorganization proceedings will continue as long as there is any money to be made out of the ups and downs of the certificates in the market. When the public are sufficiently blistered to let them alone, the concern will go into liquidation and its assets be distributed to the parties entitled to receive them.

The outbreak of hostilities between Salvador and Guatemala wears a certain comic appearance, coming on the heels of the swearing of eternal pan-American friendship at Washington, but is in perfect keeping with Central American history for the past seventy years. Whatever the outcome of the present conflict may be, it will serve afresh to show the emptiness of a political name compared with political facts. A military oligarchy does not become a republic by calling it so; an illiterate and non-voting population cannot be said to have any "voice" or "representatives"; shooting down unpopular rulers, instead of voting them down, is not the best way to commend the democratic spirit to the world. One immediate result of the latest broil in Central America will almost certainly be the death of the project of Central American union, even in its preliminary and provisional form. The ultimate consummation of that project, set for the end of the century, was seen by its most ardent champions to be beset with tremendous difficulties, which they were trusting to time and good luck somehow to remove; and now that the very first step is made impossible, the final completed union must appear more chimerical than ever. A remoter but no less impressive effect of the new imbroglio will be to remind us of the perils necessarily surrounding such political engagements with nations inheriting Spanish-American institutions and methods as are contemplated in some of the schemes left over by the Pan-American Congress. Where will the confiding capital be found, for example, to build the continental railroad through Central America when a revolution may come any day to repudiate or rescind foregoing guarantees?

AN OBJECT-LESSON.

MR. H. B. HAIGH, representing the Ironclad Manufacturing Co., No. 22 Cliff Street, New York, sends us a printed "suggestion" concerning the increase of duty on tin plate as proposed in the McKinley Bill. The suggestion is that the duty on tin plate should remain unchanged, and that a bounty of 1 2-10 cents per pound be paid to all persons who shall produce tin plate in this country. Mr. Haigh evidently has doubts whether any tin plate will be made here under either plan. He is sure that at the end of five years, even with the utmost diligence on the part of intending manufacturers, not more than one-fifth of the present demand for the article can be supplied. So he figures out that, under the bounty plan, not more than $2,000,000 per annum of taxation would be required over and above the present tax on tin plate, while under the McKinley plan the increase of taxation would be upwards of $9,000,000. And this extra taxation would fall upon the humbler classes of society who use tin pans, cans, pails, dippers, etc.

All this seems very plain, and since the wise committees at Washington have adopted the principle of bounty-paying in the case of sugar, no reason can be urged against the paying of a bounty for tin plate, especially since there is no tin plate made here at present. The bounty would not be a tax on the people until *some* tin plate is made, and then it would be a tax only to the extent that the thing we pretend to be aiming at was actually accomplished.

Mr. Haigh propitiates us by remarking that he is himself a strong protectionist. "Primarily," he says, "I desire to say that the interests I represent are strongly in favor of a fair and equitable tariff to protect American industries. Secondly, that the present tariff on tin plate is fully adequate to protect that industry in this country at the present time. Thirdly, I am fully conscious of the fact that tariff adjustments must, in order to insure protection, be founded upon not only the conditions of to-day, but the possibilities of the future." All of which shows that Mr. Haigh is as blind as a bat, and will probably never have good eyesight until he finds himself compelled to pay a tax of 2 2-10 cents per pound on the raw material of his industry. It has been a belief with him, strongly held, that taxing one man for the benefit of another is good for all of us, and that such a tax can be made "fair and equitable." It is a necessary corollary to such beliefs that somebody shall be wise enough to tell what is fair and equitable in every case, and strong enough to get his ideas enacted into law, and that our system of government is adapted to bring that phenomenally wise man, and several hundred like him, into Congress, and keep them there, and make them agree with each other. But what do the facts show in this case? Why, that Mr. Haigh, who really does know something about the tin-plate business, is not in Congress at all, while the men who have "got there" differ from him altogether on the question of what is fair and equitable. It happens, also, that these men who do not understand the subject have the power to carry their fantastic conceits into effect, while Mr. Haigh can do nothing but "grin and bear it."

Suppose, however, that Mr. Haigh were in Congress, and were influential enough with his fellow-members to bring them to his way of thinking on the subject of tin plate, who would be responsible for the other 999 things in the tariff? Take the article of licorice paste, for example. We choose this because it was the subject of debate for two or three days in the Senate recently. The bill proposed a duty of five cents per pound. Senator McPherson thought that this rate was too high, because the article itself was worth only six cents per pound. Senator Aldrich, who has charge of the bill, took Mr. McPherson to task for such wild and absurd statements about so common an article as licorice, saying:

> "The Senator says that, notwithstanding the fact that the unit of value on importations for 1889 was in the neighborhood of 14 cents, licorice paste is worth 6 cents a pound in New York. I have here the quotations of the 19th day of July, which show that it was quoted at from 17 to 28 cents a pound, and I shall be very much obliged to the Senator if he will bring before the Senate any quotations from *Prices Current* showing that pure licorice paste is quoted at 6 cents a pound, or anywhere near 6 cents. This very *Prices Current* from which I have quoted quotes licorice root, which is free of duty, at from 10 to 12 cents a pound if put up in five-pound packages for use. The Senator must be as far off in his statistics with regard to that price as he is in regard to the cost of labor."

Then Senator Allison, who is also a member of the Committee that reported the bill, polished McPherson off neatly as follows:

> "It turns out," said he, "that the Senator from New Jersey was wholly wrong about the quotations he has given us from *Prices Current* showing the cost of the article. The Senator undoubtedly is the victim of a misprint or a misquotation of figures somewhere. Probably the transcriber made it 16 cents instead of 26 cents. He has got a figure wrong or something of that sort. I think, after the correction of the Senator from Rhode Island, the Senator from New Jersey ought to be willing to withdraw his amendment."

Mr. McPherson did not withdraw his amendment, but he went down to the telegraph office and sent a despatch to "the largest consumer and purchaser of licorice paste in the United States of America," asking him what were the prices of the article during the past two years. In due time the reply came: "Six to seven cents per pound; I do not use any low grades at all." When Mr. McPherson read this telegram, there was silence for the space of about half-an-hour at the Aldrich and Allison desks. They had been legislating upon the theory that the wholesale price of licorice was 17 to 28 cents per pound, and giving themselves as authority to their fellow-Senators to that purpose, when in fact it was only 6 to 7 cents per pound.

Now here we have an object-lesson, or rather two object-lessons. Tin plate furnishes one and licorice paste the other. What do they teach? Evidently that the easy conceit which has held Mr. Haigh spell-bound all his life, that it is possible to frame "a *fair and equitable* tariff to protect American industries," is an utter delusion. Nearly all delusions that have to do with dollars and cents have some fraud connected with them. The tin-plate tax has an attachment of this kind, which Mr. Haigh will find out sooner or later. The reason why his proposed bounty on the home production of tin plate will not be acceptable to the backers of the McKinley Bill is, that that would not compel people to buy galvanized iron for roofing purposes. The price of tin to the consumer being the same as before, nobody would feel compelled to discontinue the use of it and try something else. Picking the pockets of the people and then throwing the money back to them out of cab windows would be a preferable mode of redistributing the rewards of industry.

THE DEBATE ON IRON.

THE debate on the Tariff Bill in the Senate is yielding day by day much interesting information. One of the greatest mysteries of the tariff of 1883 was explained last week by Senator Aldrich at the instance of Senator Plumb, who inquired why the duty on iron ore, after being voted in both House and Senate, and in the Tariff Commission also, at 50 cents per ton, was raised by the Conference Committee to 75 cents per ton, and so passed. Mr. Aldrich replied that it was done at the urgent solicitation of Senator Mahone of Virginia—privately, of course, because all conference - committee work is private. Mr. Aldrich was very voluble in showing that there had been no violation of parliamentary law in the matter, because, although the House and Senate had both voted for 50 cents per ton, and nobody had dreamed of any higher rate, yet they had so voted on separate bills. If they had voted that way on the same bill, it would have been an infraction of parliamentary law to change what both had agreed to; but since the bill that the House had voted on had been dropped and a new one had been framed by the Senate and tacked on as an amendment to an internal-revenue bill, it was only—what? Some people might say, a barefaced swindle. Mr. Aldrich did not say what he considered it to be in a moral point of view, although he was a member of the Conference Committee.

An attempt was made to reduce this swindling tax not to the rate at which both House and Senate intended to fix it in 1883, and would have fixed it had not "Billy" Mahone whispered something to Aldrich through the crack of the door, but 10 cents higher, *i. e.*, to 60 cents per ton. Senator Dawes of Massachusetts screwed himself up to the point of voting for this relief to the iron interest of his own State, but his colleague, Mr. Hoar, voted no. He was willing to give not only the pound of flesh nominated in the bond, but 25 cents more. And so the Senate, by a vote of 21 to 29, ratified the Aldrich-Mahone private arrangement of 1883, after its true nature had been explained to them.

The year to which the last census report on iron manufacture applied was a very prosperous one. Mr. James M. Swank, the census expert, called it a "boom" year. A little over 7,000,000 tons of iron ore were mined in that year; the laborers employed, consisting of men and boys, numbered 31,668. They earned the magnificent average of *three hundred*

dollars a year each! They were only employed a part of the year. They could not get work for the whole year. The sum of their wages was a little over nine and a half million dollars, and the cost of their work in getting out each ton of ore was $1.35.

Since that date the product of iron ore has about doubled, but the new sources of supply can hardly be called mines. They are banks of ore, from which the ore is picked with a pickaxe and shovelled by common laborers into cars or carts to be carried to the iron works. The cost of labor is less than one dollar a ton, and all who are now occupied in this art can do a great deal more work than they did in 1880. Do they get any more pay? So far as information can now be obtained, they nearly all work at less than one dollar a day; few of them get any more.

There may be 50,000 men and boys now occupied in this work. "Shall we destroy this great iron-ore industry?" shouts Senator Aldrich. You cannot destroy it, sir. You could not if you would. The bounty to the mine-owners is wholly unnecessary. The most competent men who are engaged in converting iron ore into iron testify that they would use more American ore rather than less if they were permitted to import foreign ores free of duty. They need them for mixing in order to make steel.

The iron-ore swindle of 1883 having been explained and ratified, the Senate took up the subject of pig-iron, always an interesting one. Here Senator Vance called attention to a report just issued by Commissioner Carroll D. Wright of the Labor Bureau, entitled 'Preliminary Report on the Cost of Production, Pig-Iron, Steel Ingots, Steel Rails, Coal, Coke, Iron Ore, and Limestone,' and read from it that the average *total* labor cost of a ton of pig-iron in the United States is $1.54, against which a duty of $6.72 per ton is allowed, to protect the manufacturer against the difference in wages between this country and Great Britain. Here Mr. Aldrich was as smart as he had been in his private interview with Billy Mahone in 1883. He wondered why Mr. Vance did not take account of the labor cost of everything else that preceded the making of the pig-iron—that is, the ore, the coal, etc., etc. Mr. Vance thought that there were two answers. One was that all these labor costs had been previously allowed for in the tariff on those articles, and the other was that the British manufacturer had his costs of production also, including labor costs, stringing backward to the ends of the earth and all eternity. If all such labor costs, on both sides, were to be taken into the reckoning, nobody could ever tell what was the difference between the two countries, or on which side the balance lay. Mr. Aldrich finally produced a quotation from Abram S. Hewitt to the effect that "it actually takes 90 per cent. of the cost of the article for labor, when you include everything from beginning to end"—a remark which obviously applies to every manufacturer in England and Germany as well as in this country. To which Mr. Vance replied with equal effect and humor:

"Then, Mr. President, we will not stop there. We will ascertain and levy a tax upon this article to pay the labor of the man who discovered the mine, the labor of the man who dug the roads that reach the mine, and the labor of the man who built the houses upon the road that he stayed all night at and subsisted at upon his travels; and the labor of Christopher Columbus when he sailed across the ocean in 1492 and discovered this American country of ours; and the labor of the people of Spain who went back into the mountains of Catalonia or Castile and cut down the timber that built the ships that Columbus used in crossing the ocean; and the labor of the man in the shops of Toledo who manufactured the tools that cut down the trees in the mountains of Catalonia that built the ships in which Columbus sailed across the ocean in 1492, and so on, and so on.

"The Senator knows just as well as I know, Mr. President, as one of these little pages knows, that when he rises here and demands the passage of a law to protect the American laborer who makes pig-iron, he simply has reference to the man who manipulates the ore, who melts it, and casts it into pig-iron, because the laborer in every preceding process has already been protected. He knows that, everybody knows that; and to undertake to avoid the force of an argument, and to justify a great iniquity like this, he goes back rambling into the ages of the past and invoking all the doctrine of predestination and the metaphysical consequences of the dependence of one thing upon another. He might as well go back to the Garden of Eden and say if Adam had been properly protected he would not have eaten the apple, and would be there now, lying flat on his back in the garden, looking up and waiting for pippins to drop."

FARM AND FACTORY IN CONNECTICUT.

AMONG the many sophisms of the high protectionists none has been more lustily asserted than the theory of the "home market." Orators of that school have shouted it from the stump, high-tariff writers have expounded it, and in the title of "Home-Market Club" adopted by a powerful and active protectionist organization at Boston the dominance of the idea is still more clearly proclaimed. Tersely and not unfairly stated, this "home-market" theory is, that, by taxing the mass of consumers, our industries can be so diversified that they will exchange goods with each other and thus trade will be kept at home. In particular does this dogma lay immense stress on the benefits of upbuilding the factory near the farm. When that proximity is accomplished, according to the high-tariff notion, we shall have the American farmer buying his goods of the American factory-owner, and selling in turn to the latter and to his hands the products of the farm. With the distance between factory and farm minimized and costs of carrying saved, they are, under this dogma, sure to become a blessing to each other and the utmost benefits of trade to be realized.

No advocate of protection ever set forth this "proximity" idea as to farm and factory more strenuously than did the late Horace Greeley, and in New England he used to allege its most abundant harvest of good things. But before Mr. Greeley died he saw New England's trade in cereals already passing to the West. Still, he had his "truck-farm" theory left as a sort of second line of defence. New England farms might no longer supply New York and Philadelphia, or even New England cities, with wheat, or corn, or oats, or rye, but they would still find abundant prosperity in raising "garden sass" and fruits. Under the shadows of the bustling factory town the happy Yankee farmer might still grow his vegetables—his tomatoes, his green corn, his potatoes, lettuce, and beets—and bear them, with his apples, berries, and other fruits, in a kind of jocund harvest home, to the near market of the factory town. New England was thus to become the prosperous farming emporium of "truck," leaving the cereals to the West. Unless we are greatly mistaken, much the same notion of the benefits of proximity between farm and factory has been a favorite one of Senator Hawley of Connecticut. Certainly few men have been more ardent protectionists than has he; and to advocate protection without a "home market" and "adjacent" industries would be to surrender the high tariff without a battle.

We turn, therefore, to the Senator's own Connecticut for light on the workings of this great protection blessing of "proximity" of factory and farm. The census returns just in from the State give us an excellent opportunity to make the test. In applying it we do not take a single decaying farm town that is remote from a city, but only those farm towns that lie close by, thus giving the protectionists every possible advantage of the situation. The State now contains twelve cities. In the appended table each of these cities is selected as the centre of the group of farm towns nearest it, the farming character of each town being proved in almost every case by the description of it as "agricultural" in the Connecticut State Register of 1890. In a large number of cases the farm towns selected adjoin the city which is their natural market, and in no case are they more than a very few miles away. The population by the last two censuses of these twelve "farm groups," consisting of the three rural towns nearest each of the cities—except in the case of Hartford, the State capital, where four towns are taken—is approximately as follows:

Group.	Population 1880.	Population 1890.
New Haven	2,491	2,301
Hartford	6,010	5,492
Bridgeport	6,216	6,823
Waterbury	2,910	2,179
Meriden	3,767	3,307
New Britain	3,215	3,028
Norwalk	3,927	3,498
Danbury	5,956	5,195
Norwich	2,689	2,210
New London	2,972	2,608
Middletown	3,705	3,386
Rockville	4,457	4,040
Total	48,315	43,567

The decrease, subject to very slight revision in the final returns, during the ten years in these twelve groups is 4,748, or about 10 per cent. In the thirty-seven "farm towns nearest cities" which make up the whole twelve groups, two or three towns have been used twice over, in cases where they adjoin two cities—a point to which the ardent protectionist cannot object, as in that case the farm town is supposed to receive "protective" benefits from

both its urban neighbors. It will be observed, also, that in only a single group of towns has there been a gain of population during the ten years, and in that but the merest trifle. The figures, however, derive their chief value from the fact that they test and vitiate the "truck-farm" and "proximate-farm-town" theory on the choicest protection ground—in a New England State, in towns close to bustling and prosperous cities, where the farmer may be supposed to encounter no problems of transportation, and where the competition (in "garden sass" at least) with other regions of the country is reduced to its lowest terms.

On a larger scale, indeed, the whole State of Connecticut may be taken as a visionary sample of this "local-market" dogma of protection. Its cities are well scattered over the State, all but two of the eight counties containing one or more of them—in this respect Connecticut being unlike Massachusetts, with most of her cities in her eastern counties, or New Hampshire, with her cities near her lower boundaries, or Rhode Island, with population centred near Providence, or Vermont, with almost no cities at all. From four to ten railroad lines or branches traverse each Connecticut county, bringing almost all the country towns into pretty close connection with the urban centres. Yet under these singularly favorable conditions for local markets the farm towns of Connecticut continue their steady decline. In the rural county of Litchfield all but eight of the twenty-six towns score decreases by this year's census returns; the rural county of Tolland shows gains in but three of her towns; and of the State's total gain of say 118,000 in the ten years, about 95,000 is found in the twelve cities which now contain almost 50 per cent. of the whole population of the commonwealth. Universally the farm towns lose under precisely the conditions that the high protectionist vaunts as most favorable. That concrete fact is established by the State census-enumerators, and if the protectionist alleges outside causes to account for the decline, he must at least confess that his "home-market" theory in Connecticut makes mighty poor progress in resisting them.

SENTIMENT ON THE FORCE BILL.

THE growth of public sentiment against the Force Bill is most striking and encouraging. The tide of popular feeling is now setting strongly in the right direction, and it rises higher every hour. The latest developments in various parts of the country are full of interest.

A movement has been started in this city to secure an expression of opinion against the scheme from the business men of the land, without distinction of party. The first of the proposed petitions, signed by 107 leading merchants of the wholesale grocery district, was sent to Senator Hiscock on Thursday. It presents the arguments against the bill both temperately and forcibly. The signers include men of every political faith—Republicans, Democrats, Mugwumps, and Prohibitionists. Copies of the petition have been sent to all the business centres, and there is no doubt that they will be widely signed by Republicans as well as by Democrats.

An excellent test of the feeling among Republicans has been afforded by the experience of Congressman Harmer of Pennsylvania. He has for many years represented a Republican district in Philadelphia, and nobody better understands popular sentiment in that city. Mr. Harmer refused to follow the dictates of the party caucus on this question when it was before the House, and he has just written a letter giving these reasons for his attitude: "There are several objections which have given me cause to take the stand I have, any one of which should be sufficient, to my mind, to justify at least the expression of an honest opinion. I look upon the movement as very bad politics, and the effect of the passage of the bill into a law upon many important business interests of the country would, I am sure, be disastrous. Already, merely upon the agitation of the question, the gradual and increasing flow of capital from the North to the South has been interrupted, and a paralyzing influence has become noticeable in many directions, the effect of which and the extent of the damage to be done is only to be calculated by future results. It is time to call a halt in this line of legislation. We have at best too much of it." Mr. Harmer concludes with this significant statement as to the popular response to his position: "Since I have taken the stand referred to, every Independent, and with one exception every Republican paper, has given my action its endorsement, and with almost no exception the business men of my city with them give me credit."

One of these Republican papers, the *Bulletin*, expressed its views on the question with great emphasis last week. It had been announced that Senator Quay had come to the conclusion that the introduction of the bill was a mistake, and that the Senate ought quietly to put an end to it, and that he had urged this view on those of his colleagues who had been inclined to force it through the upper chamber at any cost. "In taking this view of the bill," said the *Bulletin*, "Senator Quay undoubtedly reflects the opinion of intelligent and thoughtful Republicans in Pennsylvania, who are anxious that the party shall enter the coming campaign free from the handicaps with which reckless leaders have been weighing it down. There is no demand whatever in this State for the passage of the Elections Bill, and Senator Quay would have misrepresented his people if he had given his sanction to the folly."

Senator Washburn of Minnesota has just been on a visit to his constituents, and was interviewed in Chicago on Thursday on his return to Washington. He expressed the opinion that the Force Bill would not be passed, and declared that "the West does not want the bill." That Senator Washburn correctly interprets public sentiment in that part of the country is clear to any one who reads the Western newspapers. The Omaha *Bee* is the leading Republican newspaper of Nebraska, and it asserts that "a majority of the Republicans of the North either take no interest in the proposed legislation or are opposed to it." Moreover, after reading the letters from the correspondent whom the Philadelphia *Press* sent through the South, and other evidences of the feeling against the bill among Southern Republicans, the *Bee* declares that "the evidence is ample and conclusive that a majority of the better class of Republicans in the South do not want any new legislation for regulating Federal elections." The Omaha newspaper thinks that "this widespread and decided opposition among the better class of Southern Republicans should not fail to exert an influence upon Republican Senators who are susceptible to the opinions of trustworthy members of their party in the section of the country where the proposed legislation is confessedly intended to remedy evils justly complained of," and it sums up the case as follows: "If a majority of the intelligent and reputable Republicans of the South do not want a new election law, because they can see in it no promise of good to the party there, but rather injury and an increase of evils, and a majority of the Republicans of the North either take no interest in the proposed legislation or are opposed to it, nothing more should be necessary to convince Republican Senators of the inexpediency of enacting new legislation on this subject at present. The pending Election Bill will not pass the Senate if Republican Senators give heed to the prevailing sentiment in their party, both South and North."

Meanwhile, proofs of the deep-seated opposition to the policy among Southern Republicans accumulate. One of the most prominent white Republicans of the South, a man who has been elected to high offices in his State since the war, in discussing the proposed law the other day said emphatically: "The day that bill becomes a law I will cease to be a Republican. That bill will draw the color line in the South as it has never been drawn before, and no white man in the Southern States can remain in the Republican party." Nor does the effect of the scheme in this direction wait for the enactment of the law. Leonidas J. Moore, a leading Republican of North Carolina, has just announced his withdrawal from the party, and gives these reasons for his course: "For twenty years past in every election, both national and State, I have cast my ballots for the Republican party. I have continued in the same old course. The time has come, however, in my judgment, when no man who lives in the South can longer affiliate with the Republican party without an utter indifference to the welfare and well-being of the whole people of the Southern States. The legislation of the present Congress has been such as to convince any man of sense that if the South does not, to a man, resist the encroachment of the Republican party upon its rights and interests very soon, we shall be but provinces, so to speak, and the general legislation of the republic will not apply to us." In the recent State election in Alabama the Republican vote fell off largely in those places, like Birming-

ham, where the party has had much strength among the whites, and the reason is given as follows by one of the leading Republicans of the State: "To tell the truth, I think the Lodge Bill is responsible for it. The Republicans of the South are not in favor of that bill. Many of them are too weak-kneed to openly express their disapproval, so they express it by failing to vote. Very few white Republicans in this State voted, and they made no effort to bring out the negro vote. If that bill becomes a law, it will make Democrats in all local elections of the best Republicans in the South. Those of us who have business interests cannot afford to have them ruined by any such foolish law. If the Lodge Bill were passed, it could not be enforced in this section, and I don't believe any white Republican would try to have it enforced."

All this is precisely in the line of the predictions as to the partisan effect of this agitation which were made by the *Valley Virginian*, the leading Republican journal of Virginia, when it began its warfare against the bill. Reflection and observation have only served to strengthen the opposition to the bill of this representative Republican newspaper. The leading editorial article in last Thursday's issue is devoted to the subject, and is more emphatic than any previous deliverance. The *Virginian* publishes the "intelligent and comprehensive review of the political situation in South Carolina from the staff correspondent of the Philadelphia *Press*," and maintains that it "amply sustains every position we assumed, and presents an overwhelming argument against the enactment of the Elections Bill into law, viewed solely from a Republican standpoint." It declares that "the Republicans in Congress will inflict an irreparable and fatal wrong upon the party if, through caucus dictation, the Lodge Bill or some similar measure is made law," since "it would unsettle and disarrange party organization all over the country, and be as sure to give the Democrats the next House of Representatives as election day will roll around." It says that "the Republicans of the South, who understand the situation, and desire to see a formidable organization built up in this section, are almost to a man against it," and that "only the few who hope to gain something personally by Federal interference with elections favor it." After reasserting its conviction that the bill "is unwise from any view it is considered," and expressing the hope that it will be defeated, the *Virginian* concludes: "It remains to be seen whether the Republicans in Congress will court political suicide by passing the bill. It will bury in the general revolution it will effect in parties a good many conspicuous in its advocacy, and teach a lesson that will not soon be forgotten."

If the Republican managers at Washington insist upon passing the Force Bill in face of such protests from their own party, both North and South, it will be the most extraordinary defiance of public opinion ever known in our legislative history.

THE LATE CARDINAL NEWMAN.

JOHN HENRY NEWMAN was born in London on February 21, 1801. His father, whose family were Cambridgeshire landholders in a small way, was in the banking business till 1816, when a financial crash involved him in its ruin, and he took a brewery at Alton, Hampshire, near Selborne (of White's 'Natural History.') He was a man of good general culture, with a special taste for music, hereditary in the family and passing on to his son John, who, when challenged, after he had gone to Rome, to a public theological discussion by some Protestant Boanerges, declined, with the suggestion that they should have a public contest with the fiddle. The mother was Jemima Fourdrinier, of a Huguenot family remarkable for manufacturing skill. True to the Huguenot tradition, she reared her children in the Calvinism of Baxter, Newton, Milner, and Romaine. There were three brothers, one of whom, Francis William, four years younger than John, has suggested, by his extreme difference from him, many comparisons and much speculation. Both were born disputants, and from their childhood took opposite sides of every question that came up. One of the sisters married John, one of the Mozley brothers, famous in the Oxford movement mainly on account of James's remarkable gifts as a preacher and paradoxical disputant, and Thomas's extremely interesting and instructive 'Reminiscences of Oriel College and the Oxford Movement.' John Henry Newman was not a public-school man, to his lasting sorrow, though Dr. Nicholas's school at Ealing had the highest rank as a preparatory school. He soon became the leading scholar here, but found time for many pleasant avocations, writing much album poetry and certain masques and idyls, and even an opera. Some of his album verses he preserved in his collected works. They are as solemn as anything he wrote. But these are of his Oxford days, which began in 1816. The same year his father's failure in business and his own conversion, the reality of which he never doubted, deepened the current of his life. His parents intended him for the law, and he actually kept a term or two at Lincoln's Inn, but it soon appeared that his calling to the priestly and prophetic offices was imperative and not to be denied. His Oxford college was not that associated with his later fame, but Trinity. He was still in his nineteenth year when he was examined for his degree and came out "under the line." While a scholar of Trinity, from 1820 to 1823, when he was elected to an Oriel fellowship, he was intensely evangelical in his opinions. In company with a friend he wrote and published two cantos of a poem, "St. Bartholomew's Eve," in which he "branded with infamy" . . . "this most barbarous and cold-blooded massacre," . . . "so pleasing to the court of Rome." These phrases of 1821 were retracted with many others inimical to Rome a few years before he entered into her communion. The Oriel fellowship must have been the more welcome as, simultaneously with his conversion in 1816, he conceived the idea that it was God's will that he should lead a single life. His drawing to a missionary life was of a piece with this. He had some waverings in it till 1829; none after that. He took orders in 1824 and became curate of St. Clement's, a quaint little church picturesquely situated in the suburbs of Oxford.

From 1822 to 1825 his relations with Dr. Hawkins were more intimate than with any other person. Hawkins was then Vicar of St. Mary's, and afterwards Provost of Oriel. In his 'Apologia' Dr. Newman follows the example of Marcus Aurelius in his Meditations, and gives an account of the various personal influences that shaped his life. Dr. Hawkins taught him to weigh his words and be careful in his statements. He learned from him, besides, to give up his "remaining Calvinism," and to accept the doctrine of baptismal regeneration; also, the most important thing of all, the doctrine of tradition—"that the Bible was never intended to teach doctrine, but only to prove it, and that if we would learn doctrine we must go to the creeds and catechism of the Church." From the Rev. William James, then fellow of Oriel, "in the course of a walk around Christ Church Meadow," he learned the doctrine of apostolical succession. About the same time (1823) he got two things from 'Butler's Analogy': the sacramental idea, which Keble developed in his 'Christian Year,' that all natural things are symbols of things spiritual, and the doctrine that probability is the guide of life. The ease with which he let slip one after another of his evangelical doctrines and adopted those of the High Church party suggests that they had no very serious hold upon his mind. But his change from a Low Church to a High Church position was complicated with certain liberal tendencies. He made much of these in his repentant afterthought, but they do not seem to have been much more pronounced than those of the man who confessed himself "something of an agnostic" because he could no longer fully accept the narrative of Jonah's experience with the whale. From Blanco White, already verging towards the Unitarianism of his later years, he received ideas of inspiration less rigorous than those of his first teachers. Whately was his principal liberal teacher. He became Whately's Vice-Principal and tutor at St. Alban's Hall in 1825, and held the position for a year. Whately's contribution, however, was distinctly in the line of his ultimate development. It was that Erastianism is a "double usurpation"; that the interference of the Church in temporal and the State in spiritual matters is alike deplorable. When he went to Rome Newman gave up the first part of this contention. In 1827 Whately accused him of Arianizing because of his favorable opinion of the anti-Nicene Fathers. He wrote some slighting sentences about the Fathers for the 'Encyclopædia Metropolitana,' and inclined to Middleton's opinions concerning the miracles of the early Church. "In truth," he says, "I was drifting in the direction of liberalism." He was reading Hume, and had Paine's 'Age of Reason' under lock and key. But there is evidence that all the deeper currents of his life were towards the sacramental system of his Tractarian days. His brother, whom he rebuked for "speaking disrespectfully of bishops," writes that between 1823 and 1826 his opinions developed into "full-blown Popery." In the 'Apologia' 1827 is given as the date when his liberal tendencies were checked by illness and bereavement.

In 1829 he broke with Whately on the Peel election, which found him on one side—with the Orangemen!—and Pusey on the other—Catholic emancipation. Pusey, however, took this side as a liberal. He had proved his liberalism by writing a generous defence of German theology against the attack of Hugh Rose. But already Newman's mind was moving rapidly in the direction which later marked the Oxford movement, and then his Roman Catholic conversion. During his first years at Oriel he was not at home there. But in 1826 he became one of the tutors of his college, wrote one or two essays that were well received, preached his first university sermon, and began to be well known. Thus he picked his shell, and when he was one of the public examiners for the degree of B.A. in 1827, he came fairly out of it, and remained so, as he says, till 1841. From a silent man in the commons-room of Oriel he became one of the most free in talk and eager in debate. An assistant secretary of the Oxford Bible Society, he marked his deflection from the traditional line of that evangelical Association by offering about 250 amendments to the Secretary's annual report. He became intimate with Robert Wilberforce and Hurrell Froude, and Whately saw around him the signs of an incipient party of which he was himself unconscious. In Newman's opinion the true and primary author of this party was John Keble. His was the first name he heard spoken of with reverence at Oxford. Froude brought them together in 1828, and accounted it the best deed of his life. The 'Christian Year' had made its appearance the previous year. The two main truths which, in Newman's retrospect, it brought home

to him were the same that Butler had taught him—the sacramental doctrine of the symbolical character of all material things, and the doctrine of probability as the guide of life. But in Keble's view the firmness of assent which we give to religious doctrine is owing, not to the probabilities that introduce it, but to the living power of faith which accepts it. It was only a step from this to Keble's advice to Arnold, who had doubts about the Trinity, to preach it as if he believed it, and then he would believe it. Nothing was more central to Dr. Newman's religious experience than this doctrine of Keble, which afterwards he amplified and argued in his 'Grammar of Assent.' We have here the explanation of his easy swallowing of certain Romish doctrines which before his conversion he could not abide. He made the will the primary factor in belief. One of the first results of this doctrine was an inclination to accept the miracles of the patristic period.

With Hurrell Froude, who was a pupil of Keble, made of much coarser stuff, Newman lived on the most affectionate terms from 1829 until his death in 1836. Newman says that his power of entering into the mind of others did not equal his other gifts. It is evident that he had no such power. Brilliant and rash, he delighted most in what was most offensive to his friends. With charity for none, with malice towards all, might almost have been his motto. His influence upon Newman was so great that, if he had lived, they must both have gone to Rome much sooner than Newman went alone. He held, apparently, to every Roman Catholic tenet except the headship of the Pope. "He professed his admiration of the Roman Catholic Church and his hatred of the Reformers." He made Newman "look with admiration to the Church of Rome and in the same degree to dislike the Reformation." He "fixed deep in him the idea of devotion to the Blessed Virgin, and led him gradually to believe in the Real Presence." About 1830, in connection with his first serious work, 'The Arians of the Fourth Century,' came his conviction that antiquity is the true exponent of Christianity and the basis of the Church of England. Meantime the ferment in his mind was getting livelier every day. Political considerations added their quota of dissatisfaction and disgust. In France the Bourbons, "sovereigns who had the divine right of inheritance," had been cut adrift. In England the Whigs had come into power, and Lord Grey had told the Bishops to set their house in order. "The vital question was, How were we to keep the Church from being liberalized?" "She must be dealt with strongly, or she will be lost. There was need of a second Reformation." So far had Newman come when, in December, 1832, he set out for the Continent in company with Hurrell Froude. This journey was to him Luther's Wartburg, Paul's Arabia, a time for gathering up his energies for a great encounter. A hundred incidents reveal the temper of his mind. Such fierce thoughts had he against the liberals that in Algiers he would not even look at the tricolor, and in Paris would not go out at all. It being questioned whether a certain interpretation of Scripture was Christian, some one remarked that Dr. Arnold took it. "But," said Newman, "is *he* a Christian?" It was at Rome that he and Froude began to write the 'Lyra Apostolica.' They chose for a motto the words of Achilles returning to the battle: "You shall know the difference now that I am back again." To Cardinal Wiseman's wish that he would come again to Rome, Newman answered, "I have a work to do in England." The degree of his mental excitement must have been dangerous. He had spasms of emotion, passionate tears, actual fever, during which he cried, "I shall not die," and, convalescent, returned upon his reply to Cardinal Wiseman, "I have a work to do in England." His contributions to the 'Lyra' all tended the same way. Homeward bound, becalmed in the Gulf of Genoa, he wrote the most beautiful of these:

"Lead, kindly light, amid the encircling gloom,"

In later years he regarded the lines—

"I do not ask to see the distant scene;
One step enough for me,"

as one of many premonitions of his final rest. It is impossible to avoid the feeling that "the distant scene" already present in his mind was Rome; that he tried not to see it while step by step he took the way that brought it every day more near. The Sunday after his return, Keble preached a sermon on the national apostasy, and the Oxford movement had begun. So Newman always reckoned.

The assumptions and the inferences of the Oxford movement were as follows: There must be fundamental dogmas; there must be a visible church, with sacraments and rites, with bishops standing in the place of God, with power to order penance and enforce it. These dogmas were the dogmas of the prayer-book; this Church the Church of England; Liberalism was in its very nature anti-dogmatic; therefore, it must be crushed. The Roman Church claimed to be the Church in virtue of antiquity, its apostolic line, its sanctity. But the Church was necessarily one. If it was Roman, then it was not Anglican. Therefore the Romish Church must be opposed. Into this twofold battle Newman flung himself with fine hilarity. He had never felt so well in body or in mind. He had a joyous sense of power. His dash and his bravado were immense. The Oxford movement may be variously credited; the Tractarian movement was his own. He began it; he finished it. The tracts that signified were his without exception. He not only wrote the tracts, but he saw to it that they were scattered far and wide. He travelled much, talking with curates and rectors, urging them to go to work and purge the Church of evangelical and liberal taint. For the former he had only hatred; for the latter he had nothing but contempt. This is strong language, but his own. His language was, perhaps, a little stronger than he actually felt. In his first tract he said of the bishops that there could not be a more blessed termination of their course than the spoiling of their goods and martyrdom. As for heresiarchs, they "should meet with no mercy." To spare them was a false and dangerous pity. His position as Vicar of St. Mary's, to which he had attained in 1828, gave him a splendid opportunity to work his propaganda. In his first sermon after his return he declared that it would be "a gain to the country were it vastly more superstitious, more bigoted, more gloomy, more fierce in its religion." A friend wrote him to expostulate with him upon his course. He wrote him back that he would ride over him and his as Othniel over Chushan Rishathaim, King of Mesopotamia. In this there may have been "a mixture of fierceness and sport" which he predicates of this period. But there was no sportiveness in his refusing to speak with his brother; in his dissuading a lady from attending the marriage of a sister who had left the English Church. Newman's faith in personal influence was always strong. He had broken with Dr. Hawkins and lost his tutorship before he went abroad because he wanted his scholars given over into his exclusive charge. Now he wrote numberless epistles to young men, to women; and on the young men of Oxford he threw himself with an ardor and affection they could not resist. The movement grew and prospered. Its leader's presence was magnetic and electrical. Enthusiasts flocked to his standard. His tracts, his letters, and his fame, were everywhere. In 1836, Dr. Pusey, by whose name the movement was afterward called, added his strength, which was not little, to that of Newman and his earlier coadjutors. He had long since sown his wild oats of Germanism. And, though Newman overrates his function in the movement, it was certainly important. It was organizing and conservative. It was particularly the latter after Newman went to Rome. Newman having run the ship upon the Vatican, and got safe ashore with a few others, Pusey got her off and pacified the crew and passengers, and did his best to patch the leaks and make the paint and gear as beautiful as Cleopatra's barge. Still, often in the night there was a plunge, and in the morning it was discovered that somebody had gone over and been picked up by some Roman Catholic craft—(the last word is accidental, but it may be allowed to stand). But in 1836, when Newman welcomed Pusey to his side, he was full of confidence in the *Via Media*, as he called his middle path between Rome and Reason. He remained so till 1839. After that, one makeshift after another delayed the final consummation for six years. Since the appearance of the 'Apologia' it has been evident that he did his best to keep himself from Rome. For a long time before his intellect was satisfied, his heart was yearning for her peace. One by one his objections to her were removed till only the headship of the Pope and her worship of the saints and of the Virgin remained. But his own reverence for the Virgin and his own feeling for the saints were near to worship, and grew nearer all the time. The necessity of opposing Rome if he would defend the Anglican Church as *the* Church stirred him up to many accusations. But they were very wilful; he had no heart in them. Froude's dying adjuration for him to "stop cursing" Rome often recurred to him. But he did his worst in this direction in his 'Prophetical Office of the Church,' though even here it was not the substance of the Roman Catholic creed, but the authorized teaching and traditional action of the Church, that drew his fire. In the spring of 1839 his position in the Anglican movement was at its height, and the prospects of that movement were at their best. He was never so much admired and feared as then. In April he wrote an article for the British *Critic* proudly reviewing the past of the movement, rejoicing in its present strength, and contemplating its future with the fairest auguries. Practically, it was his valedictory. That summer, in the course of his studies, his confidence received a stunning blow.

The note of antiquity had been his stronghold of Anglicanism, and in studying the history of the fifth century he suddenly saw the sixteenth and the nineteenth reflected in his own face, and he was—a Monophysite! Rome was where she is now. The Anglican Church was in the position of the Eastern churches. The Protestants, only a little worse, were the Eutychians. "What was the use of continuing the controversy if, after all, I was forging arguments for Arius or Eutyches and turning devil's advocate against the much-enduring Athanasius and the majestic Leo?" As if this blow were not enough, there came another. This had spoiled the antiquity of the *Via Media*; the second spoiled its universality. This time it was the history of Donatism and a phrase of Augustine that brought him low: "*Securus judicat orbis terrarum.*" "By those great words of the ancient Father the theory of the *Via Media* was fairly pulverized." They proved that the deliberate judgment in which the whole Church rests is a final sentence against such portions of it as protest and secede. Then he fell back upon the note of sanctity, but with a heavy heart. He was no better than a Protestant. He might as well say there was no visible Church.

In the fall of 1841 two occurrences gave his slow-dying Anglicanism an effectual quietus. He had published "Tract 90." It argued that the articles were in substantial harmony with Roman Catholic doctrine. Immediately there was a chorus of indignant protestation. A demand was made for the suppression of the tract. Upon this Newman's Bishop did not insist; but there must be no more. Newman agreed, and gave up his place in the movement; but this did not satisfy. The Bishops charged upon him right and left. The establishment of a Jerusalem bishopric, inviting Lutherans and Calvinists to its wedding-feast, and telling them to never mind about the wedding-garment, was a blow struck at a man already down. The theory that the Anglican Church was a *branch* of the one true Church followed the *Via Media* into the valley of contempt. Off with the old, he was not yet on with the new. But Rome's apostolicity was

sound. There was no doubt about the sacred "imposition." Her catholicity he worked out in his 'Development of Doctrine,' a happy thought to justify the enormous difference of her later from her earlier creed. Meanwhile he lingered in "Samaria," as he called it—the notion that the Anglican Church might, like Samaria of old, be a subject of extraordinary grace. But it was a place of torment. In the autumn of 1843 he resigned his living at St. Mary's. He would fain have kept the curacy at Littlemore, hard by, but this was not allowed. He had previously made a formal retraction of all that he had ever said against the Roman Church. After his resignation he went down to Littlemore, a layman now, to die in peace to his old life and hope. But this was not permitted. The strife of tongues reached him in his retreat. He was in league with Rome; he was starting a monastery. "Why doesn't he go over?" was the shout of the pack upon him in full cry. On the night of October 8, 1845, Father Dominick, whom he had sent for, came to Littlemore, and of him Newman requested "admission into the one fold of Christ."

The rest is quickly told. He was immediately received into the Roman Catholic Church and ordained a priest by Cardinal Wiseman, who in 1848 placed him at the head of a newly established oratory near Birmingham. There he remained until his death, with the exception of four years spent in Dublin as rector of the Roman Catholic University, a fruitless undertaking. Whately was then Archbishop of Dublin, but the old friends never met; or, if they did, were mutually repellent. After his return to Edgbaston a school in connection with the oratory was established for the education of young English converts in the details of their new faith. His relations with the brothers of his house and the boys of his school were most affectionate. He lived with them a quiet and a busy life. Rising at five in the morning, he gave the first two hours of every day to private devotion; mass at seven o'clock; at eight breakfast in silence, but with his morning mail to batten on besides the frugal meal; then five or six hours of work alone in his own room, well stocked with books; later a good walk, his boys entreating, "Father, may I go, too?"—the common dinner at seven, silent, but for the lector's voice reading the Vulgate and less serious matter, the Cardinal serving in his turn, white-aproned for the task; next a discussion, each brother ending with "I speak under correction"; then a social hour, and finally more work extending far into the night. In all the Roman calendar there is no more cheerful saint than St. Philip Neri, whose patronage the oratory ostensibly enjoys, and his character would seem to have determined that of the brethren of his rule. We have the word of the Cardinal that in his new home he had perfect peace and contentment and never one doubt. Not but that certain difficulties remained, but "ten thousand difficulties do not make one doubt." Having accepted the Church as a whole, he found no difficulty in believing anything she taught—transubstantiation, the worship of Mary and the saints, the efficacy of relics, the winking of Madonnas, and all similar miracles. The most serious disturbance of Dr. Newman's peace came in 1864, when Mr. Kingsley brought against him a railing accusation of intellectual dishonesty and falsity. His answer is embodied in his 'Apologia pro Vitâ suâ,' which has been more widely read than any of his other books, and with general agreement that the demolition of Mr. Kingsley is complete. But the chapters in which Mr. Kingsley is not named, containing an account of his religious opinions till he went to Rome, constitute its greater value. The decree of the Virgin's immaculate conception in 1854 found Dr. Newman ready to welcome it; that of the Pope's infallibility in 1871 he thought "untimely," but brought his shrewdness to its justification after the event. In 1877 he was elected Honorary Fellow of Oriel, and visited Oxford, which he had not seen for more than thirty years, meeting Dr. Pusey and other fellow-soldiers in his early battles. In 1879 he was made Cardinal-Deacon by Leo XIII., an honor which permitted him to keep the even tenor of his way at Edgbaston.

When, in 1877, a collected edition of Dr. Newman's works was published, it numbered thirty-four volumes, and subsequent matter, with some then omitted, would make at least a half-dozen more. They represent various phases of his development and of his intellectual energy. There are many volumes of his sermons, and there is much in them that transcends all differences of creed and sect. That he was a very great preacher no one is likely to deny. The moral intensity of his preaching was its most piercing note. Its greatest attraction, after the general beauty of his style, was the wealth of correspondence it drew out between Biblical and traditional persons and events and the immediate situation. His style was at its best in his sermons, but nothing he could write was safe from its all-conquering charm. The 'Apologia' has passages of unrivalled splendor. The 'Grammar of Assent' has a more even flow, but that, too, has its swelling waves. Everywhere there is a wonderful clarity, an energy, a cumulative force, a resonance, that of themselves would justify the claim that is made for it of being the best style of the century. But it has, besides a music in its cadences, a felicity of word and phrase, a passion and tenderness, which compel our admiration and sometimes go nigh to stop the heart. If splendor of expression carried with it, as Emerson averred, the proof of that contained, Newman's doctrines would all be proven. His poetry, which has some excellent lines and stanzas, is less poetical generally than his prose. His "Dream of Gerontius," which many value highly as a vision of things after death, was accidentally saved from his waste-basket by a friendly hand, so that apparently he undervalued it as few have ever done. There are varying accounts of Dr. Newman's manner as a preacher. The truth would seem to be that it had a nameless fascination in despite of awkwardness and other limitations. Jonathan Edwards did not stick closer to his manuscript than he.

Turning from the more outward aspect to the quality of Dr. Newman's mind, we must account it more remarkable for its acuteness than for its breadth. As a dialectician his superior would be hard to find. No man could argue a foregone conclusion with greater ingenuity. He dearly loved a paradox, and was never happier than when arguing that the Roman Catholic opposition to free thought had been more provocative of it than any other cause, seeing that it does "from opposition grow." There was certainly a lack of largeness in his mental operations. He seldom looked at a great matter in its entirety; concerned himself not with the forest, but with the trees. If he could choose, he always met an enemy in detail. On his way from Anglicanism to Rome the question always was how this particular agreed with some other; there were no broad comparisons. We seldom find him asking simply, "What is true?" He is generally asking, "What can be made of this or that? How can it be held on to consistently with something else?" Nothing if not logical, he was ever too intent on drawing his conclusions to notice whether or not his premises were sound. Morally as well as intellectually, intensity was his mask. His moral judgments were not broad. His zeal for personal religion made him contemptuous of nearly all the virtues by which society exists. It is not difficult to solve the riddle of his ecclesiastical progression. The appearance of the world convinced him of some "terrible aboriginal calamity." If there were a God, he would break through the accustomed order of the world and "introduce a power invested with infallibility in religious matters." Where was this power? Not in Protestantism, surely; not in Anglicanism, as he found out in the course of time; not in the Bible, which "the wild living intellect of man" can interpret in more ways than one. The Greek Church being beneath his notice, it must be in the Roman Catholic Church. She alone claimed it, and with sufficient ingenuity he could find in her the notes of apostolicity, catholicity, sanctity, that were essential to the proving of her claim. That Dr. Newman, seeing some things so clearly and so blind to others, found this result sufficient for his mind and heart is not surprising. That few have followed where he led is not so. Some of them have not been sure about the "terrible aboriginal calamity." Others have not been about the various notes. They have missed in Dr. Newman the essence of pure thought. They have found him always mixing argument with antiquity and tradition. They have wondered why, the soul of man being equal to the sure knowledge of God and immortality, it could not, without miraculous interposition, attain to lesser things. If only Dr. Newman could have started with Calvin's doctrine of the natural intellect as wholly imbecile, this rejoinder would have been averted. But he needed the initial postulate of God. And farther, some have asked, if reason is adequate to discover the true Church, how is it possible that it should not be adequate to test the doctrines of this church?—a much less difficult matter, it would seem.

The religious history of the century has had no more interesting person than Dr. Newman; no career more picturesque than his or more dramatic. But when we come to measure his influence upon life and character, we are obliged to hope that in a thousand intimate ways he accomplished more than he did in any obvious result. The Tractarian movement of 1833-'41 midway of the century became the Puseyite movement, a much smaller thing than Newman had imagined; and later ritualism, which is smaller still. There has been a great increase of order and sobriety and æsthetic purpose in the establishment because of Newman's work. There must have been more, too, of spiritual aspiration. But the liberalism against which Newman summoned all his powers has steadily increased. It is in all the universities, in all the churches. As Newman feared, his secession made more converts from his "Anglicanism" to liberalism than from that to Rome. To many he was a warning; not to many an example. His insistence that between Rome and atheism we must choose (unjustified by his own fundamental postulates) has sent more to liberalism than to Rome. The doctrine of evolution has taken away for many the foundation on which his whole structure was built up—the "terrible aboriginal calamity." Meantime the political order of society has been advancing upon lines which, to his thinking, as both Anglican and Protestant, "took hold on hell," and its social order has been ameliorated by the exercise of those virtues of sobriety and industry and self-respect which he so heartily despised. The final impression that he leaves upon our minds is that of unreality. His world was one of speculation and tradition, not one of breathing fact. The saints of long ago were more alive for him than the men and women of to-day. His intellectual preëminence in the Roman Catholic Church would have been more significant of his commanding stature if he had been less solitary there in his intellectual pursuits and aspirations. His life, viewed in connection with that of his brother Francis William, is an impressive lesson touching respect for honest difference of opinion, to which the Cardinal did not attain.

PHILOSOPHY ON THE QUAI VOLTAIRE.

PARIS, July 14, 1890.

THE Quai Voltaire, as every book-buyer knows, extends for a mile or more along the Seine, and the second-hand books are displayed in boxes upon the wall, which are provided with covers as a shelter from rain and for protection during the night. The books are arranged so that the titles are easily seen and that they themselves may be easily examined. The Quai is a better place than many of the stores for picking up a rarity, as too often the books are not easily accessible in the latter and cannot be examined at all. I have seen them stacked in some stores in great piles, so that neither the buyer nor the seller can know what

they contain, and I have not been able to obtain a complete catalogue in any case, and in some of the largest collections none at all. Still, the rarest books are generally placed where they can be seen, and it seems that the stores along the Quai are the owners of the books on the wall running along the banks of the Seine.

I had been trying for a long time to get a copy of Bentham's 'Deontology,' but had met everywhere with the response that it was out of print. An appeal to the second-hand book-dealers was equally unsuccessful. By a happy chance I picked up a copy on the Quai Voltaire for a franc and a half, printed on fine linen paper, but with the binding in poor condition. I had only to rebind it to make it as good as new, and to congratulate myself on a rare piece of good fortune. I also saw a copy of Bentham's 'Treatise on Legislation,' in three volumes, well-bound, and offered at forty centimes a volume, or twenty-five cents for the whole. It was the edition of Dumont, and was not long in being picked up by some one. A still more interesting case is that of DeStutt-Tracy's 'Ideology.' He was one of the coterie of philosophers who helped give a certain direction to the philosophic and the political destinies of France at the time of the Revolution. The little book which I was fortunate enough to discover was the first of three parts of a work designed as a text for the new and higher system of public schools established by the Revolutionary Government. DeStutt-Tracy signs himself "citoyen," and the book is dated in the year IX. The work was not completed until 1804. The first part appeared, as I have indicated, in the year 1800. It made no special reputation, but is interesting for its attempt to put the mental sciences on the same plane with the languages in the curricula of the time. The views expressed are those of Condillac and the coterie of philosophers connected with the 'Encyclopædia.' But the remarkable feature of the work is the skill with which the author conceals the consequences of the mental analysis which he introduces into the mind of the student. His book is not a great one, but has an historic interest. I obtained it for fifty centimes.

A more important illustration is afforded by Laromiguière, two finely bound volumes of whose 'Lectures on the Faculties of the Soul' I purchased for eighty centimes. They are bound in gilt-edge leather of the best quality, with good print and linen paper, and are dated 1820. There were three other copies on the Quai, not so well bound as this, and with poorer print, dated respectively 1815, 1818, and 1823, and considerably worn. Those of 1815 and 1818 were placed at 6 francs. But what is the interest of the volumes? Laromiguière was not a great man, and is scarcely, if at all, known outside of France; what reputation he did have was soon eclipsed by Cousin and overlooked by those who surrendered wholly to the influence of Condillac. Yet Th. Ribot, editor of the *Revue Philosophique*, and well known in scientific and philosophic circles for his works on 'Heredity,' 'Attention,' 'Maladies of the Will,' and several other books, seems to have borrowed some of his fundamental ideas from this wholly forgotten author, although I see no traces of acknowledgment. Laromiguière had made an important addition to the psychology of Condillac. He insisted upon the distinction between the *active* and the *passive* powers of the mind, assigning a large and important influence to attention—in fact, practically laying down the simple theory that sensation gives us the material, and attention constructs it into the abstract forms of knowledge. Students of philosophy after Kant will appreciate the significance of this; I cannot dwell upon it here. Now, it is extremely interesting to find that the apparent novelty of a recognized savant is drawn from the dust of a wholly forgotten author. Thus the appearance of originality may be secured by resurrecting the ideas of a buried philosophy, and this in turn discovered for the small sum of sixteen cents.

Again, I was fortunate enough to pick up a copy of the 'Port Royal Logic' for a franc. In spite of its fame, the book is remarkably rare. I have never been so much as able to examine it in any library with which I am familiar in America. It is, no doubt, to be found in the principal libraries to which I have not had access, but it is so rare, in spite of a translation (by De Morgan, I think) perhaps forty years ago, that the English student can hardly hope to get a copy of it except as he may happen upon it as I have done. Its chief historical interest is too well known to require any remarks; but there are some characteristics about the book which even the historians of philosophy have not mentioned, and which throw much light upon the intellectual occupations of the age in which it was composed. It appeared towards the close of the seventeenth century, and contains what to-day would be the last thing to find its way into a work on logic, viz., a homiletic chapter on morals and religion, and another discussing the Eucharist and Transubstantiation, which makes the most tremendous metaphysical doctrines turn on the reference of the Latin demonstrative *hoc*. This, like nearly all the illustrations, shows how everything was made to serve the theological dogmas of the time, while it is clear from the tone of the book that the spectre of scepticism is flitting in the background. Descartes had raised what he could not lay.

Another valuable work was picked up for two francs. It consisted of two octavo volumes of over 400 pages each, with good paper and print and well bound, although a little worn. It was 'L'Esprit' of Helvetius, in many respects the Bentham of France, although a little more consequent than the great Englishman. Students of the history of ethics know the value of the work, and I need say no more about it. Concerning the Quai Voltaire itself I will only remark further the very interesting and perhaps significant fact, that the religious literature for sale on the Quai is almost exclusively of the old régime and Roman Catholic in its character. It generally sells for little more than its worth as old paper, or perhaps as a souvenir of a particular age, kind of print, or style of binding. Protestant books are as scarce as Catholic books would be in England and America. Of modern books, science, history, literature, and politics are the most numerous, and these of the radical free-thought temper. Of classic religious authors, Bossuet and Chateaubriand are the most frequent. They still have purchasers, but others are much more neglected. Works of Voltaire and Rousseau are perhaps the most numerous, unless they are rivalled by Molière, Racine, and Boileau. Modern popular writers are not so often met with.

J. H. Hyslop.

A BYZANTINE STUDY.

Paris, July 25, 1890.

No part of history has been more neglected than the history of the Byzantine Empire. This prodigious monarchy, formed of the most composite elements, issued from the old Roman Empire, placed between Eastern and Western Europe, always occupied with struggling against the barbarians, and becoming itself half-barbarian, is almost absolutely unknown. Strangely enough, it has been brought into notice lately by one of our lightest dramatists, M. Sardou. His drama called "Theodora" is certainly not without merit; it owed the greatest part of its success to the enchanting acting of Sarah Bernhardt, but it denoted a close acquaintance with the most important documents which concern the history of the Byzantine Empire, and with its strange and corrupt civilization. M. Gustave Schlumberger, a young member of our Institute, who belongs to the division called "Inscriptions et belles-lettres," has had the curiosity to choose an historical incident in the second half of the tenth century, and to group around a central figure all he knows of the greatest epoch of the Byzantine Empire, from the double point of view of its military power and of the perfect development of Greek art and civilization in the Middle Ages. The figure which has attracted his notice is the Emperor Nicephorus Phocas, an illustrious captain of Constantinople, who spent his lifetime in wars against the enemies of the Empire. Gibbon has written a few brilliant pages on this period; but they are mere sketches. M. Rambaud has made a remarkable study of the tenth century at Byzantium in the time of Constantine Porphyrogenitus; he has well understood that Byzantium was something *sui generis*, not merely the continuation of ancient Rome. M. Schlumberger has had, however, very few modern works to consult; he has been obliged to refer to the original documents, which are unfortunately rare, Byzantine, Arab, Armenian, Russian chronicles.

Nicephorus Phocas was a soldier; he achieved his reputation in a great expedition against the Island of Crete, which had become the headquarters of the Saracen pirates. "Of a profoundly mystical temper," says M. Schlumberger, "like so many of his Oriental contemporaries, but at the same time a man of violent passions, generally well kept down, but sometimes abandoned to their free flow, of a warm nature, but simple and primitive, severe but never cruel without necessity, of austere habits, which bordered on asceticism, when he was not conquered by passion, Nicephorus appears, at least in the first period of his existence, as a sort of soldier-monk." The expedition against Crete was one of the greatest efforts of the Greek Empire; we have very precise documents on the preparation of it, as to the strength of the fleet and of the army, and the singular composition of this army.

M. Schlumberger gives curious details about the ravages committed by the pirates of the time. There is, for instance, an account of the sacking of Thessalonica, the orthodox city, the second city of the Empire, in 904. The Arab pirates, headed by a renegade, destroyed completely this magnificent Greek town; 22,000 young men and women were taken away as slaves. The division of the spoils took place at Khandax in Crete. Khandax was a permanent slave-market. Imagine "the Saracen population of this city of brigands running to the shore, animated with a savage joy at the prospect of such incredible spoils, the women and children applauding the victory, the yells of the negroes, the sound of the cymbals and the trumpets, the terror of the captives. What a picture to paint on this admirable coast of Crete under this burning sky! Not one of the captives had even an incipient beard! Of so many thousands of women, not one who was not young!"

It is easy to imagine what was the popularity

of Nicephorus Phocas after he had conducted successfully the expedition against Crete and punished the people of Khandax. The departure of the immense fleet is admirably described by M. Schlumberger, with more color than is usually found in historical works; but he has carefully studied in the old manuscripts all the details of the costumes of the time, the forms of the ships. He gives curious particulars about the Greek fire, which was a terrible instrument of naval warfare in that age, and which modern chemists, with all their science, have not yet been able to imitate well. A number of pictures representing warriors and incidents of war have been taken from the old Greek manuscripts of our National Library; the engines employed in the sieges have been reproduced from an Arab manuscript. Khandax was besieged, stormed, and emptied of the spoils of a thousand Christian cities, accumulated within its walls by the pirates of the Archipelago. Phocas was surnamed by his army the Victorious, and ever after preserved the name. Crete never fell again into the hands of the Arabs. The Byzantines retained it for two centuries; it was given later to the Venetians, who kept it until it fell into the hands of the Ottomans. The next Eastern war will probably be the signal for the definitive deliverance of the Christian island.

Phocas had a triumphal entry into Byzantium on his return. The "Book of Ceremonies" gives the whole "programme of the ceremonies to be performed during a solemn triumph in the Forum of the Augusteum," commonly called the Agora. It was a great spectacle provided by the Basileus. Nicephorus afterwards campaigned in Cilicia and in Syria. The siege of Aleppo was the end of this campaign; the great city fell before him, and his army avenged the wrongs of three centuries. The splendid mosques were burned and demolished, the women and the young men were sent to Constantinople as slaves.

The Emperor Romanus II. died at this moment; his wife Theophane, who had only young children, entered into secret negotiations with Nicephorus. The conqueror of Crete and of Syria had many partisans; he arrived with his army before the capital. A popular sedition arose, and finally, after a long struggle, Nicephorus was proclaimed Basileus, made a triumphal entry, and received the crown. Theophane was the real inspirer and promoter of this revolution. She was young, full of ambition, and wished to reign under the name of Nicephorus. He was in love with her; she was extremely handsome. "It was a secret to nobody in Byzantium that the charms of the Empress had produced a deep impression on the simple soul of the austere Nicephorus. The crowned siren, whom he loved so much afterwards, had already profoundly agitated this violent nature, made of exalted passions, maintained with difficulty under the rigid rôle of an excessive piety and chastity." Theophane is the heroine of the drama told by M. Schlumberger. We must imagine her in her great ceremonial costume, like that of the Empress Irene, the second wife of Alexis Comnenus, in the beautiful enamel which forms a part of the celebrated *Pala d'oro* now to be seen on the great altar of Saint Mark's in Venice—sceptre in hand, with long embroidered draperies, a crown with triple points and flowing fillets.

From the year 963, Nicephorus became *autocrator* of the Romans and Regent of the Empire in the name of the two young Basileis, the children of Theophane. He was fifty years old, of an olive complexion, with long black hair, stout, very muscular, a sort of Hercules, and, as we have said, half monk, half soldier. He had relations with the builder of the St. Laura Convent on Mount Athos. After having first shut up Theophane in a convent, Nicephorus, who himself led the life of a cenobite in the palace at Byzantium, sent for her, and, throwing off the mask, and unable longer to resist his passion, married her. Was he simply carried away by a blind love? Did he wish to improve his political situation by this union with the mother of the two young legitimate sovereigns? The Patriarch tried to oppose this union, but finally he had to submit.

"This strange man, half soldier, half ascetic, this devout warrior already old, who had sworn, since the death of his parents, to abstain from sexual commerce, who had sworn never to eat any meat, who wore on his skin the hard cilice of his uncle, the old solitary, Michael Maleïnos, dead in the odor of sanctity; this iron man, whose confessors tried in vain to moderate his austerity, this man, accustomed to live in camps, whose habits were rude, united himself to this refined woman, delicate, exquisite, an enchantress in every respect, but profoundly corrupt, without faith and without love."

It was the story of Samson and Delilah over again, the story of Hercules and Dejanira. The details are changed, the setting is different. M. Schlumberger very cleverly reconstitutes the scene of this extraordinary Byzantine union; archæology becomes in his hands the servant of psychology. Nothing can be more operatic, if I may use the expression, than his description of the marriage of Nicephorus and Theophane. Nicephorus swore on the holiest relics that his own children, if he had any, should only reign after the children of Theophane and Romanus II. The Patriarch would not allow the Emperor to enter a sanctuary, hidden behind the silver doors of the *iconostase*. The canons of the Church forbade it for a year to those who had contracted a second marriage. The bold soldier had to submit to the will of the old and fanatical priest. Theophane and her husband received this insult before the eyes of a whole people. It did not prevent them from holding their court a moment afterwards. The procession of all the men passed before the autocrator, the women before Theophane. This daughter of an innkeeper, whom her beauty and her wit had made the real mistress of an immense empire, sat on a golden throne in the gyneceum, surrounded by an army of eunuchs, with painted face, a gown embroidered in gold, like an idol, her shoulders covered with a heavy mantle having great particolor squares crusted with pearls and rubies; on her head she had the diadem with a triple row of pearls.

The reign of Nicephorus was troubled with perpetual wars. His popularity did not last long; he was hard and avaricious, he levied excessive taxes. He was very partial to his soldiers, but treated the population with much severity, even cruelty. He soon was obliged to fortify his own palace, and the hostility against him became general. Theophane saw the end coming, and she precipitated it. She had never felt any love for her husband; she entered into a conspiracy against him with a bold warrior called John Zimisces, who had become her lover. On a certain day the conspirators entered the palace in disguise in women's clothes. Theophane hid them in the gyneceum. At five o'clock in the morning Zimisces arrived, found the Emperor asleep on a tiger's skin, and fell on him, sword in hand. His accomplices finished the old man while Theophane waited behind a door. So fell, at the age of fifty-seven, the man who had gloriously defended the Byzantine Empire against its numerous enemies, who had reëstablished the imperial armies and inflicted terrible blows on the Saracens. He had been less fortunate on the Danube, but, had he lived longer, he might also on that side have given greater strength to his monarchy. His Armenian murderer, who became his successor, continued his policy, and M. Schlumberger will probably give us some day the history of his reign, as well as of that of Basil II., who reigned after the usurper.

Correspondence.

THE SILVER NOTES.

To the Editor of The Nation:

Sir: The second section of the Silver Bill says: "That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand in coin at the Treasury of the United States or at the office of any Assistant Treasurer of the United States, and when so redeemed may be reissued; *but no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom then held in the Treasury purchased by such notes.*" And again: "That upon demand of the holder of any of the Treasury notes herein provided for, the Secretary of the Treasury shall, under such regulations as he may prescribe, *redeem such notes in gold or silver coin at his discretion.*"

How can these two clauses be reconciled? If the Treasurer should buy $5,000,000 worth of silver bullion and issue Treasury notes of an equal amount in payment therefor, and then redeem the $5,000,000 certificates with gold, there would be that amount of silver in the Treasury vaults and no Treasury notes outstanding.

I will say further that it does not seem probable that redemption in silver will be accepted on these notes to any great extent at present, as the Treasurer would be giving only about 85 cents worth for a dollar as the market now stands. W. M. H.

St. Louis, August 4, 1890.

[The probable explanation of the mystery is that the word "outstanding" means out of the issuing department of the Treasury. Thus, in the last annual report of the Treasurer of the United States, he reported as "outstanding" June 30, 1889, $262,629,746 of silver certificates. He reported exactly this amount of standard silver dollars in the Treasury. He reported also $5,487,181 of silver certificates in the Treasury, this latter sum being a portion of his assets. From which it would appear that silver certificates once issued are considered "outstanding," although they may have been taken back, being held by the Treasurer subject to reissue.

As long as the Secretary maintains the two kinds of dollars, silver and gold, at par with each other, it is erroneous to speak of one of them as being worth only eighty-five cents "as the market now stands." The reason why redemption in silver will not be generally accepted is, that silver is an inconvenient thing to carry around. The probability is, that when the Secretary is called on to redeem any of the new Treasury notes, he will give a check for the amount, drawn on the Sub-Treasury, and this check will turn up at the Clearing-house and be settled for

like all other demands on the Treasury. Of course it will be settled at gold value as long as the Secretary has gold to settle with or the means of getting it.—Ed. Nation.]

THE KITTERY NAVY-YARD.

To the Editor of The Nation:

Sir: In President Arthur's time the condition of things at the Kittery Navy-yard attracted my attention. The resolution lately introduced in Congress leads me to think that the following extracts from my note-book of that time may be of general interest. Each story was vouched for by a respectable citizen of Portsmouth or Kittery. Beyond this I cannot assert their truth; but I am sure that they are typical of hundreds of stories for many years current in this region.

(1.) An engineer in the Navy declined to employ at the Kittery yard an incompetent man sent to him by a local Republican politician. The politician sent back the man, with a vague threat that unless he was employed something would happen. The engineer repeated his refusal: in a few days he was ordered to sea for three years.

(2.) An Irish Democrat, wishing a recommendation to the yard, promised a Republican citizen of Portsmouth, who did not happen to approve the plan, that if the citizen would get him work in the yard, he would henceforth be a good Republican.

(3.) A Kittery man, unskilled, was offered $2.50 a day for work as carpenter at the Navy-yard. Normal wages for skilled labor at that time were $1.50 to $2.00. He demanded $3 and got it.

(4.) About the same time a laborer at the yard was paid a full day's wages for carrying three boards from one part of the yard to another.

(5.) A Kittery man offered work at the yard declined it, on the ground that he would rather wait till election day and see what his vote was worth in cash. On election day there were votes enough without his. He received nothing. This story was current as "a good joke on the man."

(6.) A widow in Portsmouth was offered $150 if she would prevent her three sons from voting the Republican ticket. She accepted the offer. When the election came, the money was unpaid. The indignant sons declined to vote at all.

These current stories throw light on what first directed my attention to the matter. I saw three laborers working together—two admirably, the third with irritating laziness. I asked a local farmer what the matter was with the lazy man. "He's a Republican," was the answer, "spoiled by the yard."

Faithfully yours, B. W.

New Castle, N. H., August 3, 1890.

THE KENTUCKY CONSTITUTIONAL CONVENTION.

To the Editor of The Nation:

Sir: Just forty years ago, a very able body of men gathered at Frankfort and formulated the third and present Constitution of Kentucky, a very lengthy document, which, in the main part, sets forth with remarkable particularity the duties of State and county officers, etc.; in the Bill of Rights forever abolishes deodands, and takes a general crack at creation; but nowhere contains a single word in regard to railroad or other corporations, or anything else more modern than the times of Jefferson.

The secret of the retention of this antiquated muniment is easily fathomed by reading together articles x and xii, the first containing an adamantine foundation for an iron-clad slave code; the other requiring for any the slightest amendment three votes by three distinct Legislatures — meeting biennially — and three votes by the people, any one of which failing, the whole series must be begun *ab initio*. This mishap has occurred, indeed, more than once.

By the strange irony of fate, this slavery provision—mighty enough to defeat the renowned and idolized Henry Clay for a seat in the Convention, and strong enough to draw after it as a safeguard this tremendous law, not for but against amendment—is the only clause which will certainly disappear from the new Constitution.

One hundred delegates were elected last Monday to meet in September and make our fourth Constitution. Many able men among them; but they were elected on party lines—about 85 out of 100, Democrats. Hardly a dozen candidates, therefore, thought it necessary to allude, during the campaign, to their probable courses and votes, if elected; speeches ran, instead, on the good or bad "Democracy" of themselves and their opponents—who taught them the word?—and whether the other man had not at some remote period, by the devil's bidding, voted for "local option"—in one instance, as it appeared, through the mistake of an election clerk. Under such circumstances, the strongest and best Mugwump of '84, who had stuck ever since, like the *Nation*, to Democracy and Reform, but who voted for Frémont and Lincoln before he voted for Cleveland, would have stood as much chance for a Democratic nomination as a New York alderman for the eternal bliss of Paradise.

There will probably be, however, at least two good changes in the new Constitution:

First. The appellate courts will be reformed, making the judges elective by the entire State instead of by districts. The people do not desire an appointive judiciary, and probably would not ratify a constitution providing one.

Second. The people demand the Australian ballot system and the real freedom it brings (the present Constitution establishes a *viva-voce* vote at all State elections). The probable effect of this reform is rather overestimated by the politicians. I heard one delegate-elect remark that he would vote for the ballot in deference to Public Will—the capitals are mine—but he solemnly prophesied that within three years the State would be Republican; to which the by-standing politicians sadly murmured, Amen! As the Democratic majority, on Monday, was 45,000, a fulfilment of this prophecy would be a curious commentary on the timidity of our "unarmed Kentuckians."

The Convention will have before it an excellent model in the Louisville Election Law, which was drawn up by its authors partly to that end, and has worked very smoothly for the last two years. A. L. D.

Louisville, Ky., August 6, 1890.

THE AUSTRALIAN BALLOT IN TENNESSEE.

To the Editor of The Nation:

Sir: The first election in this State under the Australian-ballot system took place on August 7, and thoroughly confirms the results as announced from other States. The election was everywhere orderly. The ward-politician who has heretofore surrounded the polling-places was absent, and the voters, without molestation, cast their ballots and retired at once. The most notable effect of the law was in Hamilton County, in which the city of Chattanooga is. A corrupt ring has for years been in control of the offices of that county, and thoroughly dominated its county politics, Under the operation of the law, the good citizens of the place were able to defeat every objectionable candidate that the ring proposed. Approbation of the law is universal, and its extension to the whole State may be looked for. It is now applicable only to cities of over 9,000 inhabitants, the places where corruption has been flagrant, and was adopted by the Legislature as an experiment in the hope of correcting those evils. Gustavus.

Nashville, Tenn., August 9, 1890.

THE ALLIANCE IN THE SOUTH.

To the Editor of The Nation:

Sir: In the editorial on "The Alliance Movement" in the *Nation* of July 31, 1890, it was said: "In Arkansas, however, it is the Republicans who have decided to cast their fortunes with the Alliance, having endorsed Mr. Fitzer, its gubernatorial candidate."

Mr. Fizer (not Fitzer) is the candidate of the Union-Labor party so called, an organization which sprang up two years ago as a relic of the old Greenback party. Some of your readers may have noticed that in 1888 it had a candidate for the Presidency in the field, a Mr. Streeter. The candidate on the same ticket for Vice-President, Mr. Cunningham, is a citizen of this place. The party has never had any thorough organization in this State, and it is difficult to tell what it represents. It is composed chiefly of disappointed Democratic office-seekers and political nondescripts generally. Its platform this year favors none of the measures you mention as being supported by the Alliance except the governmental ownership of railroads.

In 1888, when the Republicans, the Democrats, and the Union-Laborites each had Presidential tickets in the field, the last-named polled only about 10,000 votes.

The Alliance is very strong in this State, comprising perhaps three-fifths of the voters. They have never gone into politics as a body. They have no tickets out in any county in the State, so far as I know. They have so far seemed content with the present party organizations, and are chiefly Democrats. The Republicans, being in a hopeless minority, in 1888 "endorsed" the Union-Labor candidate. They have this year repeated this endorsement. —Very respectfully, T. D. Crawford.

Little Rock, Ark., August 6, 1890.

To the Editor of The Nation:

Sir: In your issue of July 31, in an editorial on "The Alliance Movement," you say: "In Alabama the old-line Democrats have sought self-preservation in the same way. Colonel Thomas Hardman, their candidate for Governor, has withdrawn from the canvass, leaving the field clear for Colonel W. J. Northern, the Alliance candidate." This is a mistake. The Democratic Convention held at Montgomery, some two months since, nominated Colonel Thomas Jones, a prominent and active lawyer of the Montgomery bar, and on Monday, August 4, he was elected by a large majority Governor of Alabama. The Alliance candidate before the Convention was the Hon. Reuben Kolb, the present State Commissioner of Agriculture.—Yours truly,

J. W. Horton.

Birmingham, Ala., August 6, 1890.

[By a slip of the pen we wrote "Alabama" in place of "Georgia."—Ed. Nation.]

To the Editor of The Nation:

Sir: In an editorial on the Alliance movement in the *Nation*, No. 1309, you say: "Having refused to endorse the Sub-Treasury Bill, Senator Vance is no longer fitted, in the estimation of the Alliance men, to represent the State of North Carolina at Washington, and if they can elect enough members of the Legislature, they propose to displace him." This statement is misleading. A month ago the *Progressive Farmer*, which is the official organ of the North Carolina Farmers' Alliance, and whose editor, L. L. Polk, is also the President of the National Farmers' Alliance, printed an editorial which, after criticising Vance's position on the Sub-Treasury Bill, closed with the following significant paragraph: "The moral of it all is this: We must go back to the old way of electing farmers to Congress and the United States Senate. It becomes more and more apparent that those we call our friends are our enemies. Begin this year. Delays are dangerous." The *Progressive Farmer* circulates largely among farmers. They represent the one great interest of the State. They compose the rank and file of the Democratic party, and control its action when they desire. The editorial was a signal for Democratic county conventions to express their confidence in the faithfulness and honesty of Vance. More than this, many Alliances have done the same, some saying that they "regret," and others that they "heartily disapprove," the criticism of the *Progressive Farmer*. Prominent Alliance men declare that although they dislike Vance's position on the Sub-Treasury Bill, they favor and will fight for his return to the Senate. Some counties have even instructed their candidates for the Legislature to vote for him, and candidates have found it a drawing card to declare for him in their public utterances.

There are a few demagogues in the Alliance in North Carolina who would care neither for the Democratic party nor the State if by that means they could accomplish their own advancement, but they are few; they cannot dictate the policy of the Alliance, and this organization, if its words and actions are any criterion, are for Vance by a very large majority. No one has suggested a successor to Vance should he be retired, but it has been hinted that the editor of the *Progressive Farmer* would not be adverse to Senatorial honors.

The real fight in North Carolina is for the Congressmen. The Alliance has captured two of the five already nominated, and will probably get two if not three of the remaining four. This struggle is within the party, and the utmost harmony prevails where the nomination has been made. The Alliance presents certain demands to all candidates; some have refused to sign them, but that this does not mean political death is shown by the renomination of Congressman Bunn of the Fourth District after he had refused to sign the demands and when the other candidates had done so.

Stephen B. Weeks.

Chapel Hill, N. C., August 9, 1890.

Notes.

The anonymous story which has been appearing in the *Century*, called 'The Anglomaniacs,' will be issued in book form in October by the Cassell Publishing Co. They will also bring out 'Society as I Have Found It,' by Ward McAllister, in two editions, one limited and *de luxe*.

Ginn & Co. will have ready next month Shelley's 'Defense of Poetry,' edited by Prof. Albert S. Cook of Yale; and the second volume of the selections in prose and verse, 'Open, Sesame!' edited for committing to memory by Mrs. B. W. Bellamy and M. W. Goodwin.

D. Appleton & Co. announce that the third volume of Mr. McMaster's 'History of the People of the United States' is so far advanced as to be likely to appear in the course of the winter. It begins with the Congressional debate on the constitutionality of the Louisiana purchase, and closes with the War of 1812.

Macmillan & Co. have in press for immediate publication a new volume of stories by Rudyard Kipling, uniform in size with 'Plain Tales from the Hills.'

'Valve Gears,' by Prof. H. W. Spangler of the University of Pennsylvania, is in the press of John Wiley & Sons.

'A Brief Course in the Elements of Chemistry,' by Prof. James H. Shepard, is in the press of D. C. Heath & Co.

Sir George Grove's 'Dictionary of Music and Musicians (1450-1889)' is now rounded out by an Index to the four volumes prepared by Mrs. Adela H. Wodehouse, herself one of the contributors to the Dictionary (Macmillan & Co.). The Index comprises, of course, all the titles of the main work, but also selects from the articles names and topics which would otherwise elude research. It is followed by a catalogue of the articles contributed by each writer in the Dictionary. Dr. Grove's list proves that the editorial office was with him no sinecure: his articles fill two pages of fine print. Mr. W. H. Husk comes next, Mr. W. S. Rockstro third, and Mr. J. A. Fuller-Maitland fourth; but all are far behind their chief. Mrs. Walter Carr was the most abundant contributor of her sex, which has five representatives on the list.

The companionable little series known as "The Stott Library" (Macmillan) began the republication of Montaigne's Essays in Florio's version, under the supervision of Mr. J. H. McCarthy. A second pair of volumes, comprising the Second Book, have now appeared, with the customary frontispieces, and, since the editor has already supplied an introduction, with a dedication on his part to Robert Louis Stevenson.

The index to vol. xiii. (new series) of the *Critic* (January-June, 1890) shows a particular stress on the following topics—Art, Browning, Copyright, Libraries, and Shakspere. The Shakspere Department is new, and is conducted by a votary, Dr. W. J. Rolfe of Cambridge, Mass. The *Critic* will conclude its tenth year with the current volume.

Profs. Charles Mills Gayley and Fred Newton Scott have jointly prepared a classified 'Guide to the Literature of Aesthetics,' which is printed as Bulletin No. 11 of the Library of the University of California at Berkeley; and which, though a full pamphlet of 116 pages, is to be had of the Librarian for the postage—five cents. It is the forerunner of a series of bibliographies which will deal with special aspects of the main subject, so that the present essay is designedly general and without pretence of being exhaustive. The bibliography of Literary Criticism, for instance, will shortly be sent to press. The compilers and the Library are much to be commended for this service to students.

From time to time, as the work on the United States Geological Survey proceeds, Prof. O. C. Marsh puts out a preliminary notice of some of his most important discoveries, in an illustrated pamphlet of a few pages, from the *American Journal of Science* or elsewhere. Recently some half-a-dozen of these notices have reached us, relating to the gigantic Ceratopsidæ, new Dinosaurian reptiles, the new order Hallopoda, new Cretaceous Dinosaurs, new Tertiary mammals, and some extinct Testudinata. One of the oddest of his recent acquisitions is the huge cretaceous Dinosaurian Triceratops, a creature with a skull six to eight feet in length and a brain in inverse proportion—of the smallest among land vertebrates. Over each orbit the animal had a slender pointed horn core a couple of feet or more in length, and over the snout a shorter one. It had a rostral bone in front of the premaxillaries, and was furnished with a beak like a turtle or a bird, besides the long series of peculiar teeth on each jaw at the sides. From the back of the skull the parietal and the squamosal bones were produced and expanded over the nape into a broad, shovel-shaped hood, the hinder edge of which bore more than twenty smaller horns. Recent Reptilia furnish nothing that compares closely with the Ceratopsidæ.

Three papers fill the current *National Geographic Magazine* (vol. ii, No. 3). The first, by Lieut.-Com. Chas. H. Stockton, possesses the most popular interest, for it describes the arctic cruise of the United States steamship *Thetis* a year ago, when the entire coast line of Alaska to Mackenzie Bay was followed for the first time, and a return made in one stretch to Herald Island and Wrangel Land. Off Point Barrow a whaling fleet of forty-seven vessels carrying the American flag was a stirring spectacle. In Mackenzie Bay a tidal rise and fall of three feet was met with, and from this point was launched the first of several drift-floats which will render an account of themselves after many days. A view of the whale-like outline of Herald Island is given. The other papers are on the Law of Storms, fully illustrated, by Everett Hayden, and on the Irrigation Problem in Montana, by H. M. Wilson.

"The Place of the Medical Department in the Army" is the title of a very forcible and indeed conclusive paper in the *Journal of the Military Service Institution* for July by Brevet Lieut.-Col. Alfred A. Woodhull of the Medical Corps. It is in the first place an argument for the essential identification of the medical officer with the army in a true military sense, and against regarding him as a mere civilian and non-combatant appendage. This is demonstrated with the aid of very striking illustrations. Major Woodhull next contends that his brother "surgeons" should be regularly addressed by their military titles, as is, in fact, the practice in communications from the Adjutant-General's office. He concludes with some excellent advice about the training of newly appointed medical officers in their unwonted duties, the keeping of the service abreast of medical science by compulsory attendance without cost at standard medical schools, the elimination of the unworthy without resort to a court-martial, etc. Maj. Woodhull is consistently opposed to that part of the Geneva Convention which neutralizes medical officers on the field. They may often, he says, gain important intelligence, and they have sometimes taken command of troops left without a head.

What may be called a passing topic, Heligoland, is pleasantly treated by Walter Armstrong in the *English Illustrated Magazine* for August, with the aid of illustrations which show off the island's picturesqueness to advantage.

In the London *Athenæum* of July 26, Mr. C. S. Warren, whose address is Southfields, Longford, Coventry, prints a tentative list of all the versions of the "Dies Iræ" in the English language. The American number ninety-two,

or five more than the English; but then Dr. Abraham Coles flings no fewer than thirteen of his own into the scale. On the other hand, the English went at the task as far back as 1621; our countrymen first took it up in 1841. While eight versions are set down to the seventeenth century, the eighteenth produced but two. The rate of production in the present has been nearly two per annum.

The American Forestry Association will meet on September 2, by invitation of the Government of the Province of Quebec, in the Parliament Buildings, and will sit four days. The Treasurer of the Association is Dr. Henry M. Fisher, No. 919 Walnut Street, Philadelphia.

On the 19th of last month the German composer Robert von Hornstein died at his home in Munich. He was known best in Germany through several charming books of songs, in which he had put the verses of a most cosmopolitan set of poets—Shakspere, Goethe, Byron, Béranger, Heine, and others—to music. He has also written a book of "Duets," of "Songs for a High Voice"; two operettas, "The Pages of Versailles" and "Adam and Eve," with text by Paul Heyse; a ballet, "The Flowers' Revenge"; and the pretty music to Shakspere's "As You Like It," without which the play is never given on the Munich stage. He was born December 6, 1833. At Leipzig his teachers were Rietz, Moscheles, Hauptmann, and others.

We learn with regret of the recent death at Munich, in his sixty-first year, of an eminent jurist, Dr. Franz von Holtzendorff, who had for more than thirty years occupied a prominent position as teacher, writer, and reformer, particularly in respect of the imprisonment and punishment of criminals, and as joint editor of two remarkable series of political and social tracts, "Zeit- und Streit-Fragen" and "Sammlung gemeinverständlicher wissenschaftlicher Vorträge," which have had a very enlightening influence in Germany. He was the founder, too, of the 'Encyklopädie der Rechtswissenschaft in systematischer und alphabetischer Bearbeitung,' the author of numerous penological works and legal manuals, of a book of sketches of travel in Scotland, of a treatise on Rumania's riparian rights on the Danube, etc. He undertook the defence of Count Harry von Arnim. To him Germany owes its "Juristentag," a periodical convention of native jurists for professional goodfellowship and amelioration of the statutes, which dates from 1860. In 1863 he participated in the "Protestantentag" which met at Frankfort and gave birth to the Deutscher Protestantenverein—an active protest against orthodox illiberalism and dogmatism, and an important factor in the *Kulturkampf*. Finally, this noble and indefatigable scholar was conspicuously in advance of his class and countrymen in being an advocate of the elevation of woman. Germany and the University of Munich suffer a great loss in him.

—A number of local historical works have accumulated on our table. We may begin with the stout fourth volume of the Chicago Historical Society's Collection, edited by the President, Edward G. Mason, and very handsomely printed, under the general title 'Early Chicago and Illinois.' The arrangement is from present time to past, and at the front we have memorial biographies of some very eminent citizens of Chicago (as, Isaac N. Arnold and E. B. Washburne), which are good reading in themselves, and convey no little information concerning the history of the West and of contemporary New England, from which most of these men were derived. French biographies follow the American, and both series are illustrated, as far as possible, with portraits. The two main divisions of the remainder of the book are occupied with a copy of Col. John Todd's Record-Book, and with hitherto inedited papers relating to British Illinois. There is a pretty full index. The town of Guilford, Conn., celebrated a year ago the 250th anniversary of its settlement, and the proceedings have been preserved in a solid volume, with a few illustrations, of which by far the most interesting is that of a stone house built in 1639. The list of houses more than 100 years old is surprisingly large. The best of the historical addresses is that by Prof. Samuel Hart, but all are instructive; and the Rev. James A. Gallup, sixth pastor of a church which in 182 years has never dismissed a pastor, remarks a compensation for the steady drain of the young men to the cities and manufacturing towns in the advent of the summer beach cottager and the revival of ship-building.

—Noticeable in the Guilford celebration was the number of speakers representing the families of the first settlers. Heredity played an equally significant part in the exercises on the 150th anniversary of the Greenville Baptist Church in Leicester, Mass., on September 28, 1888, now reported in a thick pamphlet. The first pastor (to whom a tablet was set up by his descendants, with Mr. Samuel S. Green, the well-known Librarian of the Worcester Free Library, for their spokesman) was also a physician, and his posterity have abounded in doctors and druggists. This church was the eighth of its denomination in Massachusetts, and its communicants had to acknowledge themselves "Anabaptists" in order to be exempt from rates under the statute of 1757. The original building was removed to make way for the present, and when burnt up was serving as a woollen mill. The "First Church of Christ in Quincy," Mass., was 250 years old in September last, and the present pastor's historical sermons, added to the commemorative proceedings, make a volume of very uncommon interest. The "Chappel of Ease," as Lechford called it, had for its first pastor John Wheelwright, whose sympathy with Mrs. Hutchinson's views involved them in a common condemnation and banishment at the hands of Boston, leaving, however, a leaven of liberality which Unitarianism, on its advent, found of its own kind and ready to adopt the name. Into this church were baptized John Adams and John Quincy Adams and John Hancock. All these worthies, together with their wives, Mr. and Mrs. Charles Francis Adams, Josiah Quincy, Pastor Wheelwright, etc., enter into the portrait illustrations of the handsome volume. Other photographic views are of old houses, churches, and interiors. The literary as well as typographical execution is much to be commended (Boston: Damrell & Upham). We can barely mention 'Historical Papers and Journal of Semi-Centennial of the [Episcopal] Church in Florida,' a pamphlet likewise well supplied with portraits. Its greatest lesson is, we believe, in the aloofness of this denomination from the humanitarian instinct of the age. On the all-absorbing subject of slavery we read only that, down to 1838, "it is grateful . . . to note the interest manifested in the spiritual welfare of the negroes. There is frequent mention of them by the different missionaries"; and that Bishop Rutledge congratulated the Convention held in 1861, after Florida had seceded, to reorganize the Church South, "that the Church had taken no part in the unhappy dissensions which were agitating the country." This was only too true, both North and South. Bishop Polk of Louisiana soon afterwards took the field in arms to prevent black Christians from becoming freemen.

—The section of "Social Economy" of the Paris Exposition of last year is the subject of an elaborate report prepared by M. Jules Helbronner, a Canadian Labor Commissioner, and published by the Canadian Government in a portly (French) Blue-book of 686 pages. The terms "Social Science" and "Social Economy" are used so loosely and with such a variety of meanings, that it may be necessary to explain that in this instance what is meant is the all-pervading "Labor Question," which, in its turn, is likewise a most comprehensive expression, embracing such topics as wages, coöperation, benefit societies, workingmen's dwellings, alcoholism, and a dozen more. The exhibit referred to consisted in the main of several hundred documents, more or less voluminous, submitted by as many firms and associations, principally French, although there were a few from Belgium, England, and Italy. The report of the Belgian section made a volume of 1,100 pages. The whole number of exhibitors was 1,116, and their contributions were divided into sixteen classes, treating various phases of the general subject. M. Helbronner reprints such a selection of them as in his judgment is likely to be of practical service to Canada. He follows the official classification just mentioned. Thus, in section i., Wages, he gives not only tables of wages in different industries, but also details concerning a number of selected establishments together with the rules enforced in different factories, as well as a table of strikes in France from 1874 to 1885. Section ii., on Profit-Sharing, contains a full account of all the French establishments, and of some in other countries, in which the owners have admitted their workmen to an interest in the profits; the testimony is uniformly in favor of this method of solving the vexed problem of the relations of labor and capital. Not so encouraging is the second part of the same section, devoted to coöperative manufacturing, in which as yet no decisive success can be recorded. Space fails us to follow the report through other branches of the subject, but enough has been said to show that it offers a mine of valuable and interesting information for students of the labor question.

—'Das Heidentum in der Römischen Kirche: Bilder aus dem Religiösen und Sittlichen Leben Süditaliens' (Gotha: Fried. Perthes, vol. i., pp. 342) is the title of an interesting work by Th. Treve, who during the past twelve years has been the pastor of a German Protestant church in Naples, and has taken advantage of his continuous sojourn in that city to study Neapolitan manners and customs and popular superstitions, which he treats chiefly as survivals of pagan antiquity. The field which he has chosen for his investigations is a peculiarly fruitful one. Of the many Grecian colonies in Macedonia, Thrace, Asia Minor, and elsewhere which bore the name of Neapolis (New Town), the one founded between the picturesque promontories of Misenum and Campanella on the western coast of Campania was the most celebrated and most prosperous, and surpassed all the others in historical importance. In this beautiful bay Phœnician traders anchored their ships, and, at a later period, Alexandrian merchants established themselves on the shore and left a reminiscence of their enterprise in the street still known as *Vico Nilo*. Nevertheless, Naples was at no time a great commercial emporium like the Roman colony Puteoli (Pozzu-

oli), nor did she ever compete with Venice, Genoa, Pisa, and Amalfi for the sovereignty of the Mediterranean. Her greatness consisted, not in material wealth or political power, but in the fund of intellectual treasures which she had inherited and preserved. Under the dominion of Rome she clung with fidelity to the traditions of the mother country, prided herself on the purity with which Greek was spoken within her walls, and remained the seat and centre of Hellenic culture in Italy. She fostered the arts in a liberal spirit, and maintained schools to which Augustus intrusted his nephew and presumptive heir, and in which Roman youths of noble lineage received their education. She was the only Italian city that would not tolerate the brutalities and butcheries of the amphitheatre, as she afterwards refused to permit the Holy Office to exercise its inquisitorial functions within her domain. The calm and cheerful serenity of the place, and the "still air of delightful studies" which pervaded it, are sufficiently indicated by such epithets as *dulcis, docta, ad otia nata*, so frequently applied by Roman poets to their favorite Neapolis. To-day these charming characteristics have given place to scenes of incessant din and vulgar hubbub, and the ancient *otium cum dignitate* has degenerated into a lazy and ignoble *dolce far niente*. Herr Treve points out many curious survivals of pagan antiquity in the usages of common life among the lower classes of the population, but he dwells chiefly upon resemblances and parallelisms in religious conceptions and ecclesiastical ceremonies. He regards the Romish Church as the great reservoir into which has drifted all the débris of ancient superstition. The shrines of Christian saints have superseded the altars of heathen deities, but the worship is essentially the same. From an ethical point of view Herr Treve finds Neapolitan Christianity vastly inferior to the Greek paganism which it has supplanted. A painful example of this deterioration is seen in the relation of man to the lower animals. His book is not a compilation from other works, but a record of original observations, and may be commended as a valuable contribution not only to comparative theology and mythology, but also to the broader science of comparative culture and civilization.

—"The Tokugawa Princes of Mito" is the title of a very interesting paper read before the Asiatic Society of Japan by Mr. E. W. Clement, an American teacher living in the city which was once the capital of these famous patrons of literature. The paper is now reprinted as a pamphlet of twenty-four pages, with three epigraphic illustrations. Mito is an interesting city situated northeast of Tokio, near the seacoast, the name meaning "water-door." The feudal house was founded by Yorifusa, the eleventh son of the great Iye'yasŭ, the founder of Yedo and the Tokugawa dynasty of shoguns who ruled Japan from 1604 to 1868. The house of Mito was one of the three, Kii, Owari, and Mito, out of which an heir to the shogunate could be chosen, and it was one of the revenges of history that while the heirs were always, until 1867, taken from Kii or Owari, the shogun from Mito when chosen was the last to hold the office, and to surrender it, prior to its abolition, to the Mikado. The two most famous Princes of Mito were Mitsukuni (1628–1700), who founded a library of 200,000 volumes, gathered a circle of scholars and historiographers around him, invited to his court refugee Chinese scholars driven out of China on the fall of the Ming dynasty, reformed abuses, encouraged Chinese learning and the spread of Confucianism, and wrote the 'Dai Nihon Shi,' the great standard history of Japan. By proving historically that the institution of the shogunate was a usurpation, he set in train the influences which led ultimately to the revolution of 1868. The next important personage was Nariaki, who ruled from 1829 to 1861, and was one of the very few powerful daimios who had personal as well as official importance. Outwardly, he opposed foreign intercourse and the Yedo Government, and paid great reverence to the Mikado, while most probably a student of Christianity and of Western civilization, and a believer in the Japan which exists to-day. He was one of the most prominent figures in the political turmoil consequent upon the opening of the ports by the Townsend Harris treaty. His successor has often figured in popular American and European illustrated newspapers and in broadside pictures of "rulers of the world," as the Mikado Mutsuhito. The present head of the Mito family is now the Marquis Tokugawa Atsuyoshi, the Minister of Japan to Italy. The pamphlet is an interesting indication of the thoughtful study of Japanese history in its own home by Americans. Since 1888, when Mr. Shimada, the editor of the *Mainichi Shimbun* (Daily Newspaper) of Yokohama, published his 'Kai Koku Shimatsu' (origin and all the circumstances of the opening of the country of Japan to foreign influences) or the life of Ii, the great rival of Mito—a book which bids fair to create a new epoch in the method of writing Japanese history—the lively controversy as to the merits and demerits of Mito has been going on in newspaper review and solid volume. It is probably the forerunner of that critical reconstruction of the history of Japan which is sure to come, and which even Government censors, with the weaponry of prisons and fines, cannot much longer keep postponed.

RECENT SOUTHERN FICTION.

Throckmorton. By Molly Elliot Seawell. D. Appleton & Co.

Jack Horner. By Mary Spear Tiernan. Boston: Houghton, Mifflin & Co.

A Little Radical. By Jeannette H. Walworth. Belford Co.

Expiation. By Octave Thanet. Charles Scribner's Sons.

White Marie. By Will N. Harden. Cassell & Co.

Strange True Stories of Louisiana. By George W. Cable. Charles Scribner's Sons.

THE novel-writing industry continues to flourish in the South. The readiness of Southern warriors, or of their wives and daughters, to beat swords and powder flasks into pens and inkbottles is one of the most peculiar consequences of the war, perhaps the only one that has no parallel in history. Eagerness to dilate on one's own discomfiture is not common. People generally preserve an impenetrable silence about defeat, at least until the bitterness has been outworn and many interesting particulars have been forgotten. By this reticence much valuable experience is lost, and future historians are driven distracted by a quest for data to describe the condition and feeling of a conquered nation.

The world really owes a debt of gratitude to Southerners for the ease with which they threw off morbid sentimentality, or compromised with it by adopting the medium of fiction, and set about telling how their homes were made unto them desolate, even while the shadow of that desolation still lay thick and heavy over all their land. While feeling was strong and memory keen, they wrote some wonderful stories, but, as feeling wastes into vague sentiment and memory grows cold, the strength of the stories diminishes. The tendency of the writers is to substitute for events which we know any and every Southerner might have shared, those romantic complications which no actual human beings, not wholly devoid of intelligence, ever allowed themselves to become involved in. A uniformity of folly is preserved by adjusting the characters to the plot, though a close reader may discover inconsistency when some ridiculously entangled person displays a faint glimmer of reason. Fortunately, the blighting tendency towards ineffable foolishness is checked, and may yet be cured, by the appearance of a critical faculty and dawning ability to recognize the difference between heroics and heroism.

'Throckmorton' illustrates both tendencies. The plot is agonizingly romantic. In mixing lovers up, *Puck* was clumsy compared with the author; and, as we follow her solemn and harrowing disentanglement, we begin to realize that "A Midsummer Night's Dream" is a superb *tragédie manquée*, all on account of its author's too volatile spirits and his disposition to make light of the most serious affairs. It is in the character-drawing of persons who are not lovers, and of lovers when temporarily diverted from love's miseries and ecstasies, that the author shows a critical faculty which condones much nonsense. There were doubtless many generals who, like Gen. Temple, were more courageous than capable, and many mothers who, like Mrs. Temple, dragooned their families into everlasting mourning for a son left dead on the battle-field; but the Southern author who rejoices in poking fun at the General, and who deliberately exposes the selfishness if not cruelty of Mrs. Temple's grief, must have independence of observation and the courage of her opinions. These excellent qualities are even more boldly asserted in the delineation of the "war widow," Mrs. Judith Temple, and in that of her sister-in-law Jacqueline. To tell the whole truth about a Jacqueline without making her appear contemptible is no easy task. When Jacquelines die young, as Jacqueline Temple does, and as they all should, their grave defects of character are forgotten, and memory dwells on an elusive charm which all felt and none could describe. If they happen to live to full maturity, they become hard, sordid, fat women, with whom it appears ridiculous to associate a fascinating past.

The cleverness and the stupidities of 'Throckmorton' are both suggestive of the 'Berkleys and their Neighbors,' a Virginian novel which appeared several months ago. If they are by the same author, she is to be congratulated on a general improvement in manner and style, yet still advised to look to her grammar, and to consider that sentences are not beautiful or impressive simply because they are long.

It is somewhat surprising to find a thick book, entitled 'Jack Horner,' addressed to an audience long past infancy. One takes it up with dread of a prolix treatise intended to demolish the nursery hero's complacent estimate of himself—an estimate which has been accepted without question by many generations. Fortunately the author makes no attempt to disturb any ancient faith. Her Jack Horner is a baby, apparently lacking legitimate name, deposited in a luxurious basket at the door of a maiden lady in Richmond when the enemy was at the city's gates. He permits himself to be nourished and fondled on the supposition that he is a child of the

Confederacy, and never so much as whimpers with remorse when, after the war, he is claimed by a Northern father, and the good old lady who has cared for him is all but killed by patriotic indignation. Moreover, he unscrupulously demoralizes a beautiful widow, nearly related to his protectress, a woman who was a second, or third, mother to him. Previous to his appearance on the scene, she had been an impassive and lovely image of devotion to her dead husband; but with Jack Horner's advent her pent-up affections break loose and gush about wildly. Unsatisfied by Jack, they embrace one Maj. Dallas, the very pick and flower of the Confederacy. When she is arrayed for the bridal, the exigencies of war call the Major from her side. Her heart, temporarily bowed down, soon lifts itself and goes out to the next comer — no other than Jack's father, who has assumed the disguise of a Confederate soldier and entered Richmond in order to see his long-lost child. Let it not be supposed that being on with a new love seems to her good reason for being off with the old. It is quite impossible to follow the arguments and incidents used to prove that she was truth itself to Dallas while blushing and thrilling beside Dorset; but, as this is a matter of no importance whatever, we are willing to take the author's word for it. The conception of the story is trivial, and the whole train of incident improbable. There are a few very good descriptions of social life in Richmond at the time, and several situations illustrate strongly the intense feeling of the populace. Nevertheless, two or three such novels would make the most ardent admirer of Southern fiction forswear it for ever.

Mrs. Walworth's 'Little Radical' is scarcely above the level of 'Jack Horner.' She seems to be torn between waxing admiration for a new, working, plebeian South, and waning reverence for an old, idle, aristocratic South. The first half is mostly an expression of sympathy with the new order. Her Radical suffers expulsion from a "finishing school" on account of avowed democratic sentiments, which are declared to be communistic and incendiary. The young person carries her red flag into the aristocratic seclusion of her grandmother's estate. Established there, she persists in making low acquaintances, whom she invites to garden parties, and, very soon, she effects a runaway match with a young man, presumably of no antecedents, who keeps books in a factory. At this juncture Mrs. Walworth seems to have decided that radicalism can no farther go—indeed, that it has already gone too far—and that reparation is due to offended gentility. It would clearly never do to let the Radical repent and seek forgiveness: that would be to stultify both author and heroine. Besides, the book-keeping husband is an immovable obstruction. The devices to which Mrs. Walworth resorts, in order to harmonize conflicting interests and opinions, include the introduction of a vagabond foreigner whose claim to be the Radical's father is so well supported by documents that she is frightened out of her wits, and forgets she ever had any interest in the morals of factory women and the health of their babies. Several minor domestic agitations serve to detach her from the practice of social heresies, and, when her husband turns out to be a scion of an ancient house and the possessor of an ancestral mansion, much out of repair, she is reinstated in the position to which she was born. That position Mrs. Walworth persists in describing as "in the purple." Novelists are always attaching themselves to high-sounding phrases, with fine scorn of their meaning, and this is a somewhat ludicrous example of the habit. In all civilized countries, including probably the Southern States, unless the mother is a person of very exalted rank, children take the social status of their father. Why in the world should the daughter of a Mississippi steamboat's captain, whose manners and conversation are of that rough-and-ready kind conclusive as to ancestry, have any pretensions to birth in the palest shade of the imperial color?

To associate the Arkansas novel, 'Expiation,' with feeble company is rather shabby treatment. It is a vigorous, straight-away story. From the start the author knows where he means to arrive, and does arrive, without any tumbles or accidental deviations from the direct route, or deliberate experiment in byways which lead nowhere. The title suggests a subjective study, but the author's real strength is in the narration of thrilling adventures. The interest in the struggle of Fairfax Rutherford to overcome attacks of congenital cowardice is much inferior to that in the exploits of Dick Barnabas and his band of desperadoes. Barnabas is a reckless and commanding ruffian, who, but for lesser opportunity, might have rivalled Morgan, the buccaneer, slain his thousands and captured cities. An old-fashioned, romantic novelist could not have resisted endowing him with abstract virtues, and laying the blame of his actual crimes on a cruel fate which compelled him to make his living by murder and robbery rather than by any of the gentler vocations of meaner men. Here he is treated truthfully, and consistently both with good morals and good art. One follows his career with no less enthusiasm because his cruelty and depravity are perfectly plain, nor does one deplore his death, for he gets in the most probable way the punishment he richly deserves. All the characters are drawn with similar truthfulness and skill, and the situations are spirited and dramatic, without being sensational. Parson Jones and his mule Ma'y-Jane are worth honorable mention and particular praise. The stanch, wary, humorous old parson is delightful, while, for an humble beast, Ma'y-Jane's resources of character are wonderfully varied and entertaining. She is more worthy of a full-length portrait than is Aunt Hizzie, the cook, or mammie, of huge girth and polysyllabic piety, who seems still to be an indispensable scourge and blessing of Southern families. Her pictorial possibilities are, however, greater than Ma'y-Jane's, which may be sufficient reason for preference. She would be unusually amusing, too, if one had not just read about Delilah, the mammie in 'Throckmorton,' who goes far ahead of her in spontaneous fun. The portrait is the best of the numerous illustrations of 'Expiation,' most of which are so vague and spectral that they disfigure rather than adorn the book.

The story of 'White Marie' owes nothing of its pathos to form or phrase. It has, in fact, no literary merit, but rests for notice on one of the most abominable possibilities of slavery—the possibility that a child of the white race, whose parentage it was deemed expedient to conceal, might be handed over to negroes and herself become a slave. That was the fate of White Marie, to be sold and resold, to be married by force to a negro, and to grow old before she had any proof of what she had always felt, that she belonged to the dominant, not to the servile class. It would require great power of psychic analysis to depict adequately the life-long agony of a woman in such a plight, and the author has wisely refrained from seriously attempting such a task. To assure indignation it was not necessary for him to represent Marie as a "scion of a great and powerful race, the descendant of a people who associated with kings and queens." The knowledge that a system ever was under which a woman could be helplessly condemned to ignominy, is enough, even so long after the abolition of that system, to excite persons of humane disposition quite as much as is good for them.

Among Mr. Cable's 'Strange True Stories of Louisiana,' that of "Salome Müller, the White Slave," is in essentials the same as the story of 'White Marie.' Mr. Cable assures us, in a very elaborate and particular prefatory chapter, that the truth of these stories is the genuine truth, the truth which is popularly supposed to be keeping itself eternally cool and dark at the bottom of a well. Nobody could desire to probe the matter deeper, but suspicion may be permitted to rest a moment where Mr. Cable himself seems to have suspected. The lady who, when past forty, wrote the "Adventures of Françoise and Suzanne," ostensibly the story of a journey made when she was only fifteen, had a remarkably gracious and graceful gift for writing stories, whether true or false. The manner of the story of "Alix de Morainville" is so very like that of Mme. Françoise that, notwithstanding Mr. Cable's carefully collated evidence to the contrary (external evidence of differences in handwriting, spelling, texture of paper, etc.), we are inclined to give her credit for the authorship of both. But no matter; everything in the collection is good, with agreeably varied time and place, and with naturally contrasting joy and woe. Some are so coherent, so full of opportune coincidence and unlooked-for compensations, that one needs to have had wide experience to know how easily they may be true. Few French comedy-writers, for instance, have arranged a neater knot and climax with more deliciously comic minor situations than those unfolded in an episode of the life of Attalie Brouillard. Retributive justice in high tragedies never meted out more appropriate punishment than the death decreed to Mme. Lalaurie, the fiendish woman who, sixty years ago, kept splendid state in the "Haunted House of Royal Street." Decidedly, the more of such true stories that Mr. Cable can unearth, the better shall he be beloved of critical and uncritical readers.

STANLEY AFTER EMIN.—II.

In Darkest Africa, or the Quest, Rescue, and Retreat of Emin, Governor of Equatoria. By Henry M. Stanley. Charles Scribner's Sons. 1890. Two vols., 8vo.

THE interest of Mr. Stanley's story does not reach its climax with the meeting with Emin Pasha. Yet there are few pages in the whole work so graphic as those in which he describes his first impressions of the Governor of Equatoria. He notes, with not unnatural surprise considering the reports of Emin's necessitous condition, the indications of comfort in his "suit of snowy cotton drilling, well-ironed and of perfect fit," but especially that his face bore no "trace on it of ill-health or anxiety; it rather indicated good condition of body and peace of mind." In the conversations between the two leaders, during the four weeks they were together, an indecision in the Pasha was very painfully evident. Three propositions were laid before him: to return to Egypt, to remain and hold the Equatorial Province for the Congo State, or to establish himself, with such of his officers and soldiers as would accompany him, on the northeastern corner of

Victoria Nyanza in the territory of the British East African Association. Without coming to any decision, he returned to his province to consult with his officers, while Mr. Stanley, with but one white companion, his servant, set out on the search for the men whom he had left behind at Yambuya nearly a twelvemonth before. The sufferings endured by his company of 214 men during this second journey through the forest, chiefly from want of food, were terrible. He himself for nearly a month subsisted "entirely on bananas or plaintains, which, however varied in their treatment by the cook, failed to satisfy the jaded stomach. My muscles had become thin and flabby, and were mere cords and sinews, every limb was in a tremor while travelling, and the vitals seemed to groan in anguish for a small morsel of meat." His followers were so weakened by their privations that, on more than one occasion, on coming into a shower of cold rain, some of them "fell dead as suddenly as though shot."

Tortured with anxiety as to the fate of the rear column, he pressed rapidly on, and, being unencumbered with loads, and the path being well marked, he marched in 62 days a distance which it had taken 142 days to accomplish in the journey to the lake. The remnant of the rear column he found encamped nearly 100 miles east of Yambuya, under the command of the assistant surgeon, Mr. William Bonny, one of Tippu Tib's headmen having murdered Maj. Barttelot a month previous. As the conduct of the unfortunate officers who had charge of this part of the Relief Expedition is a matter of controversy in which one side only has been heard, it would obviously be unfair to form any final conclusions from Mr. Stanley's hasty and somewhat incoherent account. We are bound to say, however, that he himself does not appear to advantage in this closing chapter of his first volume. His sarcastic strictures on men who had lost their lives in endeavoring to carry out his necessarily vague instructions, if in a blundering way, are inexcusable. Furthermore, we have very carefully read all that he has written on this subject, and, in the light of the information which he gives, we fail to see how the spirit of his instructions was disobeyed, although serious mistakes were made. We are inclined, also, to think that, had Maj. Barttelot followed directly in the path of the advance column, as Mr. Stanley appears to say he ought to have done, the whole force would have perished. For if he, with all his experience and marvellous capacity as a leader, lost nearly a fifth of his picked force from hunger and the perils of the forest, what would have been the fate of the larger and weaker body of men behind him? Could they have found sufficient food in the banana-groves and manioc-fields, already stripped by the famishing advance column? This delay to advance, so unaccountable to Mr. Stanley, although it cost many lives, may have saved more.

However great the disappointment at his lack of generosity in his treatment of Maj. Barttelot and Mr. Jameson, the reader cannot but be touched at his unaffected sympathy with the poor Zanzibaris. There is infinite pathos in the closing words of his description of the camp in which the bodies of the dead lie unburied. "I heard of murder and death, of sickness and sorrow, anguish and grief; and wherever I looked, the hollow eyes of dying men met my own with such trusting, pleading regard, such far-away yearning looks, that it seemed to me if but one sob was uttered my heart would break." Then, after enumerating the dead natives, he writes, as if rehearsing the meeting with Bonny: "'And of the gallant band of Englishmen?' 'Barttelot's grave is but a few yards off. Troup went home a skeleton. Ward is somewhere a wanderer. Jameson has gone to the Falls, I don't know why.' 'And you—you are the only one left?' 'The only one, sir.'"

It was on the last day of August, 1888, that Mr. Stanley began his third march through the forest, which, the more we learn of it, the more truly does it seem to be a "region of horrors." Again men enfeebled by want of food are stricken instantaneously to death by the merciless rain. At another time, with the utter recklessness of children, one hundred and fifty of the carriers threw away their five-days' rations on the false report of an abundance of bananas near at hand. All the able-bodied were sent back three days' journey for a fresh supply, and the remainder, one hundred and thirty people, lived for a week on berries and fungi and a thin broth made of "a pot of butter and a pot of milk." The only bright spot in this record of suffering is a chance meeting with the pygmies. A box of ammunition had been left on the path and a party was sent to bring it to the camp.

"Arriving near the spot, they saw quite a tribe of pygmies, men, women, and children, gathered around two pygmy warriors, who were trying to test the weight of the box by the grummet at each end. . . . Every member of the tribe seemed to have some device to suggest, and the little boys hopped about on one leg, spanking their hips in irrepressible delight at the find, and the tiny women, carrying their tinier babies at their backs, vociferated the traditional wise woman's counsel. Then a doughty man cut a light pole and laid it through the grummets, and all the small people cheered shrilly with joy at the genius displayed by them in inventing a method for heaving along the weighty case of Remington ammunition. The Hercules and Milo of the tribe put forth their utmost strength and raised the box up level with their shoulders and staggered away into the bush."

Meanwhile the soldiers of the Equatorial Province revolted and imprisoned their Governor and Mr. Jephson, who had remained with him. On the news of Mr. Stanley's return to the lake, however, these gentlemen were released and rejoined him on February 17, 1889. In his account of the events of the next two months there is shown very considerable ability as a writer. Incidents are narrated and conversations reported with an almost photographic accuracy, so far as vividness of impression goes. But his qualities as a leader were never more apparent. The patience with which he awaits the decision of the Pasha, the forbearance with which he endures the insults to himself and the outrageous treatment of his men by the Egyptians, the wonderful control which he exercises over his indignant followers smarting under their injuries—all this excites our highest admiration. The inevitable moment when this patience and forbearance will give place to stern and vigorous action is awaited with an almost breathless interest. At length, being satisfied that Emin has absolutely no control over his people, who only seek an opportunity to seize their rescuers and deliver them prisoners to the Mahdists, he gives the signal to muster under arms. Facing the throng of now cowed and cringing Egyptians, he bids the Pasha tell them "that in future they are under my command. If I discover any treacherous tricks, I shall be compelled to exterminate them utterly. No Mahdist, Arabist, or rebel can breathe in my camp. . . . Whatever I can do to make them comfortable I will do, but for sedition and theft of arms, there is only death." With this dramatic incident the climax of his story is reached, although the remainder is by no means lacking in interest. Soon after the beginning of the march to the sea, an acute attack of gastritis prostrated the leader, showing how great had been the strain upon his strength. For nearly a month the great caravan halted to watch, as it were, the struggle between life and death. During the crisis of the disease, the ringleader of a band of deserters, who had also carried away several rifles, was tried and convicted, and, although Mr. Stanley was apparently at the point of death, he was borne into the presence of the people to pronounce his sentence, "Yallah rabuna! Depart to God!"

There is little worthy of special note in the further progress of the expedition, now numbering 1,510 souls, 600 of whom were the Pasha and his people. Fortunately it met with but little resistance from the greatly dreaded natives of Ankori. This surprised Mr. Stanley, nor could he learn the reason until he heard of what had taken place in Uganda, and recognized the fact "that the events of 1888, the deposition of Mwanga, the revolution and counter-revolution, were simply clearing our track for a peaceful march to the sea." He led his expedition into Bagamoyo, on the mainland opposite Zanzibar, on the afternoon of December 4, 1889, after an absence of three years, during which they had travelled, in simply going from ocean to ocean, over 6,000 miles.

By a strange irony Emin Pasha met with an accident on that same evening which nearly proved fatal. In regard to the character and conduct of this man, the second subject of controversy which this book will awaken, it is again necessary to reserve our final judgment until his account of what took place is given to the public. But as, in the case of the rear column, we were compelled, in the light of the facts presented, to withhold our commendation of Mr. Stanley, it is only fair to him to say that it seems to us difficult to acquit Emin of the charges which he makes against him, or to deny that the picture which he draws of him is, in the main, true. He certainly showed an unaccountable remissness in not attempting to communicate with the expedition sent out for his relief. He persistently concealed the true condition of affairs in his province, having apparently become a true Oriental, or "negrofied," to use his own expression, in languor, reticence, and indifference, except in scientific pursuits. These had become a passion to which, according to his own people, he was apparently willing to sacrifice everything. Fond of the semblance of power, he was unable to compel obedience. By his own confession his rule of the province of Equatoria was marked by the same oppression of the wretched natives which characterized that of the Khedive Ismail in Egypt. We may not wonder at his ingratitude to Mr. Stanley, who, no doubt, intensely irritated him, but this does not excuse his conduct towards the few who remained faithful to him. "Dr. Vita Hassan, the apothecary, his most devoted follower, received a letter from him a few days before I left Cairo, which announced to him that he and the others must look out for themselves; that as he had severed his connection with Egypt, he could not be troubled any more with them. Poor Shukri Agha, faithful to the last, with tears in his eyes came to ask me what it all meant."

We have purposely reserved but little space to speak of the scientific results of this expedition. They were, we imagine, somewhat disappointing, since, in the absolutely unknown region passed through, Mr. Stanley's whole energies were devoted to guiding his people and finding food for them. Had Mr. Jameson,

the naturalist, lived to penetrate the forest and climb the slopes of Ruwenzori, the case would probably have been very different. To the geography of Africa Stanley has contributed more than to its natural history or its ethnography. The course of the Aruwimi has been traced, and the water-shed between the basin of the Congo and the Albert Nyanza determined. The relations of the "Mountains of the Moon," the Albert Edward Nyanza and its effluent the Semliki River to what he terms the "Albertine" Nile are clearly shown. His descriptions of the dwarfs, their villages and manner of life, are somewhat meagre and unsatisfactory, and leave the reader in considerable doubt as to their rank in the human scale. If, as he asserts in his table of forest and grassland languages, they are able to count to a hundred, it must be far above the lowest level.

Emin Pasha is authority for the most astonishing passage in the book, which runs as follows:

"The forest of Msongwa is infested with a large tribe of chimpanzees. In summer time, at night, they frequently visit the plantations of Mswa station to steal the fruit. But what is remarkable about this is the fact that they use torches to light the way! Had I not witnessed this extraordinary spectacle personally, I should never have credited that any of the Simians understood the art of making fire."

If the circumstance here stated is true, it must certainly be considered one of the most important contributions to ethnology in recent years, for the fact would not only establish the closest connection between the intelligence of the human and brute creations which naturalists have thus far been able to chronicle, but it would destroy the value of the "fire" era in the history of development of the human species. Naturalists will probably receive the statement with some hesitation. Prof. Romanes, who has made the study of animal intelligence his own, bluntly refuses to accept the trustworthiness of Emin's observation, and prefers (as he states in a communication to *Nature* of July 10) to account for the phenomenon in question on the supposition that the Pasha, by reason of his shortsightedness, "had mistaken a band of native children for his 'large tribe of chimpanzees.'" But it can scarcely be conceived that Emin was alone when he made his remarkable observations. Moreover, a still more recent statement in *Nature* avers that "a large ape is now undoubtedly acting as a signal-man (under direction) on a railway at Natal."

In the greater part of his work Mr. Stanley seems to be too sparing of his commendations of what his European officers did, though he does not hesitate to blame them for their failures to meet his expectations. The single exception is Dr. Parke, of whom he says in one instance: "This expedition possesses the rarest doctor in the world. . . . We are all bound to him with cords of love." Nevertheless, all of them—Stairs, Nelson, Jephson, and Bonny—must, we think, be satisfied with the final eulogium and the affectionate parting words with which their leader closes his work.

The illustrations are in the main hardly worthy of the book and add but little to its value. The maps, on the other hand, are very clear and show few signs of haste in the preparation.

B. F. Stevens's Facsimiles of Manuscripts in European Archives Relating to America, 1773-1783. Vol. IV., Nos. 344 to 453. Issued only to subscribers at No. 4 Trafalgar Square, Charing Cross, London. 1890.

THE fourth volume of this collection is devoted to the organization of the royal commission sent by Great Britain to America in 1778 with proposals of peace. Burgoyne had surrendered; France was about to take part in the struggle. On the other hand, the royal forces had beaten Washington's army at the Brandywine and had occupied Philadelphia. It seemed worth while to make a last effort for conciliation.

What should be the basis of an agreement? Since the close of the Seven Years' War, discontent had been growing in America. The colonists had been displeased with one act of Parliament after another. England would therefore consent to abrogate all unpopular statutes on colonial affairs passed since 1763. But the Ministry recognized that this was not enough. The clock could not simply be set back. The Americans had shown themselves a power to be counted with. It was worth while to keep them as subjects on almost any terms. How much could be granted them and anything worth having be retained? Such was the question before Lord North and his Cabinet.

As we read the instructions to the Commissioners, here first published in full, we see that hardly anything would have been absolutely refused, so that only the name of independence had been relinquished. The Commissioners were empowered to grant much. The Americans might retain their ancient charters, to be amended only on the petition of their own assemblies. They might even hope to be directly represented in the Parliament of Great Britain. They might elect their own governors, subject only to confirmation by the King. They might raise their own tribute and employ it in the maintenance of troops for their own defence. The Commissioners were even empowered to acquiesce in a proposition of no contribution at all, should they find the colonists peremptorily fixed in such a resolution. Although an attempt was to be made to retain commercial advantages for Great Britain, yet this matter also was open to negotiation. And even such things, "short of open and avowed independence," as the Commissioners were not allowed, or were not disposed, to give up, were, if insisted on by the colonists, to be referred to his Majesty for decision, instead of being firmly refused.

Such concessions as these would, in 1775, have been greeted with joy in America, by all but a few hot-heads. They were useless in 1778. Opinions and feelings change rapidly in days of revolution; and the Congress of the United States, although driven from Philadelphia and shivering in a Pennsylvanian village, had just negotiated a treaty with His Most Christian Majesty, obliging itself to insist on that absolute independence which Great Britain was unready to grant, in spite of the conviction of her statesmen that it was inevitable.

Evolution and Disease. By J. Bland Sutton. Scribner & Welford. 1890. 8vo, pp. 285. Illustrated.

DR. SUTTON'S first sentence, "My object in writing this book is simply to indicate that there is a natural history of disease, as well as of plants and animals," is not well chosen. It gives the impression that disease is to be treated as something entirely distinct from the natural history of plant or animal. A fault to be found with the author throughout his work is that his purposes are not kept before the reader with the clearness and prominence called for in writings on popular science. The study required to determine what and how much he intends to teach might be no obstacle to a specialist, but many of those for whom the book was written will throw it aside as a jumble of facts from which they have not the energy or the discipline to reach the conclusions.

The author's object is to show that disease is controlled by laws of general function in biology. Susceptibility to disease may arise from weakness in an organ consequent upon disuse or undue development of some other organ, from vestigial structures, from reversions or atavistic acquisitions, or other heritages not in harmony with the general organization. Under discussion of supernumerary digits, limbs, heads, and so on, it is suggested that a common cause underlies the production of such monstrosities, but what it may be is not made clear, and there is no hint of possible connection with budding processes in lower organisms. Where a summary of all the causes mentioned might be looked for, in "Causes of Disease," bacteria only are treated. Tumors are said to arise from change of function in organs, from bacteria, and from "sports," and glandular tumors and cancers are modified epithelial growths. The "Zoölogical Distribution of Disease" gives man but two diseases (leprosy and syphilis) not shared with lower animals. Evidently acquired characters, malformations, tendencies to particular diseases, etc., are believed to be more or less directly transmissible; mutilations are left in doubt. It will interest their owners to know that pug dogs are supposed to be cretins, products of disease. The mosquito will gain no favor from being known as the disseminator of the filaria that produces the terrible disease elephantiasis. As examples of careless statements occurring here and there, it will suffice to mention that concerning the hind legs of the viper, or the use of the legs of menobranchus as paddles: the viper has no hind legs; menobranchus and its allies use the tail for paddling and the legs for walking.

The book is interesting, and contains a good deal that is of value. It is not so much a symposium of horrors as a glance at the illustrations of abnormalities, cretinism, leprosy, and the like, might lead one to suppose; but we cannot say the author has made the best use of his material and opportunity.

Cent Ans de République aux États-Unis. Par le Duc de Noailles. Vol. II. Paris: Calmann-Lévy; New York: F. W. Christern.

THIS work is a serious effort to analyze and understand the working of our institutions. It is not to be expected that a Duke with an historic name which carries us back to the court of Louis XIV. should take an over-favorable view of the great democracy, or be as much prepared as Mr. Bryce to appreciate the high national qualities which form an offset to the defects and dangers of our political machinery. The American reader must therefore be on his guard not to let the gloomy picture so depress his spirits as to deprive him of all hope and courage.

Like most Europeans, the writer exaggerates the power of the President, but is shrewd enough to see that this power depends upon the use of the offices for party purposes, and he is evidently not impressed so far with the results of civil-service reform. In confirmation of his view of the power of the Executive, he points out that while the Constitution defines very clearly the powers of Congress, it leaves those of the President almost wholly indefinite, and thus capable of great expansion, as was shown during the civil war. But though he dwells upon some of the consequences, he does not clearly show how this indefiniteness has

worked the other way, and subjected the Executive to the constant encroachments of Congress, forming the greatest difficulty of our politics to-day. He adopts Mr. Bagehot's view of the "Presidential" as different from the parliamentary system, making it quite impossible for the Cabinet to have seats in the Legislature, and points out with much satisfaction how this results in the rule of the lobby and the utter confusion and chaos of legislative work. He might have made the picture much stronger if he had shown how, in the absence of these and any other representatives and defenders of the national interest, the whole field is given up to a conflict of local, private, and party interests, which, and neither the ignorance nor the perversity of the people, is the real cause of the overwhelming preponderance of special legislation. An elective judiciary, the mechanism of elections, and the politicians come in for their share of castigation. Immigration, moreover, pauperism, and "alcoolisme" are bearing us downward, and our successes are attributed to our great natural resources and the absence of standing armies.

The average American, finding himself in tolerably comfortable circumstances, may be sustained under this accumulation of horrors by the reflection that it is, after all, the same people which carried through the Civil War, abolished slavery, and then disbanded the armies, and which may yet prove itself equal to dealing with existing political problems.

The Life of George H. Stuart. Written by himself. Edited by Robert Ellis Thompson, D.D., University of Pennsylvania. Philadelphia: J. M. Stoddart & Co. 1890.

THERE is a suggestion of crushing a butterfly upon the wheel in Dr. Thompson's ponderous introduction to Mr. Stuart's autobiography. He need hardly have gone back so far as Sts. Paul and Augustine and Justin Martyr for a justification of this kind of writing. He need not have gone away from Philadelphia. But Franklin's autobiography had a charm of manner which added much to the fact that it protrayed the youth of one who came in time to be one of the great men of his century and of the modern world. Mr. Stuart was a good man—in a narrow sense a much better one than Franklin; he was an energetic, useful, and extremely pious man; but he had none of the elements of greatness and he had no literary skill. Men with much less to tell than he, have told it so pleasantly as to bring children from their play and old men from the chimney corner. But such interest as there is in Mr. Stuart's autobiography is wholly in the facts. He adds nothing to them by his report. He touches them with no felicity of thought or phrase. It is difficult to imgine how the same things could have been narrated in a less interesting manner. Nor has the editor done even what he could to make up what was lacking in his friend's performance. He has not corrected obvious errors, such as those on page 61, where of the Liberty party it is said: "This small party nominated John P. Hale for President in 1844, and continued steadily to grow until 1854, when it was merged in the Republican party." Here there are two mistakes, if not three. Hale was the candidate of the Free-Soil party in 1852, which was hardly identical with the Liberty party that nominated Birney in 1840 and 1844. Granting the identity, instead of steadily increasing, it fell off from 291,000 in 1848 to 155,000 in 1852. There is a suggestion here of failing memory, which is augmented on the previous page and makes us wonder how far the trouble goes. On page 60, we are told that James G. Birney "finally located in Washington, where he for a short time published the *National Era*." Mr. Stuart has confounded Birney with Gamaliel Bailey, who established the *National Era* after having for ten years edited the *Philanthropist*, which was Birney's paper in 1836 and 1837, in Cincinnati On the same page we are told that Birney's party in 1840 was "called the Free-Soil party," as it was not, and that its candidate for Vice-President was "Thomas Earl" of Philadelphia (it was Thomas Earle). A careful editor could not have let such an agglomeration of mistakes escape. It is a little matter, but if Dr. Thompson had known how Dr. Samuel Hanson Cox expressed himself when asked why his son spelled his name "Coxe," he would not have spelled the Doctor's in that way, as he has done.

Mr. Stuart was a more than average specimen of the piety whose ascendancy in our national Government is strongly marked at the present time. Mr. John Wanamaker was his intimate friend and the teacher of a Bible class four hundred strong, in the Bethany Sabbath-school, which was of Mr. Stuart's making. There is a picture of Mr. Wanamaker that is radiant with self-satisfaction. Mr. Stuart's piety had the defects of its qualities: it did not err upon the side of delicacy or refinement; the coarser methods of Moody and other revivalists had for him great attraction, and he was an effective speaker as well as organizer in religions circles. He was not narrowly sectarian. One evangelical Christian was for him about as good as another. For his efforts in behalf of Presbyterian reunion in 1868 he was suspended from office and membership, on the ground that "he had sung hymns of human composition and communed with other than the Reformed Presbyterians." This was a pleasant martyrdom in many ways. If old friends fell off, new ones were extremely warm and flattering, and Mr. Beecher celebrated the event in a discourse of which Mr. Stuart was not a little proud.

But the sect which cast him out in 1868 had done him good service a generation back. After 1800 it denied even occasional communion to persons holding slaves. Mr. Stuart, while still in his teens, became strongly anti-slavery. He knew Benjamin Lundy. Because the Abolitionists, mainly Friends, did not open their meeting with prayer, he organized a Young Men's Anti-Slavery Society, which corrected the omission. The religiousness of the early anti-slavery agitators is allowed on page 58, but with an insinuation that afterwards they fell from grace. Mr. Stuart was one of the first political Abolitionists and a Republican from the start. He encouraged Grant's fatal predilection for rich men by the subscription for the house given to him in Philadelphia. Mr. Stuart managed this, and four years later was offered the Treasury in Grant's Cabinet. He declined the place, and suggested A. T. Stewart, another Scotch Irishman in Dr. Thompson's extensive list of those Scotch-Irish Presbyterians who have been prominent among us. It is probably not very critical, for it includes "the Websters," and Daniel certainly was not of this stock.

The most important public station held by Mr. Stuart was the Presidency of the Christian Commission. His account of this is marred by the absence of any generous recognition of the work of the Sanitary Commission. There is the frankest possible admission that the Christian Commission was organized "mainly to reach and help men spiritually," and some would have had its work exclusive of all temporal and material help. Mr. Stuart was too shrewd, as well as too kind, to be taken in this snare. He wished to supplement the work of the Sanitary Commission, and he wished to commend his theological wares to the soldiers by offering them "a prize in every package."

Mr. Stuart's business career had not the circumstances of poverty for its beginning which are so dear to the biographers and the writers of moral tales. His father was a thrifty and successful farmer and manufacturer. The son came to America in 1831. His great success in business had a painful termination in 1879, when the house of Stuart & Brother, in which he had been a partner for forty years, went into liquidation. The circumstances are withheld, but that they brought no stain on Mr. Stuart's character is evidenced by the enthusiasm with which a bank was organized of which he was made the President. He was born April 2, 1816, and died April 11, 1890. He was married on the great day of the bank suspensions in 1837, and as he went for the doctor for the birth of his first child he passed Pennsylvania Hall in flames, the work of a pro-slavery mob, May 17, 1838.

NEW MIDSUMMER BOOKS

FROM THE PRESS OF

J. B. LIPPINCOTT COMPANY.

A Diplomat's Diary, A Novel. By JULIEN GORDON. 12mo. Cloth, $1.00.

The author of this interesting volume shows that familiarity with the subject only attained by personal observation. Until recently a resident at the Court of St. Petersburg, where the scene of the story is laid, the writer has found material of keen interest to Americans, and has interwoven a romantic plot with clever hand ing of character drawings and crisp comment. As the author is equally prominent in society at home, the book will undoubtedly receive more than ordinary attention.

Disenchantment. The latest issue of *Lippincott's Series of Select Novels.* An everyday tory. By F. MABEL ROBINSON, author of 'Mr. Butler's Ward,' etc. 12mo. Paper, 50 cents; cloth, 75 cents.

Gleanings for the Curious from the Harvest-Fields of Literature. A Melange of Excerpta, collated by C. C. BOMBAUGH, A.M., M.D. 12mo. Half morocco. Cloth, gilt top, $3.50.

The present volume is an expedient for grouping together a variety which will be found in no other compilation. From the nonsense of literary trifling to the highest expression of intellectual force; from selections for the child to extracts for the philosopher, it will accommodate the widest diversity of taste, and furnish entertainment for all ages, sexes, and conditions.

"It is one of the very best books we have ever seen."—*New York Independent.*

"A rare volume, indeed. We know of nothing like it in the whole range of English literature. It must have been the labor of a lifetime to collect so many fragments of genius and caprice. We never knew that the mind of man was such a kaleidoscope until we turned the pages of this entertaining book. Try it."—*New York Churchman.*

Rejected Addresses. By HORACE and JAMES SMITH. Edited, with an Introduction and Notes, by PERCY FITZGERALD, M.A., F.S.A. 16mo. Cloth, gilt top, $2.00; ¾ calf, $3.50.

The Promised King. The Story of the Children's Saviour. By ANNIE R. BUTLER, author of 'Stories from Genesis,' etc., *Stepping-Stones to Bible History.* With numerous illustrations. 12mo. Cloth, $1.00.

This book tells in simple language, suitable equally for reading to, or being read by, a child, the earthly life of the Saviour. It is illustrated by many engravings of familiar places and familiar incidents in the life of Jesus Christ on earth.

For sale by all booksellers, or will be sent by the Publishers, postpaid, on receipt of the price.

PROPERTY OF THE BOUND PERIODICAL ROOM

THE AMERICAN BOOK COMPANY

(INCORPORATED),

Publishes of School Text-Books heretofore issued by D. Appleton & Co., A. S. Barnes & Co., Harper & Brothers, Ivison, Blakeman & Co., Van Antwerp, Bragg & Co.

For **High-School and College** classes the list of the **American Book Company** includes the best-known and most popular text-books in all departments of the **Natural Sciences, Higher Mathematics, German, French, Italian, Spanish, Latin, Greek, Mental and Moral Science, Pedagogy, etc.**

LATEST TEXT-BOOKS.

Harkness's Easy Method for Beginners in Latin.

BEAUTIFULLY ILLUSTRATED W.TH COLORED PLATES.

The following are some of the leading features of the work:

1. This volume is not a mere companion to the Grammar, but a practical guide for the pupil in the work of reading and writing Latin.

2. The work is at once a Book of Latin Exercises, a Latin Reader, and a sufficient Grammar for the beginner.

3. The exercises are largely conversational.

4. These exercises are diversified and enlivened by the frequent introduction of passages of connected discourse, consisting of anecdotes, stories, letters, dialogues, etc.

5. Questions in Latin on the subject-matter of these passages are often introduced.

6. Throughout the entire volume it has been the constant aim of the author to lighten the task of the learner without endangering the thoroughness of his work.

7. The book is illustrated with four full-page colored plates and a large number of engravings of classical subjects carefully reproduced from authentic sources. These illustrations, mainly explanatory of the text, add greatly to the interest and value of the work.

Lindsay's Juvenal. Fully Illustrated.

By THOMAS B. LINDSAY, Ph.D., Professor in Boston University. (Ready August 20.)

Sensenig's Numbers Universalized.

An Advanced Algebra. By DAVID M. SENSENIG, M.S. In two parts: Part I., $1.20; Part II., $1.08.

Part I. includes integral quantities, algebraic fractions, simple equations, theory of exponents and radicals, equations of the second degree, intermediate equations and inequalities, ratio, theory of limits, proportion, variation, logarithms, progressions, interest, annuities, and permutations and combinations

Part II. includes serial functions, complex numbers, theory of functions, theory of equations, and determinants and probabilities, with a supplementary discussion of continued fractions and the theory of numbers.

Eclectic Physical Geography.

By RUSSELL HINMAN. 12mo, cloth, 382 pages, 30 single and double page charts and maps; 151 cuts and diagrams, $1.00.

White's Pedagogy.

The elements of Pedagogy; a manual for Teachers, Normal Schools, Normal Institutes, Reading Circles, and all persons interested in education. By EMERSON E. WHITE, A.M., LL.D., formerly Superintendent of Cincinnati Public Schools. 12mo, full cloth, 336 pages, $1.00.

Sickels's Exercises in Wood-Working.

A text-book for manual-training classes in schools and colleges. By IVIN SICKELS, M.S., M.D., $1.00.

Van der Smissen and Fraser's High-School [illegible] Grammar.

With Ap[illegible]s in Composition, and Vocabularies. By [illegible] DER SMISSEN, M.A., Lecturer in Ge[illegible] College, Toronto, and W. H. FRASER, [illegible] and German Master, Upper Canada [illegible].

Harper's Inductive Greek [illegible].

By Prof. WM. R. HARPER, Ph.D., Yale University, and WILLIAM E. WATERS, Ph.D., Cincinnati, Ohio, $1.00.

Harper's Inductive Latin Method.

By Prof. WM. R. HARPER, Yale University, and ISAAC B. BURGESS, A.M., Latin Master Rogers High School, Newport, R. I. $1.00.

STANDARD WORKS by the following well-known authors are also included in the company's list:

SCIENCE. Works in Geology by Dana, Andrews, Steele, and Le Conte; in Botany, by Gray, Wood, Goodale, Coulter, Youmans; in Chemistry, by Cooley, Eliot & Storer, Gillet & Rolfe, Steele, and Norton; and in Physics, by Peck, Cooley, Steele, Norton; in Astronomy, by Kiddle, Steele, and Ray; and in Natural History, by Johonnot, Cooper, and Tenney.

HIGHER MATHEMATICS. By Courtenay, Davies, Peck, Loomis, Ray, Robinson, Schuyler, and Sensenig. These authors will be recognized as among the best standard writers, and their works are extensive y used in the best schools of the country, including the great colleges and scientific schools and the military and naval academies.

MODERN LANGUAGES. In German may be named the works of [illegible] Ahn, Dreyspring, Gastineau, Heydenreich, [illegible]orman, Ollendorff and Kroeh; the E[illegible] Eclectic German Readers. In French, the text-books of Ann, Bu[illegible]et, Chouquet, Collot, De Fivas, De Peyrac, Duffet, Jennequin, Pasquelle, Gaillard, Gastineau, Gerard, Magill, Languellier & Monsanto, Ollendorff, Pujol, and Worman. In Italian, the works of Fontana and Foresti. In Spanish, Mantilla's Readers and History, Monsanto & Languellier's Complete Course, and Worman's Spanish Text-Books.

CLASSIC LANGUAGES. In Latin and Greek the list contains the standard and popular text-books of Hadley, Harkness, Harper, Roy, and Wincheil. In Latin texts are editions of nearly all the great authors, with notes and comments by Harkness, Frieze, Herbermann, Lord, Lindsay, Johnson, Lincoln, Searing, Tyler, Butler, Thatcher, Spencer, Crosby, and Fisher. In Greek texts are editions, with notes, by Boise, Crosby, Robbins, Smead, Hackett, and Tyler.

The general price-list of the publications of the American Book Company will be mailed on request to any school officer or teacher. Any book upon this list will be sent by mail or express to any part of the United States or Canada, *without extra charge for transportation*, on receipt of the published price.

AMERICAN BOOK COMPANY,

MACMILLAN & Co.'s NEW BOOKS.

Mr. Bryce's Great Work on the American Commonwealth.

THE AMERICAN COMMONWEALTH.

By JAMES BRYCE, D.C.L., M.P. New and Revised Edition. 2 vols., large 12mo. $6.00.

"It cannot be too widely known that the second (revised) edition of Mr. Bryce's 'American Commonwealth' is now deliverable. Marks of the indefatigable author's retouching are everywhere visible. A work destined to maintain a living hold on our institutions of learning, and to shape the political thinking of the rising generation."—*Evening Post.*

Sir Charles W. Dilke's New Book.

PROBLEMS OF GREATER BRITAIN.

By the Right Hon. SIR CHARLES W. DILKE, Bart. With Maps. Large 12mo. $4.00.

"Sir Charles Dilke's book, as a contribution to political science, is fully worthy to rank with the great works of de Tocqueville and Bryce. Its scope is vast; its treatment detailed but concise. Every page is crammed with important facts or equally important inferences. All that can be said in conclusion is that every one should read the book for himself. The author has done for 'Greater Britain' what Mr. Bryce has done for the United States."—*Political Science Quarterly.*

Author's Edition.

PLAIN TALES FROM THE HILLS.

By RUDYARD KIPLING. 12mo. $1.50.

THE POETICAL WORKS OF JOHN MILTON.

Edited, with Memoir, Introductions, Notes, and an Essay on Milton's English and Versification, by DAVID MASSON, M.A., LL.D. With Portraits. New and Revised Edition. 3 vols., 8vo. $15.00.

Chesterfield's New Volume of Letters.

LETTERS OF PHILIP DORMER, FOURTH EARL OF CHESTERFIELD,

TO HIS GODSON AND SUCCESSOR. Now first edited from the originals, with a Memoir of Lord Chesterfield. By the EARL OF CARNARVON. With Portraits and Illustrations. Royal 8vo. $4.50.

"A volume of unique interest, . . . is one of those that hold a permanent interest in literature."—*Traveller.*

"The volume is thoroughly entertaining and instructive. It contains a great deal of information about the life and the times to which Lord Chesterfield belonged. It is also a fine specimen of careful and scholarly editing."—*Boston Herald.*

Bound in half morocco, gilt edges, $18.00.

THE LIBRARY REFERENCE ATLAS OF THE WORLD.

A complete series of eighty-four modern maps. By JOHN BARTHOLOMEW, F.R.G.S. With Geographical Index to 100,000 places. Half morocco, gilt edges. Folio. $18.00.

"To those desirous of possessing an atlas of handy size, at a reasonable price, and amply supplied with maps executed with taste and accuracy, Mr. Bartholomew's 'Library Atlas' may be commended. There are few places one is likely to inquire for that will not be found in this Atlas, which may be easily consulted by means of the copious index appended."—*Times.*

** *For Prospectus giving list of Maps, etc., please apply to the Publishers.*

THE CIVILIZATION OF THE RENAISSANCE IN ITALY.

By JACOB BURCKHARDT. Authorized translation by S. G. C. MIDDLEMORE. 8vo, cloth, gilt top, $4.00.

"To every variety of social, political, intellectual, and artistic activity Dr. Burckhardt pays due heed. The immensity of his learning, the balance of his judgment, and the candor of his mind are everywhere evident in a work which no one who would know the Renaissance can now have any reason to neglect."—*Literary World.*

THE ADVENTURE SERIES. Large 12mo, cloth. $1.50 each.

"Admirable, full of vigor and variety, spirit, entrain, graphic and picturesque."

I.

ADVENTURES OF A YOUNGER SON.

By JOHN EDWARD TRELAWNY, with an Introduction by EDWARD GARNETT. Illustrated. Large 12mo, $1.50.

"One of the books that will be read as long as daring deeds and hair-breadth 'scapes have any fascination for humanity. In these days of mawkish sentimentalism and brutal realism it may indeed be counted as a pleasure that one has within reach a book so fervid, natural, and thrilling as is 'The Adventures of a Younger Son.'"—*Boston Beacon.*

II.

MADAGASCAR;

OR, ROBERT DRURY'S JOURNAL DURING FIFTEEN YEARS' CAPTIVITY ON THAT ISLAND. And a further description of Madagascar by the Abbé ALEXIS ROCHON. Edited, with an Introduction and Notes, by Capt. PASFIELD OLIVER, R.A. author of 'Madagascar.' Large 12mo, illustrated. $1.50.

"It has all the fascination that attaches to Defoe's Robinson Crusoe,' and is written in the same realistic style, and with the same ingenious care for little details that shall impart an air of naturalness to the whole."—*Boston Saturday Evening Gazette.*

III.

MEMOIRS OF THE EXTRAORDINARY MILITARY CAREER OF

JOHN SHIPP.

Late a Lieutenant in His Majesty's 87th Regiment. Written by Himself. A New Illustrated Edition, with an Introduction by H. MANNERS CHICHESTER. Large 12mo, $1.50.

Shipp's is perhaps the most extraordinary autobiography of a soldier ever published. Every incident is absolutely true, and the narrative has been vouched for by many officers of high rank. The author twice won a commission through the ranks, and was engaged in the hottest actions in the days of the East India Company.

IV.

PELLOW'S ADVENTURES AND SUFFERINGS

DURING HIS TWENTY-THREE YEARS CAPTIVITY IN MOROCCO. Edited with Prefatory Notes by Dr. ROBERT BROWN. Large 12mo, illustrated. $1.50. (*Just Ready.*)

RUBAIYAT OF OMAR KHAYYAM.

The Astronomer Poet of Persia. Rendered into English Verse. Large 12mo. In parchment binding, $3.00.

A DICTIONARY OF MUSIC AND MUSICIANS.

(A. D. 1450–1889.)

By eminent writers, English and foreign. Edited by Sir GEORGE GROVE. With illustrations. Complete in four volumes, 8vo. $6.00 each.

A COMPLETE INDEX TO THE ABOVE FOUR VOLUMES and catalogue of articles contributed by each writer, by Mrs. EDMOND R. WODEHOUSE. 8vo, $2.50.

SHORT STUDIES OF SHAKESPEARE'S PLOTS.

By CYRIL RANSOME, M.A. 1 mo, $1.00.

Now Ready. Vol. X of the New and Enlarged Edition of the Collected Works of

DE QUINCEY.

Edited by DAVID MASSON, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh.

Vol. X. PAPERS OF LITERARY THEORY AND CRITICISM. Letters to a Young Man whose Education has been Neglected; Rhetoric; Style; Language; Conversation; A Brief Appraisal of the Greek Literature; Theory of Greek Tragedy, etc., etc. 12mo, $1.25.

*** This edition will be completed in 14 volumes, published monthly. Price, $1.25 each.

PRINCIPLES of ECONOMICS.

By ALFRED MARSHALL, Professor of Political Economy in the University of Cambridge. Vol. I. 8vo. $4.00.

HISTORY OF THE DOMINION OF CANADA.

By the REV. WILLIAM PARR GRESWELL. 12mo. $2.00.

A GENERAL VIEW OF THE CRIMINAL LAW OF ENGLAND.

By SIR JAMES FITZJAMES STEPHEN, K.C.S.I., D.C.L. Second edition. 8vo. $3.50.

The first edition of this work was published in 1863. The new edition is substantially a new work intended as a Text-Book on the Criminal Law for University and other Students, adapted to the present day.

MYTHOLOGY AND MONUMENTS OF ANCIENT ATHENS.

Being a translation of a portion of the 'Attica' of Pausanius. By MARGARET D. G. VERRALL. With Introductory Essay and Archæological Commentary by JANE E. HARRISON. With 250 Illustrations and Plans. Large 12mo. $4.50.

English Men of Action Series.

12mo, cloth, limp, 60 cents. Edges uncut, 75 cents.

New Volume:

CLIVE. By Col. Sir CHARLES WILSON.

Already Published:

DAVID LIVINGSTONE. By Thomas Hughes.
HENRY THE FIFTH. By Rev. A. J. Church.
GENERAL GORDON. By Col. Sir W. Butler.
LORD LAWRENCE. By Sir Richard Temple.
WELLINGTON. By George Hooper.
DAMPIER. By W. Clark Russell.
MONK. By Julian Corbett.
STRAFFORD. By H. D. Traill.

The Nation.

NEW YORK, THURSDAY, AUGUST 21, 1890.

The Week.

THE mixed Republican situation at Washington does not leave much of the campaign boast that the Republican party is the only one that has brains enough to rule the country. Congress has been in session nearly nine months, and, aside from splitting the Republican party into several factions, absolutely nothing has been accomplished. One stock argument against putting the Democratic party in power was that it would unsettle the business of the country by revising the tariff. The Republican party, we were assured, would legislate in regard to the tariff in such a way as to make business more stable than ever. What is the situation today? The House, by revolutionizing its procedure, has "railroaded" through a tariff bill which greatly increases tariff duties, and does several other things which nobody really comprehends. The business interests of the country, expecting to see the same bill pass the Senate, adjusted themselves to meet the new conditions which it would bring about. Having done this, they are confronted with a grave doubt whether the bill will ever become a law. The result is greater commercial uncertainty than the country has seen for many years, with no prospect of relief for a considerable time to come.

The New York *Tribune* and its weak echo, the Philadelphia *Press*, vehemently denounce Senator Quay for his proposition to drop the Force Bill, and loudly call upon the Republican Senators to defeat it. But other Republican newspapers take a very different view of the matter. The Philadelphia *Inquirer*, for example, declares that "it is a timely measure, and will be adopted." In the same line is the leading editorial article in the Philadelphia *Bulletin*, entitled "Wise and Timely," which declares that "the resolution offered by Mr. Quay in the Senate Wednesday ought to receive the prompt approval of every Republican Senator," and says that "it is evident from this resolution that Senator Quay has been observing the temper and disposition of the Republican party. His programme," it adds, "is exactly in line with the wishes of the prudent and moderate Republicans all over the country who are anxious that the party shall not be allowed to drift on the rocks, and that it shall go into the coming campaign without being dragged down by the heavy loads which some of the leaders in Congress have been endeavoring to place upon it." Referring to the attitude of the *Tribune* and its Philadelphia echo, the *Bulletin* says that "they have certainly failed on this occasion to gauge the prevailing sentiment in the party," and concludes that Quay's "resolution, far from being cowardly, is a most timely exhibition of political sagacity."

We suggest to our distressed Republican contemporaries that they can get even with Senator Quay by giving free expression to their real opinions concerning the charges against him as a public thief. They have hitherto given him the benefit of their silence on the subject, but he is clearly so deficient in a proper sense of gratitude for it that he deserves it no longer. What is the use of allowing a thief to stay in the party and escape all censure by its organs if he is going to desert the party in a crisis and turn a deaf ear to their exhortations? A few plain words about Quay's real character, as both the *Tribune* and the *Press* understand it, would not only make him more docile, but would serve as a useful warning to future leaders of his character who get the pernicious notion into their heads that they are bigger than the party. We should imagine, also, that truthful speech on this subject would be a great relief even to a Harrison editor.

It was a significant feature of the Republican caucus on Thursday that the strongest opposition to the passage of the Force Bill came from those Senators, like Mr. Washburn of Minnesota, who have recently been to their homes, and thus had a chance to learn how little support the policy has among their constituents. As in Minnesota, so in Wisconsin, the leading Republican organ of the State is against the passage of the bill. The Milwaukee *Sentinel* of August 13 thus defines its position: "The *Sentinel* has not changed its views in regard to that measure. It never doubted the right of Congress to pass such an enactment, nor the existence of abuses it is designed to abate; but it did and does question the expediency of attempting to enact it. This doubt as to its expediency is based on the opinion that it will not be effective to assure honest elections where the great frauds upon the ballot-box are practised, while it will be used, as it is already used, by political demagogues to perpetuate unjust animosities against the Republican party, and open still wider the fountains of sectional distrust and hatred in the South."

Other Republican newspapers in the West are equally emphatic in calling for an abandonment of the Force Bill. The St. Paul *Pioneer Press*, in its latest article upon the subject, talks in this way: "We have to ask, once more, what is the object of passing it? It will not do away in the slightest particular with the frauds upon the ballot practised at the South. It will not secure to the negro voter a single right now refused to him. It will not accomplish any practical result not attained by the law as it stands." As for the modifications of the bill made by the Senate Committee, the St. Paul newspaper holds that "there is, as far as we can see, less reason for the passage of the Senate bill than for that of the bill passed by the House." It finds an added argument against the policy in the fact, so thoroughly established by the correspondent whom the Philadelphia *Press* sent through the South, that "the Southern Republicans do not want a Federal Election Law at all," and in view of all the considerations involved, it declares that "the advocates of Federal control of elections, though their motives are good and the crimes that arouse them are real, attempt the impossible. The objections to any practical application of the principle so far suggested are sustained both by public opinion and by the report of the Senate Bill."

Ex-Chairman Jones of Pittsburgh has furnished a rational explanation of Senator Quay's movement to shelve the Force Bill. The object, he says, is to get the Tariff Bill through. Naturally Jones endorses this project. "Mr. Quay is perfectly right," says Jones in the interview telegraphed from Pittsburgh. "If something of the sort was not done, the Democrats could compel the session to continue for an indefinite period. These resolutions will also allow the passage of the Tariff Bill. That is just now of more importance than the Election Bill. The Senate hasn't any one to force matters as Reed did in the House, because it is a much more conservative body and has got to act in a more serious way." Independently of Mr. Jones's rational explanation we might be sure that if there were any money in sight, Quay's line of march would be in that direction. The only money in sight in the present Republican *débâcle* is in the Tariff Bill. When he moves to postpone the Force Bill till next session and to commence voting on the Tariff Bill on the 30th of August, we can easily see that Quay's creditors—the contributors to the Harrison campaign fund—are pressing their claims. That they began to be alarmed some weeks ago was made plain by the outcry of the organ of the Protective Tariff League. Quay was undoubtedly called on to make good his promises, and he has devised the plan of unloading the Force Bill in order to save the subscription list.

The organ of the Manufacturers' Club in Philadelphia has quite outdone Senator Quay and ex-Chairman Jones in its attitude towards the Federal Election Bill. The *Manufacturer* says that the Election Bill ought not to be passed at all, even if there were abundance of time for it. Moreover, "the sentiment of the Republican party, *outside the circle of professional politicians*, is against the adoption of the Federal Elections Bill." The reasons why the bill ought not to pass are stated with considerable force, and we especially commend them to Senator Hoar, who appears to be classed by the *Manufacturer* with "the circle of professional politicians," while Quay occupies the more lofty position of statesmanship. The reasons are (1) that this is no time to be stirring up sectional animosities; (2) that the bill

if passed will fail of its purpose; (3) that instead of breaking the solid South, it will make it more solid than ever; (4) that it will play the mischief in the North by giving an opportunity for every discontented faction that can muster one hundred cranks, to have their Congressional election put under Federal supervision; (5) that the Republican party is now in good health and needs no medicine. All of these reasons except the last have been so often repeated in our columns that it would be superfluous to dwell upon them. As to the last reason we have our doubts.

The *Tribune* of Friday morning "gave away" its party again almost as badly as it did in confessing to the manner of Harrison's election. In stating reasons why the Election Bill should be passed by the Senate it says: "*The Election Bill carries within itself the assurance of future tariff bills by the hundred.*" That is to say, while every business interest demands a settlement of the tariff question, and while many a promise has been made (some of them, we think, in the *Tribune*) that the passage of the McKinley Bill would afford a settlement for ten years or more, the *Tribune* now lets out the secret that if this Force Bill, by means of which it is expected to perpetuate the Republican majority in Congress, goes through, it will mean the passage of future "tariff bills by the hundred." In other words, the Republican leaders will stand ready to pass a tariff bill to suit any manufacturer who will submit with sufficient grace to the fat-frying process. There is no doubt that this is the actual programme which the Republican bosses in the present House of Representatives have in view; but how do these bosses like to have the *Tribune* betray it, and how do the business interests of the country enjoy the prospect?

The most important word said on the subject of the national finances in either branch of Congress was said by Senator Edmunds on Saturday while the River and Harbor Bill was under consideration. We quote from the *Congressional Record*:

"The state of the Treasury, Mr. President, I am very much afraid—I am almost afraid to say it; it may not be Republicanism or whatever—may turn out, as we now stand on the appropriations proposed in this bill and in the other bills that have passed both houses and that have passed one or the other, and which, in the round effect, will come to be the law that is passed, will turn out on the 30th of June, 1891, to be, I fear, $50,000,000 in round numbers short of the estimated income, assuming that we do not take the duty off sugar."

The Senator said also that he had intended to offer an amendment that one-half of the money in the bill be appropriated to be expended by the Secretary of War for rivers and harbors at his discretion, being satisfied that the Secretary would expend it for really national works, and not for neighborhood purposes. This would have been equivalent to cutting down the total appropriation one-half and eliminating all the special appropriations in the bill. "But," he added, "I have become convinced that I shall only weary the patience of the Senate and enter upon a perfectly useless and hopeless enterprise to do it; but I think it right to say what I have said." Senator Frye replied at considerable length, defending what Mr. Edmunds called the neighborhood appropriation, but made no kind of reference to the threatened deficit in the Treasury. Nor did any other Senator do so. The most important inference to be drawn from Mr. Edmunds's remarks is, that he intends to vote against any lessening of the sugar duties. A letter from him containing the same intimation is published in the Burlington *Free Press*.

The debate in the Senate on tin plate has lasted a whole week and is not yet ended. The earnestness of the opposition in the Senate to the increased duty is only a reflex of the popular opposition. There is, perhaps, no article in the whole bill about which such intense feeling exists. The motion made by Senator Plumb that the people be allowed to have tin plate at the former price, and that Mr. Cronemeyer of Pittsburgh be allowed a bounty of one cent per pound on all the tin plate he produces, would be acceptable as a compromise, but it will probably be defeated because it will not serve the purposes of the galvanized-iron-roofing interest. These people want tin plate kept out of reach as much as possible. They have somehow got hold of the Republican Machine—probably by contributions to the campaign fund—so that Senator Morrill of Vermont, who opposed any increase of the duty on tin plate when the tariff of 1883 was enacted, now indulges in sneers at his own constituents who venture to send him petitions against such increase. When the tariff of 1883 was under discussion, he treated similar petitions with much greater respect, saying:

"Before the Committee on Finance we had ever so many memorials from those using this article in the manufacture of cans for the purpose of canning fruit, vegetables, etc., asking that the duty should remain as it is; and instead of following the Tariff Commission, we put the duty precisely at what it now is, 1.1 cent a pound. I trust, notwithstanding the possibility that we might at some time hereafter manufacture tin, that we shall not raise the duty to two cents a pound, *for I somewhat doubt whether we can get children to dip this article* for a great many years yet, at the wages that are paid for dipping tagger's iron into melted tin."

Apparently Senator Morrill has become convinced that American children can now be had for this repulsive employment.

In his debate with Senator Gray last week Senator Aldrich laid himself open to a charge of unfair dealing, to put it mildly. The subject under discussion was the decline in the price of tin plates during a period of about ten years. Senator Gray had stated that this decline was about 50 per cent., and quoted from Mr. D. A. Wells's 'Recent Economic Changes' to show the fact and the causes of it. Mr. Aldrich challenged the statement in these words:

"Mr. Aldrich—For the purpose of showing not only the inaccuracy of Mr. Wells's statement, but the very gross inaccuracy of it, I desire to call the attention of the Senator from Delaware, and ask his examination of a series of charts which I have before me, issued by Henry Nash & Co. of Liverpool, who are the largest exporters of tin plates in Great Britain, showing the price from 1878 to the present time, by years and by months, of tin plate and of pig-tin. This table shows that the price of charcoal IC tin in January, 1878, was 20s. a box, and in December, 1887, was 19s., 6d. a box, and in December, 1889, 20s. and 6d. a box, and that the price of Straits tin——

"Mr. Gray—In December, 1889?

"Mr. Aldrich—Yes; and the price of Straits tin in 1878, the average price for the year, was £61 4s. 2d., and in 1887 it was £111 10s."

Thereupon Senator Plumb took the floor and read a telegram from J. M. Molloy's Sons of Philadelphia, manufacturers of tinware, giving the average yearly prices of tin plate from 1880 to 1890, fully confirming Senator Gray and Mr. Wells. The telegram added: "Any proof required can be furnished." To this Mr. Aldrich had the hardihood to reply that it was very evident that the quotation of the price must be a mistake. Finally, Mr. Gray produced a copy of the Pittsburgh *American Manufacturer* containing a table of the yearly prices of tin plate from 1874 to 1889, fully confirming Mr. Wells and J. M. Molloy's Sons. It turned out that Aldrich had taken three dates only, which happened to show very nearly the same prices, and had offered them as illustrative of the whole situation, whereas the year 1887 was exceptional altogether, being the year in which the speculators in metallic tin engineered a corner simultaneously with the operations of the copper syndicate in Paris, nearly doubling the normal price of the article. When all the facts came out, Mr. Gray said dryly: "I wish the Senator from Rhode Island would be a little more fair in his discussion of this question."

The *Dry Goods Economist* occasionally lets a cat out of the McKinley tariff bag. The pending bill makes a large increase in the duties on hosiery, with the ostensible object of protecting our dear work-people against paupers in England, or Germany, or somewhere. The *Dry Goods Economist* tells us that what ails the hosiery mills is not pauper labor, but obsolete machinery. It says:

"The trouble with many mills is that they are full of obsolete machinery, incapable of producing the merchandise which the trade demands, and *it is significant that these establishments are among the loudest in their clamor for a higher tariff.* But mills that are handicapped with obsolete machinery should know that no tariff that can be framed would be high enough to save *them* from impending disaster. Even should the schedules become prohibitory, and importations of foreign hosiery cease altogether, the domestic competition would be sufficient to ultimately crush them out of existence."

Senator Aldrich may not be able to tell within 200 per cent. what is the value of licorice paste when he asks his brother Senators to vote for a tax on it, but he ought to know all about cotton hosiery, because one of the most successful mills in the country, owned by English capitalists and run by Nottingham operatives, is situated in his own State. Therefore, when the hosiery schedule is reached, we shall expect him to tell us just how much of the proposed tax is for labor and how much for bad machinery. This is a problem in pure mathematics. The present rate of duty on cotton hosiery is 40 per cent. all

around. The proposed rates are 40 cents per dozen pairs and 40 per cent. ad valorem if valued at more than $2 per dozen pairs, and at lower rates for lower values. The change in the mode of assessing the duty would seem to have been skilfully arranged for some unknown purpose. What purpose would be more rational than to provide a definite rate of protection for the owners of obsolete machinery? If we suppose that the 40 per cent. ad valorem is for the benefit of contract labor imported from Nottingham—that being the tax at present—probably the added rate of forty cents per dozen pairs (which is equal to 20 per cent.) is intended to offset the improved machinery used at Nottingham.

The Republican Convention in the Ninth Congressional District of Iowa last week furnished further evidence of the way that the leaven of tariff reform is working in that State. The platform adopted said not one word in favor of the McKinley Tariff Bill, while it contained a "demand that the farmers shall have the same rights and privileges under the tariff law that are accorded to the products of the manufacturers." The real feeling of the delegates regarding the pending Tariff Bill found expression in the speech of the chairman of the Convention, who said: "I believe our tariff system should be scaled down to the lowest point consistent with the best interests of our State and nation. *I am not in favor of the McKinley Bill; I think, in many respects, it is an outrage.*"

The speculation in silver, backed by the increased Treasury purchases, has carried the price up to $1.20 per ounce. It may go to $1.29. If it should go beyond that figure, it would do so on its own merits, since the Secretary is not allowed to pay a higher price. If he cannot obtain bullion at that price or less, the law requires him to stop buying at anything above that figure. Gold and silver are then on a parity at our legal ratio. It looks now as though the price would go up to $1.29 and stop there until the production overtakes the new demand of our Government. This new demand, although entirely artificial, serves all the purposes of a true commercial demand for the time being. There is this difference, however, between the two kinds of demand: the whole world will look forward with apprehension to a withdrawal of the artificial demand. Everybody who has any silver on hand will try to get rid of it while the artificial price continues. France and Belgium may try to unload a portion of their stock, but they could not get rid of much of it without putting down the price materially. But they cannot do this secretly. Even an intimation of their intention would have a disastrous effect on the price. The proposition to send a discreet person abroad in an official capacity to sound the governments of Europe on the subject of another monetary conference is attractive on the surface; but discreet persons on this side of the water can see that those governments look with amazement and contempt on this "engineering" of the price of silver, and that they want no part or lot in it.

There are no longer any pretences in Tammany Hall circles of hilarious emotions regarding the citizens' movement. Almost the first question which a Tammany man asks now when he meets any one who is suspected of political knowledge is: "What do you think of this citizens' movement?" The more Tammany thinks of it, the less it likes it, and between it and the awful possibilities of the new ballot law, there is abundant food for serious thought. It is very plain now that instead of being started too soon, as its opponents believed, the citizens' movement was extremely well timed. It has steadily gained in force, and is to-day, though we are in the dull season of midsummer, a most important element in the local political situation. It enters into all calculations, and, unless appearances are very deceptive, it will be the controlling force in the next election. The "straight" Republicans have helped it greatly by showing their weakness so far in advance of the campaign, thus making it practically impossible for them to work much mischief at a later period.

It is very evident that the conditions of the local political atmosphere are unfavorable to the successful development of a "straight Republican ticket" this year. A fortnight has elapsed since the Republican Club, under the inspiring guidance of Elder Shepard, put forth its disjointed "address" warning all true Republicans to "keep aloof from citizens' movements and combinations" of all kinds, and adjuring them to "build up the Republican party" by standing by its principles and candidates on all occasions. With the exception of a glowing eulogy in the Elder's own paper, and a resolution of approval by the Harlem Republican Club, the address has been very coldly received. The *Tribune* pronounced it more or less able, but premature, and the only Republican district association, the Twenty-third, which considered it at all, refused to endorse it. The People's Municipal League has now put forth a circular in response, but, strong and useful as it is, we are bound to say that the whole subject in hand was more effectively disposed of by the Postmaster, Mr. Van Cott, in an interesting interview. Mr. Van Cott, as everybody knows, is a Republican politician of large experience, whose intimate association with city politics for many years makes him one of the best possible authorities upon a question like this. When, therefore, he says that the "impossibility of electing a Republican to the Mayoralty on a straight Republican ticket is so palpable" that he is unable to "see how any one could regard the nomination of such a ticket as anything but the purest folly," there is nothing more to be said.

The impression that the negroes of Mississippi are entirely unrepresented in the Constitutional Convention now in session is incorrect. There is one colored member, Isaiah T. Montgomery, who was once a slave of Jefferson Davis. He is described as "a most intelligent man," and the Jackson correspondent of the Memphis *Commercial* thinks that he will "prove to be one of the most valuable members of the Convention." It is noted that the other members "treat him with respectful consideration," and he has been placed upon the very important Committee on Suffrage. It is interesting to learn that he openly declares in favor of the Australian ballot system. The *Commercial's* correspondent says that it is already plain that the widest liberality is to be extended to the Republican members of the Convention, who include, besides this representative of the negroes, three whites, among them ex-Gov. Alcorn and ex-Chief Justice Simrall.

One of those appointments that are always to be regretted in the interest of the public service as a triumph of political skill over personal merit has just been made by the President. Dr. Jedediah H. Baxter, the Chief Medical Purveyor of the Army, has been appointed its Surgeon-General. Dr. Baxter entered the military service in 1861 as a regimental surgeon from Massachusetts, and in the spring of 1862 he was recommissioned as a staff surgeon of volunteers, a position giving him greater latitude of movement. After a short service on the Peninsula, and before the heavy fighting on the Chickahominy, he returned to Washington, where he has remained. At first on hospital duty, he was appointed by the Secretary of War the chief medical officer of the Provost Marshal's Bureau at its organization in 1863. Upon the dissolution of that special organization at the close of the war, he was retained by Congressional resolution to compile the vital statistics it had collected, upon which he was engaged until 1875. Meantime he had been appointed in 1867 to the newly created office of Assistant Medical Purveyor, ranking as lieutenant-colonel, in the regular establishment; he was then advanced by selection and by special legislative sanction over the heads of other officers of excellent and much longer service, and finally was given additional rank as colonel, again specially created, in 1874, before he had discharged any duty in the Purveying Department. In his appointment the fundamental law of the Medical Department, that examination is a prerequisite to admission and promotion, was violated in spirit—although, according to the wording of the enactment, the appointment itself was technically legal. He has resided continuously in Washington since 1862; he has seen no service with troops; his unprecedented promotion in all its stages has followed from his close adherence to political methods at the capital rather than the impersonal and zealous discharge of public duty. This appointment is the worst possible, saying, as it does, to a scientific corps, admission to which, with this single exception, has been confined to merit, that political strength and not hard service is the real passport to place, if not to honor. The rejection of this nomination would be creditable to the Senate.

THE REPUBLICAN FIASCO.

THE caucus of Republican Senators on Thursday night settled the fate of the Force Bill. The question before it was whether Mr. Quay's resolution providing for an early adjournment should be amended, as Mr. Hoar and the other bloody-shirt Senators desired, by including the Force Bill among the measures to be passed; and the *Tribune's* correspondent announces that Mr. Hoar's amendment to this effect "was rejected by a round majority." For some time past it has been growing more and more clear that the Force Bill could not be passed, and the "round majority" against it in the Republican caucus is the end of the scheme.

The New York *Tribune* and its meek follower, the Philadelphia *Press*, still keep up their attempt to bulldoze the independent Republican Senators into a surrender of their convictions, but it is an utter waste of words. The recalcitrants know that there are plenty of good Republican newspapers which sustain and applaud their course, and they rate at its true value the parroting of two organs which have been muzzled by the gift of offices to their editors. How far the *Tribune* and *Press* choose to go in making themselves ridiculous may be a matter of importance to those papers, but it is a matter of indifference to Republican Senators.

The rejection of the Force Bill is the collapse of the new programme of government devised by "Tom" Reed and adopted at his orders by the Republicans of the House. The present Congress is the fifty-first in our history, and opens the second century of our Government. During the first hundred years of our history Congress had been a deliberative body, as the framers of the Constitution intended it to be; and when the centennial of Washington's inauguration was celebrated, in the spring of 1889, the wisdom of those framers was deduced from the excellent manner in which the system they devised had worked. In the following December "Tom" Reed was elected Speaker of the House of Representatives, and announced that this judgment was entirely unfounded; that, in point of fact, the system of legislation constructed by the founders of the Government and followed by three generations of their descendants was a ridiculous failure; and that a new system must be substituted, under which deliberation should be abolished in the House, and a dictator in the Speaker's chair should force through such bills as a party caucus decreed—these bills to be concurred in without delay by the Senate, whose concurrence was unfortunately necessary under the Constitution, but should be reduced to a mere formality.

This policy was to result, first, in the prompt passage of the regular legislation of the session, like the annual appropriation bills; secondly, in the no less prompt enactment of two great party measures—the McKinley Tariff Bill and the Force Bill; and, thirdly, in the demonstration to the business community that the Republican party was the only party which could carry on the work of legislation "with neatness and despatch," so that Congress might adjourn early in the summer with a record to which the majority could "point with pride" during the fall campaign.

The first breakdown in this programme was the failure to dispose of the ordinary and perfunctory work of the session with promptness. It is now the middle of the ninth month since Congress met, and two of the regular appropriation bills for the support of the Government have not yet become laws. This is the fault of the House of Representatives under the Reed régime. Senator Allison, Chairman of the Committee on Appropriations, in explaining last week the necessity for passing a resolution to provide temporarily for the expenses of the Government, made this important statement: "Owing to the fact that the Sundry Civil Bill did not reach the Senate until within a very few days of the expiration of the fiscal year [June 30], it was impossible for us to consider that bill in this body and pass it until nearly one month after the fiscal year for which the appropriations were made had begun. It is because of the delay in getting this bill into the Senate Chamber that these extensions have become necessary. What is true of the Sundry Civil Bill is also true of the Indian Appropriation Bill."

The second breakdown has occurred with the two great measures of partisan legislation proposed. A tariff bill was driven through the House, but what a tariff bill!—a measure which the most prominent Republican newspapers in such great Republican States as Minnesota, Kansas, and Nebraska pronounce utterly indefensible, and call upon their Republican Senators to defeat; a bill which even the New York *Tribune* confesses to be full of abominable features. In its attempt to bulldoze the independent Republican Senators, the *Tribune* warns Senator Quay that "he will find an amount of opposition which will seem curious to him to *certain features of the Tariff Bill that particularly interest his friends* if he persist in his motion," and uses this further significant language: "The reason is, that Republican Senators have been disposed to yield much, as respects the details of the Tariff Bill, in order to carry through the legislation which was deemed essential to the welfare of the country and the success of the Republican party. But if a part of that legislation which they regard as of more importance than any other is to be sacrificed, they will begin to consider what reason they have for refraining from action in accordance with their opinions respecting details of the tariff. *Sundry Pennsylvania interests will have no right to complain if in that state of affairs they suffer severely.*" Here is a frank confession that "sundry Pennsylvania interests" have been granted outrageous and indefensible privileges under the McKinley Bill.

The simultaneous exposure of the enormities of the Tariff Bill by the chief organs of the high tariff in the East and by the representative Republican newspapers in the West is now followed by the rejection of the other great partisan measure, the Force Bill. This was rushed through the House under whip and spur, a number of Republican Representatives who opposed the policy being coerced into acquiescence by the Speaker's open use of his power over other measures in which they were interested. Deliberation would have been fatal to it in the House if it had been allowed; it has been allowed in the Senate, and the measure is dead.

The breakdown of the third part of the programme has been even more complete. The one hope of success for the Reed policy was a brilliant dash which might capture the fancy of the country. If the appropriation bills had been passed during the winter, and the other measures which had been slated during the spring, and if Congress had adjourned in June with a taking record as "a business Congress," a hopeful appeal might have been made to the country for a fresh lease of power. But with the ordinary appropriation bills still lagging along in midsummer, with the Tariff Bill in August undergoing exposure both by the New York *Tribune* in the East and by Republican newspapers of the first standing in the West, as full of abominations; with the Force Bill rejected, after the prestige of the party had been involved in its passage, the outlook is as gloomy as any party in the country has confronted for many years.

All friends of good government will rejoice over the situation. The success of "Tom" Reed's scheme to abolish deliberation in legislation would have been full of peril to the future of the country.

OUR RELATIONS WITH FRANCE.

MINISTER REID'S communication to M. Ribot on the subject of the French prohibition of American pork contains one or two slips which illustrate the need of some kind of training in diplomacy if we are to have diplomatic relations with foreign countries. The object of diplomacy is to gain something for one's country at the hands of the foreign country. It has no other end or aim. To make the other man angry by your correspondence with him is wholly inadmissible, because it tends to defeat the purpose in view. The larger part of Mr. Reid's note is well considered and unobjectionable in point of taste, although the political economy of it may be open to question. But there is another part which is not diplomacy at all. It is an arraignment of the French Government before its own people, accusing the former of oppressing the latter, and especially the poorer classes. As though this were not enough to put M. Ribot in bad temper, the note ends with a threat that if France does not do so and so, we will make it hot for her by prohibiting her wines. Fancy Sir Julian Pauncefote addressing a note to Mr. Blaine saying:

> And above all you are depriving your people, particularly the poor laboring classes, of a cheap and highly prized article of household use, namely, tinware, for which you have been able to furnish no adequate substitute. Statistics of your importations and the regular quotations of your domestic prices show that what you are shutting out from us you have not supplied from other sources. Surely an abundant and cheap supply of household utensils for the laboring classes is one of the most important essentials for the happiness of a people, etc.

Such a lecture might appropriately wind up with a threat that if the new duty on tin plate becomes a law, Great Britain will curtail her importation of American cereals. If Mr. Blaine should decline to receive such a note at all, he would be justified even in the eyes of those who are opposed to an increased duty on tin plate.

Mr. Reid's lecture may be a very good pronunciamiento for pork-packers, but even they will be puzzled to read immediately after it an array of statistics to show that the prohibition of American pork has not caused any advance in the price of the article in France, either fresh or salted, and that the French laborer is paying no more now than he did before. On this point he says:

"In June, 1880, before prohibition, and when, according to theories now advanced in some quarters, the French pork-grower suffered from the American competition, French swine sold, live weight, Paris, at 138.61 francs per 100 kilos. The same quality is currently quoted now at 114 francs per hundred kilos. The average price of French swine for 1880 was from 25 to 30 per cent. higher than in 1889.

"In 1880 the French laborer, if he bought French salted pork at all, paid for it the retailers' varying profits over the wholesale price of from 160 francs to 200 francs per 100 kilos, for sides and hams. Now, if he buys French salted pork, he pays for the same qualities the retailers' profits over the current wholesale price, substantially the same as in 1880, of from 160 francs to 200 francs per 100 kilos."

In what way the laboring classes of France have been oppressed is not made clear by Mr. Reid, although undoubtedly they have been injured in common with others by the general curtailment of trade which it is the present aim of both countries to bring about, and which Mr. Reid himself seems to approve of.

Mr. Reid also gives M. Ribot some hints about raising revenue. You want to raise more revenue, he says; we Americans want to raise less (he had not heard the latest news from home on this subject). In our varied experience we have found that low duties sometimes yield more revenue than high ones. We are now engaged in raising duties in order to check importations and revenue. Let us suggest the opposite course to you for opposite reasons. This friendly suggestion is thrown in to meet the high French duties on pork in case the prohibition should be removed but the same end be reached in the other way, that is, in *our* way. Mr. Reid distinctly maintains that it is not exclusion of our pork that we object to, but the manner of it. It is unfriendly to give our pork a bad name, but it would not be unfriendly to put a prohibitory duty on it and keep it out in that way. From which it would appear that if the French Government should admit our pork duty free but caution people against buying it, we should consider that an unfriendly act, while it would be friendly, or, at any rate, not unfriendly, to put a duty of 300 per cent. on it, but not defame its character. Our pork-packers will hardly endorse this proposition.

The French position is indefensible—this Mr. Reid has made entirely clear. The trouble is that his own is indefensible also. Every Frenchman is smart enough to see through it. We have only a technical case against France as long as we maintain duties that are avowedly not for revenue, but for prohibition or for checking importation. Just now the situation is complicated by the McKinley Administrative Bill, a measure as brutal as the French prohibition of our pork, and quite as dishonest. The object of this bill, as we showed at the time, was to prevent importation. It was an attempt to accomplish by indirection what the French prohibition of our pork accomplishes directly. There has been so great a stir about this matter in France that our consuls have held a conference on the subject, and have decided that they can do nothing. What the outcome may be, no man can tell. The only things tolerably certain are that American pork will not find any easier entrance into France, and that our Republican party is knocking its brains out against its own Chinese wall.

POLITICAL PARTIES IN JAPAN.

TOKIO, July, 1890.

IN approaching the subject of political parties in this country, one needs to familiarize one's self with two or three general truths of Japanese politics before attempting to gather the significance of individual political sections.

The first is, that their existence is a matter of the last ten years only. No one of the so-called parties (*to*—a word meaning rather "society," the German *Bund*), whatever the ante-natal influences that moulded it, has yet reached its tenth birthday. The second truth is, that the Government is, in fact, not conducted personally by the Emperor, but according to the combined will of a small number of men in official position—a number yearly growing larger, however, and daily more and more restricted in their action to the path marked out by public opinion. These fill the leading governmental posts, and their assumption or resignation of office is determined solely by the exigencies of preserving harmony among themselves and at the same time recognizing each other's relative influence. There can be no doubt, let me hasten to say, that a fair number are entitled to be called statesmen, that they use their power, on the whole, to the best of their knowledge and ability, and that the Government could not as yet be properly carried on by any other mechanism. Like the war-horses of the Republican party in the United States, they rose to their present influence in the revolutionary times of 1860-70, and until within recent years their compact ranks have, with a very few exceptions, held all of the most capable patriots in the nation.

The third truth follows easily from the second, and is this: A political party in Japan is, and under hitherto existing conditions could only be, the personal following of a member of this circle who has chanced to become one of the "outs." Given the politically apathetic *heimin* (commoners), the intelligent but inexperienced and unorganized *shizoku* (*samurai*), the wielding of power by an absolutely irresponsible cabinet having a monopoly of the able men of the country, and the existence of a political party is impossible. Until, as a result of dissension, some leading member of that select circle should be obliged to leave it, should thus be placed in opposition, and should seek popular support, political controversy would be carried on only within the Government itself, not in the arena of popular discussion. This is precisely what has happened. When it has come to pass that one of the more influential members has been forced out of the circle (although a remarkable power of cohesion has made this a rare occurrence), he has become the nucleus of a party. Conversely, no political party has arisen except in this way.

There are a few apparent exceptions to this rule which are easily explained. When Eto Shimpei (of the Hizen clan), in 1874, and Mayebara (of the Choshiu clan), in 1876, withdrew in anger, they resorted to arms instead of to peaceable agitation, and were executed as traitors. Kido, one of the greatest statesmen of the nation, retired in 1873, but soon after returned. Saigo met his end on the battlefield in armed opposition. Soyejima (of Hizen), who also went out with Itagaki in 1873, returned soon after as the Emperor's tutor, and still holds an office. Itagaki's large following (the creation of which in 1875-81 I have already described), was national in its spirit, was a party and something more. But when 1882 came, and other parties arose, this body, too, crystallized into a partisan organization, the *Jiyu-to* (Radicals). Goto, one of the earliest and most influential of the plotters for the Restoration, went out with Itagaki in 1873, and for many years preserved an unaccountable self-control; but some two years ago he, too (then a Count), appeared in the field with a party which finally adopted the name of *Daido Danketsu* (United party). The resignations of Inouye, in 1887, and of Ito, in 1888, were not followed by the formation of parties; but the truth is that they never really went into the outer darkness. Their retirement was a piece of temporary policy. They are far too strong to be obliged to bend before any other members of the oligarchy, and to-day they represent a dominant, if externally invisible, governmental influence.

Such are the general truths from which depends the existence of parties to-day in this country. So far as concerns the chronicles of their history, the tale may be made a short one. The period since 1881 divides itself into two parts. In that year the national ferment which resulted in the constitutional decree of October 12 furnished abundant material for the formation of parties. Upon Okuma's resignation, in 1881, he formed immediately the *Kaishin-to* (Progressist party), based on the principle of the immediate enfranchisement of the people. One might have expected a body of men professing such a principle to join the standard of Itagaki's party, the *Jiyu* (Radicals). But the two sections have ever remained apart, and at one time even found themselves in bitter antagonism on the topic of treaty revision. The same period of ferment (1881-82) saw also the formation of the *Teisei-to* (Imperialists), the *Rikkensei-to* (Constitutional Imperialists), and numberless minor organizations; but, with the Constitution solemnly promised for 1890, the excitement rapidly subsided, and by 1884 these parties had all disbanded except the *Kaishin-to*, and even from this its leader, Okuma, had nominally withdrawn. Itagaki's own explanation of the *Jiyu-to's* dissolution, as a personal friend of his informs me, is that the restrictions of speech imposed by the Government made it impossible to conduct constitutionally such an agitation as he wished, and therefore, to rid the party of hotter heads who, for lack of lawful methods, inclined towards violent ones, he thought it best to disband the party, delaying the reunion of its best elements until the time should be ripe.

Thus ended the first period. From that time until within the last three years, there was almost no partisan activity. The question of

treaty revision, however, bringing back Okuma (now Count) to office in 1887, galvanized the *Kaishin-to* once more into life. Count Goto, coming out of his retirement two years ago, took the stump, made a tour of the northeastern provinces, and formed the *Daido Danketsu* (United party). This party rapidly grew, and to it were attracted so many from the old *Jiyu-to* that Goto, men said, began to reap where Itagaki had sowed the seed. The latter leader now bestirred himself once more. After a year or so of negotiation, the details of which would be tedious, nearly all the fragments of his old party were united in the *Aikoku-to* (Patriotic party). More than this has in effect happened, for an agreement has been reached according to which August next is to see the *Aikoku*, the *Daido*, and the *Jiyu* parties amalgamated, with much ceremony, into an organization to be called the *Ko-in* (United) Club.

But, other than these, are there any parties of note? If the generalization already made is correct, one may answer this by asking, Are there any men of influence who are now to be counted among the "outs" in active opposition? Of such there are notably two—General Viscount Torio and Viscount Tani. The former owns (one cannot help using the term) a little party called the *Hoshu-chiusei-ha* (Conservative Independents). There is far less conservatism than independence, or let us say idiosyncrasy, in its make-up, and no one seems to pay it much respect. The latter's name has been associated with an organization of real importance, known as the *Kokusui Hozon-to* (Nationalist party). Its motive is a conservative and laudable desire to preserve the national individuality by refusing to adopt indiscriminately the ideas of the West, while keeping pace with its progress. "To adapt, not adopt," might be described as its motto. The real strength of this section, however, is not Viscount Tani, but the influence of leading members who are not partisan politicians, but represent the "Mugwumpism" of Japan.

One will naturally expect to hear something of the principles professed by the three leading parties, the *Jiyu* (or *Aikoku*), *Daido*, and *Kaishin*. Here, however, there is a striking and somewhat amusing failure to disagree. One must resort to the platforms of the Republican and Democratic parties from 1876 to 1880 to find a parallel. The *Kaishin-to* (but within a few months only) has issued a platform of sixteen articles, including reduction of land-tax, retrenchment in expenses, cabinet by party, treaty revision, educational reform, extension of the franchise, greater freedom of speech, and other praiseworthy proposals. Not to be outdone, the *Jiyu-to* thereupon promulgated a creed of thirty-two articles, including, be it observed, all those of the *Kaishin-to*, with others of a somewhat more radical tendency, such as trial by jury, popular election of the governors of *ken* (counties), limitation of the number of nobles, etc. Within a month the *Daido* has published a platform of thirty articles; but of these, again, none strays far from those already in the field.

There are, however, certain distinctive marks to be seen, chiefly in the manner of men composing the parties. The *Jiyu-to* has from the first been preëminently the party, not of the proletariat, for there is as yet no such class here, but of the common people, of those on whom the taxes fall, of the poor man, of the democrats, of the radical political thinkers. The *Daido* party has to some extent poached on the same preserves; but it has drawn also from the men of the northeast (Aidzu and the vicinity), the old partisans of the Shogunate, who have accepted with pleasure the opportunity to attack their old antagonists now in power, the men of the southwest. The *Kaishin* party represents the rich and the influential, but contains also a large number of the younger educated men not in official position. It is credited with moderate feelings, and at the same time with aristocratic proclivities. The *Kokusui-to* includes a number of the best thinkers and educators, of the younger generation principally, and represents the more thoughtful tendencies of the day. Perhaps it will in its present form never actively enter politics as an organization.

The interesting question, of course, is, What general tendency, explicitly recognized or not by one or another of these sections, is to furnish the principle which will divide parties under the approaching parliamentary régime? The measures which the various sections advocate show a striking similarity of aim; it remains to discover whether their existence points to any real issues.

As between any two of the *Daido*, *Jiyu*, and *Kaishin* parties, it seems hardly possible that any issue can be formed. All began as oppositionist parties, and the only pregnant distinction at present is that between the personnel of the *Kaishin to* and that of the other two. The latter have now practically united, and it seems not improbable that by November the *Kaishin-to* also may have given up its separate existence. The *Kokusui* represents a principle which is of more consequence at present in art, manners, and education than in ordinary political matters, and perhaps not for a decade or so will an issue of broad importance and popular interest arise in which this principle will be at stake. Economic issues, too (I do not say economic problems), at present there are virtually none, if we omit the demand for taxation reform. There is no rent question, no labor question, no tariff question. What, then, can be prophesied as to the parliamentary parties?

There is one motive which seems to have supplied the very vitality of the three great parties, and it is not unlikely that this will furnish the dominant note in the formation of parliamentary sections. This motive is a simple one—the desire, on the part of a large portion of the *shizoku*, to share in the Government, and not alone in the deliberative functions of the National Assembly, but in the more real power of the Ministry. This is today the theme which quickest finds a popular response. When Count Goto made his tour of the northeast, he proclaimed himself in favor of government by party, and raised a strong following by attacking the principle of exclusiveness on which the present Cabinet is founded. When Count Okuma was recalled in 1887 to a place among his old comrades, and began to dictate a successful policy of treaty revision, the *Kaishin-to* ceased to be oppositionists, and loudly supported the Government policy of their leader, for they, too, shared in his success, and therein were tasting the power for which they had sighed. In short, the time seems to be coming when there must be, in part at least, a surrender of that power so well held in trust by the heroes of the Restoration—a surrender resulting not merely in a popular Assembly invested with deliberative powers, but in a Ministry more or less responsible to that Assembly. It is this irresponsibility of the Ministry (or, to take the point of view of the "outs," this monopoly of power by a close corporation of the Restoration leaders and their friends), which seems to stick in the throats of the politicians. One cannot help feeling that this question must be solved by the nation in some way before it will be in a mood to take up any other great issue. The sooner it is solved the better. Until parliamentary government by party arrives (even if in a modified shape only), there cannot but be more or less indecision on current questions, more or less fluidity and lack of cohesion in the party materials. Until then there will be only one real party—the Opposition. The journals have already declared from time to time in favor of "*seito naikaku*" (a party cabinet), mildly depreciating the present system of "*hanbatsu naikaku*" (a coalition cabinet, holding power *ad libitum*).

Perhaps neither the first nor the second year of the National Assembly will see the issue precipitated. At present it is obscured by the cumbersome party platforms recently put forth. But I have endeavored to give you some idea of the larger influences and their trend, rather than of the countless minor issues, which are but temporary and superficial.

JOHN H. WIGMORE.

SOREL'S MME. DE STAËL.

PARIS, August 7, 1890.

IT seems to be the destiny of Mme. de Staël to be always before the public. Whenever you see her name, your curiosity is at once excited. She remains, even now, an enigma. There are some traits in her character which cannot easily be explained. She seems to have gone through life as if it were a constant field of experiment. She lived in the most extraordinary time, and she was extraordinary herself—always out of balance; acting seemingly under an impulse stronger than herself; led by her passions as much as by her intellect, though her intellect was a wonderful force and at times approached even genius; always on the stage, always playing a part, and nevertheless the most sincere of women.

From time to time we become acquainted with some inedited portions of her voluminous correspondence. I spoke lately in your columns of a book in which many letters from her to Benjamin Constant were published. I have now before me a little volume, by M. Sorel, belonging to the series which the Hachettes have undertaken, "Les Grands Écrivains Français."[1] The best volume of this series that has yet appeared is 'Madame de Sévigné,' by M. Gaston Boissier of the French Academy. The volume on Victor Cousin, by M. Jules Simon, is amusing, but it is only a satire on a philosopher who hardly deserves to be ranged among the great French writers, and who will only be remembered as an historian. I prefer not to speak of the other volumes of the series, as I should not have much to say in their praise.

Why did M. Sorel choose Mme. de Staël as one of the "grands écrivains français"? It is merely because he is occupied with the study of the French Revolution, because he has found Necker one of the great figures of the Revolution, and because the most important of Mme. de Staël's works is the book entitled 'Considérations sur la Révolution Française.' Mme. de Staël certainly had a good style—there is a terseness in her manner which sometimes approaches originality; but, on the whole, she cannot be cited as one of the great models of French literature. I pick up this phrase in 'Corinne' at haphazard: "La gloire elle-même ne saurait être pour une femme qu'un deuil éclatant du bonheur." This phrase is not a bad specimen of her style; a good judge would probably tell you that a *deuil* cannot be *éclatant*, that the two words are not in harmony, and that their union is an affectation.

When she paints herself as a Muse, the favorite of Apollo—"Her great black eyes are brilliant with genius; her hair, as black as ebony, falls on her shoulders in undulating locks; her features are more pronounced than delicate, one feels in them something above the destiny of her sex"—we are not quite pleased with the picture. We find everywhere this note of masculinity in Corinne; and who can much like a woman who looks like a man? The descriptions given by M. Sorel from the pictures of Mme. de Stael are not agreeable. "Ambition is with her at the service of sentiment, but sentiment borrows something of the inquietude and the asperity of ambition. Her love is such as man conceives it, dominating love; but she cannot be happy if she is not dominated by the man whom she loves. In life, she ought to have a guide, in love, a master; and she will be, in life, the most disobedient, in love, the most despotic, of creatures."

Germaine Necker was born on April 22, 1766. She was a precocious child, the pet of her father and mother: at the age of eleven she knew Raynal, Thomas, Grimm, Buffon, Marmontel, La Harpe; at fifteen, she made an abstract of Montesquieu's 'Esprit des Lois.' She read everything—'Clarissa Harlowe,' 'Werther'; at seventeen, she asked one day the old Maréchale de Mouchy, "Madame, what do you think of love?" She fell ill, and Tronchin remarked, "Perhaps she will become mad, but she will certainly be very unhappy." She had no method, felt no restraint, and entered life with an ardent imagination and an insatiable curiosity. She wrote tragedies, political essays, novels, sentimental compositions, letters on the character of J.-J. Rousseau; these last were published in 1789, when Germaine was already married.

Mme. Necker wished her daughter to make a brilliant marriage; she thought a moment of Pitt, who came to Paris in 1783; she chose a diplomat, Baron de Staël-Holstein, who was a Protestant, and was seventeen years older than her daughter. Germaine became on January 14, 1786, Baroness de Staël. Catherine the Great wrote: "Everybody says that the daughter of M. Necker makes a very poor marriage." Madame de Staël was received at Court, she had a salon, she became a queen of society, she frightened all women and many of the men; she became intimate with M. de Narbonne, Talleyrand, and Mathieu de Montmorency. Gouverneur Morris gives interesting details on their relations which M. Sorel probably overlooked, and which, at any rate, are not found in his book.

Mme. de Staël had a great triumph when her father was recalled on July 14, 1789. She accompanied him amidst the applause of the people. She became, however, the butt of the Royalists as well as of the friends of the Revolution. Her enemies treated her as they did Marie Antoinette. "She is the *bacchante* of the Revolution, the only person in France whose sex can be an object of doubt." She placed herself among the men who were called the *Constitutionnels*—Lally, Talleyrand, the Prince de Broglie, admirers of the English Constitution. This moderate party was soon lost between the pure Royalists and the Republicans. Mme. de Staël was obliged to leave Paris in 1792, and found a refuge at Coppet, on Lake Geneva, in her father's house. She tried, as well as she could, to save Marie Antoinette, and made an appeal to all women in her 'Reflections on the Queen's Trial.' Mme. Necker died in 1794, and about that time Mme. de Staël had the misfortune to meet Benjamin Constant, who was then twenty-seven years old, and who had more vices and more brilliant faculties than are generally found in one man. He made the conquest of Mme. de Staël. She became his slave and he became her slave. Their mutual passion was a mixture of love and of hatred, and recalls the famous distich of Catullus, "Odi et amo," etc.

Love and politics were always filling the head and the heart of Mme. de Staël. In 1794 she wrote some 'Reflections on Peace,' addressed to Mr. Pitt and to the French. This pamphlet reopened for her the door of France. She returned to France, found M. de Staël there reestablished as Ambassador, and she reopened her salon in the Rue de Bac for her old friends and for the rising men of the Revolution. She dreams of a republic, on the American pattern, with Lafayette for President. Benjamin Constant, who inspired her and was inspired by her, wrote a pamphlet 'On the Strength of the Present Government of France and of the Necessity of Rallying to It,' and Talleyrand, who had returned from America and was biding his time in Hamburg, wrote to Mme. de Staël: "Who is this M. Constant who has just written a remarkable book?" He probably knew very well.

The relations of Gen. Bonaparte and Mme. de Staël began after the war in Italy. They almost immediately disliked each other, and Mme. de Staël threw herself into the opposition, after the 18th Brumaire. On that day she had invited some people to dinner who belonged to the Government. Two hours before the dinner came ten letters of excuses; one was from Talleyrand. Mme. de Staël never pardoned him. She had dragged him out of misery, presented him to Barras, and made him Minister of Foreign Affairs. From that time their old friendship was broken for ever. M. de Staël died in 1802; his wife was free, but she did not wish to marry Benjamin Constant. He did not desire the marriage more than she did. Things remained as they were before. She travelled from 1804 to 1807 in Germany and Italy; she collected in Weimar, where she was received with open arms, the materials of her great work, 'De l'Allemagne'; she saw Schiller and Goethe. Goethe had read her novel 'Delphine' and her treatise on 'The Influence of the Passions,' and merely said: "Mme. de Staël has no notion of duty." She talked philosophy with Fichte. At Coppet, she worked at 'Corinne,' a descriptive novel, in which the study of sentiment is mixed with meditations on history, emphatic, not devoid of a certain sort of elevation. 'Corinne' was the result of her journey in Italy.

In 1810 she met at Geneva a young officer, only twenty-three years old, who belonged to the Swiss aristocracy, Albert de Rocca. He was come from Spain, where he had been wounded. He was handsome. Mme. de Staël fell in love with him, though she was nearly double his age. She wished to keep her name, and married him secretly in the beginning of 1811. We see her afterwards, persecuted by Napoleon, going as far as Russia, where she was treated with much distinction by the Emperor Alexander. She has a few pages on the Russian people which are truly prophetic, quite as fine as anything she wrote on Germany and the Germans. Her enthusiastic nature was singularly sympathetic; she understood the German genius and the Russian genius, and her loving disposition always inclined her towards the bright side of human character. She confided in man, in humanity, and this probably explains the great influence she exercised on all who approached her.

Her work on Germany was a revelation; she discovered, as it were, Germany in the German literature. Her great work on the French Revolution had equal influence on several generations of Frenchmen. The fall of Napoleon was her triumph. She came back to Paris after Waterloo, and wrote to the Duke of Richelieu: "The problem consists in the integrity of France, the departure of the allies, and the English Constitution frankly and sincerely established." In 1817 she was struck with paralysis, in the midst of a ball, at the house of the Duke Decazes; she lingered some time and died on July 17. Her children rendered to her a last homage in making public her marriage with M. de Rocca, and in treating as a brother a child which had been the fruit of this union. Her daughter Albertine, who was one of the most perfect, accomplished, and virtuous persons of her time, was married to the Duc de Broglie, the father of the present Duke. The marriage was celebrated at Pisa in February, 1816, and this union was the pride and the consolation of her last days.

Correspondence.

THE LATE EUGENE SCHUYLER.

To the Editor of The Nation:

Sir: The *Nation* of July 24 has reached us with the sympathetic notice concerning the death of Mr. Eugene Schuyler. He was for years one of your most frequent contributors, and with many of your writers had friendly relations which date from the early days of your journal. To you, and probably to them also, it may be interesting to know some particulars of Mr. Schuyler's last hours.

During the past winter and spring he had suffered from a succession and complication of ills, and was, by advice of his physician, on his way to Marienbad when, on the passage from Alexandria, he was taken for a second time with an intermittent fever which kept him at Venice, unable to go further. He did not think the attack of sufficient importance to ask his wife to come to him: on the contrary, he was hoping from day to day to be able to join her, and when I dropped in upon him on the morning of the last day of his life, he was feeling much better than he had been, so that we arranged the details of the journey to Alassio, where he was to recover strength for going on later to Marienbad. Meanwhile, though the weather had suddenly become very hot and the air of Venice was anything but bracing, he was in comfortable quarters which, in previous visits, he had much enjoyed. The view across the Grand Canal to the Salute and down past the Dogana di Mare to San Giorgio Maggiore, the public gardens, and the sea towards the Lido, was lovely, and one enjoyed there such air as there was. Moreover, the members of an embassy from Morocco—the wonder and delight of the city for the moment—were staying in the same house. There was always a crowd of gondolas with gay liveries under the windows, and stately figures in turbans and white burnouses were continually passing in and out. What a feast for the eyes it would all once have been for us both!

The doctor's visit was encouraging. The fever was taking its course, but not unfavorably—it was complicated with one or two other ills that gave no present cause for apprehension; the journey might, very probably, be begun in two or three days. Still, I think that somehow the shadow of what was coming was upon us all. We agreed that things were going on well, but my suggestion that Mrs.

Schuyler should be sent for was listened and assented to—alas! too late. An hour after, a change had set in—chill and difficulty of breathing—which was alarming, but passed away after a short time and left the patient quiet. We had begun to think that there was no more cause for uneasiness when at eight o'clock—just as the Grand Canal outside was full of lights and music, the beginning of an evening of festivity—my friend gasped faintly, and then, without a struggle, passed for ever away from earth. It was a fainting fit, such as he had been subject to all his life, such as his friends had come to look upon as almost without consequence. We know now, by the testimony of the physician who attended him during his various illnesses at Cairo, that the real danger all along was from weakness of the heart—a fact of which Mr. Schuyler was himself aware.

Thirty-six hours later we followed him to his last resting-place in the Protestant cemetery, at the east end of the island of San Michele. There were the United States Consul, the physician, an English clergyman on a pleasure trip, whom I had induced to perform the office of the chaplain at Venice, away for the summer, and two friends from Alassio summoned in haste. On the lagoons the hot July morning was tempered by a quiver of air rather than a breeze. The sea was as glass, the distance was silvery gray, and through the scene the funeral gondolas, with their hangings and costumes, passing, made a wonderful picture. It was impossible not to be reminded how such a spectacle would have touched the friend who was its present cause; and reaching San Michele, with its exquisite campanile and beautiful cloisters, we felt that the destiny was indeed kind which had assigned him his rest in a spot so in accordance with his every taste and sentiment. F.

ALASSIO, August 6, 1890.

TRANSLITERATION FROM THE RUSSIAN.

TO THE EDITOR OF THE NATION:

SIR: Perhaps you will allow me a few words in reply to the remarks of the by no means unfriendly critic who lately reviewed my book on Russia in your journal. I should have written before had I not been prevented from doing so by my absence in Russia. Some of the misspellings to which he calls attention are slips of the pen and misprints, and nothing more, and I must crave the reader's indulgence for them. My reviewer himself has not wholly escaped: the printer has accredited him with *Koloshikhin*. The name Duchinski I allowed naturally to stand in its original Polish form as being that of a Pole; there is no question of transliteration. "Sovin" is so spelled throughout Yuri Tolstoi's book, 'The First Fifty Years of Intercourse between England and Russia (St. Petersburg. 1875). Mindog or Mendog is the Polish form of the Lithuanian Mindovg, ordinarily used in histories. I leaned to it as rather less uncouth.

As regards the inconsistencies sometimes found in my spellings, many of these may be explained by the fact that I have been unwilling to disturb some geographical and historical names which had assumed a stereotyped form, *e. g.*, Irtysh. I may be allowed to quote the example of Grote, who followed the same plan in his 'History of Greece,' leaving many names which had become universally familiar unaffected by the new spelling he had adopted. Of course, to be thoroughly consistent, I ought to have spoken of Aleksander I., Yekaterina II., Nikolai, etc. This is "the head and front of my offending." I certainly prefer the spelling Diebitsch and Herzen. As regards "aprakos," this is the form given in Buslaev's 'Russian Chrestomathy' (Moscow, 1877, p. 1). I omit some other explanations for fear of obtruding too much upon your space.—Yours very truly, W. R. MORFILL

(Author of 'The Story of Russia').

OXFORD, July 28, 1890.

[We freely yield to Mr. Morfill two points: the name "Duchinski" should unquestionably retain the Polish form; there is, indeed, "no question of transliteration," it is only one of nationality—was Duchinski more Pole than Russian? Mr. Morfill himself, notwithstanding his remark about "Diebitsch" and "Herzen," gives the Russian form to numerous Polish names long ago naturalized in the Russian language. We offer no excuse—only apologies to Mr. Morfill—for taking Duchinski as found in the Russian authorities consulted. We would remark, however, that Estreicher, in his 'Bibliografia polska,' gives no work of Duchinski as published in Poland; the most were issued from Paris in the French language.

The second point is this: Mr. Morfill has very aptly matched the reviewer's "*Kolo*shikhin" against his own "*Koti*shikhin."

In regard to the retention of "stereotyped" forms, it may be said that there are many cases where new and improved editions are desirable, and the sooner the better. "*Se*bastopol," for instance, was for a long time the only form seen, but has at last nearly disappeared.—ED. NATION.]

THE SHADOW AND THE SUBSTANCE.

TO THE EDITOR OF THE NATION:

SIR: The streets of our comparatively quiet city have this week been literally submerged with the tide of visitors from Dan to Beersheba, the dwellers in Mesopotamia and those beyond Jordan. They seem to have had a good time; the weather has been delightful, and we have treated them to our most peculiarly local product, a Boston east wind in August, the luxury of which is hardly known anywhere beyond fifty miles west of this city. My experience may be singular, but I am proud to say that I have not seen a drunken man during the week. On Monday afternoon the harbor presented a wonderful appearance. Besides several war ships, there was a swarm of yachts and steamers of every description, and as the *Baltimore* steamed up the harbor and came to anchor in the bright light of a five-o'clock sun, everything which had gunpowder and everything which had a steam whistle joined in an infernal din, which may have been gratifying to the President, but made the ordinary observer anxious about the drums of his ears.

In a square at the head of the wharf stood a handsome carriage with four spirited horses and two men in livery, and surrounded by the gay uniforms of a squadron of mounted militia. A few minutes later there sat in it the President of the United States and the Governor of Massachusetts—or, as seen from under the moralizing cap, two nominal chief magistrates, one representing a nation of sixty millions, and the other perhaps the most historic State in the Union. The offices are second to none in the world. The swarms in the street and on the housetops, and the echoing cry, "I have seen the President," bear witness that the people fully appreciate that fact. But who and what are the men? Harrison and Brackett! What enthusiasm or emotion do the names awaken? They are not even the choice of the people. They are only the nominees of a party committee, accepted by the people as a little, if anything, preferable to the nominees of another party committee. So completely are they the creatures of their creators that the one does not dare to veto a general pension bill dictated by the managers of the G. A. R., nor the other a West End Railroad bill, declared by a committee of the Legislature to have been passed through that body by the power of the lobby. They have little more power over, and are little more identified with, any positive policy than any member of the swarming crowd around them. And so, while Congress wrangles through the summer months over a tariff bill so absurd, and a silver bill so defiant of all laws of finance, that the whole world looks on in amazement, and while the Massachusetts Legislature passes six months in evolving a mass of special legislation under the guidance of the lobby, these officials, placed in power at such a vast expenditure of popular effort, find their highest function in adorning such pageants as this.

Is it right or is it safe? Will the people always consent to be amused with baubles while all real power lies with the fighting factions of the lobby? Is it not wiser to appeal to the popular will to insist upon some real and responsible executive power which shall by constitutional means enforce order and protect the public interest, instead of waiting till the factions come to blows, and the people, reluctantly and in sheer disgust, allow some strong man to suppress them by violence all round, at the expense of establishing despotic power of his own? G. B.

BOSTON, August 16, 1890.

BROWN'S BEGINNINGS OF KENTUCKY.

TO THE EDITOR OF THE NATION:

SIR: In the closing paragraph of the review of Col. John Mason Brown's book, 'The Political Beginnings of Kentucky,' in your issue of the 31st of July, 1890, there is the following statement: "But surely the Printers to the Filson Club should have taken enough care of the curious French original published in the Appendix to prevent it from reading in spots like a piece of typographical 'pi,' or like some uncouth variety of the Welsh tongue mitigated by a few stray vowels." The criticism is justified by the appearance of the letter; but in justice to the "Printers to the Filson Club," and for the sake of the book itself, which may suffer in public estimation from such a criticism, I desire to say that the letter in the Appendix is a verbatim copy of the document which was sent to Col. Brown from Canada. That document purported to be an exact reproduction of the original manuscript in the Canadian archives. This may be true, or the mutilation of the letter may be due to the ignorance of the clerk by whom it was copied.

After the death of the distinguished author of this volume it was discovered that he had not prepared even a rough draft of the Appendix, and as he constantly refers to it in the body of the work, it had to be supplied by others. It then became a question whether the document under consideration should be published as it was, or whether it should be rewritten and put into correct French. It was decided that it would be better to reproduce it as it was.—Very truly yours,

MARY JOHNSTON.

LOUISVILLE, KY., August 11, 1890.

A NATIONAL UNIVERSITY.

To the Editor of The Nation:

Sir: The recent announcement of a proposed "National Baptist University" leads to certain questions. If *National*, why Baptist? If *Baptist*, how National? Whatever may be said in defence of denominational schools and colleges, how is it conceivable that any really national institution should be under the control of a single religious body? With no disparagement to the Baptist denomination, how can it claim the right to call itself National? Will the Roman Catholics and the Methodists, who outrank the Baptists in numbers, follow with a National Roman Catholic or Methodist Episcopal University?

But what denominational bias can be given to courses of graduate study, except to the work of a theological seminary? All honor to those who seek to advance the cause of true education; but if we are to have a National Baptist University, why not have a Presbyterian Post-office (with Mr. Wanamaker at the head), a Reformed Dutch Express Company, an Episcopalian Railroad system, a Free-Will Baptist Oil Trust, and a United Brethren syndicate of telegraph lines?—Truly yours,

F. L. P.

Litchfield, Conn., August 16, 1890.

Notes.

Messrs. Longman announce that they have in press a new 'Student's History of England,' by Mr. S. R. Gardiner. It is intended to be a plain and easy book for upper classes in schools, free from puzzling allusions and details that burden the memory out of proportion to their usefulness. The volume will be of about the size of the 'Student's Hume,' and will be illustrated with cuts in which archæological correctness has been studied, and accompanied by an accurate atlas.

John Wiley & Sons have in preparation 'Metal Working,' by Prof. Alfred Compton of the College of the City of New York.

'Poor's Manual of Railroads' for 1889 (H. V. & H. W. Poor) swells this indispensable series to twenty-three volumes. It now embraces with its statistics upwards of 161,000 miles of road, nearly 6,000 of which were built in the past year. The significant item for the general public is the persistence of the low average freight rate. In 1888 it fell below one cent a ton a mile; in 1889 it was still .97 cent. The average passenger rate fell in 1888 to 2.246 cents, in 1889 to 2.17, the lowest on record. Nevertheless, 1889 was a more prosperous year than the preceding for the railroads themselves. The passengers carried amounted to all but 12,000,000,000. Besides the group State maps showing railroad lines, the new volume has a new assortment exhibiting the extent and connections of the principal roads. This is a feature which might naturally have formed part of the original idea of the Manual, and we have no doubt that these maps will be multiplied in future editions. A very striking folding-map is borrowed from the *Engineering News*, which shows in color the track-laying of the four years 1886-1889. Kansas was the great focus of activity in this period.

The two latest volumes of "The Great Artists" series (Scribner & Welford) are devoted to the so-called "Barbizon School," one volume being given to Millet, Rousseau, and Diaz, and the other to Corot, Daubigny, and Dupré. The books are almost unapproachable models of what such short lives ought not to be, and the author is remarkable for the variety of his incompetence. The three most necessary qualifications for the writer of such artistic biographies are: first, a knowledge of art; second, a knowledge (preferably at first hand) of the life of his hero; third, a knowledge of at least two languages. Mr. John W. Mollett, B.A., as the title-page announces him, seems to know nothing of art; next to nothing, even at second-hand, of the lives he writes about; and no language whatever, not even his own. His books are made up almost entirely of contradictory and ill-arranged quotations from all sorts of sources, partly in extraordinary French or Italian, and partly in more extraordinary translation, liberally sprinkled with fantastic italics, and occasionally interlarded with amazing original opinions. They have neither head nor tail, beginning nor end, and to read what Mr. Mollett calls the life of Rousseau or of Diaz is to be invaded by a doubt whether such a man can ever have existed. In short, the books are incredibly bad.

Macmillan & Co. have done well to reprint from W. Aldis Wright's 'Letters and Literary Remains of Edward Fitzgerald' the portion devoted to the Rubáiyát of Omar Khayyám. We observe no change except in the position of an editorial note on the freedom which Fitzgerald used in dealing with the original of his "translations." Typographical errors have naturally been corrected, and we have noticed a few places where the punctuation might have been bettered. The print is handsome and the binding in white and gold. The first and the last versions are given entire, and every variant in the intervening editions is noted. In short, the admirers of Fitzgerald as the poet of the Rutáiyát can desire nothing more unless it be to see his name on the title-page—a singular omission.

The eccentric author of 'Alice in Wonderland,' dissatisfied with the several classes of readers to whom that classic appeals, has worked it over or down to the abecedarians. Hence a charming small quarto, 'Nursery Alice' (Macmillan), composed of detached episodes, with Tenniel's illustrations colored capitally. Lewis Carroll comments in each section on the absurdity of his imaginings, and does not omit his now regular moral tag, placed by itself at the end of the book. With all this there are few children who will not be pleased, but if they are to read these pages for themselves, there are far too many hard words in them; and if they are to be read to, why then the full-blown 'Alice' is not above them. It is noticeable, as a matter of judgment, that these chapters are pure description, without conversation, and that the nonsense verses are wholly omitted. The reason of this last is not clear to us, unless, as in the case of the parody, "You are old, Father William," the author shrunk from prepossessing infant minds against serious doctrine.

Horace Mann's lecture, 'A Few Thoughts for a Young Man' (New York: John B. Alden), though now more than forty years old, has still its saving lesson for the class to which it is addressed. Time has made some of the illustrations and examples old-fashioned or obsolete, but it is still a widely held opinion that, "in the woes of Ireland, God is proclaiming the wickedness of England," and that "the millionaire is as dangerous to the welfare of the community in our day as was the baronial lord of the Middle Ages"—albeit there is a vast difference between the millionaire of 1849 and him of 1890. So where Horace Mann asserts that "Gall, Spurzheim, and Combe have done for Metaphysics, or the science of mind, as great a work as Bacon did for Physics, or the laws of matter," we should now substitute Darwin and Theology. Contrary to the command of Greeley, "Go West, young man!" Mann concluded his discourse with "Orient yourself!"—borrowing from the French this "beautiful phrase, which would enrich any language that should adopt it."

The industrious ex-editor of the *Pall Mall Gazette* has made a book, 'The Passion Play as It Is Played To-day' (New York: Charles E. Merrill & Co.), which carries out the promise of its title as none other does, Mr. Stead being his own witness. He had to compile it laboriously from the performance, and from other and antiquated books of the play. To facilitate following the action, he has cast his English version (parallel with the German) into the form of a Biblical narrative, embodying the movements of the stage. Finally, he has studded the volume with portraits and scenic representations after photographs. In these the likeness of the *Christus* to Count Leo Tolstoi is rather striking. Mr. Stead's introduction and reflections are characteristic of his sensational temperament.

Hinrichs (Leipzig) has published a new edition of the Mishnic tract, 'Sabbath,' edited by Prof. Herman L. Strack. Like its predecessors in the series, 'Idolatry,' 'Day of Atonement,' and 'Ethics of the Fathers,' it is carefully edited from the manuscripts, and furnished with notes and a vocabulary. Unlike the texts heretofore edited by Prof. Strack, 'Sabbath' is not vocalized. These editions are doing much to promote the study of post-Biblical literature, and will no doubt clear the way for a new dictionary of the 'Mishna.'

A German series of reprints analogous to the English "Libraries" edited by Prof. Henry Morley is the "Deutsche Litteraturdenkmale des 18. und 19. Jahrhunderts," presided over by Bernhard Seuffert, and henceforth to be published in Stuttgart by the house of G. J. Göschen. This is a more thorough and scholarly enterprise than Morley's, as must needs result from a wide collaboration. The introduction is sometimes as bulky as the reprint. Invariably care is taken to denote the pagination of the original; notes are added where necessary, and these, in the case of the complete poetic works of J. P. Uz (No. 33), record the variants of the several editions most minutely. Four other numbers are before us: (Nos. 29 and 30) Gerstenberg's 'Briefe über Merkwürdigkeiten der Litteratur,' a notable landmark in the pursuit of English studies on the Continent; (No. 31) Karl Philipp Moritz's 'Ueber die bildende Nachahmung des Schönen,' and (No. 32) Johann Anton Leisewitz's 'Julius von Tarent' and dramatic fragments. The print of these handy volumes is excellent, and the introductions are in Roman type.

The first *fascicule* of the long-expected French Dictionary of Prof. Adolphe Hatzfeld and the late Arsène Darmesteter has just been issued in Paris by M. Charles Delagrave. The work had been some seventeen years in preparation when it was interrupted by M. Darmesteter's too early death. His place in it has been taken by a pupil of his, M. Antoine Thomas, lecturer in Romance philology at the Sorbonne. The full title of the work is 'Dictionnaire Générale de la Langue Française du Commencement du XVIIe. Siècle jusqu'à nos Jours, précédé d'un Traité de la Formation de la Langue.' It will follow out both the logical and historical development of the French tongue on substantially the lines indicated by Darmesteter in his 'La Vie des Mots.' Fascicules of eighty pages will appear every other month, and will be sold at a franc each. About thirty fascicules will complete the work. The first goes from A to "Ajournement."

A new quarterly, the *Economic Review*, is announced, and its first number will appear in October. It will be carried on by the Oxford University branch of the Christian Social Union, and will be devoted to the consideration of economical and social questions, both in their wider aspect as theories, and also practically and technically. That is, it will consider such questions not only as they bear upon social life as a whole, but also as they relate to special classes of men, or special industries, at one period or another. The price of subscription will probably be ten shillings, and subscribers or contributors are invited to apply to the Rev. J. Carter, Pusey House, Oxford.

Too little known to the art world is the *Archivio Storico dell' Arte*, published by Loescher (Rome, Florence, Turin), and edited by the accomplished librarian of the Victor Emmanuel Library of Rome, Domenico Gnoli, with the assistance of the entire staff of the Department of Fine Arts of the Ministry of Public Instruction and of most of the leading German writers on Italian art. It is especially directed to the investigation of the archives of the libraries, convents, and other public institutions of the peninsula which have come under the supervision of the Government by the measures of secularization or reform which the Government has had to effect since the unity of Italy became a fact; but it is not limited to those. The number for May-June has, for instance, some exceedingly interesting researches in the vaults of the Vatican, where are works of Donatello and Mino da Fiesole which have been long lost to the world. Numerous illustrations from photographic negatives give sufficiently the character of the works, and the text by Gnoli is exhaustively descriptive. One of the contemporary copies of the "Cenacolo" of Da Vinci forms the subject of another paper, and the photograph is of especial interest, for it probably represents the original better than any of the known copies, as it was evidently by a pupil of Da Vinci, whom Frizzoni in the text recognizes as Gian Pietrino, exiled from Milan and in refuge in Lugano. It is in the village of Ponte Capriasca, near Lugano, Italian Switzerland. A most important branch of the studies of the editorial staff is the collation of documents relating to the history of art or artists, and the number before us has letters of Titian which had escaped his biographers and are of curious interest. As a storehouse of material for the historian of art, the *Archivio* will be invaluable, and it should be in every public library. It is now in its third year, with a circulation which by no means defrays the expenses of printing.

A rather amusing attack upon the English Astronomer Royal seems to be implied by Col. Maurice, R.A., in his article on the Battle of Waterloo in the June number of the *United Service Magazine*. He says: "Twice during the Nile campaign [of 1882] Lord Wolseley made arrangements for movements by moonlight, and found darkness instead of light attend them, because the almanac prepared in the office of the Astronomer Royal at home had omitted to record total eclipses of the moon on the nights in question." To this weighty charge it is replied that the Astronomer Royal can hardly be considered in the capacity of almanac-maker, although, at the request of the War Office, he did contribute the times of the rising and setting of the moon for Egypt from July 1, 1882, to June 30, 1883. Another similar request was made in 1884, in response to which these times were again computed, from July 1, 1884, to June 30, 1885; but upon the ultimate shape of the almanac the Astronomer Royal was never consulted, nor was any information as to lunar eclipses requested at these times. Later, however, in 1884, he was asked for more computations, including eclipses, which were, as usual, promptly supplied. There is also some evident confusion of dates, for the only eclipse of the moon occurring in Egypt during the first period mentioned was of so insignificant a nature that its interference with military night-movements is most improbable.

—We analyzed, not long since, three books about American authors, with the result of discovering that the headquarters of our authorship still remains, very much as of old, in Massachusetts, New York, and Connecticut. Another way of following up the same inquiry is by analyzing the so-called "American Academy," devised by the New York *Critic*, and consisting originally of "forty immortals"—to adopt the ambitious French phrase—selected by a constituency of about 130 voters from among the readers of that weekly. This balloting took place in 1884, and the result certainly showed a rather miscellaneous and haphazard selection, the eminent historian, Francis Parkman, standing at the bottom of the list of forty, with nominees like Charles A. Dana and D. G. Mitchell far above him. This was not altogether strange, for of course every such ballot must vary with the personal equation of the newspaper calling for it. If the call had proceeded from the New York *Independent*, for instance, it is quite certain that the Rev. Dr. Storrs would have found a place among the "immortals"; the readers of the Boston *Literary World* would have been very likely to substitute the present editor of the *Atlantic Monthly* for the editor of the New York *Sun*; while the constituency of the Chicago *American* would have been pretty sure to claim places for Gen. Lew Wallace and Maurice Thompson, neither of whom seems to have received a single vote from the electors commissioned by the *Critic*. Nevertheless, the out come was, after all, a more reasonable list than might have been predicted, and probably better than would have been brought together by Presidential nomination, Congressional committee, or popular election. In creating the National Academy of Science, it will be remembered, there was a good deal of miscellaneousness in the original membership; and it has required a gradual elimination through years, by death or otherwise, of the less desirable material, to produce the present picked body. This was a difficult process to carry on even in pure science, but it is obviously harder in literature, where the standards of merit are less easily determined. It is a noticeable fact that a similar process of substitution has already begun in the *Critic*'s "Academy"; and the choice by the "immortals" themselves of nine new members shows on the whole more maturity of selection than was seen in the original list. The men thus chosen are the following, in the order given: R. W. Gilder, Phillips Brooks, C. E. Norton, F. J. Child, F. R. Stockton, H. C. Lea, A. D. White, H. H. Furness, and Joel Chandler Harris.

—All this may seem to the public, as it very likely does to the participants, to be rather in the nature of a joke. Yet it has a certain interest, as had the three books of biography just mentioned, in the light it throws on the geographical distribution of those who are, or purport to be, our leading authors. An analysis of the final list of forty, viewed in respect to habitat, shows the following results: *Massachusetts:* Aldrich, Brooks, Cable, Child, Fiske, Frothingham, Hale, Higginson, Holmes, Howells, Lowell, Norton, Parkman, Whittier (14). *New York:* Burroughs, Curtis, Dana, Gilder, Hawthorne, Stedman, Stoddard, Tyler, White (9). *Connecticut:* Clemens, Fisher, Lathrop, Mitchell, Porter, Warner, Whitney (7). *New Jersey:* Stockton, Whitman (2). *Pennsylvania:* Furness, Lea (2). *England:* Harte, James (2). *District of Columbia:* Bancroft (1). *Michigan:* Winchell (1). *Georgia:* Harris (1). *Italy:* Story (1). If, now, we make inquiry as to the birthplaces of these forty selected authors, we find the same result established—New England having a very marked majority, and Massachusetts alone affording nearly half. The analysis is as follows: *Massachusetts:* Bancroft, Brooks, Child, Fisher, Frothingham, Hale, Hawthorne, Higginson, Holmes, Lowell, Norton, Parkman, Stoddard, Story, Warner, Whittier, Whitney (17). *New York:* Burroughs, Harte, James, Whitman, Winchell, White (6). *Connecticut:* Fiske, Mitchell, Porter, Stedman, Tyler (5). *Pennsylvania:* Furness, Lea, Stockton (3). *New Hampshire:* Aldrich, Dana (2). *Rhode Island:* Curtis (1). *New Jersey:* Gilder (1). *Georgia:* Harris (1). *Louisiana:* Cable (1). *Ohio:* Howells (1). *Missouri:* Clemens (1). *Hawaiian Islands:* Lathrop (1). How far this precedence extends also to weight of metal must be left to the judgment of each reader. New England and New York, it seems, still furnish the bulk of the recognized authors of the nation, although Dr. Eggleston, in his 'History of the United States and its People' (p. 381), mentions it as the leading characteristic of the "present school of writers" in this country that they "are not chiefly a group of men about New York or Boston." As a matter of fact, this group predominates as distinctly as ever, so far as is indicated by these forty so-called "immortals." It is, indeed, rather remarkable to see how well even Harvard University holds its own; ten of the fourteen Massachusetts residents being Harvard graduates, together with four others (Messrs. Bancroft, Story, Dana, and Furness), making in all fourteen out of the forty. In one respect at least this American imitation has the advantage of its French prototype, inasmuch as its candidates are not expected to go about, hat in hand, and beg for ballots. It seems a pity that another innovation should not be introduced, and that women as well as men should not be admitted to so much of literary immortality as can be guaranteed by a vote taken through the post-office.

—The first volume of the 'Correspondence and Public Papers of John Jay' has appeared, and in type and general make-up is uniform with the sets of Hamilton, Franklin, and Washington, issued by the same publishers (Putnams). The editor, Prof. Henry P. Johnston, is known as a painstaking student of American history, and an authority in certain branches, and he has had free use of the Jay papers. This first volume covers Jay's life to 1781, and includes his services in the Provincial Convention, the Continental Congress, and in Spain, and the editor has followed closely what has been printed in the Life of Jay and in the Diplomatic Correspondence. The interest of the volume lies chiefly in letters written to Jay, many of which are new. There are two from Hamilton, one, a remarkable production for a youth of nineteen, announcing that he "has thrown out a handbill or two" to defeat the schemes of the Tories; one from John Morin Scott on the Battle of Long Island; one from Schuyler on the retreat from Ticonderoga, with others bearing upon the intrigues

against the General that threatened to deprive him of his usefulness to the cause; and some throwing much light on the Vermont claims, which exercised Jay a good deal. After his arrival in Spain a few new letters to Franklin and Adams are printed, but they add little to what was known before. In all his letters to America the burden of Jay's advice was, "Depend on yourselves." "I believe there is no man of your age in Europe so much a favorite with the ladies," was one of his first greetings to Franklin. Mr. Johnston has done wisely to include some letters from the ladies, and the glimpses given by the few that are printed make us regret that he did not omit such of Adams's or Washington's letters as are included in the collections of their writings, to make room for more from Kitty Livingston, Mrs. Jay, and Mrs. Montgomery.

—The editor has been too sparing in his notes, assuming in his readers too much acquaintance with American history. He prints Jay's letter to the Committee of Tryon County, but neither inserts nor refers to Jay's letter to Gouverneur Morris, which could alone explain the occasion for the first. So when Jay was chosen to the Spanish mission, there should have been some reference to the contest in Congress that led up to it, by which Jay was virtually used as a club to knock out that arch mischief-maker, Arthur Lee, while John Adams was chosen a minister to make a peace. Prof. Johnston prints the first instructions of Congress to Jay from the original among Jay's papers, which shows some differences from that printed by Sparks, who used the report of the Committee to draft the instructions. That is a distinct improvement; but in printing the subsequent instructions (Oct. 4, 1780) to insist on the right to navigate the Mississippi, something should have been said to direct attention to the able letter of Congress, drawn up by Madison, explanatory of these instructions. Still more necessary was it to direct attention to the fact that the subsequent recession from their claim to this right, communicated to Jay in instructions of February 15, 1781, was a temporary measure, extorted by the success of the enemy in the South, and revoked as soon as the danger was past. Nor is it necessary to be squeamish in the printing of names in place of the asterisks. In one letter Prof. Johnston has supplied the name, Wooster, who has had very few compliments paid to his merit; but in a letter from Rutledge on the Conway Cabal, the asterisks are retained, although one familiar with the episode has little difficulty in supplying the names, the *Lees* and *Mifflin*. Still, these defects are small in comparison with the general excellence of the collection. We note some typographical errors: "Dickenson" for Dickinson (p. 32) and probably "attacked" for attached, for surely candor, generosity, confidence, and good offices are odd weapons with which to attack America. The omission of dates of letters and papers from the table of contents makes reference awkward.

—The sixth annual report of the Universities Settlement in East London records the best year, both inwardly and outwardly, of the five years' life of Toynbee Hall. This institution, which bears the name of a much loved and much lamented young Oxford man, is, as is generally known, an attempt to reach and help the misery of some of the worst parts of the East of London by means of personal contact and influence. It is partly a club whose members devote themselves to the exercise of the duties of citizenship in East London, and partly an educational institution. Men of education settle down in it, and take up the duties that come to them naturally from their surroundings. "Some of the residents of Toynbee Hall have been keenly interested in labor movements, others in the management of schools, others in the administration of relief, and others in higher education." Still, the main development of the settlement has been educational. This was not what was contemplated at first, though it is what might have been looked for. The young university men gave most easily and naturally of what they had in store to give, and were sought by those who lacked and desired what they could impart. Their list of good works includes lectures, conferences, conversazioni, student and workmen's clubs, halls for resident students, a library, and many other beneficent agencies. These are all now in full and successful working, and are likely to increase and multiply. The only thing needed is more money and more men. It is almost incredible that all of the public work of Toynbee Hall last year was carried on and directed, all the education and entertainment given, all the thousands of visitors welcomed, for an expenditure of less than £900 per annum. The special expenditure of the Educational and Entertainment Funds increases this only to about £1,225. Toynbee Hall is by no means the only or the largest work that is going on in the East of London, but it has one or two characteristics that make it specially interesting. One of these is the size of the settlement. It is intended that there shall never be less than twelve residents in the house. For exterior work twelve men are worth far more than six times two, while within doors there is far less danger of losing heart in the presence of difficulties, or of narrowing so as to run in a rut. Another characteristic of Toynbee Hall is an entire absence of sectarianism. Among its residents have been found Churchmen, Nonconformists, Roman Catholics, Jews, as well as those who would not accept the name of any sect. "No man can say that Toynbee Hall has any narrow aim; it does not exist to increase any party or to bring honor to anybody." It is a work which possesses all the nobility, and deserves all the honor, which comes from singleness of purpose and disinterestedness.

— News comes from Switzerland of the death of Mr. Charles Loring Brace, a well-known author of several books of travel, sociology, and theology, and for the last forty years conspicuous in this city as an efficient missionary among the poor. Mr. Brace was the founder and the soul of the Children's Aid Society, which has rescued thousands of young lives from the perdition of this metropolis, and sought for them homes and a fair start anew in all parts of the country. He also founded the first newsboys' lodging house in this country. Mr. Brace was born in Litchfield, Conn., in 1826, his father being a teacher and journalist of very varied accomplishments. He graduated from Yale College in 1846, and pursued theological studies, but was drawn aside from the pulpit career to engage in practical philanthropy. His first journey abroad, following his studies at Berlin, was used as a preparation for his life work, and he visited a great number of reformatory institutions in Great Britain and on the Continent. In Hungary (it was just after the collapse of the revolution), he suffered a political arrest on suspicion, and was with difficulty released. Some of his earlier writings are entitled 'Hungary in 1851,' 'Home Life in Germany,' 'Norse Folk,' 'Races of the Old World,' 'The New West,' 'The Dangerous Classes of New York.' His latest, which seemed to recall his clerical predilections, were 'Gesta Christi' and 'The Unknown God.' Mr. Brace was also one of the first contributors to the *Nation*. Personally, he had a very genial temperament, and kept an ever hospitable home, where he lived surrounded by his books, on the banks of the Hudson. In spite of his years, his death has the appearance of suddenness, in the plenitude of his intellectual powers and in the midst of his disinterested labors.

FROTHINGHAM'S BOSTON UNITARIANISM.

Boston Unitarianism 1820–1850: A Study of the Life and Work of Nathaniel Langdon Frothingham. By Octavius Brooks Frothingham. G. P. Putnam's Sons. 1890.

In a prefatory note Mr. Frothingham explains that many years ago he proposed writing a sketch of his father's life, but abandoned the project on account of the meagreness of the biographical material. Recently, having been urged to the duty by an admiring friend of his father, he resolved to interweave his reminiscences and impressions of his father's life and character with some account of his time. Boston Unitarians whose days have fallen into the sere and yellow leaf will be especially grateful for this account of men and things whom once they knew and of which they were a part, but no local element will exhaust the interest of a study to which Mr. Frothingham has brought the amplest preparation and of which his own personality and antecedents are a great enhancement. That the mid-period of Boston Unitarianism should have found its historian and critic in the most distinguished representative of the later and most radical development of the Unitarian movement, is not so remarkable as that it has found in him an historian and critic so appreciative and so sympathetic that no one of its own set could have done it fuller justice than is done it here.

Nothing was more characteristic of Mr. Frothingham as a preacher than his ability to put himself in an opponent's place and state his case as fairly and more eloquently than he could state it for himself. Sometimes his statement—so his friends complained—was stronger than his refutation, and left the enemy in possession of the field. This quality was never more apparent in his preaching than it is throughout the present work. Especially in the earlier chapters his self-effacement is to a remarkable degree. He is more the advocate than the historian; so much so that, though he does ample justice to Channing and Parker, both variations from the type that he has set himself to describe particularly, his treatment of the latter tends to disparagement, and contrasts sharply with his former treatment of him in his biography of him and in his history of New England Transcendentalism. It will be remembered that some years ago, after Mr. Frothingham had concluded his brilliant career as a preacher in New York and had been to Europe for a long time and returned, a reporter of the *Evening Post* came upon him in a mood of general exhaustion and depression, and elicited from him something that had very much the appearance of a melancholy recantation of his radical opinions. Those who remember that will be very apt to think, as they read the earlier chapters of this book, that Mr. Frothingham has made that mood the permanent habit of his mind, or that he has returned to it almost with violence. Only the most careful readers will note a sentence here or there, a turn of phrase, in which the mask is for a moment twitched aside, and the wise

smile which it conceals admits us to the author's private thought. As the book goes on, either he wearies of the mask or it is deliberately thrown aside, and the conservatives and reactionists who have imagined him as coming back to them will find themselves without excuse for such a hope, if they do not feel that Mr. Frothingham has victimized them cruelly, to such a flattering promise bringing such a contradictory term. Certain it is that never in his most radical preaching was Mr. Frothingham's break with the traditional theology of the sects more definite and uncompromising than we find it here as we draw near the end.

In his first chapter he describes three types of Unitarianism, and makes Channing representative of one—the spiritual; Parker of another—the practical; the third—the cultivated, the scholarly, the elegant, the refined, the safely conservative and cautiously progressive—had no better representative of its virtues and defects than Dr. Frothingham, minister of the First Church in Boston. Mr. Frothingham's account of Channing is very generous, and shows a disposition to exalt his worth which is strongly marked among the more radical Unitarians of the present time. When Mr. Frothingham calls him "the father of Spiritual Christianity," we wonder if he is not forcing the note, and even if he did not mean to write Unitarianism. Why he should set Parker over against Channing's spiritual aspiration is not clear, for Parker had not less of this than Channing. The word spiritual is one of the vaguest of all words, but if it describes a morality that is "touched with emotion," that is inseparable from the thought of God, Parker would seem to have been the more spiritual of the two. What is most valuable in Mr. Frothingham's discrimination is his perception that for all Parker's liking for speculation he had little aptitude for it. Consequently, his hold on the intuitive philosophy, of which he was the avowed protagonist against all comers, was slight and artificial. He and Channing presented the interesting spectacle of two men each in fundamental sympathy with the system of philosophy which he formally disowned.

The Boston type, to which Channing and Parker were about equally exceptional, is nowhere better described by Mr. Frothingham himself than in a quotation from his father's tribute to Dr. William P. Lunt:

> "He loved to hold fast, so far as he could, to the language of Scripture, and to the doctrine, liberally interpreted, which had come down from the fathers. He was more anxious to accept than to define hallowed phrases. While he was open to new light, he was jealous of innovations. He shrank from all approach to the subversive speculations of the newest criticism. . . . The political and reformatory movements of the day he was slow to admit into his pulpit. Controversial religion was not to his liking."

In these phrases Dr. Frothingham described himself as accurately as his friend, except that his own closet opinions were probably remoter from his public utterance than those of Dr. Lunt. Dr. Frothingham was born July 23, 1793. When his son speaks of the little Boston of that time—a Boston of 30,000 inhabitants—as fuller of intellectual life than any other city of the time, does he not make its twittering self-consciousness the measure of its actual attainment? In 1815 the father was ordained to the ministry and entered on his life-long charge. There is an interesting account of the famous Thursday Lecture, the rock on which Theodore Parker and his clerical brethren most obviously split. The present version of that catastrophe is hardly that given in Mr. Frothingham's Life of Parker. There we are invited to sympathize with Parker; here with Dr. Frothingham. In both versions the young Octavius blows the bellows of the church organ. Parker's objectionable preaching was not so absolutely the end of the venerable institution as is commonly supposed. It flamed up under his mighty breath, but it smouldered for some time after the trick by which he was debarred from further use of it, hardly more dubiously than for some time before.

If a chapter on "The Dogmatical Position" is not clear-cut, it is because the position of the men described was not so, from deliberate choice. The chapter contains much interesting matter to which its title lays no claim. "It must be confessed," says Mr. Frothingham, "that there was not much *moral earnestness*, as that term is usually apprehended, among these men." Channing's central idea of the dignity of human nature had for them small attraction. His own society was little after his own heart. It went with him in none of his projects for reform. He could not have his church for Dr. Follen's funeral sermon. "James Walker, it was said, would not *vote* lest he should be associated in the public mind with political opinions." Another minister said of the Abolitionists: "These men have brutalized the spirit of the community." Leaving the name of this "excellent minister" unwritten, Mr. Frothingham passes his virtue to the credit of the whole company, which is hardly fair. But it was Dr. Chandler Robbins, who, during the period of civil war, boasted that "neither sermon, prayer, nor hymn had, in his church, reminded people of the strife." Yet this man was not incapable of generous emotions and courageous acts. He called the outcry against Emerson's Divinity School address a "vulgar clamor" and a "popular roar," and at the most critical juncture of the Parker trouble Mr. Parker found in him a tender, if opposing, friend. Dr. Frothingham's preference was "for people who don't get into jail"—this with a small donation in response to a solicitor for the *Prisoner's Friend*. He could not understand "the sympathy of well-meaning persons with those who have outraged every feeling of humanity"—an astonishing sentiment from one looking to Jesus as the author and finisher of his faith.

We breathe more freely and the prospect widens as we come to the fifth chapter, which is entitled "Literature and Religion." In the allowances of these men in critical and scientific matters there were the fruitful germs of the most daring radicalisms of the present time. They thought they could go a certain distance—as far as Andrews Norton—and then stop. Their openness on the literary side was a delightful feature of their individual and common life. The Unitarian clergymen, Edward Everett and others, who passed out of the ministry into literature and politics, were hardly more literary in their habits and their aspirations than many who remained behind. Frothingham, Clarke, and Hedge were deep in German studies, and Mr. Frothingham might easily have made much more of his father's 'Metrical Translations' and other poems. But it is not as if these were not easily accessible. The concluding stanzas of the poem "Homeward from Foreign Lands" touch, perhaps, the height of a talent which was singularly fine and pure.

A chapter on the father's foreign travel is mainly interesting as showing how much has been lost as well as gained by changing methods of travel, but also as a revelation of Dr. Frothingham's personal tastes. Best of all is a chapter, "The Freedom of Friendship," in which brief sketches are given of a number of Dr. Frothingham's clerical friends, Francis Parkman, Alexander Young, William P. Lunt, for whose ordination Dr. Frothingham's most celebrated hymn was written; Chandler Robbins, Samuel K. Lothrop. To find JOHN PIERPONT in small capitals with this circle seems an utter incongruity; but in the "freedom of friendship" there were tolerations of which the pulpit did not admit. Dr. Convers Francis, brother of Lydia Maria Child, seems almost equally incongruous. There was a mild infusion of worldliness in the Boston set of which he had no taint. Nathaniel Hall of Dorchester, "not distinguished as a preacher or writer, or for other shining gifts," seems also out of place. Neither he nor Francis nor Pierpont was an illustration of the type of which Dr. Frothingham was a bright example. Mr. Frothingham's spontaneous enthusiasm when he speaks of Mr. Hall is his most damaging reflection on the temper of his Boston type. Mr. Hall was an anti-slavery preacher, and the most eloquent page in Mr. Frothingham's book is an extract from one of his sermons asserting his intention to use, as he had used, his office for the advocacy of the anti-slavery cause. With several of these clergymen there were connected traits and incidents that Mr. Frothingham's exacting taste has not allowed him to rehearse. Of Dr. Parkman's humor he gives some good examples, but there are many others which, after a thousand repetitions, have not lost their charm in Unitarian gatherings of the more private sort.

Such names as those of Hall and Francis and Pierpont suggest a caveat which cannot be too studiously heeded in the reading of this book. There was such a type of Unitarianism as Mr. Frothingham has described—scholarly, elegant, urbane, conservative, cautious, cowardly—but it was less exhaustive of even Boston Unitarianism as a whole than would be gathered from this representation, even allowing for such exceptions as the above named and Channing and Parker. Another exception was Dr. Gannett, politically as conservative as any, but nevertheless a flame of ethical passion and of spiritual earnestness; not scholarly, or literary, or dainty, or urbane; who could, as Emerson once said, "pour a stream of lava over their sea of ice." Clarke, as literary as any, was with Parker in his political fidelity; and Bartol, if he could be classified at all, certainly could not be with Lothrop and Parkman and Lunt and Robbins and the preëminent subject of Mr. Frothingham's sketch. In concluding the chapter under consideration, Mr. Frothingham gives a brief account of Unitarian periodicals, in which the most singular thing is his omission of any mention of the present *Unitarian Review*, the more singular as his praise of the *Christian Examiner* as conducted by the Rev. Joseph Henry Allen is as warm as possible, and the *Unitarian Review* is simply a revival of the *Examiner* in Mr. Allen's editorial charge.

One of the most elaborate chapters in the book is called "The Unitarian Layman." It is devoted, for the most part, to a characterization of Mr. Peter C. Brooks, one of whose daughters Dr. Frothingham married, Edward Everett marrying another, and Charles Francis Adams a third. Mr. Frothingham does his best to make a good show for his grandfather, but it is up-hill work. His limitations were such as Henry James would love to paint—infinitely depressing. He had, however, no suspicion that he had any. His self-satisfaction was entire. "He was not an anti-slavery man," says his biographer; "far from it. He would not have been if he had lived later when

the agitation had fairly begun"—as if it had not begun a score of years before his death. But in his minute journal there are no allusions to its increasing rage. There are some slips in this chapter. On page 101 we read: "Dr. Channing he took no interest in, and less than none in Theodore Parker." On page 125: "He believed in Dr. Channing," etc. On page 102 his liking for Dr. Gannett is offered in evidence of his liking for "power that did not run to enthusiasm," of which Dr. Gannett had as much as Parker.

In his closing chapter, wherein the blindness of Dr. Frothingham for many years is an affecting incident, his son indulges in some general reflections on the Unitarianism of the present and the past. While not denying to the former its right to the Unitarian name, here as elsewhere he seems too much inclined to appropriate it for his Boston set exclusively. He says, "Unitarians appealed to the Bible and went no further. They were shut up in its enclosure and will always be." But already they are not in one case in a hundred. Mr. Frothingham has even gone so far as to say that Channing was not a Unitarian. The same method of criticism would show that Luther was not a Protestant, George Fox a Quaker, Wesley a Methodist, or Garrison an Abolitionist. But the highest is the truest measure of alike the party and the sect.

HAIGH'S ATTIC THEATRE.

The Attic Theatre: A Description of the Stage and Theatre of the Athenians, and of the Dramatic Performances at Athens. By A. E. Haigh, M.A. Oxford: Clarendon Press; New York: Macmillan.

It was high time for such a work as Mr. Haigh's to make its appearance in English, as our existing treatises have long been antiquated and incorrect in many details. This, indeed, is the case not only with Donaldson's 'Theatre of the Greeks,' but with all our handbooks on classical antiquities. Englishmen and Americans have been busy enough in research and exploration; but the results of investigation for the last fifty years have not been embodied in any comprehensive treatises, such as with the Germans are constantly encouraged and demanded. It is worth notice that out of the long list of authorities which Mr. Haigh refers to in his preface, the only English work mentioned is the learned and judicious essay on the Dionysiac Theatre by Mr. J. R. Wheeler, published in the Transactions of the American School of Classical Studies at Athens.

Mr. Haigh's purpose has been to collect and piece together all the available information concerning the outward features and surroundings of the old Athenian dramatic performances—in other words, to write a history of the Attic drama from the theatrical as opposed to the literary point of view. The result is a work which has the very decided merit of being at once learned and readable. The references, which are full and satisfactory, are carefully banished to the foot-notes; and, as a consequence, any reader of ordinary intelligence may peruse with pleasure almost every chapter and discussion in the book. Perhaps this ease of style lapses at times into diffuseness and a habit of repetition; but, on the whole, Mr. Haigh's work is as satisfactory to the scholar as to the general reader. He deals with a subject which admits of learning and good judgment rather than original research, so exhaustively has it been of late years investigated and discussed. He follows, for example, unavoidably in many particulars, the admirable work of Dr. Albert Müller, entitled 'Lehrbuch der Griechischen Bühnenalterthümer'; but he does so with an independent judgment and occupies a somewhat different field. He concerns himself almost exclusively with the representations at Athens, but he has collected everything that bears on this theme, not omitting the lately discovered inscriptions which confirm the date of the first performance of the "Agamemnon," with its associated plays.

The earlier chapters discuss the general characteristics of the Attic drama, the festivals at which it was exhibited, the various kinds of contests and prizes, and the mode of choosing the judges. Then follows a minute description of the Dionysiac Theatre, based on the latest investigations and measurements; while the succeeding chapters treat respectively of the scenery, the actors, the choruses, and the audience. Mr. Haigh concludes that the great Dionysiac festival lasted probably five or six days, and maintains, in opposition to the opinion of Lipsius, that in the fifth century B. C. a comedy was performed each day after the tragedies. He corrects the old-fashioned statement that the Choregus competed for his tribe, and, if successful, received a tripod from the State, which he erected on a monument in some public place, with an inscription recording his victory. This was true only of the dithyrambic choruses. The other competition was, in fact, purely personal, and the wealthy citizen who had spent thirty minæ, the equivalent perhaps of $2,500, on the costumes and salaries of a tragic chorus, was simply crowned with ivy in presence of the spectators, and had the privilege of erecting a tablet in commemoration of the event. Themistocles erected such a tablet four years after the battle of Salamis. Mr. Haigh mentions the earlier orchestra in the market-place, described by Dr. Dörpfeld, which is referred to, probably, in the 'Apology,' when Socrates says that any one could buy the works of Anaxagoras in the orchestra for a drachma. He accepts the view that, in the fifth century, the orchestra of the Dionysiac Theatre was a complete circle, like that of the theatre at Epidaurus, but controverts Dr. Dörpfeld's opinion that the stone seats of the auditorium and the first permanent stage-building date from the time of Lycurgus. He accepts, accordingly, the statement of Suidas that the stone theatre was begun 499 B. C., and holds that the expression "benches" (ἵκρια) used by Aristophanes and Cratinus is merely a relic of the days of the early wooden theatre. The work of Lycurgus was therefore an improvement or completion of a structure already existing. "It is impossible," he says, repeating substantially the remarks of K. O. Müller, "to believe that Athens, the city in which the drama was originally developed, and whose theatrical representations continued to be the admiration of all the rest of Greece, should have been later than Epidaurus and later than her own sea-port, the Peiræus, in providing herself with a permanent theatre."

It is an interesting question, much discussed in late years, whether, in the fifth century B. C., the Greek theatres had any elevated stage at all, or λογεῖον, from which the actors spoke. It was raised, we believe, first by Höpken in 1884 from an examination of certain passages in the drama; and more recently so high an authority as Dr. Dörpfeld has maintained, on architectural grounds, from an examination of the remains of the Dionysiac Theatre and that at Epidaurus, that the actors stood in the orchestra on the same level with the chorus, and that the elevated stage belongs to a much later date. This view seemed to be supported by the explorations at Thoricus (see correspondence of the *Nation*, No. 1120, December, 1886), where no remains were discovered of a stage-structure of any kind; and it has been adopted by some eminent American and English scholars, among the latter by Prof. Jebb. Dr. Dörpfeld's final and complete account of the researches on which he bases this opinion is, we believe, not yet published; but his reasons, so far as hitherto given, are the extreme shallowness of the stage and the scant room it affords for action—that at Epidaurus, for example, is only eight feet wide—its extravagant height of ten or twelve feet, and the absence of any extant connection between the orchestra and the stage.

Mr. Haigh maintains with a good deal of force the old-fashioned, conservative view of the question, following mostly the arguments of Dr. Müller, but rejecting his hypothesis of an intermediate platform which diminished the distance between the actors and the chorus. He appeals to the undoubted fact that in the Roman times the Greek plays were performed with a stage of the height given by Vitruvius; he assumes the use of a wooden flight of steps, removable at pleasure, to connect the stage with the orchestra, and he adduces the important evidence of vases found in lower Italy, which represent scenes from the Old Comedy as taking place on an elevated stage. One of these, indeed, dated as far back as the third century B. C., depicts a staircase such as he conjectures. It must be frankly said that each view leaves serious difficulties unexplained. If Dr. Dörpfeld's is accepted, what became of the ἐλεός, or elevated table, on which, according to Pollux, the prototype of the actor in early times used to mount? Is it the natural order of development that such a convenience as a slight elevation for the actors should disappear totally in one century, and should afterwards reappear in an exaggerated form? How, again, do we explain the reluctance of the chorus, its feigned or absurd excuses, when asked to take part in the action on the stage? How could the central throne of the front row be assigned to the priest of Dionysus as the choicest in the theatre, when the chorus must have stood directly between him and the actors? The cothurnus did not elevate the actor sufficiently to do away with this difficulty, and, besides, the cothurnus was not worn in comedy. On the other hand, Mr. Haigh, who accepts the shallow stage at Epidaurus, does not explain how Agamemnon could parade in a chariot and pair, along a shelf eight feet wide, leaving room for actors and projecting scenery. Neither does he account for the excessive and apparently inconvenient height of the stage. "There is no doubt some difficulty," he says, "in imagining a conversation between persons in the orchestra and persons on a stage twelve feet above them. Perhaps during the fifth century the stage was not so high as at a subsequent period, and this may be a solution of the difficulty."

Not the least merit of Mr. Haigh's work is the fulness and clearness with which he exhibits the points of contrast or resemblance between ancient and modern dramatic representations. He does not disdain to answer those questions which naturally occur to the layman, and which scholars, perhaps from familiarity, often ignore. The religious origin of the drama brought many consequences that are rather bewildering to the modern mind. Most prominent amid the rows of reserved seats for dignitaries and officials of various kinds was the armchair of the priest of Dionysus, and the places reserved for

other ministers of religion. To this class belonged no less than forty-five out of the fifty-four personages in the front row whose places have been ascertained by the remaining inscriptions. This "bench of bishops" often listened to choral odes as elevating as any of the Psalms, and more decorous than many of our Christian hymns, but they must also have witnessed performances that would try the modesty of a nautch-girl, and in which all notions of morality and reverence were turned topsy-turvy; and yet, as Mr. Haigh puts it, "the spectator who sat watching a tragedy or a comedy was not merely providing for his own amusement, but was also joining in an act of worship." Perhaps he puts this rather strongly, and perhaps he goes too far in saying that the attendance of women and boys at these spectacles was regarded as "a pious duty." He is perfectly right in urging that such customs must not be judged in accordance with preconceived opinions. The evidence seems indisputable that both sexes were present at the tragedies, and boys, strange as it may seem, at the comedies. It is by no means so clear that women attended the comedies. If Lipsius is right, they were acted on a single day before the tragedies, and attendance on the one did not, as Mr. Haigh asserts, involve attendance on both. The passages cited from Aristophanes, on close examination, are not conclusive, and the jest in the "Peace" (lines 966, 7) loses its point, in fact, if the women are present. Finally, we must allow for some independence and diversity of sentiment. In matters of decorum, the Rubicon is sometimes hard to trace; but some of the Athenians at least had their punctilio. The protest of Aristotle in the 'Politics' proves this, if it proves nothing more. The boy Autolycus, in the 'Symposium' of Xenophon, withdraws before the mimic representation of the marriage of Dionysus and Ariadne. The young wife of Ischomachus, like others of her social rank, "had been carefully brought up to see and hear as little as possible and to ask no questions." In whatever way these words are taken, whether they applied to affairs or to morals, no young woman who regularly saw and heard plays like the "Knights" and the "Lysistrata" could be said to be either very ignorant or very innocent. Participation in certain festivals or religious processions is really an entirely different matter.

Another curious consequence of the religious associations of the drama was that the actors were also regarded as sacred personages, and received accordingly certain important privileges. These "Artists of Dionysus," as they styled themselves, were the subject of special decrees by the Amphictyonic Council, granting to the members of the guild immunity from military service and personal security in time of war. They travelled about freely from place to place, and supplied small and distant towns with the entertainment which we call the "provincial theatre." Their reputation and character were much the same as those of our strolling players. The social position of a first-class actor was highly honorable; he was often the companion and intimate of kings and a trusted agent in delicate matters of diplomacy. In the fifth century, the poet was not only stage-manager and musician, but dancing-master, if we may use the expression—that is, he supervised the movements of the chorus and invented figures for them. It was Phrynichus who boasts of himself that he discovered more figures for the dance than there are waves in a stormy sea. This age of great poets was succeeded by an age of celebrated actors. Their whims were humored, and plays were written expressly for them. Their reward, too, was extravagant. Polus received a talent for two days' acting, a sum which Patti might despise, but to which Irving might condescend without loss of self-respect. The qualities of a great actor were, of course, somewhat different from what we demand. He must be a singer as well as an actor, and a loud, resonant voice was a primary qualification to fill the immense auditorium in the open air. Yet the acoustic properties of the theatre at Athens are even now satisfactory, and Aristotle praises Theodorus for his natural style of delivery. The splendid poetry of the choruses was not intended to be launched upon a sea of sound and submerged, as in our choirs and oratorios; the music was entirely accessory; there was no harmony, and every syllable could be heard with distinctness.

The sudden blossoming and maturity of the Athenian drama, comprised within the space of a lifetime, reminds us of the miracles of the Elizabethan age; but while Shakspere lived (one may say) incognito in his own generation, Æschylus and Aristophanes were instantly detected by that susceptible people who were ready often to postpone a battle for a festival, and who spent more, as Demosthenes complains, on their theatres and processions than on the army and navy together. Mr. Haigh suggests rather absurdly, forgetting the sunset beauty of Lord Tennyson's "Demeter" and the vigor of the epilogue of "Asolando," that the unabated force of such a poem as the "Œdipus at Colonus," written at ninety, is due to the life and energy inspired by the perpetual rivalry of the dramatic contests. However that may be, the popular enthusiasm must have been an immense encouragement to the dramatic poet. Where, except in Athens, could a play like the "Frogs," which hinges on literary criticism, have found the audience and the success it deserved? Where else would the popular excitement and the spirit of partisanship have gone so far that the most elaborate devices were needed and enacted to prevent foul play on the part of the judges and to preserve the purity of their critical ballot? It sounds like travesty to hear that a certain Pythodorus was wicked enough to "tamper with" the urns, or ballot-boxes, after they had been deposited in the Acropolis for safe-keeping; and it would strain the imagination to conceive a Mayor of New York or Chicago presiding, as did the Archon, at a Government theatre, and endeavoring, with extreme solemnity and delicacy, in the face of a dangerously enthusiastic audience, to see that the best poet and the best actor received a prize awarded at public expense. It speaks well for the taste of the Athenian audience and their judges that the great poets generally did win the prizes. The strangest exception to this was the defeat of the "Œdipus Tyrannus" by a third-rate poet. But, as Mr. Haigh explains, the mounting of a play must have had much to do with its success with the populace, and this kind of success depended entirely on the liberality of the Choregus. Nicias and Antisthenes, who spent unsparingly, were always successful with their choruses.

The illustrations include two views of the Theatre of Dionysus copied from recent photographs. One of the most novel is a copy of a vase-painting, of Athenian workmanship, belonging to the first half of the fifth century, which represents a chorus of men dressed as birds dancing to the accompaniment of the flute. A list of the arguments prefixed to the plays, and a selection from the inscriptions which confirm or supplement their evidence, conclude a work which may be pronounced as satisfactory as it is much needed—a work sometimes expressing views more positive than the evidence will warrant, but, in the main, sound, learned, well-arranged, and well-written.

VENN'S EMPIRICAL LOGIC.

The Principles of Empirical or Inductive Logic. By John Venn, Sc.D., F.R.S., Fellow, and Lecturer in the Moral Sciences, Gonville and Caius Colleges, Cambridge. London: Macmillan.

THE appearance of an elaborate and extensive work on inductive logic, by a writer of established reputation, is not an every-day event. The announcement that Mr. Venn was about to issue a book bearing the above title was calculated to excite lively interest and considerable expectation; and upon the first point to which this interest would, in a great proportion of cases, be directed, the author promptly gives us sufficiently explicit information in his brief preface. His attitude towards the great work which for three decades stood the unrivalled exponent and inspirer of clear thinking, is indicated as follows:

"As many readers will probably perceive, the main original guiding influence with me—as with most of those of the middle generation, and especially with most of those who approached logic with a previous mathematical or scientific training—was that of Mill. But, as they may also perceive, this influence has subsequently generated the relation of criticism and divergence quite as much as that of acceptance; though I still continue to regard the general attitude towards phenomena which Mill took up as a logician, to be the soundest and most useful for scientific study."

Nothing could be more satisfactory than this to any disciple of Mill; it at once assures us that we are to encounter nothing in the least resembling the attack by which Jevons only succeeded in staining his own memory and in exhibiting the narrow limits within which his ability, considerable as it was, was bounded; and at the same time it leads to the expectation that important corrections and additions to Mill's doctrines are to be found in the work before us.

We regret to say that in our judgment this expectation is entirely disappointed. Mr. Venn's criticisms and divergences are almost uniformly characterized by one quality—they lack substance. It is not so much that they are wrong, though in our opinion they sometimes are; it is that they are fine-spun, scholastic, unreal. And this character attaches not only to special criticisms—in which it is sometimes not out of place—but to the whole texture of the book in almost all its parts. It is a thousand pities that this should be so, for in clearness of style, in accuracy of statement, in closeness of reasoning, in abundance of well-chosen and illuminating metaphors and analogies—in all these qualities, so important in a work on Logic, Mr. Venn can hardly be surpassed. But he lacks one quality indispensable to a writer on the logic of truth, as distinguished from the logic of consistency, an abiding sense of the difference between the real and the unreal, between the important and the trivial.

The ways in which this deficiency of the author manifests itself are various. One of the most conspicuous, and not the least detrimental to the utility of the book, is the astonishing amount of space that is devoted to mere questions of language, in a work upon the principles of empirical logic; and, allied to this, the remarkable prolixity of explanations and discussions relating to points of more or

less interest, but which a bare mention would sufficiently dispose of, for an audience of the intelligence which Mr. Venn's work must presuppose. It would hardly be too much to say that the whole book is one continuous illustration of this prolixity; yet, in the nature of the case, it is hardly possible to cite an instance of it within the limits of a short review. One example which can be understood without quoting, is furnished on page 281, where the author devotes about two pages to justify his speaking of the technical terms in use among a particular class—for example, the slang of sporting men, or the special terms of the higher mathematics—as a distinct language; a proposition the solemn expounding of which is obviously thrown away upon any one so stupid as to need it.

Another way in which this character betrays itself is in the absence, almost throughout, of any reference to the actual importance, in the history of the progress of knowledge, of the considerations which the author discusses. Whether a given mental process is called into play when we see a cricketer and infer that the other ten are somewhere in the neighborhood, or whether it plays a great part in fathoming the problems of the physical universe or of human society, seems to make no difference to Mr. Venn. Of course, for mere purposes of illustration, it is not only permissible, but unfortunately almost always necessary, to use trivial examples, inasmuch as the real and great ones take us too far afield; but unless the applications to these real and great objects be kept in mind and at every opportunity actually referred to, the treatment not only loses in importance and interest, but is deprived of its chief safeguard against those incongruities and self-contradictions which are sure to be the punishment of mere subtlety and over-refinement.

Mr. Carveth Read, in a long and laudatory review in *Mind* of Mr. Venn's book, points out an error which seems to us a fair illustration of what we have been saying, though the reviewer himself does not cite it as indicative of any general trait. Mr. Venn introduces a class of Uniformities of Nature which do not, according to him, come under the law of Causation, and which are neglected by logicians, although they are one of the important "classes of considerations upon which sound and reasonable persons unhesitatingly rely every day of their lives in speculation and practice alike." The Uniformities in question are denominated by Mr. Venn Uniformities of Persistence, and he proceeds to "intimate their nature" by an example the discussion of which constitutes his definition and discussion of the general principle he wishes to establish. A woodman cuts down a tree one day in the forest; he feels sure that he will find the tree the next day in the same general condition in which he left it. On what does he base this confidence, or upon the basis of what general law—as distinguished from an "appeal to botanical or chemical considerations"—can the logician sustain him in it? It cannot, "without extreme violence," Mr. Venn says, be grounded on the Law of Causation, as understood by Mill, because this applies only to changes, while the phenomenon we are here concerned with is the absence of change. Mr. Carveth Read points out that in this contention Mr. Venn overlooks the contraposed form of the Law of Causation, namely, that where there is no cause of change there is no change. As to whether there has been a cause of change in the night or not, the woodman relies upon his past experience, and supposes the night just past to have been essentially similar to all the other nights he has known in this respect, and the tree similar to other trees. This obvious view of the case would, we believe, have been taken by Mr. Venn had he kept most prominent in his mind the great and leading ideas of scientific thought, and been less intent on filling up trifling crevices which his defective sense of proportion magnifies into great gaps. What he does do here is to advance a "Principle of Continuity" which he considers the nearest approach that can be made by any "law of real generality" (*i. e.*, law not appealing to considerations special to the case in hand) towards justifying the woodman's expectation. As to this law, "all that it denies is actual discontinuity; that is, instantaneous change." But such a law as this is plainly no more pertinent to the case practically than it is needed as an addition to the Law of Causation theoretically; it does not (as Mr. Venn plainly admits) enable us to bridge over the interval of a night or of any other stated time. Of course, the true answer to Mr. Venn's demand for a "general law" to cover the case is that there is none; the phenomenon does rest entirely upon special peculiarities, and it *is* a question of chemistry or botany how much change will take place in a given time in a felled oak or a plucked mushroom or a pint of yeast.

It is possible that we have been taking the book somewhat more seriously than the design of its author would justify; if it be looked upon less as a treatise on Logic than as a collection of acute observations upon Logic, the book becomes much more satisfactory. Even in this aspect there is too much light and clever saying of things merely because they can be said; ingenious defences of half-truths, and flippant criticisms of great principles—a kind of thing which the genius of the "Autocrat of the Breakfast Table" keeps within bounds, and which few others can be trusted with, and which, besides, is eminently out of place in philosophical discussion. But, after all, any one who goes to Mr. Venn's work not to have the foundations of his logical knowledge strengthened or rectified, but to get light upon any points which may chance to be fruitfully treated by the author, will find instruction on a great variety of topics and lucidity in the treatment of all, and will get the mental discipline involved in reading a writer who, however he may err by excess of words, is invariably clear and accurate in his language.

History and Pathology of Vaccination. By Edgar M. Crookshank, M.B. 2 vols., 8vo. Vol. I. A Critical Inquiry. Pp. xxiii., 466. 19 plates. Vol. II. Selected Essays. Pp. vi., 610. Philadelphia: P. Blakiston, Son & Co.

PROF. CROOKSHANK is a bacteriologist of repute who has reached the astonishing conclusion that vaccination affords no protection against smallpox. In his own words, "Inoculation of cowpox does not have the least effect in affording immunity from the analogous disease in man, syphilis; and neither does cowpox, sheeppox, cattle-plague, or any other radically dissimilar disease, exercise any specific protective power against human smallpox" (i, p. 469).

Jenner held that what is known as cowpox is smallpox modified by its presence in the cow, and probably derived from "the grease" of horses, which was substantially the same disease. The grease hypothesis is now generally regarded as untenable. The author, however, quite disagrees with Jenner as to the vaccine disease having any connection with the variolous disease, and, partly on account of this disagreement, he denies the preventive efficacy of vaccination as against variolation. He goes further and sets up the theory that, after all, cowpox is practically a venereal disease (i, pp. 461–4). There is, as far as we can see, no logical reason and certainly no scientific evidence to connect cowpox with any form of lues. Whatever flaw there may be in Jenner's theory does not interfere with the substantial results derived from the practice. However desirable it is that fact and theory should coincide, fortunately in the natural world this is not necessary for the existence of the fact. Else how long would man have been in literal darkness from false theories of light, and cold with no true explanation of fire? Medicine in particular is an experimental science, not to say in a degree an empirical art. A part of its progress is along strictly logical lines, but many of its facts are as yet inexplicable except as facts. It is no reproach to Jenner that, believing as he did, from observation, that an affection of the cow when transplanted to man protected against smallpox, he should go further and regard it as a veritable although modified smallpox that was thus introduced. In view of the known value of direct inoculation with true smallpox virus (since supported by modern experience with attenuated animal-disease causes), it was a reasonable hypothesis. In our opinion it remains so. His fame justly rests upon his seizing the logical deduction, and particularly upon his conceiving and putting into practice the broad idea, that the protection he believed the vaccine disease to afford could be indefinitely extended directly from man to man, and upon his zeal in publishing his opinions and facts for the benefit of the world. His premise of the variolous nature of cowpox *may* be false; his conclusion that smallpox is prevented by vaccination is true.

Jenner certainly had been anticipated in the intentional inoculation from the cow — the most conspicuous and best authenticated instance being that of Benjamin Jesty, a farmer, who thus protected his family in 1774; and he probably was not the very first to communicate the disease from man to man. But his own action was original, and these isolated antecedent examples did not inure to the general good. Not satisfied, however, with depreciating any claims to priority that might be made for Jenner, with demolishing or at least writing down his theory, and with setting up quite new ones as to the nature of the vaccine disease or diseases, the anti-vaccinists (for Professor Crookshank, who is merely a late pervert, does not stand alone) deny his facts. It seems to us that it is just as distinctly true that a person properly vaccinated may be exposed to the contagion of smallpox with impunity as that a modern ironclad may defy the obsolete ordnance of earlier days. An accidental shot may enter an open port or strike a defective plate, and an occasional subject may receive the disease in a modified form. But the general principle of security to each remains undisturbed.

This seems so clearly a matter of daily as well as of historical experience, that there is no room for argument. The mortality, to say nothing of the morbidity, from this excessively contagious disease has been reduced in the mother country from 3,000 to about 100 per million; in the United States it is no longer a permanent resident of cities, and from broad country districts it is absent for years. In former times it was a standing menace to health and life, whose actual ravages can only be appreciated by study of contemporary records. The anti-vaccinists, however, claim that

smallpox, like the plague, is an exotic in northern latitudes; that it has cycles of recurrence, that it gradually fades away under improved general sanitation and by a mysterious law of self-limitation, and that vaccination on the whole does more harm than good. Their reasoning, using the term by courtesy, seems akin to Brother Jasper's when he contends that "the sun do move."

In the interest of truth and not of faction, it is, however, only fair to say that the stock of virus originated by Woodville in 1799 in the midst of a smallpox epidemic, which was the chief if not the only supply for the world for forty years, *may* have been modified by a case of intercurrent smallpox early in the series, and thus there may have been a substantial variolation instead of a vaccination. This is what the author contends (i, p. 163), but the evidence for it is much more speculative than a great deal that he tries to brush away as fictitious. It is, nevertheless, a fact that Badcock of Brighton, by the deliberate variolation of a cow in 1840, produced a benignant vaccine virus that is non-infectious and protective (ii, pp. 520 *et seq.*). The virus so generated has been in general use in that section to the present time. This extensive experiment gives support to Jenner's facts and color to his theory. It certainly demonstrates that variola is rendered milder by its transmission through the cow, whether "casually," as Jenner supposed, or directly, as Mr. Badcock induced.

Unfortunately, the author has in some curious way allowed his feelings to become involved in his argument. He seems to have conceived the most serious dislike to Jenner, and to believe that no good can come from that Nazarene. Whether this warping is due to his conviction that vaccination is a useless procedure, or the reverse, we cannot tell. It has left these volumes great magazines of information, from which students will not be apt to draw the same conclusions as their collector. They are admirably printed and made up, but the want of an index greatly diminishes their working value.

Rig Veda Americanus. Sacred Songs of the Ancient Mexicans, with a gloss in Nahuatl. Edited, with a paraphrase, notes, and vocabulary, by Daniel G. Brinton, A.M., M.D. Philadelphia: D. G. Brinton. 1890. 8vo, pp. 95. Illustrated.
